

# THE Best OF Sinclair Programs

HOURS OF FUN  
WITH 100 PROGRAMS  
FOR THE SPECTRUM,  
ZX-81 AND ZX-80

**SPECTRUM COMES TO LIFE !**

# ABBEX

**THE GAMES PEOPLE**

## SPOOKYMAN

EAT THE PILLS AND KEEP AWAY FROM THE GHOSTS. EAT THE VITAMINS AND CHASE THE GHOSTS. FULL MACHINE CODE ARCADE ACTION AND SOUND. DESIGNED TO MAKE YOUR ADRENALINE RUN HIGH. PRICE £4.95

## COSMOS

YOU HAVE THE JOB OF PROTECTING A CONVOY FROM ALIENS AND METEOR STORMS. WATCH OUT FOR THE SPACE MINES AS YOU PLAY THIS AMAZING MACHINE CODE ARCADE ACTION SIMULATION PROGRAM. PRICE £4.95

**OTHER GAMES IN OUR SPECTRUM RANGE INCLUDE:  
ANDROIDS RUN, HIGH NOON, ETX, INVASION,  
FAUST'S FOLLY (Adventure), HARRIER - ALL AT £5.95**

If you would like to contribute to any of the Sinclair User group of publications please send programs, articles or ideas for hardware projects to:  
Sinclair User and Programs,  
ECC Publications,  
30-31 Islington Green,  
London N1 8BJ

Programs should be on cassette and articles should be typed. We cannot undertake to return them unless a stamped-addressed envelope is included.

We pay £10 for the copyright of each program published and £50 per 1,000 words for each article used.

## "IT LOOKS NICE BUT WHAT THE HELL CAN I DO WITH IT?"

Every ZX SPECTRUM Print'n'Plotter Jotter has 100 pages of finely printed screen grids.

50 for the high resolution screen. 50 for the normal character screen.

With these at your disposal you can plan practically any graphics print-out to program into your computer.

The high-resolution PLOT grid shows every one of the 45,060 pixels! Every one printed. Every one with its co-ordinate numbers. This gives you enormous graphics power to DRAW, PLOT, CIRCLE, PLOT OVER and so on in any position or screen building up graphic drawings, charts, maps... In fact anything without the complications of guesswork, Integer out of range, or wrongly positioned pixel colours which change PRINTED INK characters!

The normal character PRINT grids on the other hand will allow you to be specific about PRINT AT, TAB, PRINT OVER, SCREEN% and INK/PAPER in direct co-ordination with PLOT... you see every page is printed on high quality tracing paper... Ideal to overlay on to illustrations and 'copy' or co-ordinate.

And there's another bonus, because each page contains 24 User-definable grids — 2400 per pad!

With 50 pages of PLOT grids, 50 pages at PRINT grids 2400 user-definable grids, a set of colour pens, a printed PIXEL RULER and our Special Offer of demo programs, IT'S THE BEST VALUE IN ZX GRAPHICS PROGRAMMING.

## "NOW WHICH KEY DO I PRESS TO SHOOT DOWN THE THING FROM MARS?"

Ever forgotten which key to press when playing a game? Do you suffer from a mind-boggling mass of programmed keys? Do you write programs that use different keys to perform various functions? If so, we have just the thing for your ZX SPECTRUM.

**A pack of Print'n'Plotter Keyboard Overlays.**

Just write the function or functions under each key you program and keep the overlay for the next time you play the game. Of course there's lots of more uses you will find for our OVERLAYS, user defined characters, keyboard scanners, mathematical programs, business uses — to name just a few.

**There's TEN OVERLAYS to a pack — so you can program with impunity!** And they fit perfectly onto your standard ZX SPECTRUM KEYBOARD. Each OVERLAY is printed with the cursor movement key directions and there's room for program name etc.

## "ZX81 GRAPHICS BETTER THAN SQUIGGLES AND BLOBS?"

Disappointed with ZX81 Graphics? Perhaps you haven't explored the vast possibilities.

Why not invest in a ZX81 JOTTER, FILM and our guide "ZX81 Graphics programming made easy"?

The JOTTER is a 100 page pad of PRINT grids and PLOT grids with all numbered co-ordinates. The FILM is a re-usable matt transparent polyester version of the grids which can be drawn-on and used again... Ideal for overlaying and copying.

The 24 page full colour guide will show you how to use the JOTTER and FILM to produce perfect low resolution graphics on your ZX81!

So stop squiggling. Get a set now!

## "PRINTER PAPER THAT WORKS? I DON'T BELIEVE IT!"

Five rolls of our PRINTER PAPER will only cost you £10.95. And you will gain a great deal more! It prints beautifully. It's not too thick. It's not too shiny. Print is black — not grey. It actually feeds through the machine! See for yourself. Only £10.95 for 5 rolls. Beware of expensive Imitations!

## "WHERE CAN I GET THEM?"

Post now or call at one of our retailers!  
Post to Print'n'Plotter Products, 19 Borough  
High St., London SE1 9SE.

## SERIOUS SPECTRUM SOFTWARE only £9.95 each!

### USE AND LEARN

Your perfect Spectrum starter Kit. 25 original BASIC programs you can use immediately, PLUS 118 page manual to help you get the most from your 16 or 48K Spectrum. 25 programs include: Music Composer, World Atlas, Computer Term Glossary, Screen Designer, Star Maps – PLUS games and powerful routines to use in your own programs: graph-drawing, text-editing, sorting, searching and much more. 118 page manual includes detailed description of programming techniques, full listings of all programs, and articles to develop your own program-writing skills.

"Excellent" A.R. West, Surrey. "First-time loading, user-friendly, superb documentation" J.E. Mann, Leeds.

### THE DATABASE

Whether you want to update mailing lists, manage customer accounts, or simply produce an index of your record collection, THE DATABASE makes it easy and enjoyable. A breakthrough in power and practicality, THE DATABASE allows you to store information on any subject in the way you want, and gives you a full range of commands to display, update, sort, search and print – even perform calculations. Massive storage capacity: 1,000 lines in memory at a time, over 7,000 names and addresses on a single C90 cassette. See for yourself why THE DATABASE is the most advanced 48K Spectrum database available – far more powerful and practical than Sinclair's VU-FILE and all other "competitors".

### THE SPREADSHEET

Based closely on Visicalc, the world's best-selling program, THE SPREADSHEET turns your 48K Spectrum into a "super-Calculator" that helps you solve all kinds of number-based problems quickly and easily. Hundreds of applications in business, engineering and science – and just as versatile for home finance management. Invaluable in education too, helping develop maths ability and confidence. In power, flexibility and ease of use, THE SPREADSHEET outperforms all other Spectrum spreadsheets – including Sinclair's VU-CALC. See for yourself, with the security of MiCROL'S 14 day money-back Guarantee.

### THE WORD PROCESSOR

The only full feature, professionally-written word processor for 48K Spectrums. Use it to produce memos, letters, reports – THE WORD PROCESSOR has the features you need, including flexible editing, justification, centering, and automatic "word wrap". Simplicity itself to use, THE WORD PROCESSOR uses the same "what you see is what you get" principle as word processors costing hundreds of pounds more. 20,000 character storage capability for real-work applications, and it's easily adapted to work with full size printers. Once again, MiCROL sets the standard in serious Spectrum software.

To order: Simply complete the coupon, and FREEPOST with your cheque, made payable to MiCROL (UK Mail Order). All products normally available from stock and despatched by return. Credit Card Orders: By phone 9-5.30 Mon to Sat. stating name and address, Card No. and item(s) required.

# SURROUND

**Y**OU WILL probably recognise **Surround** as soon as you RUN it. It is a version of a fairly standard routine in which you are required to surround your adversary before he can surround you. Both players are in continuous motion and are not allowed to cross their tracks or those of their opponent, or to hit the boundary or the score display.

What will surprise you is the way in which the ZX-81 can recognise two keys when pressed simultaneously. That is not possible using **INKEY\$** and is achieved by utilising address 16421. This contains a number which changes as groups of keys are pressed. Lines 185 to 260 translate the number into a series of possible moves.

Black uses keys 1-5 to move up, Z-V to move down, Q-T for right and A-G for left. Grey uses the keys 6-0 for up, Y-P for right, B-M for down, and H-NEWLINE for left. After a crash the other player scores one; the winner is the first to reach 15.

The routine enabling two players to participate can obviously be used in many graphics games. J Winchester of London W13, submitted the program for the 16K ZX-81.

SINCE WE loaded **Bio-rhythms** we have not been able to see the TV screen for interested parties. Everyone in the office is becoming a bio-rhythm bore.

The program requires your date of birth and the current date and then displays a neat chart of the month, with curves for the physical, mental and emotional cycles.

Your physical state varies over a 23-day cycle and relates to your endurance, strength and aggressiveness. The emotional cycle lasts 28 days and governs anger, moodiness and optimism/pessimism. Mentally, you oscillate between Einstein and ape over a 33-day cycle.

The program was submitted by R Clark, of Saltash, Cornwall.

270 PRINT "FUEL LEFT=";J

```

**W**E DO NOT often print **Space Invaders** games but because this is so neat and because it fits on to a 1K machine we decided to give the old routine another airing.

"A fleet of 20 'X' ships is attacking you," writes C J Barnatt of Worcester. "You must destroy at least 15 of them or be destroyed."

The cursor arrows move you up and down and the 8 fires your laser. Every time you move or fire you use one fuel unit out of 200. If you destroy all the 'X' ships, the amount of fuel remaining is displayed.

# KNIGHT'S MOVE

**K**NIGHT'S MOVE uses the movement pattern of the Knight in chess to try to cover every space in a square. The program asks where you wish to start on the board, giving the vertical co-ordinate first, and then marks the moves as you make your way round the board.

There is a check routine to make sure you cannot cheat by making an incorrect move or land more than once on the same square. When no more squares can be visited, enter 0 as the number for the next square.

Press NEW LINE to replay the game or any other key and NEW LINE to end the game.

The graphics in line 20 are the capital I reversed with two reversed dashes, shifted J, between each. In line 30 the dashes are replaced by reversed spaces.

Knight's Move was sent by K M Godolphin, of Camborne, Cornwall, and needs 16K RAM.

**T**WO GERMAN readers have sent an excellent game, inspired by a trip across the Channel on the way to a holiday in England.

You are the manager of a ferry company. You have a working capital of £200,000 and your job is to double it. Running costs are steadily depleting your resources, but you make a profit of £150,000 on every trip.

As our two readers noticed, the Channel is extremely crowded and one of the major hazards you face is the frequent collisions which return you immediately to your point of departure. Only a steady hand on the tiller—that is, keys 5 to 8—can save your time and money.

A great game, which has fascinated half the office for days. Take care, or you will, as our German readers have phrased it, "have to declare the bankrupt".

Channel Crossing was sent in by Bjoern and Henrik Wolter of Hanover.

# ROCKET ATTACK

**I**N *Rocket Attack* for 1K machines the player is in control of a guided missile launcher defending the shores from air attack. A rocket launcher is situated at the bottom left-hand corner of the screen, while enemy planes approach at random height from the right.

To fire, the P key is used and, when depressed, a rocket is launched, rising at 45 degrees. The rocket will continue its advance only as the key is depressed, so there is a measure of control over its progress. Aircraft can be destroyed either by scoring a direct hit or by leaving the rocket in the path of the aircraft.

*Rocket Attack* was submitted by D E Healey of Coseley, West Midlands.

# CLOCK

**C**LOCK uses a FOR and NEXT loop in which to keep the time rather than the more conventional PAUSE statement, resulting in a clearer screen display.

Running in slow mode, the program does not include seconds and, because of zero suppression, the time entered as 10.09 will appear as 10.9.

According to author Chris Hutchin of Cirencester the clock is accurate to a few seconds a day. To start, type the usual RUN and, when prompted, put in the hour and then the minutes. Use BREAK to get out of the program. It will run on 1K machines.

# HANGMAN

**G**ILL of Westerham, Kent has produced a game of **Hangman** which can be played on the ZX-80. The program, as written, contains a set of 12 six-letter words which it chooses at random and the player has to guess it, losing one life out of 10 each time an incorrect guess is made.

If the player guesses correctly, the screen shows: "Well done, that is it". If you run out of lives it says. "You are dead".

The line of words can include a total of about 70 letters, so that other combinations, such as 14 words of five letters each, can be used. If other groups are used it is necessary to change line 5. If the case of 14 words of five letters it would read

5 LET A=RND ((14)-1)\*5.

```

5 LET A=RND ((12)-1)*6
10 DIM L(6)
15 LET AS="LETTER NORMAL BATTLE
VISION MUTINY BARREL VOYAGE
RETURN DEVOID MUTTON BOTTOM
REFORM"
20 IF A=0 THEN GO TO 30
25 GOSUB 200
30 FOR G=1 TO 10
35 PRINT "INPUT YOUR GUESS"
40 PRINT
45 INPUT GSY
50 CLS
55 LET T=0
60 PRINT "YOU,VE GOT "; 10-G; " LIVES
LEFT"
65 PRINT
70 FOR B=1 TO 6
75 IF CODE(BS)=CODE(GS) THEN LET L(B)
=CODE(GS)
80 IF L(B) > 0 THEN PRINT CHR$(L(B)); " ";
(space)
85 IF L(B)=0 THEN PRINT "-"; " ";
90 IF L(B) > 0 THEN LET T=T+1
95 LET BS=TL$(BS)
100 NEXT B
105 GOSUB 200
110 IF T=6 THEN GOTO 400
115 PRINT
120 NEXT G
130 GOSUB 200
135 CLS
140 PRINT "YOU'RE DEAD"
145 PRINT
150 PRINT "IT WAS";
155 FOR B=1 TO 6
160 PRINT CHR$(CODE(BS));
165 LET BS=TL$(BS)
170 NEXT B
175 GOTO 420
200 LET BS=AS
205 FOR B=1 TO A
210 LET BS=TL$(BS)
215 NEXT B
220 RETURN
400 PRINT
410 PRINT "WELL DONE, THAT'S IT"
420 POKE 16421, 24

```

AS contains 12 words each six letters long. Any words can be substituted so long as they are all the same length. Words of, say, five letters long can be used, when AS can be 14 words long—AS can contain about 70 letters. Line 5 should then be changed to:

5 LET A=RND ((14)-1)\*5

# PAINTPAD

PLOT t,y(h)+r: DRAW 0,y(d)+INT (
-g(d)*(x(d)-t))-y(h)-r: NEXT n:
PAUSE 0: GO TO 20

```

**T**HE AUTHOR of **Paintpad** was prompted to compose it when he noticed that the Spectrum had no **PAINT**—or **FILL**—command. The user can draw the outline of a shape and then cause that outline to be filled-in. As it stands, the program can handle a shape with up to 99 vertices but that limit can be changed by altering the number 99 in lines 20, 30 and 170.

The cursor can be moved in any of eight directions; its position is recorded on-screen and fixed with **P**. A line is then drawn to the last **P**. When the shape is complete it is filled with **H**.

If **CLS** in line 190 and **PAUSE 0** in line 230 are omitted a cumulative shape can be built-up in successive runs, as it re-sets itself at the end of each run.

With the two commands in, the instructions at the top of the screen will be removed before the shape is filled. That is convenient if the filled shape is to be stored as a **SCREENS**.

Submitted by John McKeown of Upminster, Essex.

# ZX BANNERS

**I**F YOU are wondering what to do with your printer why not try ZX Banners which will print out banners of as many letters as you want each three inches high. Letters are printed sideways, so the length of a banner is restricted only by the amount of paper in the printer.

While letters and graphics will work, functions will not. The width of a letter can be changed by altering line 910—e.g., by inserting FOR F=1 to 4 would double the width.

ZX Banners was sent by Christopher Holt, of Gravesend, Kent.

```

# SHOOTING RANGE

A VERY frustrating game has been sent by Christopher Wysocki, of Swindon, Wiltshire. It is called **Shooting Range** and involves firing at a range of constantly-changing letters.

The letters have values ranging from one for A to 26 for Z and the aim is to achieve as high a score as possible. A time-limit is imposed by a grey square which travels along the row of letters and the game ends if it is not shot down before reaching the end of the rows.

It is a simple program and because of that the movement of the bullets from the gun is slow and only one shot can be fired at a time. That makes it difficult to hit the grey square, as you have to anticipate its position in good time.

Throughout testing, our reviewer found it impossible to hit the grey square but still managed a high score of 314.

The gun is moved to the right and left by the cursor keys and the upward cursor, key 7, is used for firing. Graphics notes:

Line 70, a shifted Q with a space on either side and shifted 3 with a space on either side; the grey square is a shifted H and the double quotes throughout have a space between them except for line 580.

# Treasure Island

Lat. 5° 34' 52" N

Long. 82° 24' 11" W

## TREASURE HUNTER

**T**REASURE HUNTER is a clever little game in which a hunter, denoted by an asterisk, has to find treasure which is hidden at a random position on the screen. The only assistance given to the hunter is that he is told when he is getting warmer.

It can be very annoying when, whichever way you move, you seem to be getting warmer but cannot find the exact location of the treasure. When the correct spot is found, the number of steps taken is shown on the screen, along with the program's idea of the optimum number.

The first attempt by the Sinclair Programs reviewer resulted in 453 steps taken against an optimum of five. That later improved to 84 against an optimum of 30.

The hunter is moved by using the cursor keys but an added difficulty is that if you go to the edge of the screen you bounce back so that the left and right keys and the up and down keys can become reversed.

Treasure Hunter was sent by P Brown of Charlesworth, Derbyshire.

IF YOU detest having to work out compound interest, this program is for you. It works out the compound interest automatically once it has been told the principal, the rate of interest, and the number of years to be considered. It can also work out simple interest problems.

A short program, fitting into the 1K ZX-81, it was sent by Stephen Booth, of Barnsley, South Yorkshire. He said it is useful helping him with his homework.

# Owzat

A SIMPLE GAME based on the famous cricket dice game. **Owzat**, simulates a simple form of the complex summer game. Once running, it runs automatically through until a team of 10 has completed its innings and gives the total score. The game is repeated to find the score of the opponents.

One problem which readers might like to tackle is to find a way of removing Owzat and not out once an appeal has been turned down. Because of this it is not known when another appeal has been made until one is allowed and the next batsman's score is shown.

Owzat fits into 1K ZX-81 and was sent by Nick Gray of Burton-on-Trent, Staffordshire.

# ALIEN LURE

A GAME which links the bug-baiting type of program with a battle against alien invaders has been produced by Sanath Yogasundrum of Ashton, Preston, Lancashire.

When the game begins, the player is asked for a skill level, A or P, which stand for amateur or professional. It is advisable to start on the amateur level while the player begins to understand this complex game.

A small grid is shown in the bottom left-hand corner of the

screen in which there are four aliens, shown as X and \$, with a soldier (\*). The soldier has to dig a hole (O) and then lure the aliens into it, scoring 100 points for every X and 200 for every \$.

The hole is dug by going into dig mode, pressing 2, and pressing the cursor key for which side of the soldier you wish to place the hole. The soldier can then be moved by pressing 01 to return to movement mode, and using the cursors in their normal directions.

A soldier can be killed either by

falling into his own hole or being eaten by an alien. The game lasts for the lives of three soldiers, although an extra soldier can be gained by scoring more than 3,000.

Two other limitations are that only one hole can be dug at a time and a hole cannot be dug beneath an alien. Once an alien has fallen into a hole it is filled immediately and the game continues.

Even after playing for more than an hour at the amateur level, no-one at Sinclair Programs managed to score more than 1,300.

# SKY SHOOT

**S**KY SHOOT for the Spectrum is a kind of target shoot against the clock.

You have four targets—which you must destroy in an unreasonably short time.

Move left with l, right with r and fire with 0.

A challenging game from David Price of Glenfields, Caerphilly, which proved too difficult for your fast-fingered reviewer.

# UNIVERSAL PATTERNER

UNIVERSAL PATTERNER is a program for 16K ZX-81 users and produces patterns at random. Author W. S. Hearn, of Ilford, Essex states that more than two million designs can be printed on the screen. Each pattern has a number and string length printed at the bottom so can be recalled and adjusted using those numbers. Answer N for No when asked if a random pattern is required and then input the numbers.

# BOMB

**T**HE IDEA of *Bomb* is to blow up undefined enemies, represented by an inverse space. Your bomb moves across the top of the screen and pressing any key will release it. Only one bomb can be in the air at any time, limiting the attraction of the game, but it will run on 1K machines.

For those with slow mode the PAUSE and POKE may be removed by deleting lines 100 and 110. *Bomb* was submitted by David Goodup.

# ER!

**D**IGGER is an excellent arcade-style game for the 16K Spectrum. It is based on an already popular routine and requires you to take your user-defined man up several ladders to the treasure chamber on the top floor.

When you arrive, the CARRYING sign will flash, indicating that the man has picked up a bag of gold. There are three bags to retrieve, but it will be a very skilful player who can grab them all, because there is a snag — a hungry but stupid beast concerned to eat you.

Evade the monster if you can, or dig a hole which you can leap, but he cannot, by pressing the 0 key. Meanwhile your oxygen supply is diminishing rapidly.

This is a very professional-looking routine, though there are two possible improvements to keep the tinkerers interested. It was submitted by Stephen Lathrope, of Beaconsfield, Bucks.

# CLIMBER

**Y**OUR AIM is to climb a 1,000-metre mountain in 10 days. If you fail to finish in the allotted time or run out of supplies, the trip is cancelled and abandoned. Bad weather may hinder your progress.

When the program is run, an input mode will await the highest previous score—enter 0 on your first run. The display will then show the climbing day, distance to the summit, number of supply units from 75 to zero, and the weather on a scale of awfulness up to 10.

As group leader you must enter the distance you wish to travel on that day, the maximum being 300 metres. Remember that you will use more supplies in bad-weather climbing and that in the worst conditions it may be advisable to stay in the tent.

When the distance reaches 0, enter zero to obtain your final score. That is dependent on the number of supply units and days expended; David Stewart of Darlington, who submitted the program, reports that his best result is 251. The program runs on a 1K ZX-81. Graphics notes: 50,100,180 & 190—graphic shifted 1, 60—graphic shifted 2, graphic shifted 1.

## SPECTRUM 48K : ZX81 16K SIX PART ADVENTURE

### BLACK CRYSTAL THE QUEST IS ABOUT TO BEGIN

The ultimate role-playing adventure for the SPECTRUM/ZX-81. You can become a warrior, elf or wizard on a quest to find and use the rings of creation: to destroy the Black Crystal and defeat the Lords of Chaos. Held within six programs lies a land of fabulous treasures and mythical monsters. Journey through the land of Beroth, explore the castle of shadows, descend into the Shaggoths lair, search for diamonds in the sea of sand but beware of sand sharks! Confront the fire demon in his temple, battle against the Lords of Chaos and win your way to the Black Crystal. By splitting Black Crystal into six programs we can provide more variety and detail than any other adventure for the Sinclair computers.

Real time monster battles. Superb graphics. Save game feature. All six parts are supplied together on cassette, boxed with instruction booklet.

**SPECTRUM 48K: 180K OF PROGRAM  
IN SIX PARTS — ONLY £7.50**  
**ZX81 16K: OVER 100K OF PROGRAM  
IN SEVEN PARTS — ONLY £7.50**

PROPRIETORS: R. CARNELL, S. GALLOWAY

**Do your programs load from tape first time, every time? If not, you need...**

**(1) THE MICROCOMPUTER USER'S BOOK OF TAPE RECORDING** by Hilderbay Ltd.

Contents:

**PART I** (for everybody; the 'how to' part):

- 1 How your system should work
- 2 choosing a tape recorder
- 3 testing and adjusting your tape recorder
- 4 keeping your recorder in good condition
- 5 the selection and care of tapes
- 6 making reliable recordings
- 7 loading 'difficult' tapes
- 8 useful accessories.

**PART II** (more for enthusiasts; the 'why' part):

- 9 how a tape recorder works
- 10 computer cassette interface waveforms
- 11 stereo heads, azimuth angle error
- 12 miscellaneous tape problems.

Price £3.15 incl postage; £2.90 from bookshops. Or ask for it at your library.

**(2) TEST AND ALIGNMENT CASSETTE:** a precision accessory which enables you to set up the azimuth angle of your cassette recorder head accurately using only a small screwdriver! Azimuth error is one of the commonest causes of tape troubles. With full instructions. £4.90.

**(3) LOADING AID:** if your recorder is basically OK, but you have trouble getting the playback level right with tapes from different sources, you need our Loading Aid! Also suitable for checking the quality of tapes, detecting and (sometimes) compensating for dropouts, etc. With full instructions and hints on tape use. £5.95

**(4) TAPE RECORDER** aligned and tested for computer use. A simple, but satisfactory, machine. £22 + £2 postage (All products suitable for most computers)

#### SPECIAL TAPE OFFER!

Book + alignment cassette + loading aid for £11.90!

#### SPECTRUM SOFTWARE (48K)

**PAYROLL** (50 employees, all tax codes, pay levels, NI contributions; Hourly, weekly, monthly; payslips, summary of payments; Very easy to use; Amendments to employee details very easy right up to the last minute; Can also compute gross pay & deductions from net pay). £25

**STOCK CONTROL** (typically 1500 stock lines; prints list of all lines, or lines with given codes, or understocked lines; locate-by-name/add/delete stock line in under two seconds; prints values of stock. Program loads in one minute, data in less than three). £25

**GOLD** our best-selling adventure game, now available on the Spectrum! £8

All these programs are available from stock; we have interesting professional Spectrum software development, but we won't advertise it until we can supply it!

#### ZX-81 SOFTWARE (16-48K)

**BEAMSCAN.** Computers bending moment and shear force diagrams for a simply supported beam with 1-99 point, uniform, and uniformly tapered loads. £25

**TIME LEDGER** for up to 17 employees, 200 clients. A great time-saver! £15

**OPTIMAX.** A powerful linear optimisation program. Up to 75 variables. <, =, > constraints. £40

**PAYROLL.** Similar to the Spectrum version, but 30 employees. £25

**STOCK CONTROL:** about 400 stock lines in 16K, 2000 in 48K). £25

**CRITICAL PATH ANALYSIS.** Enter & solve 500-activity network in 16K. Edit durations & costs, & repeat. £15

**BUDGET.** Keeps track of expenses & compares them with budget. 50 headings, 12 months (I) or 12 categories (II). £15 for budget I & II (together)

**FINANCIAL PACK I.** Contains three programs: MORTGAGE, LOAN, VAT. £8

**GOLD.** A tantalising adventure game! £6

**Free GOLD (ZX-81 or Spectrum) with all orders of £22 or over postmarked before 1 December!**

All prices include VAT. Everything post free unless stated otherwise. COD orders £2 extra. Access orders accepted by telephone.

# It may repel extra-terrestrials, but can it switch on the light in the loo?

If you're getting bored playing games and running simple programs Electronics and Computing Monthly can show you how to put a lot of fun back into your micro. With the addition of some easy-to-build electronic circuits, your computer could drive much more than a TV screen.

Like your Scalextric or train set. It could control the lights in your house, the central heating system, talk to the budgie while you're out and water the houseplants while you're away.

And you can build all these things yourself-the simple circuits for pennies rather than pounds. Each month Electronics and Computing magazine shows you how to

expand your micro and gives you new ideas for computer fun. Project by project we add another dimension to your computer.

In the latest issue we show you how to build an infra-red remote controller for your micro and what 'dialogue programming' is all about.

All you need is a hot soldering iron and a cool 75p.

## **WHERE ELECTRONICS AND COMPUTING INTERFACE**

# TRUE OR FALSE

WE FEEL that many of the education games sent to us ignore the crucial place of good graphics in the interest of the young learner.

**True or False** is a program for teaching multiplication. The authors, Neil Pick and Rae Bryant of Harrogate, obviously worked hard

to accompany the didactics with a lively display and a line in cheery patter.

The operator has a very limited time in which to judge the displayed arithmetic as true or false and to input 7 or 5 accordingly. Error or delay will advance a decrepit-looking automobile further and

further towards a brick wall. There are three levels of difficulty and a running score for every correct answer. Graphics notes:

24—Inverse space, graphic 7, inverse space.

100—Graphic F, graphic G.

670—Inverse GOOD.

680—Inverse BYE.

# CLOCKMAN

**C**LOCKMAN is a very quick reaction-type game for the 16K Spectrum. It is so-called because your enemies appear in a circle around the screen as if on the face of a clock. Your gun, at screen centre, is rotated with keys 5 and 8 and fired with 1.

Men stay on the screen for a shorter time after every hit, so hitting more than 40 out of 50 is very good. Fifty out of 50 is impossible. You can adjust the difficulty of the program by altering the length of the BEEP in line 180.

Sent by Arthur Douglas, of London E4. Graphics notes:

70, 80 etc—k.

1000, 1010 etc—j, a, b.

# BINOMIAL DISTRIBUTION

**B**INOMIAL DISTRIBUTION might be the first of a new style of program. It was submitted by P R Scott, of Goldalming, Surrey, who believes that there are many fundamental scientific principles which could profitably be illustrated on Sinclair machines.

This program for the 16K ZX-81 serves to illustrate the principle of

binomial distribution. The display shows a ball falling through a triangular matrix of pegs. When the ball hits one of the pegs it rebounds to the left or right, entirely at random.

Its final position is recorded and a further ball produced. The distribution of final positions is the binomial distribution, familiar to most O level mathematics candidates. You may

not know that this characteristic pattern is also of importance in spectral intensities and polymer conformations.

An excellent program, likely to prove of immediate use to teachers and students of mathematics. Graphics notes:

120—Minus, Four spaces, minus and so on.

# STAR GATES

STAR GATES is a 1K program in which the sun is about to go super nova and a fleet of space ships is waiting to depart from Earth to escape the holocaust. The object is to guide each ship through star gates.

The space ship is situated at the bottom of the screen and key 1 is used to move vertically upwards and keys Q and P to move left and right respectively.

Star Gates was submitted by D E Healey of Coseley, West Midlands.

100 PLOT H,RV
110 NEXT A

```

THE AUTHOR of Kaleidoscope Matthew Calvey, of Lytham Lancs, claims amazing results with this ZX-81 program. It will generate a random number of dots at random points on the bottom left of the screen and then re-create the pattern on the other quarters of the screen. All the patterns created will be symmetrical.

Kaleidoscope occupies 1.2K of memory but can be squeezed into 1K by removing lines 120 onwards, using VAL where numbers are used, and by changing line 10 to:

```
10 LET N=INT (RND*25)+25.
```

# HEX LOADER

```

1 REMXXXXXXXXXXXXXXXXXXXXXXX
10 LET I=16427 15 INPUT AS
20 IF AS="S" THEN STOP
30 PRINT AS:***
40 POKE I,16*(CODE (AS)-28)+CODE
(TLS (AS))-28
50 LET I=I+1
60 GOTO 15

```

HEXLOADER works on the ZX-80, which is something of a rarity. The REM in line one must contain more characters than there are bytes in the machine code program. The number code 118 must not be used in machine code routines or all kinds of strange things will start to happen to the listing.

To remove the REM statement from line one, POKE 16403, 10. This program will help many people who still own a ZX-80 to obtain more power from it using machine code. Machine code programming is something which has not been entered into any great depth with the ZX-80.

The Hexloader was sent by A Goodright of Sutton, Surrey.

# CRIBBOARD

CRIBBOARD, as the name suggests, is a scoring system to use while playing cribbage. A board is displayed on which the state of the game is shown by the blanked-out hole on the board and the numerical total is shown. The result in the number of games is also given.

When run, the players are asked if they are playing a bust or no-bust game and the game is recorded as required. A maximum score of 29 is allowed on each turn and the impossible figure of 19 cannot be entered. The score is entered by giving the letter of the player, followed by his score.

The program was sent by M J Bennett of Jeddah, Saudi Arabia. It requires the 16K RAM pack.

```

1 REM CRIBBOARD
2 REM EACH PLAYER ENTERS HIS
  LETTER (A OR B), FOLLOWED BY HIS
  SCORE, FOLLOWED BY NEWLINE.
3 REM AN ENTRY GREATER THAN
  29 WILL NOT BE ACCEPTED.

ON THE RARE occasions when the weather is too bad to play Golf, fanatics may care to try the computer version. It requires the 16K RAM pack and can be as frustrating as the real thing—but not so tiring or expensive.

For each of nine holes the program selects a random distance between 200 and 400 yards and displays it with the par value. The player is invited to play strokes at strengths from one to nine and after each stroke the distance remaining is displayed, with the number of strokes taken at the hole, and a further

request to choose a shot.

That continues until the ball is in the hole, when the comparison with par is shown.

At the end of the nine holes the par for the course is shown, with the score for that game and some advice about the future of your game.

The numbers for strength of shot do not correspond to the numbers of real clubs. The best guide to the distance which can be expected can be obtained from lines 90 to 98. Although each distance is chosen at random, they are in the region of the last figures. The exception is shot

one, which always moves the ball one yard.

That random element is the cause of the frustration, particularly when the ball is less than four yards from the hole. The choice must always be between taking the safe method and playing a series of one-yard shots, and the two, which can give two, three or four yards.

With a little concentration, a good level of skill can be achieved and you can avoid being told to sell your clubs at the end of the nine holes.

Golf was sent by R A Lean of St Austell, Cornwall.

# MULTIPLICATION TRAIN

A GOOD, simple game for testing a variety of abilities with multiplication sums has been sent by James Hurrell, of Knutsford, Cheshire. The aim is to take a train to the end of a track by giving the correct answers to multiplication problems given at random.

The program makes good use of the random function to produce different problems and it contains alternative levels of difficulty.

To start the game, press RUN and NEWLINE; the player is asked which level of difficulty is wanted, either one or two. A problem is then shown to which the player gives an answer. If correct, a train moves along a track with a puff of smoke from its funnel.

When the train reaches the end of the track, a buffer appears with "Well done".

Alternative difficulties can be obtained by changing the lines 50 to 80.

To help with the graphics in line 100 they are, all shifted, keys R, 3, unshifted space, 8 and unshifted space; in line 110 they are 8, three spaces, and 5; and in line 120 R, E, space, R, E. In line 130 there are 14 dashes.

**Y**OUR MISSION is to fly at wave-top height and launch your bomb with the Ø key at a submarine hiding in a cave. After releasing your bomb you must climb steeply with the 7 key to avoid the cliffs above. Do not climb too soon, as there is a cliff-top radar station capable of arranging your instant destruction.

The composer of the program, Andrew Kelcey of Bewdley, Worcestershire, says that removing line 20 to 27 will enable it to be fitted into an unexpanded ZX-81. He has obviously limited the complexity of the graphics and, though pleasing, they are in our opinion capable of improvement. You might also try to devise a scoring line. Graphics notes:

13—Graphic shifted 2, graphic shifted W.

19—Inverse BANG.

20—Inverse SHOT DOWN.

21—Inverse CRASH.

24—Graphic shifted E; two graphic shifted Rs, graphic shifted E; graphic shifted 8, two graphic shifted 5s.

25—Eight graphic shifted As.

27—Twenty-five graphic shifted As.

**T**REASURE HUNT is a game of almost arcade quality. You are in a system of 21 underground caves filled with monsters and poisonous fungoids. The aim is to collect treasure, by running over the asterisks, and deposit it in Cave O. You cannot carry more than five bags of treasure at a time and even one will slow your progress.

The display is of the current cave—see the illustration. You are able to move around with the cursor keys and the exits are represented by the areas of graphic A at the top and bottom of the screen. It is not possible to return to the previous cavern.

To protect yourself against monsters and to clear a path through the fungoids you can loose an arrow, with F followed by the appropriate cursor key. Remember, though, that new arrows are obtainable only in the entrance cave in exchange for captured treasure.

In Cave 21 there is a hoard of treasure guarded by a growing serpent which will attempt to seal-off exits. Shooting a hole in it is usually only a temporary measure, unless you also shoot at something else, in which case the serpent will attach itself to the other target.

The score is calculated by Monsters killed  $\times 5$ ; + treasure captured  $\times 10$ ; = arrows bought  $\times 4$ . Reincarnation is granted if you score more than 50 between deaths.

A fine program, to be typed and taped, from Paul Sherwood of Hartlepool, Cleveland. 16K ZX-81.

# ALPHABET

**A** LPHABET is a teaching aid for students—so if you can't read this, read on. The program runs initially in FAST mode, then the screen clears and displays the alpha-

bet in random order.

The student has a laser base and has to blast the letters in their correct order. The distance of the laser from the letters is decided by the level of

difficulty selected and the laser is moved with the usual keys 5 and 8.

The program was sent by P Styles of Rotherham. It runs on an expanded ZX-81

**W**E HAVE had total recall since we started playing **Memory**. It is a memory-testing routine for the 16K ZX-81 which invites you to try to recollect the positions of various symbols in a six by six grid.

The program first displays the grid and the 36 characters enclosed in it. You have very few seconds in which to absorb the display and are then required to input the positions of matching pairs of the symbols. Up to four players can compete and a running score is kept of your successes.

Submitted by Jack Anderson, of Svenstrup, Denmark.

# HOT PURSUIT

**Y**OU ARE bumping along the vapour trail of the Red Baron, trying to manoeuvre him into your gunsights in **Hot Pursuit**. You control your trusty Sopwith Camel with the cursor keys and hit P to fire.

If the game is too difficult alter the 4 in line 143 to a higher number and be careful not to move too close to the edge of the screen or the routine will crash.

Submitted by S Wild, of Oldham, Lancashire, for the 1k ZX-81.

Graphics notes:

300 - Graphic shifted A inverse asterisk, graphic shifted A.

```

**F**RUIT GUARD is a game for the 1K ZX-81, submitted by C Regaud of London SW7. The object is for you (graphic shifted M) to fetch the fruit (graphic shifted U) and take it home (inverse H) by evading the monster (graphic shifted P).

The best way to make sure you are

munching instead of being munched is to keep to the sides, since you can use them to cross the screen but the monster cannot. It is fun but perhaps a little too easy.

Graphics notes:

60 - Graphic shifted U  
70 - Graphic shifted M, graphic shifted P, inverse H.

**D**ROP 4 simulates a well-known parlour game in which you are required to complete a row of four counters. The display simulates neatly the frame used to hold the counters and the slow-motion fall of the counters down the screen.

An enjoyable and diverting game of tactics from Arthur Douglas, of London E4 (16K Spectrum).

**T**HE OBJECT of *Air Sea Rescue* is to rescue a sailor bobbing around below your helicopter. You must hook him to safety before you run out of fuel. You steer the whirly-bird with the usual cursor keys and you will crash if you get too close to the water.

A time is given for completing the rescue. Andrew Blackburn of North Hykeham, Lincoln, who submitted the program, reports his fastest time as 15. We did not manage anything better than 30. (1K ZX-81). Graphic notes:

60—Graphic F, inverse space, two graphics 7s.

**D**O YOU teach physics or study it? **Physics** is a program for the 16K ZX-81 which tests you on some of the calculations necessary in basic electrical physics.

There are four topics in the listings but two of them are divided into subsections giving a total of seven types of problem. After each question you are told whether you

are correct, incorrect or close enough and your score is displayed at the end of every section.

As each new topic is introduced every 1,000 lines, new sections could easily be included by changing the 5 in line 110 and by moving lines 4225-4270 to the end of the last topic.

Sent by Michael Coombes, of Newport, Gwent.

# SQUASHED

**S**QUASHED is an intriguing version of the **Break Out** game for an expanded ZX-81. Imagine a squash court full of milk bottles and a ball made of solid steel. Your job is to break the bottles by moving the bat with keys S and Z.

A running score is kept and the game ends when you destroy all the targets or lose your allocated three balls.

# PUZZLE

THE DISPLAY will show a grid of 16 squares. The grid contains the first 15 letters of the alphabet and one space. Slide the letters around in the grid, using the space,

and the puzzle is solved when the letters are in their correct order.

The letters are moved with the usual cursor controls and a count is kept of the moves taken. Your task is

to complete the re-arrangement in as few moves as possible. A diverting little routine, worth having on tape. Submitted by W G Davies of Hereford for the 16K Spectrum.

# BUILDER

**A**T LAST there is a program which takes only five minutes to key-in but which will provide you with hours of annoying enjoyment. It is also likely to make you very unpopular with the rest of the family if you are using the television set and they want to watch something else.

Despite its simplicity, it takes a long time to achieve the aim, which is to build a row of = signs. Start by pressing run and then hold down any key until the screen is filled with greater than signs with = at the end of each line. Then keep a key pressed down to move the = sign along a line to try to add it to the other = sign. Releasing the key stops the = sign.

You have one attempt at each line as you go down the screen, the inverse space showing which line you are on. When you reach the bottom you start again at the top. This clever game for the basic ZX-81 was sent by Julian Smith of Maidstone, Kent.

**W**E WILL say nothing about being bowled over by this game, or about going down like nine-pins, or about it being right up our alley. It is a 1K game for the ZX-81 called **Skittles** but the title is somewhat misleading, since the eight balls are steered after they are released, not before.

They are amazingly responsive, manoeuvred with the 6 and 7 keys to a target of 15 pins.

It is a highly-enjoyable game submitted by Philip Teakle of Bristol.

# HORSE

```

1 DIM R(5)
2 DIM S(5)
3 LET P=0
4 FOR N=1 TO 5

170 RACE NO. "Y
180 LET Y=Y+1

```

**N**OW YOU can watch a horse race without having to listen to Peter O'Sullivan tying himself in knots for the last furlong. It is a race game for up to six players. Each punter enters his initials and then inputs the number of the horse he has selected and whether he wants to bet each way or to win.

The players start with 10 points' worth of capital and score according to the odds on each horse and the type of bet laid. The game ends when one of the punters finds himself without cash.

Sent by C Winn for the expanded ZX-81.

## ALPHABETICAL SORTING

**A**LPHABETICAL SORTING is a neat routine for sorting  $A\$($  into alphabetical order. Alter the numbers in lines 9540 and 9770 according to the number of elements in  $A\$($ . For example, if you  $\text{DIM } A\$(100,15)$ , the number in those lines should be 100.

Michael Horton of St Edmond's Junior School, Canterbury, who sent the program, says that it is the fastest sort of which he knows for the ZX-81.

```

9500 FAST
9530 LET A=1
9540 LET N=100
9550 IF 2**A>N THEN GOTO 9580
9560 LET A=A+SGN A
9570 GOTO 9550
9580 LET F=2**A-1
9590 LET F=INT (F/2)
9600 IF NOT F THEN GOTO 9750
9610 LET D=N-F
9620 LET B=SGN A
9630 LET A=B
9635 LET E=A+F
9650 IF A$(A)>A$(E) THEN GOTO 97
00
9660 LET B=B+SGN B
9670 GOTO (B>0 AND 9590)+(9620 A
ND B<=D)
9700 LET B$=A$(A)
9710 LET A$(A)=A$(E)
9720 LET A$(E)=B$
9730 LET A=A-F
9740 GOTO (9650 AND A<1)+(9630 A
ND A>=1)
9750 SLOW
9760 CLS
9770 FOR F=1 TO 100
9780 SCROLL
9790 PRINT A$(F)
9800 NEXT F
9810 RETURN

```

**T**HIS IS one of two programs included in this collection for ZX-80 users. It is a very simple, user-friendly program intended for young children.

B Spencer of Chatham, Kent, who wrote it, said he did it because after two years of owning a ZX-80 he thought it was time he bought a better machine, probably the Spectrum. He wanted to hand his old faithful to his children with something useful for them to do with it.

The listing includes lines to allow the person using the machine to input their name, lines 100, 640, 750. When run, it asks what kind of sum is to be attempted and then shows the required problem. An answer is given and that is judged correct or incorrect, giving the correct answer. Press NEWLINE for another attempt.

In the case of division, the answer is given in terms of a whole number and then the remainder, both of which are input separately.

# Worm Game

THE WORM GAME for the 16K Spectrum was just too difficult for your thick-fingered reviewer, who could reach only the sixth of its seven stages. The game is of the Surround type but there is only one player and you must avoid not only your own tail but also aim to hit certain objects in the field of play.

In the first section, for example, your targets are contained in the tail you leave; in the second they are the dandelions among the deadly rocks. In the third, fourth, fifth, sixth and—we suppose—seventh, they are different again.

This listing represents an original concept in computer games, brilliantly executed. Michael Andreason, of Alloway, Ayr, who wrote the program, reports a staggering best score of 150,490. We wonder if he has considered marketing the game commercially?

Control is by the usual cursor keys; there is a high score facility and list of instructions.

Graphics notes:

- 1—Graphic D, graphic C, graphic E, graphic B
- 2—Graphic A
- 5—Graphic A, graphic H, graphic F
- 1000—Graphic I
- 1002—Graphic G
- 2000—Graphic J.

# KEYBOARD

**K**EYBOARD is a test for all sharpshooters of the computer keyboard. A letter will appear on the screen heading full tilt for self-oblitration in an inverse space at stage left. Your task is to hit the appropriate key before the letter auto-destructs. Your flying-fingered reviewer managed only five in fast mode.

Submitted by Graham Woods of Redhill, Surrey for the 1K ZX-81.

```

1 PRINT "ENTER LEVEL: 1 (HARD)
OR 2 (EASIER)"

```

**T**HE DISPLAY of **Sticks and Stones** will show you three sticks lying horizontally in the middle of the screen. You are required to move each of them so that the holes in them line up and allow the stone—"O"—to pass through them. After 10 attempts your score is displayed.

Manoeuvre the top stick with keys

1 and 0, the middle stick with Q and P, and the bottom one with A and NEWLINE. A small but exasperating routine for the 1K ZX-81 from Timothy Taylor, of Perterfield, Hampshire. Graphics notes:

# QUADRATIC EQUATIONS

A NEAT program for solving quadratic equations on an unexpanded ZX-81 has been sent by Richard Harris of Eastleigh, Hampshire.

The program invites you to enter the co-efficients of the equations and then displays the equation with the known values inserted, followed by the roots. It also points-out when a negative square root occurs.

**H**ANGMAN II is an improved and updated version of G Gill's ZX-80 Hangman game the July/August issue of *Sinclair User*. This version makes the giant stride of showing a display of the gallows, advanced one stage for every incorrect guess.

The 120-word vocabulary consists of 40 six-, seven- and eight-letter words selected randomly from a dimensioned string.

This seems a reasonably definitive listing for this game and is therefore worth a place in anyone's cassette collection. It was sent by P Marsland, of Tamworth, Staffs, for the 16K ZX-81.

# ONE-ARMED BANDIT

IF YOU are too lazy to stand up and gamble, **One-armed Bandit** is a fruit machine simulator for the 16K ZX-81, submitted by Andrew Jackson and Paul Jenner of Warrington, Cheshire.

The aim is to line-up the letters displayed on the three 'reels'. If you manage a jackpot, you are given the chance to take a fifty-fifty gamble with your winnings (Y/N). You can win five pence, or lose 10. Five points can also be won for a diagonal line.

Occasionally you are given a "nudge" option—i.e.,—the chance to change three letters. To move up the reel one place, press 1; for reel two, press 2; and press 3 for reel three. To move a reel down one place, press Q, W or E. If you do not wish to nudge, hit N.

The program usually will wait for some kind of input, so if in doubt hit a key; in desperation, hit RUN. Graphics notes:

1000—Inverse ABCDEABCDEABCDE.

1005—All inverse spaces, except for inverse hyphens after A\$(A) and A\$(B).

**C**HARACTER MAKER changes the character set of the 1K ZX-81. It will even change the letters in program listings into blocks of strange patterns.

The main program is a machine code routine set up using the POKE command. After running the main routine remove it line by line but do not use NEW.

When the program is in memory, type-in one of the demonstration programs. They will show continuous patterns on the screen. You can also make your own programs which create patterns on the screen which change at random.

The program was sent by Allister London, of Sleaford, Lincs.

```
10 POKE 17000,62
20 POKE 17002,237
30 POKE 17003,71
40 POKE 17004,201
50 POKE 17001,-122
60 LET Z=USR (17000)

20 PRINT CHR$ A;
30 NEXT A
```

```
10 LET A=RND*255
20 PRINT CHR$ A;
30 GOTO 10
```

**P**IE CHART will provide you with a means of displaying your percentages in a really professional way. A circle is shown on screen; you are asked to input your percentages and the computer will slice the pie into appropriately-sized

pieces. When you have finished, INPUT "-1" and the program will move to labelling the different slices. A grid is drawn around the screen and you enter your label and then its x and then its y co-ordinates. An entry of 32 for the

y co-ordinate will move you to the next stage of the routine, which enables you to title your display.

This useful program was submitted by Paul Smith of North Harrow for the 16K Spectrum.

# COVER T

# THE BOX

A GOOD, interesting game, which takes slightly less than 3K of memory on the ZX-81 is sent by John Ellis, of Wimborne, Dorset. He says it is based on an old French game known as **Shut the Box**.

The aim is to eliminate each of numbers from one to nine by throwing two dice. The total thrown can then be used to eliminate numbers

which add to the same total. For example, if a three and a five are thrown, any combination of two numbers adding to eight can be eliminated.

The chosen numbers are entered together and the program checks for illegal moves. The game continues until it is impossible to make a move; no number can be eliminated twice. To end the game, press zero

and the total of the numbers remaining is displayed. After a number of plays a running average of the remaining totals is shown; Ellis says that after much practice his average for 10 games was 8.3. The program is user-friendly.

To help with the graphics, in lines 30 and 50 there are 27 inverse spaces; in 80 there are 23 spaces; in 240 there are 17 spaces and 26 spaces.

**G**HOST TREKKER is a genuinely challenging game requiring quick thinking and quick cursor-fingers as you chase a ghost around the haunted house.

You begin as an inverse V in the top left of the screen and change direction anti-clockwise with 1 and clockwise with 0. Both you and the ghost leave a trail which you are not allowed to cross in your attempt to corner the wayward wraith.

If you have sufficient luck and animal cunning to corner the fugitive phantom, you will be congratulated and your time displayed. A demanding game for the expanded ZX-81 from Alistair Crowe, of Llandudno, Gwynedd. Graphics notes:

110—Thirty-two inverse full stops.

130—Inverse A, graphic shifted M, inverse V, graphic shifted N.

350 & 400—Inverse full-stop.

410—Graphic A.

530—Inverse "Congratulations, you have caught the ghost. It took you ..... time units.

550—You hit a trail and have been killed.

560—For another go, press any key.

**A**RE YOU worried about your driving test? Or your brakes? **Stopping Distances** displays a speed and requires you to input your assessment of the stopping distance in optimum braking conditions.

Your answer is marked as "too far", "too short" or "correct". You have three chances before being shown a representation of the effects of late braking and the correct answer.

A program for the 1K ZX-81 from Simon Cross, of Ipswich, Suffolk.

**R**UNET of Barking, Essex, sent **Jellymen**, which bears some resemblance to a Spacman routine but has a character of its own.

Your monster is controlled by the usual cursor keys and must travel round the maze consuming food pellets, with a bonus of 50 points for the larger pellets. Jellyman ghosts wait to attack you, though occasionally a bold frontal attack on them will enable you to survive.

A running score is kept and the game stops when a monster catches you. (16K Spectrum). Graphics notes:

2-Graphic G; graphic A.

W G DAVIES of Hereford has sent a frivolous but funny game for the 16K Spectrum. It is called **Juggler** and requires you to keep three coloured balls in the air by manoeuvring the juggler's ape-like arms with keys 1 and 0.

The listing is complete with sound effects and a running score. It would be ideal for keeping children entertained on wet winter afternoons.

For graphics in lines 1040, 1460, 1640 and 5030 enter 0 in graphics mode.

# DAM BUSTERS

**A** DAMBUSTERS game for the ZX-81. Droning over Hamburg in the flak-riddled Lancaster, the bomb-aimer tensed over his sights, the Barnes-Wallace special already spinning in the bomb bay—and everybody humming the tune.

You have 10 dams to bust and the bombs are bounced by the novel cosine-controlled routine in line 320. The position of the dam is randomised and the bomb is released with any key.

The program uses only 2K and there should be plenty of room for elaboration of the graphics.

Submitted by R Larham, of Chatteris, Cambridgeshire. The reviewer managed to account for only seven. Graphics notes: 600—Graphic shifted A inverse asterisk, graphic shifted A.

# LURE

**L**URE is a game in which you, bipedal mammal with the opposable thumb and wrinkled cortex, attempt to prove your evolutionary superiority over a dumb dinosaur.

You are trapped in a maze with the beast, whose minimal intelligence is sufficient to track you down. As you flee the creature you are able to consume power pills; 20 of them give you sufficient energy to dig a trap. Then employ that over-developed fore-brain to lure the muscle-head into the hole.

Q and A send you up and down; O and P manoeuvre you left and right and you dig with M. You have three holes per monster but your supply of holes and pills is renewed if you can trap the beast. If the dinosaur catches you he will erect a little cross and you lose one of your three lives.

The game was sent by A Ward of Aldridge, West Midlands. (16K Spectrum). Graphic notes:

120—Graphic A, graphic B

605—Graphic D.

700—Graphic C.

# MUSIC MACHINE

**M**USIC MACHINE is the most frivolous program we have received. It is from Jason Fitchew of Leigh-on-Sea, Essex. It uses the FAST and SLOW commands on the ZX-81 to generate a kind of musical scale through the TV speaker.

The scale is to be found on keys 1 to 6 and is the kind of basso-profondo associated usually with Count Dracula hunched over the organ keys in the crypt at midnight. Tune the dial slightly off-station to start the background hum, turn up the volume and shake to that vampire beat. Graphics notes: 68, 180 and 243—Inverse.

```

SOME OF the best graphics we have seen are the striking feature of this reaction game for the 16K ZX-81.

D G Lomas, of Dukinfield, Cheshire, who submitted **Outlaw**, has managed to achieve something approaching the effect of a slow animated film by drawing and re-drawing the outlaws as they fall dead.

There are five of the villains who reach for their guns in a random order. Your task is to press the appropriate key before they can kill you. The pleasure of shooting first is enhanced by those fine graphics.

Graphic Notes:

359 - Graphic shifted 1, graphic shifted 2.

1010 - PRINT AT  $\times(F)+I, Y; A \& (I)$ .

SOMETIMES, when the cursor finger is worn to the knuckle and we are blinking at 50 cycles per second, nothing pleases us like a game where thinking is not just something between you and a high score. When the game works on a ZX-80, we are really happy.

**Beancup** is a fine brain-game from Nigeria. You sit cross-legged with a row of seven cups in front of you. Each cup contains four beans—except the store-cup on the right-hand end of the row, which is empty. Your opponent faces you with exactly the same equipment in front of him.

The display will show you two rows of numbers, representing the beans. The bottom row is yours and the top one is operated by the suddenly-cunning ZX-80.

You move by taking all the beans from one of your cups and dropping one into the cup on its right, one into the cup on the right of that, and so on, anti-clockwise round all 14 cups until you finish. You cannot empty the store-cups. The game ends when all the beans are out of circulation and the winner is the player with the most beans in his store cup.

Input the number of the cup you wish to empty and the computer will display the position of the beans after your move and its own response. If you have no beans on your side to move, then enter any number from 1 to 6.

If you can beat the machine you are better than we are. Submitted by Paul Morriss of Alford, Lincs.

```

**I**F YOU are struggling with mathematics homework, **Lineal regression** calculates those tricky problems using the ZX-81. It relates both x to y and y to x, as well as giving the probable errors involved.

From Martyn Whitwood, of Rotherham, South Yorkshire.

# √5 FACTORS

JASON MINETT of Birkenhead, Merseyside, has sent two programs for calculating factors. The first will find all the factors of a given number and the second will provide its prime factors.

In both cases the machine waits for a number to be input and then prints the appropriate answers (1K ZX-81).

```

5~REM FACTORS
10 FAST
20 INPUT A
30 PRINT A
40 FOR B=A-1 TO 1 STEP -1
50 IF A/B=INT (A/B) THEN PRINT B
60 NEXT B
70 PRINT "."
80 RUN

5~REM PRIME FACTORS
20 INPUT A
30 PRINT A;"="
40 LET B=2
50 IF A/B<>INT (A/B) THEN GOTO 80
60 GOSUB 190
70 GOTO 50
80 FOR B=3 TO A STEP 2
90 FOR C=3 TO B-1 STEP 2
100 IF B/C=INT (B/C) THEN GOTO 150
110 NEXT C
120 IF A/B<>INT (A/B) THEN GOTO 150
130 GOSUB 190
140 GOTO 120
150 NEXT B
160 POKE 16398,(PEEK 16398)-1
170 PRINT "."
180 RUN
190 PRINT B;"*"
200 LET A=A/B
210 RETURN
    
```

## BLACK HOLES

BLACK HOLES is an uncomplicated game for the 1K ZX-81 for which you are required to manoeuvre your speeding spacecraft through a whole cosmos of the omnivorous megastars.

Change course with keys 8 and 5 and when you crash the length of time you survived will be displayed. Sent by James Hatchell of Guildford, Surrey.

```

10 LET A=17300
20 LET D=0
30 LET Y=10
40 LET B=INT (RND*21)
50 PRINT AT 21,B;" "
60 PRINT AT 9,Y-1;" "
70 IF Y=21 THEN LET Y=1
80 IF Y=0 THEN LET Y=20
90 PRINT AT 10,Y;"H"
100 POKE A,B
110 LET D=D+1
120 LET A=A+1
130 LET Y=Y+(INKEY#="8")-(INKEY#="5")
140 SCROLL
150 IF A=17350 THEN LET A=17300
160 IF PEEK (A-12)=Y THEN GOTO 180
170 GOTO 40
180 PRINT "CRASH ";D
    
```

**C**ONSTELLATIONS is a program specially for all avid stargazers. After the lengthy process of entering it, press RUN and NEW LINE and a menu is provided, listing 10 groups of stars. Pick which one you wish to see and the group of stars is shown, along with its name.

The list available is the same as that sent by the writer of the program but others can be added or substituted according to taste.

The main idea is to provide some kind of record of a particular constellation, so it is essential to save the program on cassette.

Kevan Cheyne, aged 10, of Hartlepool, Cleveland, wrote the program for a school project on stars. No doubt the next project will be to draw a picture of Patrick Moore.

# GRUB RACE

**G**RUB RACE involves a race between three good representations of caterpillars. The progress of the race is decided by random elements in the program and the player places bets on the likely winner, starting with a total of £100.

The race is complicated by the fact that at any moment the caterpillars may turn into butterflies which, after fluttering on the screen for a time, return to being caterpillars and have to start again. Complete instructions are included in the program once it is run.

The graphics in lines 60, 70, and 80 are 30 shifted Ss and two shifted As and the butterflies in lines 1061, 1071 and 1081 include two shifted As.

Grub Race was sent by Roy Kay of Wirral, Merseyside and requires a RAM pack.

## PIXEL GAMES

### TRADER

A trilogy of 16K programmes that combine to give  
an epic 48K graphic adventure. As a galactic trader,  
you deal with some very bizarre customers indeed.  
Will you live to tell the tale?

### SUBSPACE STRIKER

With your deadly Antimat  
torpedoes, you unleash havoc  
in the Federation spacelanes  
and try to dive back to the  
safety of subspace, fast.

+ **ZOR** - Battle of the  
robots. Fight for survival  
in this action-packed strategy  
game.

### STARQUEST

With the help of your on-  
board computer, you seek  
a habitable planet amidst the  
perils of deep space.

+ **ENCOUNTER** - In this  
adventure, you are snatched  
off the Earth and the space  
invaders play YOU!

**PIXEL POWER** A graphics workshop packed with useful  
features like Create, Amend, Save, View Set.

**HARVESTER** A cut-throat strategy game for 2 to 4 players.  
**BRAINSTORM** Can you get our three space explorers across  
a river of nasty goo without blowing their minds.

### SUPPLIED ON CASSETTE

# C.C.S. MANAGEMENT GAMES

**16K ZX81  
Spectrum**

## DALLAS

A game of oil exploration and exploitation in Texas. Decisions are required on purchasing concessions, the movement and use of drilling rigs, and the building of platforms and pipelines. Can you take-over the Ewing Empire, or will you be taken-over in the attempt!

## AUTOCHIEF

As MD of a Catering Company you must negotiate for leases, decide on menu prices, level of wages, advertising and dividends. Each year you must predict the inflation rate. You will be made to resign if you are not successful. There are 3 levels of difficulty.

## FARMER

is a simulation for running a large wheat farm. Decisions are required on when to plant, irrigate, fertilize, spray and harvest your land and whether to purchase seed corn, land or farm machinery or whether to employ more farm workers.

## AIRLINE

Can you compete with British Airways? You must decide on the number of aircraft to operate, whether to buy or charter, and the levels of staffing and maintenance. Problems encountered are tax demands, strikes, cancelled flights, hijacks and aircraft crashes.

## PRINT SHOP

You own a small printing company and are required to decide on (a) the number and type of staff you employ and when to increase or reduce staff (b) the amount and type of paper you stock (c) the week in which work is scheduled (d) the quotation for each. There are 3 scales of difficulty.

# We've got big ideas about you and your Sinclair

Because we know you're always looking for new ideas to make the most of your Sinclair computer, we're making sure you never run out of steam!

Just announced is our latest magazine for the real enthusiast – **Sinclair Projects** magazine, full of fascinating schemes to tax your skills and reveal the practical potential of your Sinclair in applications like controlling lights, upgrading computer graphics, household security, and many more.

Whether you're new to computing, or an old hand, you're certain to be an enthusiast. That's why we introduced **Sinclair User** magazine for the latest news, techniques and enhancements to **match** your enthusiasm (now with new 'Spectrum User' supplement!) Next, its companion magazine, **Sinclair Programs**, became an overnight success with 40 NEW programs, ready for you to key, in every issue. Demand was so great that we are now publishing monthly.

Now the exciting new Sinclair Projects completes your store of possibilities with a huge increase in computing potential for you to explore.

Sinclair Projects is published every other month, so with these three magazines there's **always** something new to test your skill. But here's the best news: when you subscribe to all three Sinclair magazines, you get the first **three** issues of new Sinclair Projects **absolutely free!**

We **know** you've got big ideas about your Sinclair. Make sure you live up to them with **threefold** computing pleasure. Fill out the order form now and we'll send you the latest ideas-packed Sinclair Projects – hot off the press.

Mail to: ECC Publications Limited; 30-31 Islington Green,  
London N1 8BJ

## Sinclair User / Spectrum User; Sinclair Programs; Sinclair Projects

Yes – I'd like to subscribe to:

Sinclair User (12 issues – price £11.00)

Sinclair Programs (12 issues – price £13.20)

Sinclair Projects (6 issues – price £6.60) Remember you get the first three issues FREE if subscribing to all three magazines!

I enclose a cheque for £ \_\_\_\_\_ (deduct £3.30 from total cost if subscribing to all three publications)

Please charge my credit card Card name \_\_\_\_\_ Number \_\_\_\_\_

Name \_\_\_\_\_

Address \_\_\_\_\_

Signature \_\_\_\_\_ Date \_\_\_\_\_

NB This offer applies to UK subscribers only. Overseas rates available on request.

# THE NEW SPECTRUM 'ADD-ON' NOW WITH ADDITIONAL SWITCH-TYPE JOYSTICK PORT

**ONLY £22.50 PLUS VAT**

COMPLETE your SPECTRUM with our Multi-purpose Sound Generator and Joystick-port Board!! With one low-cost purchase you can obtain the following outstanding improvements to your ZX SPECTRUM:

- THREE CHANNEL sound effects. PROGRAM three independent sounds with music, gun shots, explosions etc.
- AMPLIFICATION of the standard sound output.
- TWO ports for Potentiometer Joysticks;
- ONE port for Switch-type Joystick.

The 'ADD-ON' uses the amazing AY-3-8910 SOUND Chip, which gives you an enormous range of sound effects. The output and volume of each channel can be separately controlled, with gun shots, explosions, drums etc., produced under the 'sound envelope'. MOST IMPORTANT TO NOTE — the CHIP is 'processor independent.' This means that sounds can continue to be produced without any noticeable effect on the speed of your program!!

The 'ADD-ON' contains its own speaker and amplifier chip and is supplied with a cassette containing sound demonstration routines and some sample sounds. The 'ADD-ON' simply plugs straight onto the back of your SPECTRUM. No soldering is required.

**COMPLETE YOUR SPECTRUM NOW!!**

JOYSTICKS (POTENTIOMETER-TYPE)  
KIT (incl. case) each £5.35 + VAT

BUILT each £6.75 + VAT

**NEW COWBOY SHOOT-OUT**  
(Machine Code) £3.95 + VAT

Full feature, TWO PLAYER, cowboy shooting game. Hide behind the cactus plants and moving chuck wagons until they are shot away. Shoot your opponent and avoid getting hit yourself. The second player can be the computer, but you set its skill from 10 levels. Excellent colour graphics and sound.

**CABMAN** (Machine Code) £3.95 + VAT

You are the owner of a fleet of yellow taxis. A rival firm competes with you, trying to steal your fares and run you off the road, if they can. Ten skill levels determine the number of opposing taxis, the speed at which they drive and the amount you earn per completed journey. MAXIMISE your earnings before you lose your entire fleet. This program is FIRST CLASS.

# R & R

## STAR TREK 48K

Rid the Galaxy of the evil Klingons. Protect your Star Bases from attack. ("Easy to play. Difficult to beat". Sinclair User Dec '82)

ONLY £4.95

## 16K Spectrum GOLF

Hi-Res Full colour graphics. A game for 1 or 2 players. All the features of a full size course. THE family game. (Reviewed Sinclair User Oct '82)

ONLY £3.75

## P-E-P

THE PROGRAM ENHANCEMENT PACKAGE FOR THE ZX81 (16K)

A suite of easy to use machine code routines designed to transform your Basic programs

- DEFINED SCROLL REGION 1 line to whole screen
- SCROLL up or down
- FILL SCREEN any character
- CHANGE BACKGROUND
- CHANGE FOREGROUND
- INVERSE VIDEO
- FLASH SCREEN
- CLEAR SCREEN without changing print position

Supplied on tape with a 6K DEMO PROGRAM and a FULL instruction booklet

ONLY £5.95

## GNASHER 16K

THE ULTIMATE MAZE GAME. Ghosts, Energy Pills, Bonus Fruit, Sound, Colour + much more. Starts easy. Becomes impossible.

ONLY £4.95

Send to: **R & R SOFTWARE (BSP)** 48 HOUR DISPATCH

# ZX SPECTRUM

## SPECTRUM 16/48K — ZX81 16K

## ZUCKMAN ZX81 (16K)

EAT THE DOTS, BEAT THE GHOSTS IN THIS ADDICTIVE GAME. CLEAR THE SCREEN OF DOTS TO EARN A BONUS LIFE AND A FRESH MAZE-FULL OF DOTS. WHEN THE CHASE REVERSES, CATCH A GHOST AND SEE ITS 'EYES' RETURN TO BOX.

- ALL MACHINE CODE (10K)
- AUTHENTIC ARCADE ACTION
- HIGH-SCORE 'HALL OF FAME'
- TITLE/DISPLAY ATTRACT MODE

ONLY £5.95 INC P&P

## FROGGER ZX81 (16K)

GUIDE YOUR FROG ACROSS THE ROAD, THEN CROSS THE RIVER BY JUMPING ONTO TURTLES AND LOGS, TO REACH SAFETY IN A FROG-HOME. FILL ALL FIVE FROG-HOMES TO EARN A NEW 'SCREEN' WITH MORE HAZARDS.

- MOVING CARS, LOGS, TURTLES
- ALLIGATORS, DIVING TURTLES
- SAVE BABY FROG FOR BONUS
- ALL MACHINE CODE (13.5K)

ONLY £5.95 INC P&P

\*SPECTRUM 16/48K VERSIONS AVAILABLE SAME PRICE\*  
(NB: Photographs show ZX81 versions)

# SIMPLE SIMON

**S**IMON may be simple but this game for the unexpanded ZX-81 is complex; you must increase the volume of your television set to hear the ZX-81 make its noises. Then you must guess, using keys 1 to 4 on the keyboard, the correct pitch and order of the notes played.

You must enter key 1 for the highest note and key 4 for the lowest. When you have guessed which notes have been played, the computer will continue to play the game until you have an incorrect note. When that happens you will be given your score and the proper sequence of the notes which you had incorrect.

```

**J**UDGMENT DAY has arrived for the fearless ZX-81 alien fighter on planet Earth. As a member of the Space Cadet Corps you must stop the aliens from making a permanent base.

The ground is shown at the bottom of the screen and the alien craft is shown as a bump above the landscape. You have 20 shots in your cannon and each one must count. You

fire by entering a number from one to 30, corresponding to positions from left to right on the screen.

When you have entered your guess, your spaceship will travel across the screen and drop its bomb. The number which appears in front of the alien after you have fired is the correct position of the target.

The program was sent by Robert Courtney, of Isleworth, Middlesex.

**F**IVE-YEAR PLANS, monetarism, the green revolution, laissez faire and the dictatorship of the people. You can try them all.

**Kingdom** gives you a rural realm to regulate and five years in which to increase your personal wealth and protect your people against flood, famine and the depredations of the ruthless local banditry.

You are first given instructions for the game and asked to input your name, age and sex. Depending on the information you supply, you will be dubbed king, queen, prince or princess and then asked to decide how best to divide your available workforce in the season ahead. Consider the crops or your subject will starve. Bear the bandits in mind or your minions are murdered. Delay on the dykes and they will drown.

It is reasonably difficult. Our 1,000 subjects were reduced to single figures after the first year.

Any number can play and you have five years in which to justify your kingship and to amass as much money as possible by the judicious selling of surplus grain.

Good luck, your highness, and thanks to Andrew Johnson of Amer-sham, Bucks, who submitted this excellent listing (16K ZX-81).

# 3D NOUGHTS + CROSSES

**P**R SCOTT of Goldalming, Surrey, has sent the kind of program Mr Spock plays on long, winter evenings. **3D Noughts and Crosses** displays a cube and 27 possible positions for the Xs and Os. Unlike the 2D version, the game must be continued until all the positions are filled, the object being not to obtain the first completed row but as many as possible.

The player who starts has an advantage, as finally he occupies one space more than his opponent and so, to level matters, the first player is prevented from occupying the centre square on his first attempt.

The program checks for that and other illegal moves, as well as setting-up the board, indicating whose turn is next, and giving the correct score throughout. Moves are entered by keying-in a letter, then a number, then NEWLINE. "A" indicates the front face of the cube, "B" the centre and "C" the rear. Entering "R" will restart the game (16K ZX-81).

**S**croll is a machine code program to move the display across the screen in any one of eight directions. Enter Listing 1, keying 126 characters in the REM statement in line 1. The variables S1 to S9

correspond to the compass points NW, N, NE, W, E, SW, S and SE. RUN the program and the machine code will be POKed into the REM statement. Then delete lines 10 to 70 and replace them with the demon-

stration routine in Listing 2. If the direct command "GOTO 10" is then entered, the versatility of this scroll program will be demonstrated. Submitted by Stephane Crainic, of Paris. [16K ZX-81]

**S**HOPPING LIST is a program for the 16K Spectrum with printer which enables the user quickly and efficiently to compile a list of items to be purchased.

The possible items are displayed one by one and you must hit the Y or N key as appropriate. At the end of the routine

the chosen goods are listed through the printer, with the option of adding extra requirements.

It is a genuinely-useful memory aid and provides a rare practical use for the printout. The listing was supplied by Nigel Copage of Abu Dhabi. (16K Spectrum).

**H**IGHER-LOWER is an excellent gambling routine based loosely on the TV game hosted by Bruce Forsyth. It involves trying to guess if the next card in a series will be higher or lower than the preceding one. In this version you need to have all five in correct order to win the round and the money.

Aces are a sure winner, since they can count as high or low. Two cards the same are decided on suit, and if you win the odds are increased. Also included is a Gamble/Collect routine which will double the odds if you gamble successfully.

The display shows the five cards, face down and up, with appropriately garish flashing instructions. A fine program, well thought-out and presented, from Neil Streeter of Hastings, East Sussex. (16K ZX-81).

**W**ORD PUZZLER is not so much a game as a game generator.

The object is to make word puzzles like those which appear in puzzle magazines, where a series of words is hidden in a grid of random letters.

The words can be vertical, re-

versed or diagonal, but rarely obvious.

The ingenious program requires a list of up to 15 words each of up to 12 letters, in order of length and pressing NEWLINE TO to start. The screen goes blank as the computer goes into fast mode to re-arrange the

letters and hide the words in a square of 15 by 15 letters.

Eventually the word puzzle is shown on the screen and the game is to find the input words which are listed by the side of the square.

The grid can be printed so that a number of puzzles with different

words can be made at the same time.

The dimensions of the square are set by the variable G\$(15,15) which can be altered to provide other sizes.

Word Puzzler is from Andrew Blackburn, of North Hykeham, Lincoln.

# 81 BREAKOUT

**D**AVID JOHNSON of Belper, Derbyshire, has sent a new version of the traditional arcade game of **Breakout**.

Two layers of bricks have to be pulverised using a ball which bounces off walls and a bat controlled by the player. Ten points are scored for every brick hit and a bonus ball is given for each screen cleared. You start with three balls and control the bat by pressing Q for left and P for right. (16K ZX-81).

**M**AKING WAVES for the 16K Spectrum will work out the average RMS and peak values of an alternating sine wave. A menu is displayed and you must select one of the functions. If you

want to find the peak value the program will ask you to enter the known RMS value; it is the other way round to find the RMS value and if you want to find the average value no input is required.

The graphics of the program are good and make this a fine educational program and mathematical aid. The program was sent by David Price, of Caerphilly, Glamorgan.

# *making* **WAVES**

# CHORDS

FOR ALL who are trying to master a musical instrument, **Chords** is a good learning aid. By entering the name of a chord, the notes which comprise it are displayed on a piano keyboard shown at the top of the screen.

Despite some chords having complicated titles, the program can deal with them by using a code for the different elements, such as the note, whether in major or minor and whether diminished or not. The code is shown on the screen beneath the keyboard.

To help in printing, the keyboard line 1030 contains a shifted 8 then a

shifted 7 and a shifted space followed by alternate shifted 7s and spaces.

Line 1070 is made up of a shifted 8, 30 shifted 6s and a shifted 5, and in lines 1100 to 1200 there are six spaces for letters in the second set of doubles and 32 shifted 7s in line 1210.

In line 1110 there are two sets of double quotes, shifted Q, after TAB 26.

Chords was sent by Paul Hopgood, of Wantage, Oxfordshire. It was one of the runners-up in the May competition in our companion publication, *Sinclair User*, and needs the 16K RAM pack.

# WIPE OUT

A DECEPTIVELY simple but frustrating game has been sent by Keith Paterson of Newmarket, Suffolk. When run, two walls are displayed with an O between them. The O can be used to eliminate the walls but as it does so it leaves a trail of Os behind it when moving vertically. No trail is left when moving horizontally.

The object is to finish with only one O on the screen. Despite a lengthy attempt by the *Sinclair Programs* reviewer, that proved impossible but Paterson maintains that it can be done with a little thought and concentration.

The O is moved by the cursor keys in the usual directions. It can run on the 1K ZX-81.

```

2 PRINT "USE 5,6,7,8 TO CLS

28 PRINT AT 20,16;C
  
```

FOR THE 1K ZX-81, *Ships* is a simple type of missile game in which a target moves at various distances from the gun across the screen and the objective is to hit it. Ten ships pass and the score is shown at the end of each game.

Only one shot can be made at a time, so the skill is in judging when to fire, so that the missile and ship coincide. When a hit is made in the middle of the ship, BANG is shown on the screen.

Press RUN and NEW LINE to start each game and P to fire the missile. The *Sinclair Programs* reviewer managed a top score of four.

The graphics in line 100 are, all shifted, 3,6 and 4 and line 125,Q,F and W. *Ships* was sent by Ian Johnston, of Newmarket, Suffolk.

# SMAUG

**S**MAUG is an Adventure game based on a circular maze of rooms.

The object is obviously to find a dragon called Smaug and then kill it. On the way you risk being transported to other caves by Orcs or catching sight of a dreaded Balrog, which is fatal instantly.

Having slain the dragon, you must

steal the Arkenstone which assists you by protecting you from Orc-  
porting and also warns of impending Balrogs.

Smaug has no graphics built in yet but perhaps that could be the next development for interested readers.

The program requires 5K and was submitted by Mrs C M Corns of Enfield.

# PONTOON

**T**HIS VERSION of the card game **Pontoon** requires a minimum of 4K RAM on the ZX-81. The program is a very good simulation of the game which is played with the computer as the dealer.

S is pressed for stick and T for twist, with the answer as to whether you wish to play again after the end of a game being a Y or N. No betting is involved—only the satisfaction of having beaten the computer.

To help with the graphics for the card designs, on lines 30 to 100 there are five spaces between the quotes.

Pontoon was sent by Paul Mapstone, of London N7.

# COMPUTER COMBAT

THE FIRST question often asked about a new machine is "Does it play Space Invaders?". Though a 1K machine has considerable difficulty getting anywhere near, *Computer Combat* for 1K ZX-81 is a type of mini space invaders but with only one invader and one base and a much slower rate of firing.

The object of the game is to hit the invader as many times as possible before it lands or you run out of missiles. Twenty-five missiles normally are given but that can be altered by changing the value of B in line 5.

You receive five points for hitting it but lose one if you miss. Use keys 5 and 8 to move left and right respectively and key 0 to fire. The invaders' missiles are shown as an asterisk and yours as a cross. The program is good for beginners, as it is easy to understand the function of each line as there are none of the usual POKES and PEEKS or other complicated functions.

If you want to get more memory, enter in direct mode the following BEFORE entering the program:

POKE 16389,68 followed by NEWLINE  
NEW followed by NEWLINE

The program will run continuously until the BREAK key is used.

*Computer Combat* was sent in by 15-year-old Anthony Wells, of totnes, Devon.

**S**PEARMAN'S coefficient of rank correlation is used to prove hypotheses of relationship between two sets of values. This program calculates **Spearman's Rank** for up to 14 pairs of values; any more will run over the page on the final printout.

The program was sent by Ian Holwill of Richmond, Surrey, who writes that he had trouble with the calculations, since the ZX-81 did not seem to store the numbers correctly. He overcame the problem by using the rounding technique in line 330, then dividing the result by 100 later in the listing. That gives a value to two decimal places. (16K ZX-81).

# SPEAR MAN'S RANK

**E**DUCATIONAL GAMES are always popular and useful routines for the Sinclair machines. **Monster Maths** is designed to test simple mathematical skills.

The student is set 20 problems. Each incorrect answer extends a bridge towards a ravenous monster and 10 errors will enable it to cross over and eat you.

Lines can be changed to alter the range of numbers dealt with and the mathematical process required. Submitted by Russell Newby, of Biggin Hill, Kent (1K ZX-81).

# NUMBERBOARD

**N**UMBERBOARD is a 1K ZX-80 program whose subject is to move the inverse plus sign from the top left-hand corner of the screen to the inverse question mark at the bottom right. You move with the usual cursor keys and your final score is the total of all the numbers on which you land in the course of your journey, the lower the better. To start the game, use GOTO 1 instead of RUN.

**Numberboard** was sent by Robert Bumstead, of Keswick, Cumbria.

```
10 FOR F=1 TO 479
20 LET J=RND(5)
30 PRINT J;
40 NEXT F
50 PRINT CHR$(143)
60 LET Y=0
70 LET X=0
80 LET T=0
90 LET Z=Y*33+X+1+PEEK(16396)+PEEK(16397)*256
```

```
100 IF PEEK(Z)=143 THEN GOTO 180
110 LET T=T+PEEK(Z)-28
120 POKE Z, 147
130 INPUT A
140 POKE Z,0
150 LET X=X+(1 AND A=8)-(1 AND A=5)
160 LET Y=Y+(1 AND A=6)-(1 AND A=7)
170 GOTO 90
180 PRINT "FINISHED IN"; T
```

**U**SERS with 1K can now pass the hours using their machines to gamble. **Jackpot** is a fruit machine routine without the fruit. Hit any key except SHIFT or SPACE to change the line of numbers until three in a row appear. A running total is kept of your money and credits.

The program was sent by Darren Hatton of High Wycombe, Bucks. (1K ZX-81).

```

# Jackpot

# SEMAPHORE

**S**EMAPHORE has sharp graphics and is educational, too. You can teach yourself with the help of an animated instructor supplied by Dr G A Jeffery of Stanley, Co. Durham.

Press any letter and the little man in the middle distance will give the appropriate semaphore signal, while FUNCTION induces something which looks like an attempt at vertical take-off, but is really the signal for Attention. 16K ZX-81.

# WORD PROCESSOR

A PROGRAM which allows the 16K ZX-81 to be used as a word processor has been sent by K J Moore of Shoeburyness, Essex. It was a runner-up in the May competition in our companion publication, *Sinclair User*.

It allows the user to enter text directly on to the screen; the print position can be moved to any point using the cursor keys and up to 10 screens of text can be entered.

When run, a brief list of instructions is given and to continue press NEWLINE, when 'Screen 1' will appear. Press NEWLINE again and you are ready to enter text.

Moore advises that when the program is run for the first time the user becomes used to entering text on the screen before proceeding to press

# WORD CROSSOR

EDIT, which brings up a list of print options. A further warning is that once an option has been chosen there is no chance to change it until listing or printing has finished.

One problem when entering text is that the space key doubles as the BREAK, which will stop the program running. Within that system the space key is NEWLINE. It is also worth noting that the typing must be done at the normal speed for acceptance by the ZX-81, which can seem slow. While it is possible to correct letters, ones which have been missed cannot be inserted without repeating a good deal of text.

To make the listing clearer, in lines 1080, 5020 and 5050 are inverse K, G and K again.

**R**OCKET ATTACK is yet another spin-off from the Sinclair Programs R&D industry. J Sells of Enfield has updated a program printed originally in our May-June issue.

He has Spectrumised D E Healey's Rocket Attack games, composed originally for the ZX-81. The game involves a squadron of 20 planes heading towards your missile station. Pressing P will fire the missile. To destroy the plans you can either hit them directly or leave the missile in their path. Your hawk-eyed reviewer only managed 12 out of 20. Graphics notes:

160—Three graphics 8s, twenty-nine graphic 3s.

170—Graphic 6.

185—"ab" as in graphic mode.

440—Inverse video "Game over",

```

**S**IXTEEN PINS appear at the top of the screen for **Bowling** and the ball at the bottom. Use keys 5 and 8 to line up the two and press key 0 to bowl. The ball will be deflected by impact with the pins and thus make your task more difficult. For every pin hit you will add one to your score; the score is printed after eight balls and the game ends (1K ZX-81).

# BOWLING

**A**DDING MACHINE allows you to keep a running total of your expenditures and income—income is entered as a negative figure. First enter the amount of money involved—press NEWLINE and then enter a description of the item. As it stands the program will off-load each item automatically to a printer with a running total, though those lines can easily be deleted and the same information is displayed automatically on the screen.

Adding Machine is from Mike Salem of Hilderbay Ltd.

# UTILITY DRAW

PETER SAFRANEK of Ashford, Middlesex, has sent a very useful graphics program for the 16K or 48K Spectrum. Commands available are "o" to input the over; "d" to draw for inputted x and y and draw x and draw y; "c" to draw a circle around inputted x and y coordinates and inputted radius; "s" to save the design on the screen as a SCREENS; and "r" to re-set the flashing pixel cursor to inputted x and y co-ordinates.

The pixel cursor is moved in any one of eight directions using the eight letters around "H" on the keyboard—i.e., T, Y, U, G, J, B, N and M. Once you have entered the program you can SAVE it by entering "RUN 550".

Practice and patience can produce displays like the map of Europe shown; an outline on the screen in washable ink was a help for this, Safranek reports. The advantage of such a saveable display for educational purposes is obvious (16 or 48K Spectrum).

# Sinclair ZX Spectrum

**16K or 48K RAM...  
full-size moving-  
key keyboard...  
colour and sound...  
high-resolution  
graphics...**

**From only  
£125!**

First, there was the world-beating Sinclair ZX80. The first personal computer for under £100.

Then, the ZX81. With up to 16K RAM available, and the ZX Printer. Giving more power and more flexibility. Together, they've sold over 500,000 so far, to make Sinclair world leaders in personal computing. And the ZX81 remains the ideal low-cost introduction to computing.

Now there's the ZX Spectrum! With up to 48K of RAM. A full-size moving-key keyboard. Vivid colour and sound. High-resolution graphics. And a low price that's unrivalled.

## Professional power— personal computer price!

The ZX Spectrum incorporates all the proven features of the ZX81. But its new 16K BASIC ROM dramatically increases your computing power.

You have access to a range of 8 colours for foreground, background and border, together with a sound generator and high-resolution graphics.

You have the facility to support separate data files.

You have a choice of storage capacities (governed by the amount of RAM). 16K of RAM (which you can update later to 48K of RAM) or a massive 48K of RAM.

Yet the price of the Spectrum 16K is an amazing £125! Even the popular 48K version costs only £175!

You may decide to begin with the 16K version. If so, you can still return it later for an upgrade. The cost? Around £60.

## Ready to use today, easy to expand tomorrow

Your ZX Spectrum comes with a mains adaptor and all the necessary leads to connect to most cassette recorders and TVs (colour or black and white).

Employing Sinclair BASIC (now used in over 500,000 computers worldwide) the ZX Spectrum comes complete with two manuals which together represent a detailed course in BASIC programming. Whether you're a beginner or a competent programmer, you'll find them both of immense help. Depending on your computer experience, you'll quickly be moving into the colourful world of ZX Spectrum professional-level computing.

There's no need to stop there. The ZX Printer—available now—is fully compatible with the ZX Spectrum. And later this year there will be Microdrives for massive amounts of extra on-line storage, plus an RS232 / network interface board.

## Key features of the Sinclair ZX Spectrum

- Full colour—8 colours each for foreground, background and border, plus flashing and brightness-intensity control.
- Sound—BEEP command with variable pitch and duration.
- Massive RAM—16K or 48K.
- Full-size moving-key keyboard— all keys at normal typewriter pitch, with repeat facility on each key.
- High-resolution—256 dots horizontally x 192 vertically, each individually addressable for true high-resolution graphics.
- ASCII character set—with upper- and lower-case characters.
- Teletext-compatible—user software can generate 40 characters per line or other settings.
- High speed LOAD & SAVE—16K in 100 seconds via cassette, with VERIFY & MERGE for programs and separate data files.
- Sinclair 16K extended BASIC— incorporating unique 'one-touch' keyword entry, syntax check, and report codes.

# Spectrum

## ZX Spectrum software on cassettes – available now

The first 21 software cassettes are now available directly from Sinclair. Produced by ICL and Psion, subjects include games, education, and business/household management. Galactic Invasion... Flight Simulation... Chess... History... Inventions... VU-CALC... VU-3D... 47 programs in all. There's something for everyone, and they all make full use of the Spectrum's colour, sound and graphics capabilities. You'll receive a detailed catalogue with your Spectrum.

## RS232/network interface board

This interface, available later this year, will enable you to connect your ZX Spectrum to a whole host of printers, terminals and other computers.

The potential is enormous. And the astonishingly low price of only £20 is possible only because the operating systems are already designed into the ROM.

# sinclair

Sinclair Research Ltd, Stanhope Road, Camberley, Surrey GU15 3PS.  
Tel: Camberley (0276) 685311.

## The ZX Printer – available now

Designed exclusively for use with the Sinclair ZX range of computers, the printer offers ZX Spectrum owners the full ASCII character set – including lower-case characters and high-resolution graphics.

A special feature is COPY which prints out exactly what is on the whole TV screen without the need for further instructions. Printing speed is 50 characters per second, with 32 characters per line and 9 lines per vertical inch.

The ZX Printer connects to the rear of your ZX Spectrum. A roll of paper (65ft long and 4in wide) is supplied, along with full instructions. Further supplies of paper are available in packs of five rolls.

## The ZX Microdrive – coming soon

The new Microdrives, designed especially for the ZX Spectrum, are set to change the face of personal computing.

Each Microdrive is capable of holding up to 100K bytes using a single interchangeable microfloppy.

The transfer rate is 16K bytes per second, with average access time of 3.5 seconds. And you'll be able to connect up to 8 ZX Microdrives to your ZX Spectrum.

All the BASIC commands required for the Microdrives are included on the Spectrum.

A remarkable breakthrough at a remarkable price. The Microdrives are available later this year, for around £50.

## How to order your ZX Spectrum

BY PHONE – Access, Barclaycard or Trustcard holders can call 01-200 0200 for personal attention 24 hours a day, every day. BY FREEPOST – use the no-stamp needed coupon below. You can pay by cheque, postal order, Access,

Barclaycard or Trustcard.

EITHER WAY – please allow up to 28 days for delivery. And there's a 14-day money-back option, of course. We want you to be satisfied beyond doubt – and we have no doubt that you will be.

To: Sinclair Research, FREEPOST, Camberley, Surrey, GU15 3BR.

# THE FIRST sinclair user ANNUAL The Complete ZX Companion

In the fast-moving world of Sinclair—a year is a very long time . . . . .

The first of the best of the year! A complete guide which follows the course of all the Sinclair developments in the last 12 months—and you'll never believe how much has happened until you see it!

Since Sinclair User was launched in April, we've tried to keep you up-to-date. Now we've asked our top writers to take stock of the year's progress in the compendium you won't want to miss. We've also chosen the best articles and programs from previous issues—so the new **Sinclair User Annual** makes a great gift for a new enthusiast, as well as forming a valuable reference work for you.

If you are unable to obtain **Sinclair User Annual** from your newsagent, order it by post from: Sinclair User, ECC Publications Ltd., 30-31 Islington Green, London N1 8BJ, price £2.05 including post and packing (£2.75 for non-U.K. residents). Cheques/POs with orders please, payable to Sinclair User.

## MAIL ORDER ADVERTISING British Code of Advertising Practice

Advertisements in this publication are required to conform to the British Code of Advertising Practice. In respect of mail order advertisements where money is paid in advance, the code requires advertisers to fulfil orders within 28 days, unless a longer delivery period is stated. Where goods are returned undamaged within seven days, the purchaser's money must be refunded. Please retain proof of postage/despatch, as this may be needed.

### Mail Order Protection Scheme

If you order goods from Mail Order advertisements in this magazine and pay by post in advance of delivery, **Sinclair User** will consider you for compensation if the Advertiser should become insolvent or bankrupt, provided:

- (1) You have not received the goods or had your money returned; and
- (2) You write to the Publisher of **Sinclair User** summarizing the situation not earlier than 28 days from the day you sent your order and not later than two months from that day.

Please do not wait until the last moment to inform us. When you do write, we will tell you how to make your claim and what evidence of payment is required.

We guarantee to meet claims from readers in accordance with the above procedure as soon as possible after the Advertiser has been declared bankrupt or insolvent (up to a limit of £4,250 per annum for any one Advertiser so affected and up to £10,000 per annum in respect of all insolvent Advertisers. Claims may be paid for higher amounts, or when the above procedure has not been complied with at the discretion of **Sinclair User**, but we do not guarantee to do so in view of the need to set some limit to this commitment and to learn quickly of readers' difficulties).

This guarantee covers only advance payment sent in direct response to an advertisement in this magazine (not, for example, payment made in response to catalogues etc, received as a result of answering such advertisements). Classified advertisements are excluded.

**SPECTRUM GOES FORTH**

THE GOOD  
COMPUTING  
BOOK FOR  
BEGINNERS

PLUS a comprehensive glossary of words

If you want to know  
about computing . . .

# THE FACTS DON'T HAVE TO BE BORING!

An entertaining, but **thorough** reference source with the most readable, comprehensive glossary you'll find anywhere. The Good Computing Book for Beginners is an essential A-Z of all the facts you need to know about computing — and none you don't!

Whether you're brand new to computing, or an old hand keen to stay ahead, you'll score by keeping this classic, top-selling book within reach to use again and again.

The author, Dennis Jarrett, is a successful journalist who was also founder editor of Which Computer? magazine — so his first edition quickly became a standard work. Now this new, substantially enlarged and revised edition covers the latest trends, terms and technology with the relevant facts — and **ONLY** the relevant facts — in **plain English**.

Here's another fact you'll find fascinating: **it will only cost you £2.95!**

Use the coupon below to get your copy right away — or buy it soon from your bookshop. It's the nonsense book you'll turn to again and again.

Please send me \_\_\_\_\_ copy(ies) of The Good Computing Book for Beginners by Dennis Jarrett at £2.95 each plus 50p post and packing. I enclose a cheque for \_\_\_\_\_
