## Micro widows

Research is being undertaken into what could become a social problem of the 80's. You've heard of the golf widow and the cricket widow — now here's the micro widow.

The problem is addiction to computers, which gives rise to antisocial behaviour. Take the example of the working man who comes home at night, grabs a bite to eat and then holes himself in with his home computer until four o'clock in the morning. His wife and children barely see him and he prefers to work or play with the computer than do anything else.

*Continued on page 5*

## Currys steps in

Curry is moving into the home computer market in a big way. After spending 18 months preparing for a major national launch, Currys aims to increase its share of the home computer market from the current 1 1/2/2 1/2 per cent to 9 per cent by the end of December 1984.

Simon Williams, marketing director, said: "Our company philosophy is to try and test before entering a market. We have been testing the waters in Wales and Scotland and are now ready for the launch!"

Currys will be stocking six computers in most major stores: the 48K Spectrum, Commodore C16 and CBM 64, Electron, BBC and Toshiba's MSX, the HX-10. The QL will also be sold in Currys' top five or six stores.

Justifying these choices, Mr Williams explained: "We have quite good stock availability of the Spectrum and the starter pack is encouraging sales, which went up by 25 per cent during the first week of the promotion."

"The C16 is due the last week of September, and it's an ideal starter to replace the VIC-20. Commodore are backing it with heavy advertising. The CBM 64 takes us into the small business market."

## Currys

From front page

"The Electron will go to most stores, and the BBC is still a good seller. Its' starter pack provides added value."

Currys will be the first to have the HX-10, according to Simon Williams. "We'll be 10 days ahead of any other retailer," he said. "It will be in the shops on September 20." However, he doesn't anticipate selling the HX-10 in great volume before Christmas.

Peripherals will become an increasingly important area, and will be stocked in all stores. Currys realize the importance of stocking up-to-date software and is using Websters as its distributor.

"It's very important to offer the full range of software available," said Ralph Armond, responsible for the home computer operation. "It's always very difficult to organize through warehouses, which are slow and inflexible. We've chosen Websters and we'll be their second largest client. We're assured a very quick change of stock."

The top 150 stores will have merchandising operation and others will have starter packs, banded together.

Currys plans to spend £½ million promoting its launch and will be inserting catalogues in the Radio Times. The possibility of TV coverage has not yet been finalized.

Currys has pledged its commitment to training. At least one member of staff from every branch has participated in a two-day course at Currys staff training centre. "Our staff already have a lack of technofear," said Simon Williams. "They're used to selling appliances with plugs on." Currys aims to avoid baffling clients with jargon, while providing the guidance and help necessary.

## Widows

From front page

Margaret Shotton of Loughborough University Department of Human Sciences is researching for a PhD on the psychological and social effects of excessive computer usage.

"It's a subject which has fascinated me for a number of years," she said. "This is a problem which is causing great distress in families in some cases. Wives sometimes find themselves forced to issue ultimatums — either it's the computer or me. It can be a

worse problem than for golf widows, since the computer is always there."

Ms Shotton is in the initial stages of her research and so far has studied 100 adults — of whom only four are women — and is now looking for children and women to study. It's a problem for which she has a great deal of sympathy, and she is unhappy about the sensational press coverage she has received so far.

"This problem may affect only one per cent of all micro users," she said. "However, if you take the estimate of 2 million home computer users in Britain, that's still a sizeable amount. What's more, it's a problem which is very real for the family of the individual concerned."

With 100 computer users studied, it is too early to establish a pattern of behaviour. Why do some enthusiasts devote themselves so entirely to their computer that other aspects of their life suffer? This is something which is still to be ascertained — and you could help.

If you have relatives or friends who spend a disproportionate time in front of their computer, and they will agree to help Margaret Shotton with her study, then contact her. Each case will be handled in confidence and Ms Shotton will be grateful for any help towards establishing the cause and effects of this new social problem.

Margaret Shotton, Department of Human Sciences, Loughborough, Leics LE11 3TU

## UK chess contest

Make your Move is the name of the computerised chess championship which Acorn, together with Ceefax, is sponsoring for UK primary school children. In the final stages contestants will be competing from their own schools on BBC micros, linked by direct telephone line to the Ceefax Computer Centre in London. And if you're a chess enthusiast interested in spectating, you'll be able to watch on Ceefax.

Regional heats will take place in October, and around 26,000 schools have been invited to take part. Contestants will be whittled down to eight regional winners for the national final which is to take place in January.

The first prize is a complete BBC system for the winner's school, including monitor,

cassette recorder and teletext adaptor. The second prize-winner will receive a BBC B for his or her school, and six finalists will take home a teletext adaptor or cash equivalent. All finalists will be able to keep an engraved chess

clock for themselves.

Competition entries must be submitted by Wednesday 17 October, and can be obtained from RWJ Tonkin, 21 Rumbold Lane, Wainfleet All Saints, Skegness, Lincs.

William Hartston, International master, supervises chess on the BBC

## Spine chilling

Mastertronic recently launched the latest in its range of low-cost software, Chiller. The press launch took place at London's Peppermint Park, where journalists were treated to a display of dancing by a Michael Jackson look-alike.

Inspired by the Michael Jackson record Thriller, the game is part of the so-called second generation of Mastertronic games. Martin Alper, Mastertronic managing director, said: "This game should convince the industry once and for all that we can publish a quite exceptional program and still keep the price at £1.99."

Chiller was written by David and Richard Darling and features five different screens. The game involves a journey through a forest, cinema, ghetto, graveyard and mansion and your task is to rescue your girlfriend who is being held captive. Ghouls, zombies, ghosts and bats threaten you.

Mastertronic, Park Lorne, 111 Park Rd, London NW8 7JL

## Well done!

There were ten titles concealed in our Dk'tronics wordsquare. They were: Jawz, Diet, Proteans, Apple Jam, Trom, Speed Duel, Slicker Puzzle, Road Toad, Astron and Who Dares Wins.

Here are the names of the ten first prize winners, who will each receive a Spectrum key-

board: D J Schofield, Liverpool; P Shepherd, Nottingham; Michael Clarke, Consett, Co Durham; A C Williamson, Brighton; C Butterworth, Halifax; K Giggell, Cwmbran; N Sheikh, Morden; Thomas Allan Barr, Aberdeen; Gerald Machin, Leeds; Steve Adison, London.

The forty runners-up, who win two Dk'tronics games, are: F Ashley, Birmingham; Kevin Satchell, Sawston; Peter Van Allen, Weymouth; Richard Wright, Richmond; J K Tan, Edgware; Mark Graham, Congleton; K R Laslett, Wembley; A Logie-Campbell, Cheltenham; G Tew, N Finchley; Lars Jensen, Dalmose, Denmark; John Owens, Luton; M A Casey, Derby; Andrew J Hutchinson, Southampton; L S Golden, Cowbridge; Paul Hinde, Wirral; P Fairbairn, Stockport; P M Lovelock, Chelmsford; Jeffrey MacDonald, Mid Lothian; E Oates, Blyth; F A Beale, Blanford; C Beard, Walton; A Sagar, Stockport; Richard Green, Norwich; Robin Davies, Redruth; K Longley, Heywood; D Kinsella, Manchester; David Tomblin, Rhyl; S R Blackshaw, Liverside; David Ayres, Stoke; H Collings, Aldershot; S G Mitchell, Basingstoke; Paul Hudson, Milton Keynes; P M Williams, Ebbw Vale; Nigel McGee, Nottingham; M A Burns, Sutton; M E Taylor, Birmingham; T Quinton, Horsham; Richard Branton, Redruth; S Brodie, Hull; Lynne Turner, Hull.

Atlantis is Intrigue's new game for the Texas. "A fully animated arcade adventure"; is how Intrigue describes it. It has more than 80 different scenes and the first person to discover the secret of Atlantis will win £50. Price: £6.95.

Intrigue, Cranbrook Rd, Tenterden, Kent TN30 6UJ

Good news for all Memotech users: Level 9 Computing has converted Colossal Adventure, Adventure Quest, Dungeon Adventure, Snowball and Lords of Time for the Memotech. All games will cost £9.90.

Level 9 Computing, 229 Hughenden Rd, High Wycombe, Bucks

# Win a prize in the HCW survey

**Tell us what you think of HCW  
— it's your view that counts**

Here's your chance to give us your views on HCW and at the same time we're giving you the opportunity to win prize software or books for your computer.

This week, instead of our usual competition we're including a questionnaire all about you, your computer and Home Computing Weekly. We want to know all about our readers and what they expect from us. The senders of the first 25 questionnaires received will each win software or books as prizes.

All we want you to do is fill in the questionnaire on this page. Just tell us who you are, what sort of computer you own and so on. There's also a section about HCW in which you can give your views on the magazine. Write down what your favourite HCW features are: it could be the reviews, the charts or anything. It's entirely up to you.

We also want to know if there's anything that you dislike about HCW. Maybe you think there aren't enough listings for your home computer — tell us, because that's the sort of information we need to find out. There's also a section where you can include your recommendations for improving HCW.

From this information we'll be able to discover what we're doing right (and wrong!) and so we'll know what improvements to make on the pages of your magazine.

So what are you waiting for? Simply fill in the form, mark your envelope HCW Survey and post it off in time to reach us by first post on Friday October 5, 1984. Remember that HCW is your magazine and we won't know what you think of it unless you tell us yourselves.

# The computer game is DEAD...

## Astronomer 48K Spectrum £9.95

CP, 2 Glebe Rd, Uxbridge,  
Middx UB8 2RD

Astronomer is amazing. Taking latitude, longitude, and time parameters it calculates the position of the stars and planets, then displays them in a variety of formats so that you can peep into the future, or the past, and view the night sky exactly as it will be, or was, from any point on the Earth.

When viewing a section of sky you can ask that constellations are drawn in, or planets highlighted or you can view the planets in the Solar System, and watch their movement from the input date.

Using the Spectrum's computational facilities, any view from

any part of the Earth at any time can be synthesised, so it is suitable for enthusiasts to calculate rising and setting times, and positions of bodies in the Solar System. There is, however, a time penalty while the Spectrum grapples with the maths involved.

The graphics are stunning, it's like looking up on a clear night, and there's a fascination in looking at the sky as the Romans saw it, or on the night of your birth. A well written manual guides your use of this first class package.

## Computer Scrabble Commodore 64 £12.95

Leisure Genius, 3 Montagu Row,  
London W1H 1AB

It's quite some time since a Spectrum version of Scrabble appeared; now a Commodore version is available and it was worth waiting for.

The cassette version of the program comes in a cardboard box with a clear instruction leaflet. It has a vocabulary of over 11,000 words, so it takes an age to load. You can have up to four players, any or all of which can be the computer.

There are a lot of nice touches, including graphics for use on black and white TVs, options to allow you to watch the computer thinking, see other players' racks

and ask for a hint if you're stuck and receive comments on your efforts. You can cheat by challenging the computer's words, ignoring its challenges, or swapping letter racks in the middle of a game.

There are four play levels and the computer should score an average of 350 points in a two-player game at its highest level. It only managed a score of 215 against me — but unless you're a Scrabble champion, you should still find it a worthy opponent.

## White Lightning 48K Spectrum £14.95

Oasis, Alexandra Parade,  
Weston-Super-Mare, Avon

This is not a games designer program, but a complete development system. White Lightning appears to have no limitations. The demo tape shows huge, neatly defined and coloured sprites (shapes) moving at a variety of speeds, some lightning fast, rotating, rising, falling and accelerating in a professional, flicker free manner.

The manual explains that this is a suite of programs to design sprites, and manipulate them on the screen. Using the Z80's interrupt facilities, two actions can take place simultaneously, by accessing the animation language IDEAL. This can be done from BASIC whilst you become familiar with it. The really professional effects are produced by using Spectra Forth, which is included, and which you need to learn.

So what's the advantage? White Lightning is easier to learn, and when learnt, all the routines are available. You don't have to write them for yourself before getting on with the games design. You are free to publish games written using this package, so all you need for professional games production is this small amount of money, time, and imagination! Very impressive.

## Graphics Designer Commodore 64 £9.95

Supersoft, Winchester House,  
Canning Rd, Weadstone, Har-  
row HA3 7SJ

If you're looking for a package to help you design user defined graphics and sprites, look no further, this one's the best I've ever seen. The strength of this package is that the author has looked at the problem and found the ideal solution.

A grid is used to give a blow up view of the sprite or UDG. Any changes made to this blow up are reflected in the sprite or UDG selected. There are commands available for the setting and clearing of points, the reversing, inverting and shifting of the pattern.

The joy of the program is the operation in multicolour mode. Most other programs expect you to remember which bit combination gives which colour. Character designer does this for you by allowing you to choose your paintbrush. The colours are shown on the blown up version giving a better idea of the sprite or UDG. A work area is given in the UDG mode enabling you to build up macro designs using several UDGs.

Overall, fast reliable machine code package making the design of graphics trivial. At this price, excellent.

A.W.

instructions	100%
ease of use	90%
display	90%
value for money	95%

## Graphics Editor Commodore 64 £14.99

Romik, 272 Argyll Ave, Slough,  
Berks SL1 4HE

This is a three part package for designing user defined graphics, sprites and creating screen designs. There is also the facility for the creation and running of animated sequences using sprites.

As such the sprite and UDG editors are unexceptional and of average quality. There are the usual commands for the setting and clearing of points, the reversing, inverting and scrolling of designs. You can also, OR, EXOR and AND specified UDGs or sprites. The implementation of multicolour mode was poor and you have to remember which bit pattern gives which colour.

The strong point of the package is the screen editor. This enables you to use your UDGs (not sprites) to design the screen layouts. These screens can be saved and reloaded later. There are commands for specifying colours, placing of characters and creation and movement of areas of screen.

Overall this is a handy package whose high point is the screen editor. The package operates reliably and speedily and is of acceptable quality, albeit overpriced. It's not the best character editor I've used but it's worth a close look.

# Design and draw

The Dragon doesn't provide the true user defined graphics, but instead has the powerful GET and PUT commands. However it is possible to simulate UDGs very simply.

First, find out the eight binary numbers which must be used to define the character. To do this, type in and use the program given below. The commands are as follows:

**CURSOR KEYS** move the cursor around the grid

**FILL (F)** fill in the square the cursor is on

**CLEAR KEY** clear the square the cursor is over

**RESTART (O)** clear the grid and restart the program

**PRINT (P)** send the binary numbers to the print (only use if print attached)

**SAVE (S)** save to tape the character

**LOAD (L)** load back from tape a character

**END (E)** end the program

While you are defining a character you will be able to see it at the bottom of the screen. The binary numbers are displayed to the right of the grid.

To use these numbers in your program you have to POKE the numbers on to the screen and then GET them into an array.

## Example program

```
10 PMODE4,1
20 PCLS
30 SCREEN 1,1
40 FOR A=1 TO 8
50 READ B
60 POKE &H600+A,B
70 NEXT A
80 DIM C(8,8)
90 GET (0,0)-(7,7),C,G
100 END
110 DATA 255, 255, 255, 255,
    255, 255, 255, 255
```

This program defines a solid block and shows your UDG. This is easier than drawing the characters on screen then GETting them into an array.

Now you can use the PUT command as normal.

## Variables

**A(20)** PUT details for a full square  
**B(10)** cursor  
**C(10)** blank out a filled square  
**D(8,8)** 1 if square is filled, 0 if it is not  
**ES(9)** string of instructions used to draw characters on screen  
**A** X position of cursor on grid  
**B** Y position of cursor on grid  
**C** count in FOR... NEXT loops  
**AS** used with INKEY\$ statement to get a character from the keyboard  
**NS** used for filename when character is saved on to or loaded from tape

## How it works

**10-130** dimension arrays, set variables  
**200-350** draw grid on which characters will be designed  
**360-390** place cursor on screen  
**400-470** check if any cursor keys are being pressed and move accordingly  
**480-580** check for options such as FILL or CLEAR  
**590-630** reverse cursor  
**640-700** print out a line of character at the bottom of the grid  
**710-860** save character routine  
**870-1020** load a character from tape  
**1030-1120** print out character number at side of grid  
**1130-1240** calculate correct binary numbers and convert them to decimal  
**1250-1370** calculate all numbers and print up all lines of characters  
**1380-1530** print numbers out to a printer  
**1540-1630** definitions for numbers printed on screen

## Hints on conversion

This program should run as it stands on the Tandy 32K colour computer with Extended BASIC. If you wish to convert it for another computer here is a brief list of some of the Dragon's commands:

**PMODE4,1** set graphics to a two-colour mode giving a resolution of 256\*192  
**PCLS** clear graphics screen  
**LINE** draw line between two points  
**GET** move a section of screen onto a given array  
**PUT** plot array back on to screen  
**SCREEN** alternate between graphics and text screens  
**PSET** plot a point on screen  
**OPEN "O"** open file for output  
**OPEN "I"** open file for input  
**PRINT#-1**, print to file  
**INPUT#-1**, inputs from a file  
**CLOSE** close both types of file  
**PRINT#-2**, print out to a printer

# Attention Spectrum Owners

**SPECIAL OFFER  
EXCLUSIVE TO  
H.C.W. READERS**

**Buy any two of these best sellers . . .**

## BIRDS & BEES

An animated cartoon-style arcade game featuring Boris the Bee. Collect as much nectar as possible, whilst avoiding the insects.

**£5.95**

## CAVERN FIGHTER

The best scramble-type game available on the Spectrum.

**£5.95**

## THE COMPUTER COOKBOOK

A 2 cassette pack containing over 80 detailed recipes, menu, planner, and wine guide. A must for the Micro Mum! (counts as one tape)

**£9.50**

## MANIC MINER

The all-time best selling game for the Spectrum. The original and the best.

**£5.95**

**. . . and claim any two of the following**

**Absolutely FREE!**

## POOL

An adaptation of the popular pub game for one or two players.

**usual price £5.95**

## STYX

An action-packed arcade game. Can you battle your way across the river Styx and the spider-filled maze?

**usual price £5.95**

## GENERAL ELECTION

A game of strategy for 2-4 players. Decide your policies, but keep an eye on the swings.

**usual price £6.95**

## THE CASTLE

A traditional adventure game. What perils await you in the dark passages and chambers of the castle?

**usual price £6.95**

**Mulberry House, Canning Place, Liverpool L1 8JB.**

**Offer available while stocks last**

## MAIL ORDER COUPON

## Strip Poker Commodore 64 £9.95

US Gold, Unit 24, Tipton Trading Est, Bloomfield Rd, Tipton, W Midlands

Here's a program to set you drooling, a card game with multicolour hi-resolution nudes (all done in the best of taste... of course). After the plethora of pontoon games, it was nice to play something a little more taxing. This program is a good implementation of draw poker. And, to a relative amateur at the game, presents a good challenge.

The screen is split into two portions. The top half shows the full colour picture of your glamorous opponent and the bottom, rather smaller portion shows the cards.

You each start with \$100 and

your opponent can borrow \$100 by removing a garment. All the normal facilities are available including betting, raising and calling. You can change any number of your cards and all is done with tolerable sound effects of shuffling and dealing.

The tape comes with two opponents, one on each side and each equally attractive. Turbo loading is used and operates without problems. My one complaint is that a joystick must be used to play the game.

In all an excellent buy, if only for the graphics. **A.W.**

ease of use	95%
graphics	95%
value for money	95%

## Caverns of Khafka Commodore 64 £7.95

US Gold, Unit 24, Tipton Trading Est, Bloomfield Rd, Tipton, W Midlands

This is the latest offering from the author of Forbidden Forest and Aztec Challenge. The question is, does it live up to the same high standard? The answer is no. Whilst the same imaginative use of user defined graphics is utilized this game doesn't have their addictive quality.

The action takes place in a maze of caverns shown in side view. You control an Indiana Jones type character in his search for sacred tablets.

He is opposed by vampire bats, scarabs, falling rocks and

pools of larva and acid. This hero is quite versatile being able to walk, jump, crawl, climb a rope and shoot (all by means of the joystick!).

When a tablet is found, it must be carried via a lift to a spot in the bowels of the earth. Collect five, and you are conveyed to the inner sanctum where you must avoid guards and reach the statue of the sphinx. If you achieve this you are awarded cash and the saga is repeated.

Overall a great idea using great graphics and nice sound which rapidly runs out of steam. **M.W.**

ease of use	80%
graphics	80%
value for money	60%

## Astro Chase Commodore 64 £8.95

State Soft, Business & Technology Centre, Bessemer Drive, Stevenage, Herts

This game is similar to Asteroids but with greater depth. The screen shows the earth surrounded by a large number of planets and stars. As you move your spaceship about, the screen scrolls to show more of the universe.

The idea is to protect the earth from megamines which home in from outer space. If one hits the earth... oblivion. As you zip about shooting the megamines, you are attacked by spaceships. There are eight types, each with different abilities. As you progress your energy level drops. This can be replenished by rendezvousing with Energy Generators. There are also shield depots which will replenish your protective field.

The game has a high degree of complexity and there are a variety of tactics open to you. The graphics are excellent and very colourful. Sound was quite good but the optional use of a mutilated version of the 1812 overture was irritating.

A comprehensive instruction booklet is supplied, but it would have been useful if pictures of the various spaceships etc had been given to aid identification. Overall, a pretty good game.

**A.W.**

# Commodore carnival

A variety of tapes for you CBM  
users — adventure,  
excitement and mystery

## Mystic Mansion Commodore 64 £8.95

US Gold, Unit 24, Tipton Trading Est, Bloomfield Rd, Tipton, W Midlands

This program is billed as a graphical adventure with arcade elements. This is a tolerably accurate description and the concept is quite novel.

You control a ghost searching a 60 room mansion for 40 treasures. The rooms are on ten levels and you can choose any. You must start at level one for a maximum score. There are 15 skill settings.

Each room is shown in simple plan and presents a problem to solve, from the shooting of aliens to the solving of logic problems. The ghost can mutate into

objects like a spade, gun or torch to help in certain situations. At the base of each map is a clue sometimes giving the solution. Often access to rooms will depend on success in another room.

Time in the rooms is subject to a varying limit depending on the problem. Exceed your time and you lose a life.

The graphics are fair with minimal use of sound. The problems should give hours of frustration, but when solved, the game will have questionable value. **M.W.**

instructions	80%
ease of use	75%
graphics	70%
value for money	70%

## Flip and Flop Commodore 64 £8.95

State Soft, Business & Technology Centre, Bessemer Drive, Stevenage, Herts

My initial reaction to the demo screen of this game was that it was a Q-Bert clone. I was wrong. It is vastly superior.

You help a kangaroo and a monkey evade capture by the minions of the zoo. The action takes place on a network of square platforms in 3D linked by ladders. The kangaroo hops about the platforms, for the screens involving the monkey the platforms become ceilings from which it hangs. Since the screens alternate between the two this reversal of perspective adds to the difficulty.

Our heroes are pursued by a zookeeper and a net, both of which become progressively more difficult to evade. You must also step on squares with a square marking them white in the process. Change all of these squares to complete the screen. Scattered about the screen are flashing squares which are sticky and will impede your pursuer if lured onto them. As you progress the screens get more complex and life gets tougher.

Overall an excellent game with first class graphics and sound and guaranteed to keep you at it for hours. **A.W.**

# Don't get lost!

If you find that geography is as interesting as watching paint dry, then perhaps the subject has not been made interesting enough for you.

With the Towns and Cities program, you have the chance to learn exactly where certain towns are positioned in mainland Britain.

The program is split into three sections: show, locate and test. The show mode displays all 50 towns in the memory (five at a time), on a base plan of Britain. This routine can be performed at any one of five speeds to suit the user.

The second option — locate — will find and display a town or city of your choice (provided it is in the computer's memory), so you can take some time studying the position of individual towns.

Once you think you know where all the towns and cities are, you can go to option three which is the test. You select how many towns you wish to be tested on, and the computer picks them at random.

All you have to do is manoeuvre the dot across the country to the position you believe is correct. When you think you have positioned the dot correctly, you press Break, Space and the computer draws a small circle around that dot.

It then compares your guess with the correct position and a

**If you find geography boring, then this program from Andrew Bird may be just what you're looking for to improve your knowledge of the names of towns and cities in Great Britain**

message appears announcing the result. The correct position is then drawn.

A data check routine has been included at the end of this program, which simply checks all the co-ordinates for accuracy. Once used, this can then be omitted.

So, if you are thinking of becoming a lorry driver, or perhaps a geography teacher, then this is the program for you.

MIND GAMES

SPECTRUM 48K · CBM64

## Atom Smasher Electron £6.99

Romik, 272 Argyll Ave, Slough, Berks

Having played this game on the new Amstrad I looked forward to trying it on the Electron too. What a disappointment! The good detailed graphics and attractive screen layout had become crude block effects in very few colours. It didn't even look like the same game. This company always supplies a 'screen shot' from the game on the cassette sleeve, but in this case it isn't even accurate.

The aim of the game is to shoot the wandering proton in the nucleus of the atom while avoiding the electrons which circle it. It's fairly fast but far slower than on the other machine. At the same time as

shooting the proton you also have to shoot away the debris which encroaches from the sides of the screen.

All told this is a good game concept which has been very poorly implemented on this machine. The instructions are only fair, being a little too short but the keys are appropriate.

Quite honestly, if this is the best that Romik can do with the Electron I don't why they bothered.

## Alien Break In Amstrad £6.99

Romik, 272 Argyll Ave, Slough, Berks

It really does amaze me how people manage to find another combination of words to use for the basic space invader type games. This is another one of the type, and as this is a new computer I suppose we ought to have expected that someone would provide one soon.

Here we have the Zargon fleet trying to steal all our uranium. The number and variety of invaders is astounding. The motherships are dropping pods which hatch out on landing and the only way to destroy them is to drop them into your ration of five holes. If you decide to shoot them they split into two and then float around indestructibly for

a while before turning into fighters.

There are also bombs to avoid and lasers to fire. Despite all this there is little difficulty in scoring, to start with at least, and the biggest enemy I find is boredom. You never get to clear a sheet, so the invasion is quite relentless and makes me sleepy. A game to miss, if you can stop yourself buying it that is.

## Aces High BBC/Electron £14.95

Oasis, Alexandra Parade, Weston-super-Mare, Avon BS23 1QT

Claimed by the publishers to be their 'best deal yet' the programs in this package are better than the puns suggest. There are two cassettes, each containing two card game programs. All are casino-style games involving an element of betting, either against the computer or against other players.

The games are Blackjack, Pontoon (vingt et un), Stud and Draw Poker. The games play to the usual casino rules which are all fully explained in the well presented handbook.

In all games of this type there are two main areas to consider. The first is the quality of the graphics, which in this case are well presented and very attractive. Secondly there is the speed of response to input and of display, which is also very good in this case. All the games follow a similar pattern of display and input but then all packs of cards look the same too.

The computer is a competent player and, as the publishers take great pains to point out, plays fair. I still find it difficult to see the fascination in winning mythical money though!

# Golden oldies

Old favourites are given the  
once over for you by our panel  
of experts

## Red Attack Spectrum £5.99

Unique, 16 Thorney Lane South, Iwer, Bucks

A very "run of the mill" zapping game in which you steer your spacecraft from the bottom of the screen as identical alien ships weave towards you down the screen. You can jump up to five levels onward at the start, but this also loses you lives, in an attempt to increase the level of excitement. Speed is also variable, and movement keys can be defined.

The screen display is very uninspiring; monochrome ships on a white background, though they are relatively flicker-free. That's not to say the game is easy; it's not. But somehow, the idea is just not addictive.

There are 72 different waves of aliens to conquer, but somehow I don't think you'll stick it out.

If you do finally enter the hall of fame with a high score, you deserve a medal for patience.

Red Attack demonstrates how Spectrum software has progressed in the last two years. What would have been a viable commercial program earlier on, is now barely as good as the best magazine listings. As such, it cannot be recommended even if it is cheaper than usual.

## Xanadu Cottatge/ Ebony Tower 32K BBC £7.95

Alligata, 1 Orange St, Sheffield, S1 4DW

The reason for the two titles is that this is a two-game package for the price of one. This suggests to me that the adventure market must be fading a little for that is what these two games are.

They are text only adventures with a reasonable number of locations and a full vocabulary is given for both. Whilst they aren't simple, I don't think that they will tax an experienced player.

They are not clones of each other and as the screen style is different I suspect that they have different authors.

Xanadu Cottage's text is in block capitals and there is a shortened version of each description for second visits. It is very simple to restart this adventure, as there is no data file to load.

Ebony Tower does have a data file to load and this is a pain because it has to be loaded every time you are killed.

Overall this is certainly good value for money and there is plenty to keep the player interested. I haven't found the location where you 'undress' yet though!

# Attention all Dealers! Attention all Dealers! Attention all Dealers! Attention all Dealers!

Announcing the launch of a major weekly trade magazine from the publishers of Home Computing Weekly, A&B Computing, ZX Computing, Personal Computing Today and Electrical Retailing.

Each week the most experienced and respected team of journalists in the home computer and software market will bring you news and product information on developments in your market place. In this fast moving market you need up-to-the-minute information to make the most of your business. Computer and Software Retailing will provide you with this information—every week.

So if you are a retailer, manufacturer, distributor, or wholesaler of home computers and software and business micros and software, reserve your regular free copy of Computer and Software Retailing now.

Reader applications should be addressed to:

**Paul D'Inverno,  
Computer and Software Retailing,  
Argus Specialist Publications Ltd.,  
London W1R 3AB**

Advertisers who wish to take advantage of the complete high street and distributor coverage offered by Computer and Software Retailing should contact John Sorrenti on (01) 437 0626.

# Guaranteed: the buyer is responsible

One complex issue involving software has been getting a lot of press lately, and that is the area of guarantees. I'm not sure how things go out your way, but all too often, the unwary purchaser of a new program tears the shrink-wrap paper off his new purchase to find all sorts of interesting "small print" inside the front cover of the documentation. Often this small print is headed by a title similar to this: "Disclaimer of all warranties and liabilities."

In general, such disclaimers go on to state that the manufacturer does not guarantee either the suitability or the merchantability of the product. The exclusion of both these factors seems reasonable. After all, the maker cannot and should not have to guarantee that the retail store will be able to sell the program and certainly cannot be required to guarantee that an off-the-shelf program will custom-fit all its purchasers' needs.

Recently, however, a few industry observers have begun to notice a trend away from reasonable disclaimers to fairly heavy duty ones. Some of these companies bring new meaning to the phrase *caveat emptor* (let the buyer beware)! Two products, both released in the last month, have issued so-called warranty disclaimers which put the responsibility for programme quality on the purchaser. Perhaps it would be worthwhile to quote from one of the disclaimers. The proper name of the company has been changed to avoid legal problems. I have inserted parentheses for the purpose of clarity.

"(The Ripoff Program) Corporation makes no warranties, either expressed or implied, with respect to this manual or with respect to the software described in this manual, its quality, performance, merchantability, or fitness for any particular purpose. (Ripoff Program) software is sold or licensed 'as is.' The entire risk as to its quality and performance is with the buyer. Should the programs prove defective following their purchase, the buyer, assumes the cost of all necessary servicing, repair or correction, and any incidental or consequential damages." Isn't that dandy? And unsuspecting purchasers of this program would not even know the details until they took the program home and broke the seal!

Can you imagine walking into a John Lewis store, buying an appliance in a sealed carton (without looking at it first), taking it home and unpacking it, and then finding out that you were totally responsible for any defects that the appliance might have — including not doing the job for which it was specifically intended? How long do you think the department store (or any other similar business) would stay in business with such a policy?

Software companies should and must learn that it is vital to assure customers of the value of the program they purchased with their hard-earned money. There is no way to do this with the aforementioned types of disclaimers. The way to do it is by making a product which does what it is intended to do, by offering customer support, and then by stating that you do both. It isn't all that hard, "to operate within all specifications contained in its accompanying documentation." Likewise, Broderbund states, simply put, that "This program is fully guaranteed."

The bottom line is this, and it probably is unfortunate, but one day this issue of fitness of purpose will have to be settled in court and at much expense. In California, for example, there is a law which allows consumers to see and indeed obtain a copy of the guarantee on any product which costs more than \$50. To the best of my knowledge, most of the software industry is out of compliance with this directive.

A more immediate and practical solution is at hand, although I am pessimistic that it would ever be voluntarily adopted. Software makers should print their warranties and any disclaimers on the outside of their packages so that they can be read by consumers before purchase. That way we'd all know what we were getting before we got it (as it were). However as I stated above, it is far more likely that, as is too often the case,

this will all be settled in the courts.

Some interesting educational program packages have recently been announced for Apples, Atari, and Commodores. Sunburst Communications, which already markets its line of educational software, has added to its range. The Incredible Laboratory, designed for aged 7 years to adult, used the trial-and-error method to see what combinations of chemicals will create monsters (this seems to be more games than education). Challenge Maths, for ages 6 to 11, contains three subprograms (Alien Intruder, Maths Mansion and Digtosaurus) to help kids develop fundamental maths skills, estimation and problem solving. Finally, using Getting Ready to Read and Add, for ages 3 to six, allows kids to practise letter and number recognition. The program allows parents to direct their children's learning by pre-selecting which numbers and letters are to be practised and also how often. These packages cost \$39.95 each. For more information, contact Sunburst Communications, Pleasantville, New York; NY 10570.

Something I haven't done for a while is describe some new and interesting products on the marketplace. So, I will use the rest of this week's column to do just that. Want to visit Studio 64? Sounds like a famous nightclub, doesn't it? Well, in reality it is a music synthesizer and recording studio program made to run on the Commodore 64.

EnTech Software, publishers of the program, have extended the entry deadline on a promotion they have been running to push their product. Their Computer Song Writing Contest deadline is now 1 December 1984.

The programmer/musician who writes the best song on the Commodore 64 using Studio 64 will win \$1000 plus free time inside an actual recording studio. Judging the contest will be a 10-person panel of music professionals. All entries must be submitted on disc.

If you would like more information about the program and/or the contest, write to Computer Song Writing Contest, P.O. Box 185, Sun Valley, CA 91353, (818) 768-6646. Time to tune up!

Tired of boring old black and white printouts, but can't afford a colour printer/plotter? Sharp Electronics may just have contributed to the solution of your problem with its new CE-515P four-colour plotter.

The unit uses black, red, green and red pens, each of which can be programmed separately. The minimum pen width is 0.2 mm for excellent detail. When printing alphabetical characters (in four step by six step mode), the characters would be printed 0.8 by 1.2 mm. The unit can handle paper up to 8.5 inches wide and can plot on paper down to the size of the average postcard (custom art work on mailings!). It supports both EIA RS-232 and Centronics interfaces and therefore can be driven by just about any common microcomputer.

It has certain built-in commands too, such as circle, paint, and axis commands, all of which can be programmed and addressed from BASIC.

As if that's not enough, Softkey's Keychart is bundled in with the plotter. This program is designed for use in graphics production. It is menu-driven and uses a fill-in-the-blanks format to produce different types and sizes of charts. Sharp has consulted any number of software publishers so that the plotter can be commonly supported. Best of all, this amazing machine carries a suggested retail list price of a mere \$399!

For more details, contact your local Sharp dealer or write to or phone Sharp Electronics Corp., Systems Division, 10 Sharp Plaza, Paramus NJ 07652, (201) 265-5600.

can play in the comfort of your own home without losing any money.

Wall Street is a stock market simulation for the unexpanded VIC-20. It consists of two parts. The first is an outline of the game and instructions and the second part comprises the main program.

You can deal in five stocks: red glue, clear soap, soft drinks, toothpaste and magazines. You start with £10,000 cash and your intention is to double this by buying and selling stock at the right time. As in real life, market trends can change suddenly and unexpectedly, and you could find yourself losing your shirt.

On running the game you are given the current share prices followed by the exchange average. Then you'll see a statement of current assets, cash and stock.

Now make your transactions. If you want to sell stock, make the number to be sold a negative. When the day's trading ends you are given a status report of the number of shares held, the present value of your holdings and the change in value of each stock since close of business the previous day.

You need not type in part 1 if you don't require it. But it may prove useful in the future when you decide to run previously saved programs.

Your gains aren't all yours: you have to pay 2.5% to your broker on the total value of your stock holdings. Good luck: keep your eyes open and your wits about you.

## Hints on conversion

This program should convert easily to most computers. All that will need changing is the screen display layout, which is suited for the VIC's small screen.

POKEs in the program are as follows:

POKE 36879,8 gives black screen and border  
 POKE 36878 volume control  
 POKE 36876 soprano voice

Control characters to remember when converting are as follows (all in reverse):

Q cursor down a line  
 I cursor right a space  
 E print in white  
 £ print in red  
 horizontal arrow print in blue  
 PI print in yellow  
 heart clear screen  
 R reverse mode on  
 — reverse mode off

## The Journey 48K Spectrum £7.95

Temptation, 27 Cinque Ports St,  
Rye, E. Sussex

The Journey is an adventure with graphics, but only now and then. One could not describe it as being fully illustrated; of the 50 or so locations, few are pictured in the simple style we have come to expect on the Spectrum.

Your quest is set in the lands of the Black Warlock, whose Guardians are not very friendly, picking your way gingerly North to seek out the White Ship of the elves. You must defeat the Guardians, and other nasties, in order to make your way.

If you gain their respect, you may get some help from the elf, the warrior, and the wizard. All these characters have an independent life of their own,

reacting to you as they see fit!

Just to make matters more interesting, the whole land is littered with coded messages. Examine the objects carefully, and you might find a clue! Fail to act quickly, and you're dead!

Descriptions of locations are adequate, if not inspired, and the input interpreter simple but effective. Response from the Spectrum does seem slow.

You certainly won't solve this one all in one go! It's complex and tantalising. **D.M.**

instructions	100%
playability	90%

## Gem Grabber TI-99/4A £5

Stainless, 10 Alstone Rd, Stockport, Cheshire

As the title suggests, you take the jewels and run, but running is not too easy when you happen to be deep under the ground.

The screen shows a series of subterranean passageways surrounded by solid ground and crossed, in places, by walls of impenetrable rock. Randomly located in the ground are other rocks and explosives.

Using a limited supply of TNT you must bore a route through the ground into the passageways where five jewels have been placed.

Obviously you must avoid moving into the explosives, but passing directly beneath an object proves equally hazardous, as it will fall and crush you.

Since your man has only one life, after a brief rendering of "The Death March", the score is displayed and you are left to start again. Control of movement is from the keyboard.

When all the gems have been collected a bonus jewel appears. If you can take this and make your way to the exit successfully, a bonus screen is awarded.

Here you gather gems once more whilst avoiding laser shots. The jewels have been made even less accessible. **J.W.**

## Decimals VIC-20 + 16K £9.25

Chalksoft, 37 Willowslea Rd,  
Worcester WR3 7OP

This is a purely teaching program with no entertainment features. It's aims are to teach the principles of decimals to the nine to 14 year age group and to monitor their progress.

This includes the four basic arithmetical operations and the arrangement of numbers in ascending or descending order. There are graded tests to assess progress.

In creating this program the author has devised the most boring thing since a party political broadcast. Had it been given to a class of children by a real teacher the class would have fallen asleep or rioted.

The programmer seems to have forgotten that even the under nines use decimals everyday and that basic knowledge should be built upon.

No comparisons with fractions were given, which, combined with illustrations would have been useful.

In fact, no illustrations were used at all. Instead numbers were put on the screen and the user was told to write the examples in their note books.

This last point negates the value of a computer since a teacher could do this with 20 plus children while a computer only does it with 2 or 3.

In all a poor program, which at it's best, is a good, albeit expensive, cure for insomnia. **M.W.**

## Custard Pie Fight 32K BBC £4.95

Comsoft, 7 Roman Drive, Leeds

This game involves, as the name suggests, the throwing of custard pies. The scene is the kitchen and all the doors and units are displayed at the top of the screen.

You have an unending supply of pies to throw at your opponent who can be another human being, or the computer if you are silly enough.

There are nine different speeds for both pies and humans to move at and you can disable sound if you so desire. When a pie hits one of the players he just falls over, I do think a little more of a splattering of the pie would have been nice.

Another criticism is that there is no provision for joysticks in the program. This is a real pity as I think this sort of program is more for the younger player, eg my five year old, than the Arcade Freak — and they handle joysticks better. A nicely done, if average, game. **D.C.**

## Scram 20 VIC-20 £5.95

Artic Computing, Main St,  
Brandesburton, Driffield

This is a version of the old favourite Scramble. To those of you who don't know the game, it involves flying a spaceship over terrain which moves from right to left.

In the first phase, the surface is littered with missiles, fuel dumps and other items.

To keep your rocket's fuel stocks up you must bomb the fuel dumps. Not unsurprisingly, the missiles are fired at you and if they hit your ship the result is predictable. Subsequent phases give you varying terrain and different hazards to avoid.

You are equipped with forward firing lasers and bombs for protection. It is possible, using either joysticks or keyboard, to move the ship in the normal four directions.

The graphics are to a fair standard and movement is tolerably smooth. I found the game difficult to play with everything happening at a frantic pace. The second phase was particularly nasty and I didn't manage to progress beyond that point.

This game is very addictive and should provide hours of harmless fun. I've seen one or two versions of scramble on the VIC and this one is as good as the rest.

# COMPUTER MODELLING

Computer games are a lot of fun, but there isn't always much to show for your efforts when it's time to pull out the plug. But you can use digital technology to make something you can keep and be proud of – computer controlled models.

Digital electronics have gone beyond being something you plug into the TV. Now you can use them to operate a real working model layout. Model railways aren't for kids anymore, and we've got the magazine to show you why.

**YOUR MODEL RAILWAY** – only 80p

## MAIL ORDER PROTECTION SCHEME

If you order goods from Mail Order Advertisers in this magazine and pay by post in advance of delivery, this publication will consider you for compensation if the advertiser should become insolvent or bankrupt, provided:

1. You have not received the goods or had your money returned; and
2. You write to the publisher of this publication explaining the position not earlier than 28 days from the day you sent your order and not later than 2 months from that day.

Please do not wait until the last moment to inform us. When you write, we will tell you how to make your claim and what evidence of payment is required.

We guarantee to meet claims from readers made in accordance with the above procedure as soon as possible after the advertiser has been declared bankrupt or insolvent to a limit of £1,800 per annum for any one advertiser, so affected, and up to £5,400 p.a. in respect of all insolvent advertisers. Claims may be paid for higher amounts, or when the above procedures have not been complied with, at the discretion of this publication, but we do not guarantee to do so in view of the need to set some limit to this commitment and to learn quickly of reader's difficulties.

This guarantee covers only advance payment sent in direct response to an advertisement in this magazine (not, for example, payments made in response to catalogues, etc. received as a result of answering such advertisements):

**CLASSIFIED ADVERTISEMENTS ARE EXCLUDED.**

# It's easy to complain about advertisements. But which ones?

Every week millions of advertisements appear in print, on posters or in the cinema.

Most of them comply with the rules contained in the British Code of Advertising Practice.

But some of them break the rules and warrant your complaints.

If you're not sure about which ones they are, however, drop us a line and we'll send you an abridged copy of the Advertising Code.

Then, if an advertisement bothers you, you'll be justified in bothering us.

**The Advertising Standards Authority.** ✓  
If an advertisement is wrong, we're here to put it right.

ASA Ltd, Dept 2 Brook House, Torrington Place, London WC1E 7HN
