Valhalla sequel

Legend has parted with what is believed to be the largest sum of money ever spent on the production of a single game. The Great Space Race is the long-awaited sequel to Valhalla, and £¼m is the cost of its development.

Scheduled for launch in late September/early October, Commodore 64 and Spectrum versions will be in the shops simultaneously. Heralded as "a spectacular futuristic romp", Legend is priding itself on the graphics and animation. You'll have to wait till September to see for yourself!

Legend, PO Box 435, Station Rd, London E4 7LX

Work from home

Now you can convert your BBC or Electron to a handy office machine, with the help of Mini Office, from Database Publications.

Mini Office comprises a word processor, database, spreadsheet and graphics package — all for £5.95 in tape version or £7.95 on disc.

Managing director Derek Meakin said: "We are aiming at one man firms who cannot afford to pay for the business software currently on the market. It will also be well in the price range of housewives who wish to use it for domestic bookkeeping or children wanting to monitor their pocket money."

The word processor features a constant display of time and word count, plus a words per minute display and double size text option in edit and printer mode.

The whole package comes together with a 32-page operating guide. "At this price, home computers will no longer be restricted to games," said Mr Meakin.

Database Publications, Europa Hse, 68 Chester Rd, Hazel Grove, Stockport SK7 5NY

CheetahSoft presents...

PERILS OF... BEAR GEORGE

A story of high drama and daring deeds from the annals of our hero BEAR GEORGE — can you help him survive 'unbearable' hazards in the forest and deep cold of the mountains, and then live through hibernation?

(Graphics shown above are as on Spectrum 48k version.)

- Superb animation and graphics
- Joystick compatible (Cheetah R.A.T., Kempston, Interfaces 1 and 2)
- Built-in surprise for the real gluttons amongst you!

Available NOW on the Spectrum 48k, price £6.95 PLACE YOUR ORDER NOW!

Available at good software shops or by sending cheque/P.O. for £6.95 to:-

CheetahSoft Ltd.
24 Ray Street,
London EC1R 3DJ.

Free membership

Microdeal's own user group, the Cuthbert Club, is now offering membership free of charge.

Anyone wishing to join needs to write to Microdeal and members will receive a free badge, quarterly magazine and hint sheets.

Microdeal, 41 Truro Road, St. Austell, Cornwall PL25 5JE

Check mate

This year's World Micro-computer Chess Championship (the 4th), will take place in Glasgow from September 9 to 15.

Any individual or group, including software houses, may enter their own chess programs.

John Glendinning, 30 Rylands Drive, Mount Vernon, Glasgow G32 0SB

Charity Success

Oxfam's current appeal for personal computer software has so far resulted in contributions of over £10,000-worth of games and business cassettes.

More than 30 manufacturers, as well as private individuals and collectors, have donated their surplus stock, and cassettes are still arriving at Oxfam's North London office.

A spokesman for the charity said: "This reaction to a new appeal has been fantastic! Obviously, we want to thank everybody who has contributed so far as well as to encourage others to give us what they can over the next couple of months."

The software appeal is due to finish at the end of September, and the date of the special sale will be announced in the near future.

Oxfam, 724 High Road, Finchley N12 9QD

Quality printing

Retailing at a cost of £375, the TRD is a new printer from Triumph Adler which offers high quality Daisy Wheel printing at 20 characters per second.

This machine is suited for use with personal computers costing from £200 upwards, but is aimed at any system where

the primary application is word processing.

A library of over 150 interchangeable print wheels provides a choice of type styles which can be printed 10, 12 or 15 characters per inch or with proportional spacing.

Three versions of the product are available, with either RS232, Centronics or dual interfaces.

The machine is also capable of plotting for graphic applications.

Triumph Adler (UK), 27 Goswell Road, London EC1M 7AJ

Lead for Amstrad

A printer lead to connect the new Amstrad CPC 464 computer to any Centronics compatible printer is now available ex-stock from Computer Services.

The lead is 1m in length and features gold-plated contacts with double wipes on the 34-way edge connector end.

Cost of the lead is £14.87 including postage and packing.

Computer Services, 63 Quilp Drive, Chelmsford, Essex CM1 4YD

Cross-assembler imminent

A target release date of September 1 has been set for a new Z-80 cross-assembling version of Mikro, from Supersoft.

Mikro 80 is being written in 6502 machine code, to run on the Commodore 64; however it will assemble Z-80 opcodes rather than 6502 opcodes.

In a parallel project, Supersoft is investigating the various means by which assembled code can be transferred to the target computer. A direct cable link between the 64 and the Z-80 computer seems the most likely solution.

Supersoft, Winchester House, Canning Road, Wealdstone, Harrow, Middlesex HA3 7SJ

Starter pack

A cassette recorder/player is now being given away free with every new M5 home computer from CRL — the whole package forming the new Starter Pack.

Also included in the package is an application ROM cartridge

— "Basic I", introduction to programming, a manual and users' guide, two cassette games, and all the necessary cables to connect the M5 to a TV set.

Additions have also been made to the firm's software range — with eight new game cassettes being introduced.

The six new single game

cassettes are: Bomber Run; Devil Bird, Intrigue, Slots, Stranded, and Wheels. The new Triple game cassettes are: Simon/Granny/Spiders and Squash/Lander/Raiders. Single games are £5.95 each, and triple games are £12.95 each.

CGL, CGL House, Goldings Hill, Loughton, Essex IG10 2RR

Starter Pack from CGL, including free cassette recorder/player

You could be on our pages

We welcome programs, articles and tips from our readers. If you feel that your work meets our standards, please submit it to us for consideration for publication.

- Programs must always be sent on cassette. Listings are helpful, but not necessary. Check carefully that they are bug-free. Include details of what your program does, how it works, variables you have used and hints on conversion.

- Articles on using home computers should be no longer than 2,000 words. Don't worry about your writing ability — just try to keep to the style in HCW. Articles most likely to be published will help our readers make better use of their micros by giving useful ideas, possibly with programming examples. We will convert any sketched illustrations into finished artwork.

- Tips are short articles, and brief programming routines. Your hints can aid other computer users.

All submissions will be acknowledged and the copyright in such works which will pass to Argus Specialist Publications Ltd will be paid for at competitive rates.

Keep a copy of your work and include an SAE. Label everything clearly and give a daytime and home phone number if you can.

All work for consideration should be sent to:

Paul Liptrot, Home Computing Weekly, No.1 Golden Square, London W1R 3AB

Chicken Run Dragon 32 £7.95

Impsoft, 149 Balham Hill,
London SW12

If you like the sort of game that leaves you with brain ache at the end of a session this one should be just right for you. Explaining the plot could take this whole review, but in a nutshell you control both the hen, who is trying to lay her eggs in peace and keep her energy level up, and Farmer Folly who is trying to keep the feeding troughs filled and collect the eggs. The problem is further compounded by the fox who tries to eat the hen.

Although there is no cock bird around, eggs left uncollected hatch into chickens and go around in search of food for

themselves.

There are so many things to keep your eyes on that I find myself mind boggled, but it is possible to keep things under control if you keep cool. The bright spots are that you have a hen with three lives, very good sound and graphics and responsive joystick controls. The scoring is a little stingy in my opinion but it could become addictive. Sorry, I must finish now, there's another egg to collect...

Dix Mille 48K Spectrum £1.99

CCS, 14 Langton Way, London
SE3 7TL

I didn't think much to this when I read the sleeve notes. A dice game? I thought even less when I saw the simple standard of screen presentation, and realised it was mostly in BASIC.

How wrong can you be? It's riveting, I can't leave the thing alone!!

Up to six players can play, or your Spectrum will do battle against you alone. Six dice are thrown, by machine code, to the screen, then you choose.

When you see what you've thrown, you can take, adding to your score, and/or throw again.

As the number of dice decreases in your turn, the odds against getting a winning combination grow, whilst the odds of throwing three 2's get longer.

You can, however, quit while the going is good, and hand over to the next player. The first to score ten thousand wins.

Sounds boring doesn't it? It's not!! Eventually, I realised that when I'm losing heavily, I have nothing to lose by gambling, and the same applies when I'm well ahead. But if it's neck and neck, care is called for.

D.M.

value for money	100%

Double Dealer 48K Spectrum £6.50

MFM, 141a Camden Rd, Tunbridge Wells, Kent TN1 2RA

Double Dealer features the two well known card games of blackjack, an advanced and expensive form of pontoon, and stud poker, just like the western movies! Your Spectrum is the dealer and opponent.

In both games, the cards are revealed on a lurid, shimmering green background, and as graphics go, are something of a disappointment.

No nice kings and queens, just big letters K and Q. There are, however, some good touches in terms of sound routines when cards are shuffled and the games start.

You can gamble away to your heart's content, secure in the knowledge that all the money you're losing isn't real!

There are several levels of difficulty, but you aren't allowed onto the higher ones until you've broken the bank... and that takes some doing!

Your wins and losses are the subject of "humorous" messages. Some of the essential messages disappear rather too quickly.

Certainly, these games will allow you to learn the rules, practice, and occupy some time without leaving your chair. The instructions are fairly comprehensive without giving any real clue as to strategy. D.M.

Skill and daring needed for games

Another fresh batch of games
for you to pit your wits
against

West 32K BBC £7.95

Talent Computer Systems, 101 St James Rd, Glasgow G4 0NS

This program, an adventure, is produced for a number of home computers and some versions have a full set of graphics but the Acorn versions are text only.

The scenario is a wild west adventure and the whole thing is conducted in real time, so that if you sit around for a while things start to happen around you.

That would be rather pleasant if they were nice things but unfortunately they aren't and I seem to find most of the things rather fatal.

Take the robber for example, several things can happen when he appears. If you are carrying a pack of cards he will challenge

you to a game of pontoon, a nice touch this, but I can't tell you what he does if you win.

He might try to shoot you and, despite what the instructions say, you don't start with a gun! He often misses but running away doesn't really help.

Incidentally there is no 'Help' feature in this game although you can save your position if you get anywhere before you get killed. A good adventure if a little colourless, but the real time features do make response times long.

Dambusters Atari £5.50

N.D.S.L., 8 Green St, Willingham, Cambs CB4 5JA

Prepare for take off in this exciting simulation of the famous raid on German dams during World War 2.

You begin in flying school and your object is to blow up the dams of the Upper Ruhr.

Take control of a Lancaster Bomber and fly from England, eventually arriving at the dam where you must carefully aim your bouncing bomb so as to explode against the dam wall.

After successfully breaching the dam you will be promoted to pilot and after each further accomplished mission you are also promoted until you reach the rank of group captain.

Your plane is equipped with machine guns and of course the bombs.

Whilst crossing the channel you may be attacked by ships firing radar controlled missiles and on reaching Europe you will be confronted by enemy fighter aircraft and ack-ack guns.

Be careful not to run out of fuel, though this is replenished after each mission.

Dambusters features reasonable graphics incorporated on a horizontal and vertical scrolling screen. Sound effects are also quite good. On the whole the game is quite realistic but I found it a little on the slow side. Good luck old boy, roger and out.

THE FIRST GENERATION of Eye-friendly Filters.

Treat your eyes to a Romag CEAF. Only £19.95

Unique technology: British made laminated glass, aspherically curved Contrast Enhancement Antiglare Filter.

Up to now, contrast-enhancing filters have always been flat—and so has their performance, because the screen of your TV, monitor or VDU is curved.

Up to now, most filters have been plastic—because it takes mindbending technology to bend optical-quality laminated glass.

Up to now, filters have been expensive—awkward production techniques have meant price tags from around £50 to well over £100.

Forget all that: the Romag CEAF is here.

British designed and manufactured by space age military technologists, CEAF is profiled to fit your display screen, giving you the ultimate in contrast enhancement and antiglare performance. For under £20, this first generation of eye-friendly filters diffuses all specular reflections, gives sharper image clarity from edge to edge of the screen and greatly enhances display colours.

Mounted and removed in seconds by invisible velcro fastenings, the anti-static, anti-shatter CEAF is a major step forward in the operational safety of

computer displays—unprotected screens can cause blurred vision, watery and itchy eyes, headaches and (according to such authorities as the Institute of Ophthalmology) even permanent changes in eyesight.

Scratch-resistant, durable and easily cleaned without expensive sprays and agents, 9", 12" and 14" CEAFs are available from leading retailers at only £19.95 including VAT.

Or fill in the Freepost coupon and your CEAF will be despatched within 48 hours. Orders can also be placed around

the clock by phoning the CEAF Department on (091) 414 5524, quoting your Access Card number. For other screen sizes, please ring or write—the CEAF prices for 'specials' would be considered very competitive.... if there was any competition!

COMPETITION

NOW is the time for all TI-99/4A users to get out their pens and spot some differences. The reward for the first 50 winners is a package of software from Warwick Software, of 40 Kingsway, Newby, Scarborough, N. Yorks.

Each package comprises three games (Hopbit, Caveman and Diver) together with the Typing Tutor — and each package is worth more than £21.

Hopbit is a variation on the Frogger-type game. Your task is to guide the frog across the road — avoiding cars and trucks along the way — until you reach the river. Then jump on the back of a turtle, and make your way across river — but watchout for hungry crocodiles.

Once across the river, you simply jump down a grate which gets you home.

The second game is Caveman, an underground exploration game.

Go down a ladder to reach the first level — and all along you have to beware of various obstacles.

A total of five levels have to be passed through before you get the chance to sit on the King's throne at the end of a tunnel which leads off from level five. Once you have achieved this, you're a winner.

We stay a long way down for the third game, but this time not below ground — below water.

Diver gives you the chance to show your swimming skills, and make money into the bargain.

You are in control of a diver whose job it is to recover differing items from the seabed. These include gold coins and human bones.

A ship passes above you, and you have to catch the ship and place

Four of the best from Warwick Software

This week's competition gives all TI-99/4A users the chance to win three great games, and a program to help you improve your typing skills

your bounty in it.

Problems come in the form of ravenous sharks and an octopus.

All three of the games are for Extended BASIC, and Caveman also requires a joystick.

If you want to give the games a rest for a few minutes, and would prefer to spend your time learning — then the fourth program is right up your street.

Typing Tutor, for TI BASIC, is exactly what it says. The program starts off by taking you through the fundamentals — like which key does what.

From that point it gives you training until you reach the final part of the program which is a speed trial.

You will agree that these are fantastic prizes, and all you have to do to stand a chance of winning one of these packages is to try and spot as many differences as possible in the two cartoons below. Good luck.

How to enter

Study the two cartoons — there are a number of differences between them. Circle the differences on cartoon B and seal the cartoon and

coupon in an envelope. Write clearly the number of differences you found on the back of the envelope.

Post your entry to Warwick Competition, Home Computing Weekly, No.1 Golden Square, London W1R 3AB. Entries close at first post on Friday September 14, 1984.

You may enter as many times as you wish, but each entry must be on an official coupon — not a copy — and sealed in a separate envelope.

Important: please follow carefully the guidelines on entering — incomplete coupons and entries in envelopes with no numbers on the back cannot be considered. If you are a winner, the coupon will be used as a label to send your prize so clear writing is essential.

The rules

Entries will not be accepted from employees of Argus Specialist Publications, Warwick, and Alabaster Passmore & Sons. This restriction also applies to employees' families and agents of the companies.

The How to Enter section forms part of the rules.

Hero of the

A drama-packed action game from Barbara Prowse, Hover-Rescue gives you the chance to be a hero by rescuing people from a Towering Inferno

A tower block is on fire, and the occupants are screaming for help on top. Can anyone help them. Yes is the answer — you can, with the help of your trusty helicopter that flies between a new building under construction, and the Red Cross station.

The landing point on the tower is where the shout for help is shown at the start of the game, and you must alternate between the two landing points otherwise you will be deemed to have crashed.

When the helicopter is facing either left or right, you can only move across the screen, and when the helicopter is facing forward — you can only move up and down.

Quick reactions are required as the helicopter will lift-off automatically when the rescued people board and leave.

This is a game where skill combined with speedy reactions are required — so now is your chance to be a hero by saving those people on top of a skyscraper on fire.

How it works

100-790 game initialisation and instructions
3000-3470 main loop for each game
4000-4490 land on roof
4500-4580 ... at base
5000-5010 initialise movement after landing
5100-5180 press any key to start routine
5200-5420 check for end of game and test for another
5500-5540 plot end message on screen
9300-9340 increment number rescued
9400-9590 plot next hazard
9600-9640 plot number rescued
9700-9890 draw playing screen
9900-990 initialise character set and machine code
10000-10110 date for redefined characters (a through w)
10120 data for variables DR(nn)
11000-12090 machine code data

Variables

G1, G2 general purpose numeric variables
GS general purpose string variable
DR (1-8) movement of helicopter
TM trips made between the bases
LR lives remaining
SC score — number of people rescued
HS high score
RF flag to indicate which landing site is next in sequence
OX(1-4) X,Y co-ordinates of the OY(1-4) hazards to be plotted
CP subscript of hazard to be plotted

You could be on our pages

We welcome programs, articles and tips from our readers. If you feel that your work meets our standards, please submit it to us for consideration for publication.

- Programs must always be sent on cassette. Listings are helpful, but not necessary. Check carefully that they are bug-free. Include details of what your program does, how it works, variables you have used and hints on conversion.
- Articles on using home computers should be no longer than 2,000 words. Don't worry about your writing ability — just try to keep to the style in HCW. Articles most likely to be published will help our readers make better use of their micros by giving useful ideas, possibly with programming examples. We will convert any sketched illustrations into finished artwork.
- Tips are short articles, and brief programming routines. Your hints can aid other computer users.

All submissions will be acknowledged and the copyright in such works which will pass to Argus Specialist Publications Ltd will be paid for at competitive rates.

Keep a copy of your work and include an SAE. Label everything clearly and give a daytime and home phone number if you can.

All work for consideration should be sent to:

Paul Liptrot, Home Computing Weekly,
No.1 Golden Square, London W1R 3AB

It's easy to complain about advertisements. But which ones?

Every week millions of advertisements appear in print, on posters or in the cinema.

Most of them comply with the rules contained in the British Code of Advertising Practice.

But some of them break the rules and warrant your complaints.

If you're not sure about which ones they are, however, drop us a line and we'll send you an abridged copy of the Advertising Code.

Then, if an advertisement bothers you, you'll be justified in bothering us.

The Advertising Standards Authority. ✓
If an advertisement is wrong, we're here to put it right.

ASA Ltd, Dept 2 Brook House, Torrington Place, London WC1E 7HN

This space is donated in the interests of high standards of advertising.

The computer game is DEAD...

Count with Oliver Commodore 64 £7.95

Marmalade, from Mirrorsoft, Holborn Circus, London

This is an educational tape containing two programs. On side one you have Toyshop, in which you must help Oliver by counting the toys he indicates, putting in your answer using the keyboard. A correct answer is rewarded with a beaming smile from Oliver, an incorrect one provokes an angry frown.

The game is aimed at the early learner and the gleeful responses from my three-year-old shows it's near the mark. It is well illustrated with easily recognisable objects, i.e. boats, teddies and bikes.

The "B" side has a slightly

more difficult game, Lollipops which starts with Oliver asking, "I like lollipops, do you?" It then proceeds first to count lollipops and then to eat them. This gives a simple introduction to addition and subtraction.

After each section Oliver is seen to be increasing in size because of the number of sweets he has been eating. My son responded "He'll be sick" and sure enough the next message on the screen was that Oliver felt unwell.

Overall this is a good package to teach the younger or the slow learning child basic number sense.

Monster Maths (6-14) Commodore 64 £6.95

Shards, Suite G, Roycraft Hse, Linton Rd, Barking, Essex

These programs, in the "Fun to Learn" series are intended to help you develop mathematical and logical skills. There are five games each with nine levels and automatic difficulty adjustment linked to performance.

The first game deals with relative sizes of two rectangles. The second deals with mental arithmetic. Give the name of a friend, answer the questions correctly and a nicely animated monster eats your friend. Get them wrong or answer too slowly and you get eaten.

Times, tables and arithmetic are the next two games which are

well executed.

The final game is called Mystery Numbers. You are given three numbers and a total and you must provide the two arithmetic operators which, when combined with the three numbers, give a sum which will provide the specified answer. This is a challenging test of your deductive logic.

Throughout you are given the option to finish the game you are playing and return to the main menu. A score card is maintained enabling you to check your performance.

An aid to confidence as well as being fun to play. A.W.

Shape up Dragon 32 £10.95

Dragon Data, Kenfig Industrial Estate, Margam, Port Talbot SA13 2PE

I have to admit that I am becoming a little sceptical of the value of the shape recognition programs I see nowadays. Yes, it is something a computer can do fairly well but it often has little basis in reality.

Despite these reservations this series of games is well thought out and will teach the four shapes involved quite well to the pre-school and infant children it is aimed at.

There are four options from the menu, each leading to a game involving Mr Brock the badger. The first shows him at work with his lorry collecting shapes and delivering them to the correct dump. The second involves him playing basketball by putting large and small shapes into the appropriate hoop. He then meets a magician who hides shapes in a magic box and this involves memory training with the extra skill of short-term recall. Finally he builds pictures using the shapes.

My main criticism is that there are only triangles, circles, squares and rectangles. A bigger set of shapes would have been a nice touch. The graphics are excellent however and will keep young children's interest well.

Make faces and learn to count

Shape up and piece together
— or learn to count with
Oliver. Read what our
educational reviewers thought

Facemaker Dragon 32 £10.95

Dragon Data, Kenfig Industrial Estate, Margam, Port Talbot SA13 2PE

I can't decide about this program. I've seen it on several computers now and I have still to be convinced that it is an 'educational' program. It is interesting and fun but its educational value I doubt.

The aim is to enlarge vocabulary. A child using it has to understand and use words dealing with a face in its many variations. Therefore you could say it 'teaches' the correct meaning of such words and immediately reinforces their meanings.

The problem is that there is a

great deal of reading involved in understanding what is required in the first place and the child who doesn't understand the meaning of a word is unlikely to be able to read it either! So we end up in a Catch 22-type situation.

I believe this program would be best used in a group structured situation rather than a one child plus micro set-up and therefore cannot recommend it for home use. But if the educational aspect doesn't worry you then making the faces is really good fun.

Fun to Learn Commodore 64 £6.95

Shards, Suite G, Roycraft Hse, Linton Rd, Barking, Essex

It's a great pity that the government left off the 64 from its recommended computers for the classroom — especially when you find software like this.

Fun to Learn is a suite of five games written by a teacher and tested in schools (so Shards claim). The strength is that rather than leave you stuck in one game, after each question you can continue or return to the menu. A sixth option enables you to examine a score card which keeps a track of your performance.

You can play Count, in which letters are randomly placed and the machine measures the time taken to count the letters.

Mixer is an anagram game which gives clues to help you unravel the jumbled word. Calculator is a cumulative sum which gets progressively more difficult. Starship is a version of hangman and Codebreaker introduces simple codes.

Codebreaker and Starship give the option to enter your own words so that two children can play the games together.

Overall the routines run quickly and effectively and the overall design is good. The use of sound is good and graphics are average. This is a good package which should give hours of fun.

CLASSIC ADVENTURE. This is the program that started it all. Now you can discover the excitement of Classic Adventure on your Spectrum 48K, Commodore 64, BBC or Electron. If you are masterful enough you too could become a Master Adventurer. "The classic brainteaser."
— Micro Adventurer. "It's excellent but be warned: it's also very addictive." — Home Computing Weekly.

STAR TROOPER is a fast, action packed, machine language game for your Commodore 64. It's a game that will test the best arcade strategists. Amazing graphics and superb sound add to a game that only the bravest will survive!

THE HOBBIT. Visit J.R.R. Tolkien's Middle Earth in the most amazing adventure yet devised. "A game by which future games will be judged."
— Personal Computing Today. "Superior to any other adventure game."
— Your Computer. The Hobbit is now available for the BBC, Oric, Commodore 64 and Spectrum.

H.U.R.G. A revolutionary piece of software for your 48K Spectrum which allows you to develop high quality Machine Language arcade games with absolutely no programming experience. "It is difficult to find fault with such a complete games generation program."
— Crash.

COMMODORE 64 HORACE GOES SKIING is the sequel to the very successful Hungry Horace. In this adventure our hero attempts winter sports. Skiing is complete with slalom flags, trees and moguls so watch out Horace! "One of the most addictive packages yet encountered."
— ZX Computing. Horace Goes Skiing now available for Dragon.

MELBOURNE

FORTH. Abersoft FORTH is an implementation of the Forth Language for your Spectrum 48K. Forth is closer to Machine Code and more than 10 times faster than BASIC. "The only Spectrum package which has been endorsed by the Forth Interest Group"

— Sinclair User.

MELBOURNE DRAW. With Melbourne Draw, you can create dazzling, intricate colour graphics and pictures on your Spectrum screen without special programming skills. "Scores the highest marks in user friendliness, only limited by imagination and artistic talent! Mugsy graphics which were all done using Melbourne Draw are quite stunning". — Crash.

MUGSY gives a totally new direction for thrill seekers — comic animation in text, stunning graphics and a full arcade game! Mugsy is your one and only chance to become the greatest gang leader with definite ill repute. "Mugsy is definitely the Godfather of all strategy games." — P.C. Games. "Graphics: excellent, with some amazing animation. A game that points the way forward." — Crash

HCW4/8

If you've ever fancied getting a rating from the Galactic High Commission, this program from Graham McDonald will fulfil your wildest dreams

Shoo

From the five-year mission of Star Trek, to the 300 second mission of Space Target with this three-part program. It is in three parts so you can see that loading is taking place correctly.

This is the amount of time you have to destroy as many targets as possible. When your time is up, you will be told how many targets you have destroyed and what your score is. By the way, each target has to be hit 25 times before it is destroyed.

You will also be given a rating by the Galactic High Commission.

To make the game harder,

Variables

a,b position of target
x,y position of ship
d number of destroyed targets
h number of hits
s time
e,f colour of target
z movement of target
v random laser
fS,sS lasers (23 symbol shifts 0's)
final score
rS rating

How it works

10-17 stop tape routine
19-68 beginning routine
69-87 variables
89-98 display routine
99-150 If and Then area
179-308 star display
306-340 time routine
399-500 laser routine
1000-1070 target destroyed routine
1200-1280 target laser's on and off routine
1499-1650 ship hit by laser routine
1999-2170 finish
5999-6170 instructions
6199-6200 time warning
7999-8030 music routine
9499-9560 pause routine
9599-9890 escape routine

the target has a laser which fires randomly, but this can be switched off and on by keys 4 and 5.

Key 8, which is for escape, has a bit extra. It has a routine which asks you if you want to load another program or clear the memory.

You now have the whole of the Galactic High Commission watching your qualities and skills, so now is the time to show enterprise and get as many targets as you can.

Attacking fighters are intent on colliding with you in this game by Samir Devani. Can you ward them off? Time's running out

In this game you are a pilot entering into battle. You are being attacked by enemy planes and you must fight them off.

However, they are on a suicide mission. They don't want to shoot you down — they're intent on colliding with you.

You have two minutes in which to win the war.

Fight off kamikaze pilots!

How it works

0-56 initiate variables
57-60 clock
61-65 move enemy ship left
69-85 joystick
90-99 move missile
100-135 move enemy ship down
140-144 explosion (enemy ship)
150-200 also move enemy ship down
250-255 check time
1000-1050 redefine
2000-2053 instructions
2055-2079 explosion (your ship)
2080-2091 score
2093-3020 end

Variables

AB ship's position
AC ship's colour
I random ships (left)
M random ships (down)
PE joystick
AD attacking ship's opposition
AS attacking ship's colour
AT tractor beam's position (A)
AR tractor beam's colour (A)
ET tractor beam's position (B)
EY tractor beam's colour (B)

CURRENT SPECTRUM PROGRAMS

Tradewind (£5 Cassette, £9.50 Microdrive)

Buy a ship, provisions and cargoes to trade between the harbours of the Coral Islands. Make a fortune if the weather and pirates let you live long enough to master seamanship and economics. A strategy/adventure game with graphics for 48K.

Jersey Quest (£5 Cassette, £9.50 Microdrive)

Following an accident, you are stranded in the labyrinth of time and must find your own way back to the Present with the aid of persons and objects from Jersey folklore. A text-only adventure for 48K in machine code (Quill).

Morse Tutor (£4 Cassette, £8.50 Microdrive)

4-19 words/minute, variable spacing, variable number of groups of random letters, numbers or mixed, random sentences, own message, single characters (including punctuation), variable pitch, FEEDBACK via screen, printer or SPEECH (phonetic alphabet via Currah u-Speech on 48K version. 16K and 48K versions on one cassette, 48K only on Microdrive cartridge).

If you have 2 or more programs on one microdrive deduct £4 from total price.

WD Software (H), Hilltop, St Mary, Jersey, C.I.

Crack codes. Win big prizes. Treasure Hunt Toolkit. HCW 4 Star rating ★★★★★ (Iss 69) £4.95. 16K or 48K Spectrum (state which).

G.W. COMPONENTS
50 OAKTREE LANE,
MANSFIELD, NOTTS.

UTILITIES

Make a QUANTUM LEAP today... Our 85 characters by 24 line screen can transform your SPECTRUM displays now!

"Micro-print 85"

is an outstanding utility that lets you select from a choice of SIX character pitches in your screen and ZX printing.

Either 85 characters-per-line,
or 64 characters-per-line,
or 51 characters-per-line,
or 42 characters-per-line,
or 36 characters-per-line,
or 32 characters-per-line.

Any pitch, any time, any place. Mix all six within any line. We even give you a COPY command for any 1 - 24 line group. "Micro-print" is incredibly versatile — nothing else comes close! The 16 & 48K cassette + Demo are £5 (£6 export) from

Myrmidon Software
PO Box 2, TADWORTH, Surrey KT20 7LU

64 MONITOR
