## Eecaaan's Transmission

One of the first games computers available was the Atari 800 (and 400). These machines had unrivalled graphics and sound facilities and a wealth of American software ripe for importing. Unfortunately the UK market was young and the software stayed on the wrong side of the Atlantic and the 800 fell from favour.

Five years later the Atari is back. Although repackaged as the XL range the machine stays largely the same. At £99 the 600XL is an excellent games machine and we are delighted to have one to give away this month. For only thirty pounds more the 800XL offers 64K, sound and graphics for a fraction of the price of the BBC or C64. Now the range has been extended with the launch of the 130XE which with 128K for only £169 has great potential as a games machine.

Software titles are beginning to appear not only from the importers such as US Gold and Ariolasoft but also from Activision, PSS and Beyond.

Its clear, even to an Alderbrannen tree frog, that Atari are at last going to become a major force in the UK games industry.

Transmission ends.

# 4

## Ultimate Conversions

BBC micro and Amstrad owners will soon be able to explore the 3D worlds of Alien 8 and Knight Lore. According to Ultimate the conversions will retain the graphics and animation

that sent the Spectrum versions to the top of the charts.

Finally Commodore 64 owners can look forward to the second in the Staff of Karnath series. It is another 3D graphical adventure starring Arthur Pendragon and is called Entombed.

## Credit Card ROMs

Yet another ROM format is set to come to Britain based on a credit card style carrier, from Astar. The carrier is a plastic card with a chip and connections stuck

at one end. The chip is a normal ROM or EPROM but with the large plastic package removed. A chip is normally only a quarter of an inch square, so this just mounts nicely on the bottom of the card.

The card then slots into an adaptor or interface. It is mainly designed for MSX, but there will be

various interfaces for Commodore 64 and Spectrums.

The interfaces will be cheap at about £5, but the catch comes when you want to buy these ROMs, its intended that they are going to be sold for a whopping £14 to £20 each. Add those together and a normal £10 cartridge looks more inviting.

Software... now just a card!  
SEGA introduces a world first for home computers, truly tomorrow's technology today.

# NEWS NEWS NEWS

## Frankie goes to Hollywood

In the latest game from Ocean, the player has to collect the Frankie symbols in order to enter the Pleasuredome.

These symbols representing love, war, pleasure and fate are scattered through the strangest screens ever found in an action game. One of the games screens

depicts a fifties style living room complete with three ducks on the wall. These ducks then attack the player who must escape through the TV screen.

During the game you will also find yourself in a kitchen, Frankenstein's laboratory and in a street preventing planes from bombing an art gallery.

Other forthcoming Ocean releases include Daley Thompson's Supertest and a game based on Roland Rat.

## Beyond's Monolith

Monolith is the name of Beyond Software's new label, launched to market a range of action games.

The first game to be released is Boulderdash II which is exclusively reviewed in this month's Gamer.

Other titles to follow include Quake-1 and a Rollerball style game called Sport for the future written by Denton Designs. Quake-1 is written by Mike Singleton, the author of Lords of Midnight, and incorporates fast moving Midnight style landscapes.

Beyond themselves, plan a September release date for the third in the Midnight series. It is to be called Eye of the Moon and is expected to feature over 13000 views.

A Midnight derivative called Elindore is to be released in July and will feature 32000 animated views and over 50 "strange and mysterious" characters.

Finally, July and August will see the launch of Atari and Amstrad versions of Shadowfire, Boulderdash II and Spy vs Spy. These like the Spectrum and 64 versions, will be sold together on the same tape.

## Atari 130XE

The Atari home computer system is probably the longest running saga in the computer industry — having a basically unchanged design from its original conception back in 1980.

At the time of their launch a cartridge called Star Raiders was also released. This sold Ataris in the same way that Elite sells BBCs now, and the game had a similar impact. Since then they had the XL period and now Jack Tramiel has bought the company the XE series is upon us.

The internal architecture is changed little from the original 800. There is the same video, sound, and I/O chips — GTIA, ANTIC, POKEY. This means that all Atari software will run without modification, and

the Atari has a huge software library.

The electronics are slightly different for more efficient manufacturing and then there is the RAM system.

The XE range was originally designed to be the 65XE, 65XEP, 65XEM and 130XE. Now it looks like only the 130XE will see the light of day. The 130XE has 128K or RAM.

This RAM takes up most of the circuit board, 16 chips in all. There is also a RAM manager called FRED-DY (Atari always give their custom chips funny names).

The main processor is the 6502C running at about 1.79MHz. This chip can theoretically only access 64K of memory at one time (especially if you listen to Sir Clive!). So how does the XE do it?

Well, the 6502 can only

access 64K at any one time, the trick is to switch it in and out when you don't need it, a concept familiar to C64 owners that has 64K+20K+4K of RAM, ROM and I/O. The Atari 130XE has 64K+64K+24K of RAM, RAM and ROM. The bank switching is just that more complex.

From Basic you will find about 40K free for Basic programs, what about the other 88K I hear you cry.

24K is inaccessible apart from machine code because this is what hides behind the 24K ROM for Basic etc. The other 64K is known as the Extra Memory. This can be brought into your programs in 16K chunks. The 16K that is dealt with is the second 16K section from \$4000 to \$7FFF. This is just above where the hi-res screen normally resides.

In this section of memory you can look at either the original (normal) 16K of memory or the extra memory. The extra memory (64K) is divided up into 4 16K chunks. You can then say which 16K chunk occupies the banked memory sector (am I losing you?).

Another refinement of this system is whether the main processor or the video processor looks at which memory. This means that the video processor can use the extra memory to store all its sprites, UDG, colour, and hires data. It is now feasible to draw a number of objects in hires (you can store 8 hires screens in 64K) and flick through them to produce faultless animation. And as well as this you get an extra 8K for your programs.

The keyboard of the XE is new, and I found it to be lacking from the XL or even the original 800, it is a low profile type, very similar to the Commodore SX 64 type. The function keys are sort of moulded at the top of the case and have a very 'tacky' feel to them.

The I/O ports are similar to the XL except the cartridge port is on the back of the machine (a la Commodore) and not the top. The expansion connector is missing, but to the best of my knowledge this has never been used. Instead of this there is an ECI (Enhanced Cartridge Interface) this is sited next to the cartridge port and allows the cartridge capacity to be extended from the normal 8K up to a full 64K if it ever become necessary. It includes an audio line, which must have been for the now possibly defunct music synthesizer.

The manual is a great leap forward for Atari, their manuals are usually unreadable, but this one isn't too bad. All in all for £169 (yes £169) you get an excellent machine with bags of memory and expansion options. A large user base, readily available peripherals, and a large software base. A computer that is well worth considering.

# NEWS NEWS

## League Champion

This month saw a landmark in the Britain Software industry. Football Manager has not only sold 100,000 copies it has constantly been in the charts for the past three years.

This is incredible when you consider that most games are in and out of the top twenty in a matter of weeks. It has also lasted longer than most real football managers.

It was one of the first Spectrum games that I ever bought and has been the cause of many a late night as I was tempted into playing just one more session. (One such session ended at 5am).

Now it seems set to continue as Addictive Games have just launched the Amstrad version.

Congratulations to Kevin Toms and Addictive Games for producing a real league champion.

## ARCHON

## Spectrum Archon

The Spectrum version of Archon leads an impressive range of conversions released by Ariolasoft.

Spectrum owners will be delighted to hear that the conversion contains all the features that made it such an excellent game on the Commodore 64. (The 64 version was reviewed in the first transmission of Gamer).

The game is a chess variant where each piece is a mythical monster with its own powers. These powers are needed for if you want to take the opponents piece you have to fight it on a combat screen.

Archon is also to be available for the Amstrad and Atari computers.

Other conversions include Spectrum, Atari and Amstrad versions of One-on-one and Hard Hat Mack and an Atari disk version of Murder on the Zinderneuf.

PLACE IT IN THE CHARMED SQUARE

## Roland's Joysticks

The Cheetah RAT is now available for the Commodore 64. The RAT first made its appearance on the Sinclair Spectrum and consists of a sender unit that is the joystick, and a receiver that plugs into the computer.

The sender is not really a joystick but a device with a

set of touch sensitive panels on the top and the twin infra-red transmitters on the front. It needs a PP6 9v battery.

The receiver unit is a small box like affair that plugs into the normal D9 joystick port of the Commodore and takes its power from there. There is a small infra-red receiver that needs to be kept in view.

The whole thing is very easy to use and can be used

in either joystick port. It is a shame that Cheetah didn't include a real joystick as the one they have included seems a mere attempt at cost cutting — but to the detriment of the product.

It would be a very useful to have one of the independent joystick manufacturers such as Quickshot to produce a version for an existing proven stick — even at a higher or extra cost.

**Cassettes are unreliable but disks are expensive. Mike Roberts finds an answer to this dilemma for C64 and VIC owners.**

Cassette storage is an unsuitable storage medium for home computers. It is only with us due to economics — i.e. it's cheap. Even the ubiquitous paper tape has a number of advantages over this unsuitable medium.

On the other hand, the main competitor to cassettes — floppy disks, are extremely expensive, running to hundreds of pounds a time (they were not designed for storage any more than audio tapes were, but for data transfer, however that's another story).

The disadvantages of tape are mainly slow speed, lack of direct access (try to record at the end of a tape), and unreliability.

Disks are also unreliable, but less so, and have quantitative problems when it comes to storage space — disks are between 100K for the smallest BBC drive at around £150, 180K for the Commodore 64 at around £175, to 640K for the modified non-standard BBC drive at around £300.

The storage media (ie. the disks) all weigh in at about £2, though some people will try and rip you off with prices up to £4 for a single disk. Price is no guide to quality.

When you come to tapes, at £30-£40 tape deck and a £1 CPO will store about 300K.

As I previously mentioned, both these data storage devices were never originally designed for data storage, so getting down to the crux of the matter, the Wafadrive is.

## What is a Wafadrive?

Everybody has heard of the infamous Sinclair Microdrive, an attempt to provide a fast disk alternative. However it failed to live up to its claims, was unreliable, slow, had a low data capacity, and was badly supported by software houses.

Now a group of multinational companies headed by BSR/Astec (famous for their power supplies and modulators) and Entrepo have, over the last few years, developed their own wafer or continuous loop

tape system. The system is, in concept, similar to all 'stringy floppies' that have been developed. A loop of tape that is joined at the ends. So that if you want some data that is at the beginning of a tape and read head is just past it, it will wind on past the join until it is in the appropriate place to read it again. So direct access is possible. The big unreliability problem comes with the spooling method. When you have unravelled the tape, you have to shove it back onto the spool again. This is where the Sinclair devices fall down, at this point, after continuous use they get all munched up — losing all data, programs etc.

The Entrepo units do not have this problem, due to a highly developed tape system, lubricants, and various other systems to keep the tape tight.

In Britain the system first saw the light of day with the Rotronics Wafadrive about a year ago, for the Spectrum. The unit since went on to win the CTA 'peripheral of the year' award.

However, other computer owners will not have

to suffer any more. Dean Electronics are now importing the Quick Data Drive from Phonemark for the Commodore 64 and VIC 20.

The unit is very small indeed and is a lot smaller than the standard tape deck. Like the tape deck it plugs into the cassette port and requires no extra power supply. Quite a change from the heavy and large disk system with all its trailing wires.

The QOS (Quick Operating System) needs to be loaded so that the Commodore 64 can use the new system through the tape port. This is done by inserting the operating system wafer and hitting run/stop (where have I seen that before!) the QDD will emulate the tape recorder and load in the program at normal tape speeds. This obviously takes a while as 'normal' tape speeds are very slow indeed.

When booting has taken place the commands LOAD, SAVE, VERIFY, and the file handling commands all work through the QOS and go directly to the wafer at high speed.

The QOS does take up memory space though, and

the 4K of spare RAM from \$C000 is taken over. 4K from \$A000 is also taken, but this is banked under Basic and is not normally used by the Basic user.

For normal disk-type commands a separate program needs to be loaded, called a File Management Utility. The FMU provides tape to wafer, wafer to wafer, disk to wafer, and most other combinations of copying. It does not copy protected files.

The FMU also provides a directory display, formatting, system creation, and clean drive (this needs a cleaning wafer). It is a shame that these essential functions could not be provided in a permanent command driven environment.

On the whole the QDD is a very good alternative to tape, whether it will challenge disk or not is another matter as the price of disks is falling. The QDD is currently supported well by American software houses and there is a lot of imported software available for it.

If the price drops to significantly lower than disks this will be well worth getting.

# COMPETITION

## Competition Rules

1. This competition is open to all UK readers of Computer Gamer, except employees of Argus Specialist Publications Ltd, their printers and distributors, employees of Silica Shop, or anyone connected with them.  
2. As long as the correct coupon is used for each entry there is not limit to

the number of entries per person, photocopies will not be accepted.

3. All entries must be postmarked before 1st July.

4. The prizes will be awarded to the first entry judged to be correct by the editor.

5. No correspondence will be entered into with regard to the competition results and it is a condition of entry that the editor's decision is final.

## Win an Atari 600XL Games Pack

Silica Shop, the number one Atari specialists, are giving away an Atari 600XL computer to the winner of our competition. This 16K home computer is ideal for games playing featuring high resolution graphics and superb sound. Included in the prize is a joystick and two cartridge games, Donkey Kong and Qix.

design the defenses for a fortress. Whether this entails robot patrolled passageways of a spaceship or zombie infested grounds of a castle is entirely up to you.

All the judges will looking for is the imagination and ingenuity of the design and layout of your defenses.

Obviously in your entry you should include the following information. Who or what are you guarding and how they get past the defenses. You should also include full details of the traps, sensors and weapons as well as a diagram of the fortress and the surrounding area.

Fill in the coupon below and send it all to us by the last post on June 30th.

## How to win

All you have to do to enter this competition is to

## Coupon

## BACK-UP PROBLEMS SOLVED

**DCL1 Dual Dataset Interface** Enables the quick and easy creation of back-up copies of all Turbos, M/Code, Data Files, etc. If your program can be loaded it will be transferred exactly on a second dataset. Does not require software or modifications to your computer.

ORDER AS DCL1  
Price £10.00 (CBM 64 & VIC 20)

**DCL4 Audio Recorder Interface** Enables back-up copies to be made on 1 or 2 audio cassette recorders or on a second dataset. Like the DCL1, it will transfer any program that can be loaded. Does not require software or modification to your computer.

ORDER AS DCL4  
Price £18.00 (CBM 64 & VIC 20)

**Special Offer** Trisoft, originators of dual cassette interfaces, now offer you a Reset1 unit for only £1.00 if purchased with a DCL1 or DCL4. Offer ends 1 July 85.

ORDER AS DCL1/RESET1 OR DCL4/RESET1

**CVCopy Tape Back-up Program** Ideal for anyone with only 1 Dataset and no Audio Recorder, it will transfer programs from tape to tape or tape to disk, menu driven with prompts.

ORDER AS CVCOPY  
Price £4.50 (CBM 64 only)

# It's easy to complain about an advertisement. Once you know how.

One of the ways we keep a check on the advertising that appears in the press, on posters and in the cinema is by responding to consumers' complaints.

Any complaint sent to us is considered carefully and, if there's a case to answer, a full investigation is made.

If you think you've got good reason to complain about an advertisement, send off for a copy of our free leaflet.

It will tell you all you need to know to help us process your complaint as quickly as possible.

**The Advertising Standards Authority.** ✓  
**If an advertisement is wrong, we're here to put it right.**

ASA Ltd, Dept 1 Brook House, Torrington Place, London WC1E 7HN

This space is donated in the interests of high standards of advertising.

Imagine the outrage if a small nuclear device exploded in Britain. As MI5 agent John Preston, rumours have reached your desk that someone is planning to do just that and you have only a limited amount of time to find out exactly who is going to do it, how and where.

Frederick Forsyth's latest thriller is the basis for this game from Hutchinson. The Fourth Protocol is a secret agreement signed by America, Russia and Britain back in 1968. Briefly, it states that none of the signatories can introduce a nuclear device into the territory of another signing nation. So far, no-one has tried — until now.

The date is 1987, a few weeks before the general

explode a small nuclear bomb and use their disinformation services to blame it on the Americans. This should ensure that enough people switch their allegiance to the only partly committed to Unilateral Disarmament.

The game is a three part adventure game, the first two parts being icon/menu driven with part three being text input with some arcade-type sequences. In part one, you have to uncover a traitor within your ranks. This leads to part two where you have to discover exactly where the bomb is hidden and so to the final part and the actual defusion of the bomb. The three parts must be played in order as successful completion of parts one and two

ing a pointing finger round the screen and pressing the return key. Most of the icons, once selected, lead to a window full of further options. For example, selecting the picture of the telephone, gives you four choices: make an outgoing call (you are prompted for the number), listen to an incoming call, put the telephone on hold (so that you don't lose a call of you are doing something else) and return to the main screen.

The icons are large, very well drawn and mostly self explanatory. The telephone has already been described. The filing cabinet is used for storing memos and reports that you have accessed. The video camera allows you to put a sur-

From right to left, these are memos, reports and sitreps (reports from your watchers). Accessing one of these terminals gives you options to read, file or throw away the report. As the game progresses, more and more pieces of paper land on your desk, all of which need to be acted upon in one way or another. It's nice to know that even occupations as supposedly glamorous as spying have their problems with bums.

So to the game itself. As mentioned earlier, your main

So to the game itself. As mentioned earlier, your main task is to find out who has been leaking the Nato documents. But your job is concerned with all aspects

# THE -F-O-U-R-T-H- PROTOCOL

**With only days to foil a Russian plot to explode a nuclear bomb in Britain, Gordon Hamlett is seconded to MI5 to investigate.**

election. Experts in Moscow have decided that if the Labour Party is returned to power, they can control the government to such an extent, that over the next few years, Britain will withdraw from Nato, allow a Russian invasion and so pave the way for a Soviet takeover of mainland Europe. The problem is to guarantee the election of Labour. Thus plan Aurora is hatched. The idea is to

yields a password allowing access to the next instalment.

Whilst you are settling into your new job as head of Cl(A), responsible for security of Government buildings, a diamond robbery is taking place. The burglar discovers that he has got away with more than he bargained for and amongst his haul are some top secret Nato documents. Being a good patriot, he sends them anonymously to the Ministry of Defence and this is where the game starts.

Most of part one consists of information gathering from within your office and the icons on the screen depict varying functions that you can access. The icons are selected by mov-

veillance team (watchers in the jargon) on to a suspect. The cassette lets you save different positions whilst the graph gives you details of your current prestige and how much of the game you have solved.

You have only forty days to solve part one of the game and the calendar charts your progress. Each "day" takes two minutes of computer time but once you have solved the early parts of the adventure, you can use the calendar icon to advance the date more rapidly.

The three VDUs across the bottom of the screen are your main sources of information. Normally blank, symbols appear on the screen when there is something for you to read.

of security in Government buildings and other people will want you to sort out their problems as well. Some of these other jobs will give you additional clues whilst others are merely designed to waste your time.

Having read the messages congratulating you on your new appointment, it is time to get down to some serious work. You soon discover that a young civil servant called Abbs is reportedly seeing a foreign national so you decide to put some watchers on her and see what happens. It is worth looking up the file called "telephone" at this stage as it gives you some important numbers of use later in the game. The most frequently used of these

# 14

numbers is the one for Blenheim — one of the other MI5 offices. By phoning them, you can get their files transferred to your office — providing of course that you know the name of the file that you want.

Another thing you will have to find out pretty quickly, is exactly who had access to the leaked documents in order that you can check up on them and eliminate as many suspects as you can, as soon as possible.

No spy story is complete without its secret codes, and Fourth Protocol is no exception. Memos come through at regular intervals telling you what the latest password is. You need to know this before you can access any of the

where to put security locks. If you do not get it correct first time, you get summoned again and again until you do. Getting annoyed with this, I put locks on every single door in the building. This resulted in a rather terse memo stating that they didn't know about what happened in London, but where they were, toilet rolls were not considered a security item and the union were threatening to go on strike if the locks weren't taken off the toilets pretty quickly!

As you complete different actions, so your prestige varies for better or for worse. The lower it gets, the fewer watches you will have at your disposal and so subsequent tasks

and reports that you get. Unlike other adventures, where you have to go and look for things, here things come to you. Of course, you then have to act on them, but there is always something going on. You will have the opportunity for making voice print analysis, using the remarkable talents of Blodwyn with her incredible memory for faces and liaising with other security services, both your own and foreign, in your search for the traitor.

When you think you know who has been giving our secrets away, you have to convince the Paragon committee which has been set up to investigate the leaks. This involves answering a series of ques-

ones are introduced. Communicate allows you to use the phone or talk to someone and wait is used to advance time. Manipulate lets you take, drop or use an object while look leads to a choice of examining an object, reading something or taking an inventory of your stock. The final icon is the one that enables you to move around. This gives a comprehensive choice of actions ranging from getting in a tube or taxi to entering a lift or following someone.

To start with, you will need to visit various MI5 buildings in order to equip yourself with ID, money etc. You will also meet a Q-type figure (to pinch a character from James Bond) who may be able to help equip you.

files at Blenheim. Being security items, the passwords are not written down as such, but given to you in code. These have to be decoded using the one time pads which are included in the packaging of the game as a playing aid. These pads consists of an array of letters which are used to turn numbers into sequences and are in standard use amongst intelligence services throughout the world by virtue of being almost unbreakable.

Not all your time is spent in the office. A request comes through for you to install a security system at Building 17. When you get there, you are presented with a blueprint of the building and have to decide

become that much more difficult. The sort of thing that would affect your prestige would be the potential defection of a foreign diplomat. If you get him quickly enough, your prestige goes up as he tells MI6 everything he knows. If you don't get him in time, he defects to the Russians and down goes your prestige.

There are about fifteen different plots going on throughout the course of part one although you will not be aware of them all. Some are vital, some give subsidiary information and others are total red herrings. The way the plots fit together is cleverly done and there is a real feel of being there, especially with the variations in the memos

tions on who did it, how was he recruited, by who and what evidence there is. If you get everything correct (and be warned, it's not that easy) you get a password which allows entry to part two. If you get it wrong, the game continues but with an enormous dent in your prestige. If you do not successfully solve part one, the game ends automatically after the forty days have elapsed.

Your objective in part two is to discover the location of the bomb. Again, it is an icon driven adventure, but this time there is a lot of travelling to be done and there are about 175 locations to be explored. The utility and assessment icons are the same as in part one, but several new

As you move around the country, following a group of terrorists that you have had a tip off about, you will find you way impeded by rail strikes and the like. Plus, of course, the fact that you never have the right to pass a piece of equipment at the right time. You have to do all your own legwork in this part, no teams of watchers to help you out here. As in part one, successful com-

# 15

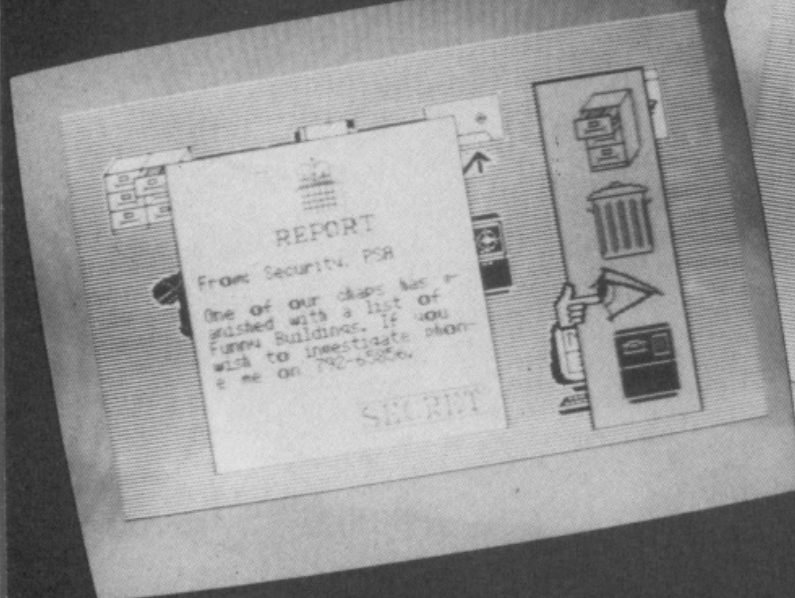

raid on the building. You must arm the six soldiers at your disposal before sending them into the building for a shootout with the KGB thugs. This is depicted as a Berzerk style game with both sets of agents dodging round the furniture in an attempt to kill each other. Only when all the Russians are dead are you allowed into the room with the bomb.

The 64 version puts you straight into the room with the bomb, with the battle raging around you. This is a graphical adventure with text input. The KGB can still find you if you don't take sufficient precautions but will not however shoot you for fear of detonating the bomb. They will try to overpower you though and will succeed if too many of

everything before it reaches zero starts to mount. If you get the correct sequence, you are presented with three wires to be cut. You cut one and still the clock keeps ticking...

Fourth Protocol is the first serious attempt at a game based on a spy story that I have seen and it works very well indeed. The use of icons makes the game a lot friendlier to use than text input and the storyline flows well and maintains a high level of excitement. This is due in no small way to Frederick Forsyth. I read the Fourth Protocol before playing the game and was more than a little worried that the game would not do it justice, but my fears proved

pletion of part two gives you a password for part three. The task must be completed within a certain number of moves although this is fairly lenient and so you don't have to follow an exact course.

All that remains now, is the small matter of defusing the bomb and it is in this part that the Spectrum and 64 versions differ considerably. The original specification of the game called for an arcade game in part three, but the writers — the Electronic Pencil Company — felt that this would destroy the feel of the game. The Spectrum version was so far advanced though, it was decided to leave the arcade element in. Having found the location of the bomb in part two, you have to plan an SAS

them get near you.

The bomb is hidden inside a cabinet and your first problem is to find a way into it. This requires a combination number that you should have come across earlier in the game. Any other attempt at opening the cabinet, such as a hefty kick will result in the bomb detonating prematurely, and you going up in a mushroom cloud. Once the cabinet is open, the bomb is revealed, together with a series of flashing lights. These have to be pressed in the correct sequence. Again, you should have found this out from earlier in the game, but it is not too difficult to work out. All the time that this is happening, a clock is ticking away, and the pressure of trying to do

groundless. The weakest part of the game is the third part and there is a feeling that it has only been put in to let the player see the plot through to the end. The part that will get everyone talking though and discussing it with their friends is part one, which is highly original and extremely well implemented.

The Fourth Protocol is published by Hutchinson for the Spectrum and Commodore 64 and costs £12.95.

# ATARI 600XL ENTERTAINMENT PACK

Great news for games addicts who appreciate high quality graphics and sensational arcade action gameplay. For Only £89, you can buy a 16K Atari 600XL Computer with two top arcade ROM cartridge titles and a joystick. These two ROM titles are the famous arcade hit Donkey Kong and another favourite Qix (We only have a limited number of packs with Qix. When these run out, Qix may be substituted for an arcade entertainment cartridge of the same value). The 600XL Entertainment Pack offers real value for money and enables you to save £83.96, nearly half of the normal RRP's of the pack items when purchased individually. Silica Shop have a wide range of ROM cartridges available including arcade favourites such as Asteroids, Centipede, Missile Command, Popeye, Q\*Bert, Star Raiders, Super Cobra for only £9.95 each! The 600XL is a programmable home computer with the Basic Programming Language built in and if you later add a 1010 Program Recorder (XLP 1010 - £34), a range of hundreds of cassette programs will become available to you. The Atari 600XL is recommended as a first class games machine.

# ATARI 800XL AND RECORDER PACK

The 64K 800XL is packaged here with the 1010 recorder, an economical storage and retrieval unit, a smash hit arcade game and programming aid, all for a package price of only £129 (ref: XLC 1010), a saving of £65.96 off the RRP's of the individual items which total £194.96. The game included in this pack is Pole Position. Now on cassette from Atari, Pole Position is an accurate reproduction of Atari's own highly successful arcade driving game which has all the thrills and spills of the grand-prix racetrack. On the reverse of this cassette is a demonstration program of Atari's amazing sound and graphics capabilities giving an example of the high quality performance of the Atari 800XL. Also included is an Invitation to Programming 1 cassette which takes you step by step through the first stages of programming in Atari Basic using Atari's unique soundthrough facility which allows pre-recorded human speech to be played through your T.V. speaker. All you need is a joystick (ATJ 0400 - £7.90 for Pole Position), to be up and running with this package. The Atari 800XL in this pack comes with a Silica two year guarantee.

# COIN-OP CONNECTION

Bank Panic

Atari Golf

Splendor Blast

Once again Computer Gamer's intrepid explorers find themselves with bleary eyes, aching wrists, and stiff necks.

As always Mike Roberts (words) and this month Steve Phipps (pictures).

The first game that struck me as being rather special is called Splendor Blast. The initial impression is a cross between Pole Position and Zaxxon, though of course it's nothing like it.

The game is based on an intergalactic race. You start off on the Earth and race to the Moon, then to the Sun, then Orion, and so on. You are represented by a small space ship in the centre of the screen. The terrain rushes up to you in an excellent 3D effect.

En route you must pick up energy and extra

missiles. You need the missiles to blast away objects you cannot avoid. On every run you can dock with one or more equipment ships, these can give you a shield that prevents you destroying yourself, a turbo that increases your speed (to such a rate that the ship becomes almost uncontrollable), and a side thruster that vastly increases your manoeuvring ability.

In all a great game that you can play for some time on your 20p. Digressing from space ships comes Bank Panic. Bank Panic is

basically a reaction time game. You play the security guard of a bank and can switch your field of view between 12 doors, seeing 3 at a time.

A sort of scanner on the top of the screen tells you when somebody is approaching a door. If it is a robot you must shoot him, if not then you let the person deposit their money in peace. They get rather upset if you shoot them.

There are a number of variations in later levels, with customers being held hostage, so you have to be quick to shoot the robber as

Marble Madness

Sprint Start

he jumps out from behind them.

Colourful and humorous graphics make this an enjoyable, if simple in concept, game.

The latest game from Atari is a full 3D golf game. I'll describe the controls first as they are rather complex.

There is a club select button that cycles you through the half set of clubs. An aim button that enables you to alter the direction of swing. A set of addressing buttons to alter the way that you hit the ball, repeatedly pressing

the high or low buttons changes your stance, likewise the intention to hook or slice the ball. These changes are represented by a plan view of your feet, the ball, and your club.

Lastly there is the hitting strength control; This is a sort of sprung metal bar that you bend — that's the best I can describe it as, though you might think different if you see it.

The screen display needs to be seen to be believed. The left of the screen is taken up by a plan view of the fairway, including all obstacles and the wind

direction.

The top of the screen is taken up with the score and card and the direction indicator. But the best thing is the full 3 dimensional display of the view you would have if you were standing directly behind the player. This view needs to be drawn every time you move and takes about 5 seconds, rather slow for a dedicated arcade game, but the sight is worth it.

The hardware doesn't seem to be able to generate the number of colours that some of the more advanced games can. So the trees are

built up by shading and mottling — even so the effect is stunning.

The game can be played in two ways, single play in which you play until you go so over par that the computer chucks you off. And half round, where you play a round of 9 holes. Two people can also compete against each other.

Another game that struck me as very good — it also did my arm in from too much play — was Marble Madness. In this you guide a marble via a tracker ball around various obstacles and into a goal against the clock. The graphics really are incredible and the music has to be heard. You can get an idea of the graphics from the photograph, but the music is another story.

I could only get to level three — anyone done better?

A couple of games that warrant a small mention are Midstream and Field Combat. Midstream is a game that is like a larger than life Scramble set under water with some good graphical effects, otherwise it is very similar in action and gameplay.

Field Combat reminds me of Frontline from a couple of years ago. You control a sort of tank/spaceship affair and can missile or capture enemies can then be turned on your foes. Quite good but very difficult to get the initial hang of.

A video thing that cannot really be called a game is Sprint Start. It is a screen attached to an exercise cycle. The video display displays a great deal of status information and a graphical view of you and the opposing computer bike.

An interesting point to note is that it initially says that you shouldn't use it if you drink, are old, or have a heart problem!

As a side note, and considering that this is the June issue. A dealer I know on the south coast reckoned that the dedicated arcade game market goes in 3-4 year cycles, he says that this year is one of those peaks, and more machines are going into more arcades than ever. So if you are reading this on a beach somewhere, go around the corner to that arcade and have a look at what I've been talking about.

As always I'd like to express my thanks to all at Dieth Leisure for their help, assistance, and putting up with us.

**CREATIVE SPARKS**

PRESENTS

# Leonardo

**A graphics package and a games designing aid for only £7.95! Tony Hetherington looks at the state of Spectrum art.**

Often the only difference between a good game and an average one lies in the programs graphics. Up to now, we have only been able to grasp in awe at the 3-D graphics created by the likes of Ultimate, but now through Leonardo, even I, can create Knight Lore style 3-D displays.

Leonardo isn't the first, nor will it be the last graphics package for the Spectrum but it surely is the most comprehensive to date. For not only does it have the usual array of line drawing, circle and fill commands it has an impressive array of additional features that distance it from the rest. It is on these additional features that I will concentrate in this article.

Although Leonardo is simple to use it takes some time to learn how to use its many facilities. Indeed the program is accompanied by a 100 page manual which includes examples and exercises to illustrate some of the more involved commands. Thankfully the booklet also includes some keyboard charts to show which operation is accessed by pressing each key. This is vital since many of the keys have three or four operations associated with them. A keyboard overlay would seem an obvious answer however I'm afraid the Spectrum plus has put

paid to such luxuries. However, I soon found that I could remember enough of the keys to allow me to begin drawing without diving for the booklet at every turn.

The programs routines are efficient and well thought out. The whole screen is occupied by the drawing screen and so you can create full screen images. Should you require a special function, for example a circle, then the bottom half of the display gives way to user friendly prompts asking for the radius and so on. Once the function is completed then the full drawing area returns.

Many users will first plan their work on graph paper before committing it to screen and will therefore benefit from a small but

useful display that shows the co-ordinates of the cursor. This can be toggled between the top or bottom of the screen so that you can always see the area in which you are working.

Such forethought, while commendable, isn't as necessary with Leonardo as it is with other graphics packages. For drawings can be easily erased, copied or even scrolled across the screen to the desired location.

Infact, Leonardo seems to have been designed for the lazy artist. If for example, you decide you need a crowd scene for a football game. Such a prospect would be intimidating, but not with Leonardo. All you have to do is draw one scarf-waving fan. This is saved as what Leonardo calls a picture element. This can be any defined window of the screen and up to 255 small elements can be stores at any time. We can then use our fan as the brush and literally paint fans on to the screen. By carefully setting some additional parameters they can appear to stand behind one another making a realistic display. Store two or three types of fans and the crowd scene becomes ever more realistic. What is even more impressive is that the picture takes minutes not hours to create.

Leonardo stores the picture elements on its backup screen which can also be used to store up to 774 UDG's or an entire backup screen. Unfortunately not all three. However you could create the images, elements and UDG's that you may need in your program in stages and save each to tape. They can then be loaded into your own programs.

Colour is added to pictures as in other graphic programs and not even Leonardo can solve the Spectrum's attribute problem that cause colours to smudge. However it can help by allowing you to paint on the colour as and when required. You can

also swap colours and even scroll the colour across the screen.

Programmed drawing is Leonardo's most impressive feature it is also the most difficult one to understand and use well. However its resulting effects are well worth the struggle. Basically it consists of two stages. In the first stage you define up to nine co-ordinates that will be used to draw a 3-D image which is then used in the second stage. Here the fun really starts as you can define a number of parameters that will draw a series of the images. However each one can be magnified slightly, or rotated by any angle or both. You can also use picture elements or just a simple brush consequently we could draw our football fan doing handstands into the distance.

As you can see you can combine Leonardo's facilities to produce an immeasurable number of effects and images. Indeed it

swap between alternate character sets.

To fully test the games designing potential of Leonardo I set out to design two different games, the first a Knight Lore style, multi screen arcade game, the second a Shadowfire style, icon driven, adventure.

Designing the arcade game was easier than I first imagined when I realised the potential of the first user program. This allows you to move one or more thirds of a screen image on to the screen display. Therefore if you make your screen images interchangeable you greatly increase the total number of screen available to the game. For example the top third of one screen becomes the bottom of another but the middle of a third screen, and so on.

Once the background has been created animated figures and monsters can be added by using blocks of UDG's. The whole game can be completed by the addi-

members who must find and catch a number of aliens that have escaped from the ships zoo. These animals are of course dangerous and will fight back.

The first job was of course to draw the main control panel display leaving spaces for a character select icon, a display showing the area of the ship that the character is in and so on.

Next the map of the ship was drawn, which occupied a full screen that was then divided into picture elements that could be displayed, as and when required.

Finally the rest of the display consisted of blocks of UDG's which had to be created and stored separately.

The game itself was easy to program as it didn't require any animation merely the correct element of UDG block printed in the right place at the right time.

In time I will improve both games by perhaps adding further screens to the second one or change the arcade game to a platform game.

Luckily since Leonardo takes the hard work out of drawing the graphics I can concentrate on trying out new ideas.

If I was to try and find fault with this program I would say that it lacks just one important feature. That is the ability to magnify the area that you are working on. For it is far easier to accurately draw large pixels than it is to stare at little dots on the screen. Finally it would have been nice to have been supplied with a library of predefined picture elements to get you going. However this is only a minor gripe as you can rapidly collect your own. For example some of the animals in the zoo adventure may soon be crawling over the 3-D rooms of the first game.

At only £7.95, Leonardo is a must for all Spectrum owners.

will take months to discover all of the different permutations.

Most graphics packages help you create pretty pictures but then leave you wondering what to do with your creations. Leonardo solves this problem by including five machine code routines to allow you to use your artwork in your own programs. Each is a subroutine of a Basic program and is easy to use for all you have to do is define two or three parameters. These routines transform Leonardo from a graphics package to an invaluable aid to games designers.

The first transfers either whole or part screens to the display from graphics screens held in memory. The second is used to print stored picture elements anywhere on the screen, over the background or merged with it. Similarly blocks of UDG's can be printed or merged by using the third routine. The last two routines are used to

tion of a score and lives display that can be printed in an appropriate character set.

Designing such a game involves dividing up the Spectrums memory into graphic and screen stores and loading in the Leonardo designed graphics into the required areas. Then your program would set the subroutines parameters so that they draw the required graphics from the appropriate area of memory.

This is no doubt daunting to first time games designers who will probably use Leonardo to create backgrounds that are then fed into programs such as the HURG games designer which is published by Melbourne House.

However no such program exists to help design the Shadowfire style adventure game. This mainly consists of one main screen display and a number of picture elements.

In this example you must control your crew

If you have matched the numbers correctly then you can slip from the grasp of the Lords of the Void into another time. As you go on take what you have already discovered — and score 100 points.

Remember, keep a check of the total score. It may not necessarily be the one with the highest score that is able to discover ALL. Until another TIME and another SPACE... WE, THE GUARDIANS wish you well.

## CLUES ACROSS

- 1: Fourtold? (4,2,3,5)
- 9: Lord of 26, in 1.
- 11: The French, the Italian, the French... the town.
- 12: Went West to save lives.
- 13: Didn't succeed at first — taken back to court.
- 14: Cubed, or broken at parties.
- 15: 'Edro' in translation, in 1.
- 16: This is no yarn — it's based on 9 (like 1).
- 20: X-stacies?
- 23: Trumpet — plays the Little Boy Blues.
- 25: John Selwyn begins to stick.
- 27: Squirm, and give the slip.
- 28: And it isn't short direction.
- 29: End of the line — organ transplant required.
- 30: A Villain in 1, returning to 6.
- 32: Leader of 9 in 1, lost in 26. (7,3,4)

## CLUES DOWN

- 2: Eggs in renovation project.
- 3: Made up, near to gaudy.
- 4: Not like him to write 1.
- 5: (Fitzgerald and Dare) returned from the west with news in 1.
- 6: Once a beautiful place, in 1.
- 7: One of 9, in 1. (5,7)
- 8: Pippin, in 1. (8,4)
- 9: He was 111, in 1.
- 10: 9 were loth to leave here, in 1.
- 17: On course, for 1.
- 18: In 1, across a river from 10.
- 19: 2 of 9 climbed here with 21.
- 21: Ate fish, in 1.
- 22: Villainous captain, in 1.
- 24: A little time?
- 26: Where 9 ac. was lord, and buried, in 1.
- 31: Employ Sue, in a roundabout way.

Hints and help is the life blood of all gamers. There are very few people who can complete any game without a little bit of help. Indeed with some extra complex games, it ends up being more of group effort than any one person's strivings.

So in this, the first of a regular series, I will look into three games, and aid you in being able to increase your score. Remember, if you know of some small (or large) hint that will help another gamer play a game, then send it in to our usual address along with your name, address, telephone number, age and membership number for the club. If you have no number, then send your application along with your hint.

As always send it marked 'Hints' to:

Computer Gamer

## Pole Position

The first game we are going to look at is Pole Position for the Atari home computer system. The techniques are also applicable for the BBC, Spectrum, and C64 versions.

## Braking? Don't!

There is only one time where you should use the brakes, and that's on the corner that all regular players know and hate. It is a very sharp left hand hairpin with a brown sign on the right hand side (colours may vary according to version). You may get into a bit of bother with this if you are trying an outside overtake of an opposing car (you shouldn't be in this position — read on later). The point to remember here, is that your speed must be below about 154mph to be able to turn at a rate that will get you around the outer lane of the track without smashing into the sign.

Doing 195mph on the right lane surrounded by hostile cars is the only time that I allow myself the luxury of brakes, swerving,

and low gears! — in fact anything to bring you down to the magic 140mph you need to escape from this dilemma. Anything higher and you skid into that sign.

## Slowing Down

As the previous section mentioned, slowing down should not be achieved by using the brakes. This is due to them slowing you down too much. Resulting in lost time to re-accelerate. To slow down those few mph you need, occasionally you should skid. Skidding slows you down by a small amount, usually all you need is a subtle change in velocity.

Skidding around corners can be useful, especially if there is a block of opposing cars. Overtaking on a corner is not much fun,

though it is fairly straightforward for the experienced player, it merely needs experience in co-ordinating all the controls at once.

Ramming the road is useful for rapid drops in speed and equally rapid acceleration afterward. This technique should be used on the infamous hairpin bend under perfect conditions.

On the straight towards the bend you should be on the left lane doing 195 mph, or near to it. As you see and approach the corner a sign will appear on your left. Duck in as sharply as you dare after the sign as hard as you can for a couple of seconds until your speed hits around 155-160 mph. Then duck out to the right as hard as is practical. The infamous and deadly sign should pass harmlessly in front of your nose. When on the right hand lane line up with the road again. You will now be on the inside lane, ready for the next corner, and travelling at upwards of 180 mph.

**Pole position is a game that is popular both in the home and in the arcades. Mike Roberts keeps you on the right track with his hints and tips.**

This method must, of course, be modified if there are any opposing cars in the way.

### Corners

Corners should always be taken on the inside lane. This gives you more manoeuvring room and means that you can take it at a higher speed, you excess speed can be shed by sliding to the outside lane if necessary.

Avoiding objects is also easy. If there is one in your lane, sliding out will avoid it. If there is one in the lane that you are moving to then turning back into your original lane will reduce your speed sufficiently to bring your next clash with the cars on the following straight — where they are much easier to handle.

If the road is clear and you want to grab every tiny bit of speed you should try tapping around corners. Again the technique requires you to be on the inside lane. The road also needs to be clear of cars, as this method sacrifices all manoeuvring ability.

As you hit the corner at 195 mph you will start to move onto the outside lane. The technique requires you to 'tap' the joystick towards the inside of the corner. This will just move the nose of your car and correct the outward slice of the car, but without skidding or the shedding of any velocity. You can, in fact, accelerate around corners like this. However, some corners are too sharp to use this method their whole length. And the speed deficit created by a quick

skid to the inside lane can soon be made up to maximum in the remainder of the corner.

The last long bend is the best for this method and you can 'tap' around the whole length of it, gaining precious time as you come up to the line.

### Overtaking

Cars rarely travel in singles, they usually move around in pairs or fours. On average, every two laps a block of eight cars will appear.

Overtaking a single car is dead easy — you just sort of swing around it. However, you have to be careful that you don't smack into its pair which just happens to be unseen around a corner.

Tackling groups of two or four is a bit more difficult. A group of four can, logically, be considered as two pairs tackled in quick succession. So just apply the pairs technique, and think quickly.

The thing to know about the pairs is that the two cars travel at different speeds. Once you have worked out which is the faster car, you should tuck yourself behind it (remembering to regulate your speed as not to smash into his rear). Then when the slower car drops behind, you can nip smartly between the gap.

With sets of eight, the cars are staggered, so you must keep your speed to within a 5 mph margin and zig-zag between them. Doing this on corners is very difficult.

### The End Result

My personal best is 108950. That has stood for three months on the high-score page. Use these techniques and you should be able to come close to it. Mike Roberts.

# The Band's On The Run!

# M.U.L.E.

Dave Bishop takes an indepth look at a strategy game that attracts both strategists and arcade freaks.

DEVELOPMENT #2

PRESS YOUR STICK BUTTON TO START

AUCTION #2  
SMITHORE

62 62

Imagine an economic strategy game where success owes as much to hand-eye co-ordination and quick thinking as it does to strategic planning!

Imagine a game as complex to master as chess and yet as simple to learn as draughts!

Imagine a game that lets four people compete and yet forces them to co-operate.

Imagine a game that attracts both strategy players and arcade freaks.

You have just imagined M.U.L.E.

M.U.L.E. is a game of exploration and development on another planet for up to four humans. The computer will take over up to three players if you are short on Homo Sapiens. There is also a complete demonstration game where you can sit back and watch the computer play all four players.

## The Aim of the Game

By deploying resources and developing plots of land each player must try to make as much money as possible. But there is a catch because you each form part of a colony which must, as a whole, achieve a certain monetary level in order to survive. The more selfish each player is in his or her pursuit of wealth the more the colony is placed in jeopardy!

## Choosing your Character

There are eight different characters to choose from, each with different abilities. For instance Bonzoids are good at mining Smithore (more of that later). Different characters also start with different amounts of money.

## What is a M.U.L.E.?

M.U.L.E. stands for Multiple Use Labour Element and they are robots designed for exploring alien worlds. The design of the M.U.L.E. allows pioneers to outfit them for specific tasks. In this game M.U.L.E.s are used as mini-production facilities.

## Resources

there are four resources:

- (1) Food
- (2) Energy
- (3) Smithore
- (4) Crystite (only found in the tournament game)

Food is needed to provide enough time to outfit more M.U.L.E.s. All plots except those producing food will use up this resource. Food plots themselves are self-sufficient. The price of food usually stays well below 50 except during shortages when it can rocket well into the 200's. The best place to produce food is by the river!

Energy is required to power your M.U.L.E.s and a lack of energy will result in under production on one or more of your plots. As with food plots those with energy M.U.L.E.s are self-sufficient. The price of energy follows much the same pattern as that of food.

Smithore is one of the two raw materials that can be mined by the colony in all areas except the river, however, those plots containing mountains will yield the most plentiful supply. The more mountains in a plot the better a Smithore producer it will be. Smithore is used to produce more M.U.L.E.s so if nobody produces Smithore, no new M.U.L.E.s will be made and if there is a run on M.U.L.E.s then the

Smithore price may soar well into the 200's.

Crystite, like Smithore, is mined from the ground but there are only a limited number of plots where decent supplies of crystite can be found. There are two ways of determining whether a plot is rich in crystite. The first is by assaying the plot you are interested in, by taking a soil sample back to the town for analysis. The second way is to deploy a crystite M.U.L.E. onto a plot you think may be rich in crystite. Once production for that round starts the number of dots in the bottom left hand corner of the plot will tell you all you need to know. The price of crystite ranges between 50 and 150 and is not affected by supply and demand.

There is a store in the town whose prices (except for Crystite) are governed by supply and demand. The store's selling price will always be 35 higher than its buying price, that is if it has anything to sell!

Let's play a game!

The game is divided into three main phases:

- (1) Land grant
- (2) Development
- (3) Auction

## The Land Grant

The colony is divided into 44 plots, one of which is the town. The remaining 43 can be used to produce any one of the four resources mentioned above by the outfitting and development of a M.U.L.E. At the start of the round a black cursor frames each plot in turn from top to bottom and from left to right. Land is chosen by pressing a joystick or keyboard when the cursor frames the plot you want. It isn't always that simple though because someone else may want the same plot as you in which case the first on the button will get it, although close calls will invariably be won by the player with less money at the time.

At the end of the land grant phase extra plots may be put up for auction (more later).

## Development

Plots are developed by entering the town and purchasing a M.U.L.E. which then has to be outfitted to perform its required function. This having been done you must lead the M.U.L.E. to the plot you want to develop.

At the end of the phase the production of those plots with mules is shown by the number of blobs appearing in the plot from 0 to 10.

## Auction

After production comes a series of auctions where players can bid and outbid each other for the various resources. This is one of the best designed features of the game!

At the start of each auction you must decide to be buyers or sellers. This having been done the players are displayed on the auction screen with the sellers at the top and the buyers at the bottom.

By using joystick or keyboard players can move up and down the auction area and where buyer and seller meet a transaction will take place.

When two buyers meet a seller at the same time (or vice versa) the player with the least money will transact first. This allows you to buy out the store, for example, when one or more of your opponents need to buy too thus leaving them short!

## Economics

Buying and selling prices in the store are determined by the amount of production and the colonies requirements of each resource. Accurate monitoring of price fluctuations is a prerequisite to successful M.U.L.E.ing as it allows quick killings to be made by offloading before the price drops.

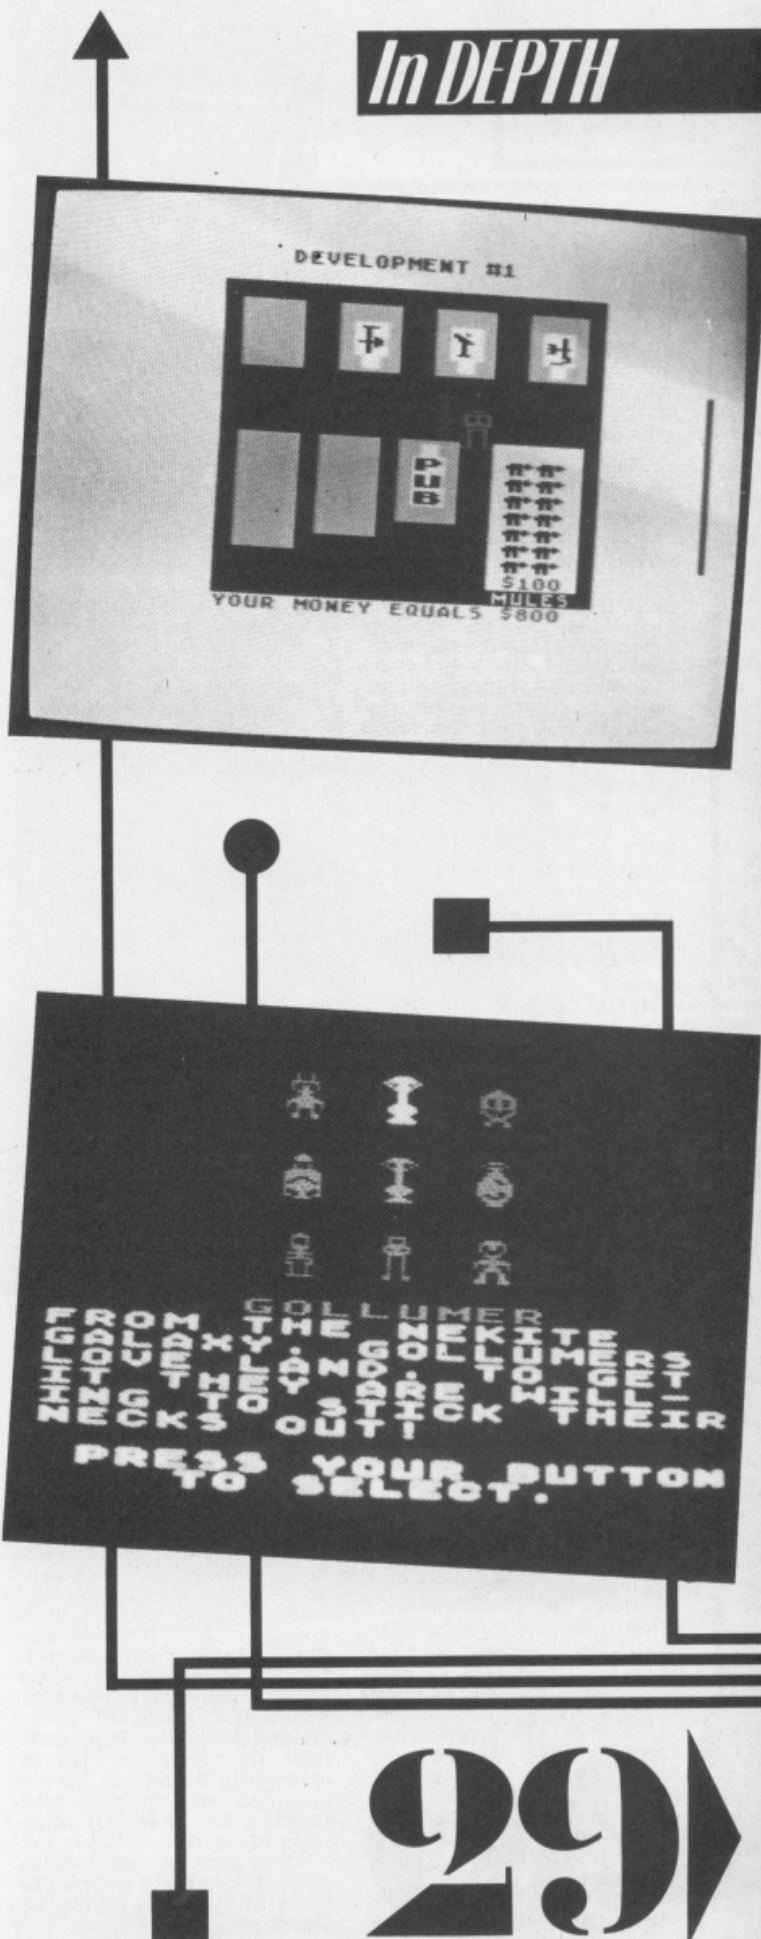

Another vital area of the game comes when deciding what type of M.U.L.E. to deploy on a given plot. There are a number of reasons for deploying a particular M.U.L.E. One is to produce food or energy for your own continued survival, another may be because everyone else is either short of or not producing, say, energy and you think these factors may push the price up and even dictate the selling price, especially if the store doesn't have any.

Here, as in many other places, the player in last place is helped by going last in line during the deployment phase. This allows him to see what the others have done and legislate accordingly.

## Economics of scale & the learning curve

Before each land grant phase it is important to work out which plot you're going to try for. Adjacent plots producing the same thing will produce one more unit each due to economics of scale. When

*In DEPTH*

# M. U. L. E.™

from Electronic Arts

three or more plots of a similar persuasion are owned by the same player then each will produce another extra unit each as you learn to produce more efficiently. A good policy therefore is to develop groups of plots that are all connected. This allows far more flexibility in M.U.L.E. allocation and means that like pairs of M.U.L.E.s can be deployed at any one time.

## Scoring

The net worth of each player is given by the total of cash, land and goods. Land is given a nominal value of 500 plus the value of a M.U.L.E. should it contain one. Goods are the resources that you own at the time.

A league table showing each players net worth is displayed at the end of each round of which there are 6 in the beginners game and 12 in the standard and tournament levels.

## Random Events

During the production phase there is a high probability that a random event may occur, sometimes inconsequential, sometimes devastating. For example: consider the situation where there is a glut of food in the store and nobody is actually producing much themselves — why should they? It's in plentiful supply, the price is rock bottom and Crystite or Smithore plots should pay far better dividends. All this is sound reasoning until there is a fire in the store destroying all it's stock. Suddenly food, and perhaps energy, becomes a rare and possibly very expensive commodity into which players will have to move if they are to continue outfitting M.U.L.E.s.

Other random events include the planetquake which halves mining pro-

duction (of both Crystite and Smithore), sunspot activity which increases energy output and the most feared of all — The Pirate — who steals all Crystite produced that round including any that players may have been hoarding because the price wasn't high enough to justify selling last round.

## Collusion

One of the extra features of the tournament game is the ability to shut out one or more of your opponents during the auction phase. This means that two players could come to a private arrangement where one concentrates on food production while the other makes energy. This means that both players can benefit from economies of scale and the learning curve thus producing more of their chosen resource. Then during the auction phase energy and food can be exchanged to enable both players to have all they need of both!

Collusion is also used to stop a particular player from buying something he wants.

## Collusion during land auctions

As mentioned above you may not be the only one trying to get a particular plot during the land grant phase (especially if a Crystite meteor has just landed on an unowned plot!).

This often results in players with plots far away from their main developments. In such cases it may be better to sell the plot in question to another player especially if he has one smack in the middle of your development. Collusion allows you to sell land to your chosen player without interference from the others.

## Summary

It is very difficult to convey in so few words how deep a game M.U.L.E. really is. All I can say, is play it for at least an hour — if after that you can't see why M.U.L.E. is one of the best games ever written for a computer then I'll eat my memory map!

## In DEPTH

### Hints and Tips

The following may help you discover some of the many subtleties which abound in M.U.L.E.:

(1) Try to become self sufficient as quickly as possible don't rely on the store for a continuous supply of food and/or energy — someone else may buy the store out or there may be a fire.

(2) Buy as much land as you can as early as possible. It is difficult to win without more than you fair share of property (11 plots).

(3) Because of the many ways M.U.L.E. favours the losing player it is no great advantage to hit the front too early — in fact the best time to take the lead is round 11.

(4) Never keep a surplus of more than 1 unit of food if you can help it because food wastes at a rate of 50%. However you may have occasion to ignore this rule of thumb if, for example, you wanted to buy up the stores supply to deliberately starve one or more of the other players.

(5) Always keep between 2 & 3 surplus energy units to allow for development next round — remember your present break-even level does not take into account extra energy requirements for the next round.

(6) The pirate usually comes at least once in the game and often twice. So if you've got lots of Crystite because the price has been lousy lately but it's late in the game and the pirate hasn't made an appearance yet then think carefully about selling at a modest price in preference to losing everything next round.

(7) Always try and group plots together for more efficiency.

(8) Early on in the game assay to determine the whereabouts of the high Crystite plots. Remember an assay resulting in a "no Crystite" message can be very informative in pinpointing where Crystite CAN be found.

M.U.L.E. is available in Atari and Commodore versions from Ariolasoft.

# 64 ADVENTURES

**Infocom are the undisputed leaders in text adventures. Gordon Hamlett examines their range in his first look at adventures for the Commodore 64.**

Life is becoming very interesting for 64 owners. Not only do they have an ever increasing base of British software available to them, but also, large amounts of American software are now appearing on the scene. Whereas previously, games from the states could only be obtained from a few specialist

buy a disk drive to enjoy a lot of these transatlantic treats.

You cannot get very far when talking about American adventures before mentioning Infocom (I'm surprised it took him 'til the second paragraph — Ed). They have justifiably acquired themselves a

ly convincing. This applies to the whole of the storyline which fits together beautifully and reads as if it has been written by a professional author rather than a computer programmer. The text also contains essential clues and so must

Universal Empire (a land which I now totally believe in!), the games are independent of each other and can be played in any order although it would seem logical to start at the beginning. This gives you an ex-

stores who had imported them, top titles are now becoming freely available under such labels as US Gold, CBS, Ariolasoft and Commodore themselves. For adventure fans, this is great news. The bad news though is that you will almost certainly have to

reputation of being producers of the world's best adventure games. If that sounds as though I am secretly in their pay, then let me try and explain.

To start with, the games are text only. Not for them, a few lines of description, but pages of it. It is very well written, funny and most important of all, total-

be read very carefully. I would recommend reading a description at least twice. Once fairly quickly to get the general feel of things, and then a second time slowly to glean all the extra bits of information.

So what are these wonderful games? The most famous ones and the ones that started the company going are the Zork trilogy. Set in the Great

tra advantage later on as you may gain an additional clue or two. For example, there is an oblique reference in Zork I as to what happens if you go round saying 'Hello sailor' but it is not until Zork III that you come across a gentleman of the sea.

Whilst the task of collecting twenty treasures in Zork I is not exactly original, the problems

# 64 ADVENTURES

associated with getting them are. Amongst other things, you have to learn how to operate a dam and perform an exorcism. Other games feature a thief who robs you of your treasures but only in Zork do you have to use his special skills to help you. In Zork II, you get to meet the Wizard of Frobozz, a somewhat dotty old man who will attempt to cast assorted spells over you and so hinder you on your way whilst in Zork III, you have to find and overcome the Dungeon Master himself.

One of the lovely things about the games is the way in which they have anticipated most of the "wrong" answers. Instead of just saying "You can't do that", they make fun of you when you try something stupid. If something is logically possible, then you can do it. (So many games do not cater for things like your burning desire to stand on a table). It may not get you anywhere, but in Zork you can do it. The parser (the bit of the program that understands your input) is very detailed and sentences such as "Drop everything except the hot pepper sandwich" are fully understood. There is always a lot of material to read within the game such as leaflets, books of matches, bibles etc and again, everything should be read carefully. Half of them will be adverts for other Infocom products but the other half will contain vital clues.

If you like more magic in your fantasy games, then take a look at Enchanter and Sorcerer. To help you in your attempt to rid the land of evil, you have a spell book at your disposal. Further spells can be found along the way, usually written on a scroll. It is normal then to try and write the spell into your book from where you can use it again and again but some spells are so powerful that they can only be used once by reading them off the scroll. Working out which spells to use where is great fun and you soon get used to the strange names of the spells such as gnusto, izyuk and frotz. These games could almost be called Zork IV and V and the use of magic adds an extra dimension.

Perhaps you prefer science fiction or fantasy. If so, there are four titles to keep you amused. Starcross puts you in charge of a space ship in the year 2186 on a search for black holes. Everything is going all right until you come across a giant space ship

full of strange aliens... In Planetfall, you are playing the part of a menial galactic crewhand when your ship explodes and you manage to escape to a strange world. Out of the frying pan and into the fire as the planet also needs saving. Fortunately, you soon come across a small mischievous robot called Floyd to help you on your way. Robots also play a large part in Suspended. Something has gone drastically wrong on your ship and you get awakened from your cryogenic capsule in order to put things to right. You do this by controlling six robots, each of which has a different function. Iris and Auda act as your eyes and ears respectively. Waldo will

manipulate things for you, Sensa will analyse various emissions whilst Whiz acts as an interface between you and the data bank. My favourite though it Poet who, when he is not actually touching something tries to make the best of his surroundings. The result is some wonderful hippy type outpourings. Getting six different views of the same area makes fascinating reading and the game has one of the most original storylines I have seen. The fourth sci-fi game is the newly-released Hitchhikers Guide to the Galaxy. As a review follows this article, I won't say much about it. Suffice to say, it is well up to Infocom's usual standard and is very funny indeed.

If you are one of those people who always claim to solve who-dunnits before the last page, you have the chance to prove it with Deadline and Witness. Here you have twelve hours to question suspects and analyse clues before arresting someone. Different actions take varying times to complete. For example, if you examine something carefully, it will take longer than a cursory examination. You can ask people about other people or objects. You can accuse them, trying to get clues from their reactions and finally you can arrest someone. You will then be assessed on your performance. Just to make life more difficult for you, the suspects are living their normal lives, moving around — and trying to cover up the evidence.

Just in case you have still not found a scenario that suits you, you could explore a lost pyramid in Infidel, tangle with pirates in Cutthroat or explore under the ocean with Seastalker.

All Infocom's games are beautifully packaged. You don't just get a disk with a few introductory notes. For example, in Witness, you get a copy of National Detective Gazette, a suicide note, a telegram, a copy of a local newspaper and a book of matches complete with scribbled message. The package is completed with booklets advertising other Infocom products and the whole package is contained in a wallet somewhat larger than this magazine.

Before you rush out and buy all the games, there are however, two drawbacks. First, the games are not cheap (£30-£40) especially with the strength of the dollar against the pound and secondly, as mentioned earlier, you will need a disk drive. To alleviate the price problem, Commodore have produced six titles under licence. These games are Zork I, II and III, Starcross, Suspended and Deadline. At a price of £11.99 these must represent value for money. As for the disk drive, more and more software, especially American software, is being produced on disk only and it is a medium that will become increasingly important in the games market. There is a story doing the rounds about people who have bought a BBC just so that they can play Elite on it. Infocom games are so good, that I would suggest it is worth buying a disk drive just so that you can play them.

Infocom adventures are also available for the Atari, Apple and IBM pc.

# LONE WOLF AND THE ICE HALLS OF TERROR

*The most exciting adventure  
of your life continues...*

Vonotar The Traitor still lives – can you survive the Ice Halls of Terror? You are Lone Wolf, the last of the Kai Lords. Shocking news has reached your homeland that Vonotar The Traitor still lives and now rules over the Ice Barbarians of Kalte.

The King has vowed to your people that Vonotar will be brought to justice for his crimes. But it is a promise that only you, Lone Wolf, can fulfil. In the ICE HALLS OF TERROR, you must brave the terrible dangers of the ice kingdom in your quest to capture your most hated foe. But be warned! It is a challenge that will test your skill and endurance to the very limit.

Based on the best selling role playing Lone Wolf adventure  
"The Caverns of Kalte" by Joe Dever and Gary Chalk.

# ADVENTURE HELPLINE

**Marion Champion helps you with your adventuring problems.**

## Feeling Adventurous

Are you one of those many keen adventurers who started out so well in your travels around the locations of THE adventure, but find that now you have come to a barrier which you cannot pass? If this is the case then read on.

Many adventurers find that once they leave the initial beginners stage of adventuring and begin to find their feet in the world of adventure software, their seemingly rapid increase in skill and knowledge of these games suddenly seems to slow to a halt. Once over the first hurdle of basic adventure tactics, the player finds his skill does not seem to be increasing and he continually gets stuck at a certain stage of every game he plays. Obviously the puzzles and problems increase in complexity the farther you get into the game, the practise and perseverance is not always enough to get you through.

I believe that a tremendous amount of experience can be gained from writing your own adventures. It enables you to understand the complexities of an

adventure program and at the same time perhaps be able to get behind the minds of the software writers and follow the deviousness of their plans. You will learn the problems they encounter and find out how they must simplify or change these ideas in order to overcome these problems. And of course apart from all that, it's a lot of fun.

I'm not going to give you all the programming techniques that are used, that would take too long. I am just going to outline what the basic requirements are.

If you decide to proceed with adventure writing then I would suggest that you perhaps invest in a book on the subject, one compatible with your computer obviously. There are several good books about a variety of micros so I shouldn't think it would be too difficult to find one to suit you.

Once you have decided to write your adventure, you need a plot. It is rather nice, instead of just having a single aim to your game, such as finding the treasure and getting it back to your treasure chest, (a typical adventure goal), to write yourself a little scenario to go with your

game. Here you can really let your imagination run riot. You can think up a short story around which your adventure will be woven. I always find it interesting, if when playing the adventure, you play it as one of the leading characters in the story. It would seem rather pointless to cast yourself with a walk on role in your own adventure.

Your story can of course be anything that takes your fancy. You can stick to the more traditional line of deep forests, black towers castles and caverns, or you can perhaps go for something a little more modern, like a space adventure, or even something involving everyday objects which seem you have developed a mind of their own, or even a combination of all these ideas just to confuse players, (my favourite sort).

Once you have written your scenario you can begin work on the adventure. The limitations of your game are entirely up to you of course, ie. how many locations, puzzles that will have to be solved, vocabulary listings and all the usual paraphernalia associated.

It is best to start with something simple, ie. a fairly short text adventure involving a small selection of locations, puzzles, objects and characters. You could actually write a short

adventure using very basic input commands with a number of subroutines on what I call a conditional basis. This means that something will only happen of a certain condition is fulfilled. This type of program on it's own does not allow much scope for

detailed and imaginative adventuring, which is why I suggested the purchase of a book to start you off.

It is necessary for you have a plan of how your locations are to be arranged and what perils you wish to place within each of these locations. I do suggest that if you have a fairly limited knowledge of programming that you are not too ambitious to start with. It is better to build up your program gradually in sections of short subroutines then putting it all together afterwards, rather than trying to write the whole program at once and then finding out that it doesn't work.

Graphics of course are a luxury to my mind, but once you have mastered the written technicalities of the text adventure, there is no reason why you should not add graphics to make it more colourful.

Unfortunately, writing your own adventures means that you do not get the fun of playing them, since knowing the answers to all the puzzles makes winning far too easy. But the experience you have gained will hopefully enable you to advance that bit further with your selection out of them. You may even become a master in adventure wizardry, although that might be a little too much to hope for.

Arcade type adventures are a different kettle of fish altogether. They require skills in graphical animation and I don't think that writing your own will in anyway assist you in playing them. For it is a different type of skill which is required. Correct timing and quick reactions come only with practise, so keep at it.

## Having problems?

There are various routines which I always follow on encountering a problem. They are not always successful of course but they provide a good basis of where to start eating away at your problem. I hope that you will find them useful.

**Problem No. 1:** Tape will not load correctly or won't run after loading.

A common enough problem which frustratingly enough occurs before you have even reached the title page of your adventure. Here is how you should try and remedy this.

- (1) Check all leads are connected correctly. If they are not then adjust them accordingly and try again.
- (2) Turn the tape over and try the other side. One side of the tape may

have been corrupted.

- (3) Try adjusting the volume control on your tape recorder, it may be that your particular cassette is recorded at a different level than that which you are used to or that the volume control on your tape recorder is badly set.
- (4) Try using a different tape recorder. Although this happens rarely, it is possible that certain tape recorders cannot cope with certain programs but use of another tape recorder could solve this.
- (5) If none of the above prove successful then write to the manufacturers explaining your predicament, an address is usually provided for just such a purpose. They should send you another copy free of charge.

**Problem No. 2:** You come across a character in a location who seems to be blocking an exit or preventing you from performing an action:

This problem is obviously associated with actual play of the adventure.

- (1) Take note of what the character is and see if you can think of anything associated with the character or type of creature that you think will get rid of it and try out your theory.
- (2) List your inventory and write down anything that you are carrying. Use each object in turn against the character until something happens, use your objects within reason though. Don't try to stab the creature with a whistle, blow the whistle. It might just scare him away. Also try giving the creature some of your objects, but don't be too free with them for you might not get them back.
- (3) Look around your location and see if there is anything that might help you there.

If all the above fails then there are two possible reasons why:-

- (a) There is no solution to this problem.
- (b) You have not been far enough with this adventure or performed the correct actions to enable you to solve this particular problem.

The first is highly unlikely and extremely unsatisfactory. The second has just one message to tell you, persevere and keep on playing.

# ADVENTURE

**Problem No. 3:** An object, or wall or something of an inanimate nature is blocking your path.

- (1) Examine it carefully for any clues that it may give you.
- (2) Examine your location carefully to see if there is anything that might help you there.
- (3) Take note of what the object is and see if you can think of anything associated with the object that you think might move it or reveal its use. Try out all your theorys.
- (4) List your inventory then try out each object in turn against the problem until something happens.

The same principle applies here as with problem 2.

The one prime rule in adventuring which should always be applied before anything else is **EXAMINE EVERYTHING** as you meet it. Do not pick up anything before you have examined it. You could save yourself from quite a few sticky situations if you remain cautious.

Two steps that I did not mention in any of those problem solving routines were:-

- (1) Ask for **HELP**. I did not mention this because it really should only be used as a last resort and in any case you might not get help just when you want it. But if you really are well and truly flummoxed by a problem, then just one clue is forgivable.
- (2) Load the other side of the tape next time you play. This may seem a strange one to add but there may be a bug in the program which is not immediately apparent and does not allow you to overcome a certain problem. You may find that loading the other side of the tape is the answer.

**O**

Dear Marion,  
With reference to your article in April's edition of 'Computer Gamer' could you please offer any help with the adventure 'Hampstead' by Melbourne House. I can only achieve 33% and always get stuck once I've reached the station. I've tried numerous ways round the problem and entered London via Regent, Oxford, Piccadilly etc., but all to no avail.

So far I've collected my UB40, worn the tracksuit, ridden the bike, exchanged UB40 for giro which I've subsequently cashed, been in the Oxfam shop and exchanged my tracksuit for tweeds and taken the art and antiques magazine from the newsagents before going into the station where I've acquired a travel pass.

Any help you could offer would be most dearly welcomed.

Thanking you.

Yours,  
Mrs C. Paulton

**A**

This is the procedure I suggest you follow. Before you go to the station to catch your train, I suggest that you return to the junction between the main road and the high street. Here you are to go east towards Hampstead. Now you will see on the screen that further east glows the promised land of Hampstead. **DON'T GO EAST HERE!** Go north and you will come across a park bench. Sit down on the park bench. (This should be possible just by typing **SIT**). Underneath it you will then see a credit card. Take the

credit card and go south, then west to return to the main junction. Follow your normal course of action here until you reach Waterloo. Catch the bus and go north until you come to the area where the better class of people shop. Enter the mens outfitters and purchase a business suit with your credit card. Don't forget to wear it before you leave the shop though.

I hope these hints will get you a little further and that the addition of the credit card will get you more noticed around London. Good luck with playing Hampstead.

**Q**

Dear Marion,  
I have just bought and read the first issue of your magazine and I must say found it very enjoyable. After reading the adventure column, which is always the first thing I turn to, I felt I must write to you on a number of points.

**36**

I hope that you are not going to fall into a trap of reviewing the so called 'ARCADE ADVENTURES' in the adventure column. Although there may be problems to solve, but I feel that anything that requires a joystick and no user input is not a true adventure, it's bad enough arguing about text only and text and graphic adventures, without starting on about 'Arcade Adventures' as well. Leave them to the arcade game players as the major requirement seems to be timing. I must admit I have got 'Technician Ted' but it isn't in my adventure box!

Well now I've got that off my chest I'll wish you all the best for the future of the magazine and especially of your column. Tell the Ed you need another page!

I'm off to slay some more dragons or something now, so I'll say bye, bye.

Happy Adventuring,  
Yours,  
Paul Clifford.

**A**

Dear Paul,  
Thank you for writing to me, I agree entirely with all that you said about arcade adventures. I believe that I mentioned in the first issue that arcade adventures were certainly not my

## ADVENTURE

favourite type of game and as a result I am rather poor when it comes to playing them. I do not intend to spend much time discussing them although they may crop up in passing of course. They are still adventures of a sort though. There is some thought involved in working out how to overcome various obstacles the difference being that your attempts are all input using physical responses rather than verbal input. Still I do see your point.

What do other readers think?

**Q**

Dear Marion,  
Please help me and the family, we are completely new to the Adventure Game, having bought 'Heroes Of Karn' and after many frustrating hours, have finally given up trying, feeling I'm missing something somewhere, but believing I've tried everything. Having found 'Beren' I either can't get passed the 'Bear' or the 'Barrowright' or get thrown into the nearest dungeon. Please help me to get a little further into the adventure. I look forward to hearing from you shortly as any help is desperately needed.  
Yours sincerely  
Mrs J. Smith

**A**

First of all you need to get rid of the Barrowright. You need with you the Bible which can be found in the monastery. Attack the Barrowright with the Bible. You are now able to take the money. Do so and then let yourself be thrown into the dungeons. If you get thrown in the dungeons without the money then you are, I'm afraid, stuck there for good and you will have to start the game again. When you have the money then you must give it to the Guard and he will let you out. These guards are highly susceptible to bribery. If you wander about down here for a while you will come across a jar of honey. Take this and return with it to the bear. Give him the honey, it will send him off to sleep and you will be able to get past. I hope what you find beyond the dungeons and the bear will prove interesting. Good luck.

# -H-I-T-C-H H-I-K-E-R-S-

## GUIDE TO THE GALAXY

David Bishop

The term "state of the art" is often misguidedly applied to things not worthy of the accolade. However, having spent many hours exploring the bizarre world of Douglas Adams' **Hitchhikers Guide To The Galaxy**, I am convinced that the art of computer adventures should always be in this state!

Hitchhikers, the computer game, comes from the Infocom stable, famous for such thoroughbreds as Deadline and the Zork trilogy. All Infocom's products feature highly sophisticated language interaction and have been labelled "Interactive Fiction", rather than adventures. A description which perfectly describes a good night's interaction with Hitchhikers.

Adams and Infocom collaborated on the project from start to finish and this marriage of talent has proved an unqualified success with much of the text being original rather than taken straight from the book or the play or the radio series or the feature film or the T-shirts, or the...

Having spent so long hitchhiking around the galaxy, I'm not about to make it easy for anyone else but a few ditties should serve to wet your appetite.

As in the book, the game starts with you, Arthur Dent, trying to persuade a particularly silly civil servant that demolishing your home to make way for a motorway wouldn't be at all friendly!

Still, none of this matters because the Earth's going to be destroyed in 12 minutes to make way for a new Hyper-Space Bypass being built by a Vagon Constructor Fleet.

Having hitched a lift off the Earth with your friend, Ford Prefect, who, you have just discovered, is really a researcher for the Hitchhikers Guide to the Galaxy, you are captured by the Vogons.

The Vagon captain insists on reading you some of his poetry (the second worst thing in the Galaxy, according to the Guide) before throwing you out into space.

So, Babel fish in ear, you are flung out into space and are picked up by the Heart of Gold, a revolutionary new ship powered by the Improbability Drive. To

reveal just what exactly you would have to do would spoil your enjoyment, but suffice it to say that in order to do it you must "become" other characters in the plot!

The best way to illustrate this is with a couple of examples... On the bridge of the Heart of Gold, you find a handbag containing a pair of tweezers. Later on you wake up at a party and you are being chatted up by Arthur Dent (he who you just were) from whom you get a very important thing (V.I.T.) which you put in your handbag. Back in the future, as Arthur Dent again, you examine the contents of the handbag on the bridge of the H.O.G., only to discover that tweezers have been joined by the V.I.T.

As if that wasn't enough, how about being on board a microscopic spaceship heading into battle when it's swallowed by a dog! Suddenly, you remember a

dog yapping outside the pub where you and Ford went drinking six minutes before the Earth was destroyed. In fact, if you have brought a cheese sandwich from the pub and fed it to the dog, this is what would have happened: "The dog is deeply moved. With powerful sweeps of its tail, it indicates that it regards this cheese sandwich as one of the great cheese sandwiches. Nine out of ten pet owners could happen by at this point expressing any preference they pleased, but this dog would spurn them and all their tins. This is a dog which has met its main sandwich. It eats with passion, and ignores a passing microscopic space fleet."

This is just one example of the detail and humour of the text in Hitchhikers, which will appeal to all lovers of Adams as well as more serious adventures who will find enough puzzles to keep them going for months.

Hitchhikers is a bug-free, highly interactive and extruitiatingly funny adventure. I'm convinced it's a major contribution to mental derangement and definitely worth buying a disk drive for.

### Hints and Tips

1. Consult the Guide about anything and everything.
2. Don't be shy.
3. Take everything you find — all things are useful.
4. Alan Freeman?
5. You'll need four objects just to get the Babel fish.
6. Make use of such prepositions as "under", "through" and "inside", when using such verbs as "look".
7. There is no hint number 7.
8. Read every word of the instruction manual and the text that appears on screen — both are riddled with clues, and funny too!
9. Using your five senses will get you out of many a tricky situation.
10. Never be without your towel.

# Dungeon Dressing

ADVENTURE

**When is a door not a door? Gordon Hamlett answers this and other important questions in this month's Dungeon Dressing.**

Last month I looked at ways of making your location descriptions more interesting. Over the next couple of months, I want to deal with the problems within an adventure.

If you wish to populate your dungeon with lazer-wielding bunnies, then fine, I am not going to try and stop you. What I think you ought to watch out for are things like rooms full of snow in the middle of a desert or a robot running riot in a story all about elves and goblins. In other words, try and avoid major inconsistencies. Before you argue that you have got a special cryostatically controlled room, let me say that this example came from a commercially produced game and was set in an Egyptian tomb!

This is a very difficult concept to understand as surely it is all make believe anyway. Probably the best way of explaining it, is not to, but to give lots of examples and hope it becomes clear. Whilst you can set a whole game round the killer rabbits, the one room full of snow is out of place in the rest of the setting. It may be a great trap, but you cannot use it in that particular story so take it out, make a note of it in your next one instead.

## Fascinating Features

Be honest, one of the most boring parts of a room description, is doors. Doors are for kicking down, or for unlocking with the correct coloured key so this month, I've written out a list of a few ways of making doors more interesting. In passing, the only doors that I can remember from my adventure playing, are in

Zork II, with the lizard's head sticking out of it, and the intelligent doors in Hitchhikers Guide to the Galaxy.

### Descriptive Doors

**Size**  
½ size  
double  
normal

**Shape**  
rectangular  
arched  
square  
saloon  
barn  
round

**Material**  
wooden  
iron  
brass  
studded

### Locking Mechanisms

special locks  
magical locks

### Colour/Decoration

whatever takes your fancy

### Special Features

grille or spyhole  
doorknocker  
handles  
one-way doors  
talking  
intelligent  
notices/inscriptions  
electrified  
portcullis

Selecting a few items from the above lists should do wonders for your portals.

## Trap of the Month

A lot of you seem to have misunderstood what I meant when I asked you to write in with your ideas for tricks and traps. I did not want "you are walking down a long corridor when a pit opens up in front of you and you fall 300 feet onto some poisoned spikes. You are dead". Instead I was looking more for problems to be overcome. Here are two on a similar theme of disguising access to other areas of the dungeon.

Chris McBride from Glasgow came up with the idea of someone searching for secret passages. They find one, but it is only a small alcove containing treasure. Convinced that he has solved the puzzle, the player carries on elsewhere. Had he searched the alcove, he would have discovered a sliding panel which concealed a tunnel leading to new locations. Tricky huh?

Henry Cherry from Derby says in his letter that in his experience, adventurers tend only to think in two dimensions and look for secret doors only in walls. He suggests a large room supported by carved pillars. One of the pillars contains a secret door, behind which is a narrow spiral staircase leading up into a hidden room.

I'll be looking at more of your ideas next month so keep those letters coming in.

I have been asked to recommend some reading material apart from the obvious Tolkien etc and I hope to be able to give the odd book review in the coming months. If you have any good suggestions in the meantime, please write to me care of Dungeon Dressing.

MAIL ORDER ADVERTISING

### British Code of Advertising Practice

ADVERTISEMENTS IN THIS PUBLICATION ARE REQUIRED TO CONFORM TO THE BRITISH CODE OF ADVERTISING PRACTICE. IN RESPECT OF MAIL ORDER ADVERTISEMENTS WHERE MONEY IS PAID IN ADVANCE, THE CODE REQUIRES ADVERTISERS TO FULFIL ORDERS WITHIN 28 DAYS, UNLESS A LONGER DELIVERY PERIOD IS STATED. WHERE GOODS ARE RETURNED UNDAMAGED WITHIN SEVEN DAYS, THE PURCHASER'S MONEY MUST BE REFUNDED. PLEASE RETAIN PROOF OF POSTAGE/DESPATCH, AS THIS MAY BE NEEDED.

### Mail Order Protection Scheme

If you order goods from Mail Order advertisements in this magazine and pay by post in advance of delivery, **ASP Ltd** will consider you for compensation if the Advertiser should become insolvent or bankrupt, provided:

1. You have not received the goods or had your money returned; and
2. You write to the Publisher of this publication; summarising the situation not earlier than 28 days from the day you sent your order and not later than two months from that day.

Please do not wait until the last moment to inform us. When you write, we will tell you how to make your claim and what evidence of payment is required.

We guarantee to meet claims from readers made in accordance with the above procedure as soon as possible after the Advertiser has been declared bankrupt or insolvent (up to a limit of £2,000 per annum for any one Advertiser so affected and up to £6,000 per annum in respect of all insolvent Advertisers. Claims may be paid for higher amounts, or when the above procedure has not been complied with, at the discretion of this publication, but we do not guarantee to do so in view of the need to set some limit to this commitment and to learn quickly of readers' difficulties.)

This guarantee covers only advance payment sent in direct response to an advertisement in this magazine (not, for example, payment made in response to catalogues etc, received as a result of answering such advertisements). Classified advertisements are excluded.

# PLAY-BY-MAIL FANTASY GAMES

## THE TRIBES OF CRANE a fantasy game bound only by the imagination of its players or STARMASTER the ultimate Science Fiction Fantasy Game.

You play a tribe on the world of Crane... a beautiful, intriguing planet of fertile plains and myriad seas. Diplomatic and tactical skills count for more than mere size and strength, as you experience the thrill of danger and the excitement of discovery, in THE TRIBES OF CRANE. Or, in STARMASTER, play a people in a galaxy of unknown planets and star systems, set in the far future. Design your own species, chose your planet type, ideology, and political system, and then roam the galaxy as you vie for supremacy.

These are play-by-mail games: hundreds of players in the same game send in turns to Mitregames, while negotiating with each other as they wish. Payment is according to turns played. The complete start-up package for either THE TRIBES OF CRANE or STARMASTER is available in your local games shop, price £9.95, which includes the first two turns of play. In case of difficulty, games may be ordered post free from Mitregames, at the address below, enclosing cheque/postal order for the games you require.

# PLAY-by-MAIL GAMES

# 41

Play-by-Mail games are adventures that you play by post. Martin Croft tracked them down and presents his findings.

Play By Mail (or PBM) games have been around for a long time — far longer than micro computers. But it is only since the silicon chip brought computing to the masses that PBM games have enjoyed widespread popularity.

The idea of a PBM game is simple. The players, however many there are, send in instructions to a central referee who works out what happens and sends the results back.

Chess has been played by post for more than a hundred years, and most popular boardgames have been given the PBM treatment.

Some games, of course, just don't work postally, as experience soon shows. **Postal Poker**, for example, has some serious drawbacks: as for **Scrabble by Mail**, you really have to be an addict. I always found my letters ended up in the wrong places.

Most games, however, do adapt well — and some work far better postally than when played face to face.

The boardgame which adapted best to postal play was **Diplomacy**, a power politics game in which seven players vied for control of a map representing Europe in the early twentieth Century.

The game mechanics were simple, but the real appeal — as the name suggests — lay in the immense capacity for treachery and double dealing the rules allowed. The objective, put baldly, was to betray yourself to the top.

**Diplomacy** was so popular some years back that you could play it postally in dozens of small, independently produced magazines (or Dippy zines, as they were affectionately known) usually put together in the small hours of the morning by gifted fanatics on a shoestring budget.

Most of the Dippy zines had circulations that hovered around the 50 mark, although there were a few well into the hundreds. They had wierd and wonderful names which reflected the editors' inclinations — names like **He's Dead, Jim, Perfidious Albion, Sauce of the Nile or Howay the Lads!**

Players would go to great length to win, often resorting to bribery and even blackmail.

Alongside blackmail went forgery and interference with Her Majesty's Mail. Players would forge other players' letters or orders, or even letters from the gamesmaster; another trick was to alter postmarks (using a franking machine) so that orders which missed the strict deadlines were accepted (most people took postmarks as proof of the date of posting, and attributed delays to the GPO).

Two players managed to get into trouble with the police — as suspected terrorists! They were involved in complex negotiations about an attack on the gamer playing Britain. To avoid postal delays, one sent the other a telegram which read **ATTACK ON LIVERPOOL CONFIRMED**. Both spent some time explaining to the police that it was only a game.

The popularity of **Diplomacy** began to wane at the end of the 1970s. Gamers wanted something more complex, to reflect the growth in sophistication of the boardgames being published. An additional factor was **Dungeons and Dragons**, the first of the Role Playing Games. Abstract games lost out to a new breed of simulation games.

The PBM games of the 1980s are, almost without exception, titles which have been specially written for postal play. As such, they are mostly immensely complex games involving tens, hundreds, or even thousands of players. They could not exist without computers, either to run them or just to handle the paperwork.

In these modern PBM games, you can be anything from a single person to an entire space faring race. You can control the fate of one of the nations of earth in the Atomic age, or you can rule a tribe of hunter-gatherers scrambling up the ladder of civilisation.

In America, PBM gaming is well on the way to being Big Business. US PBM companies are, usually, well organised and efficient.

One game, **Earthwood**, is being played by over 4,000 people. When you consider the start-up costs, including the rule-book, come to \$10, and that the turns (usually one a month) cost \$3, you can see we're talking medium sized bucks, if not big ones.

Some PBM games are still run by people — these are called human moderated or Games-Mastered games. Others are entirely run by computers, with people just there to type in the players' orders. Some don't even need this amount of human input — the players put their orders onto computer cards by filling in boxes indicating which of certain set options they wish to choose.

The two different types of game appeal to different groups. For those who like the freer, less structured game, where new ideas can be readily incorporated into the system, the human moderated game is best. For those who appreciate structure, who like using their intelligence to outwit opponents, not their imagination, the computer moderated games are probably more suited.

Both types, of course, have their drawbacks. Human gamesmasters can make mistakes, or show favouritism, or be ill; computers don't make mistakes, but they can only work in set routines, defined by the program — which may be faulty.

Games also differ in length. Some are limited both in the number of players allowed, and in time. **Earthwood** is a good example of a limited game: there are 25 human players in each game, and once one player or alliance of players has captured all the cities in the fantasy world setting, the game is over.

Other games just carry on, with new players joining and old ones dropping out all the time. Open ended games like this tend to attract those more interested in role playing rather than games playing, since the objective is not so much winning as surviving.

In a game where all the players start at the same time, the positions occupied by each are usually relatively equal. In open ended games players can find themselves with vastly differing resources.

One major drawback to some American games is that you can get a better starting position by paying the PBM company more real world money — which biases the game in favour of those with more cash. It also means that players who drop out will sometimes try to sell their game position, through adverts in games magazines.

Players can also be at a disadvantage because of the vagaries of the postal services — particularly in America, where it can take five days or more for a letter to go from coast to coast. As for transatlantic mail, that can take weeks.

This doesn't affect those games which have deadlines so much, as these will only allow, say, one turn a month. There are games, however, where you can send in your next turn as soon as you get the results

of your last one back. If you live close to the PBM company running the game, you could end up getting two or three turns for every one someone three thousand miles away is getting.

To try to ease this problem, some UK companies act as postboxes for, US companies, and vice versa. This means that UK players would have to send their orders in to the postbox by a deadline, usually earlier than the US one, and all would be sent on to the US. The UK PBM hobby is less well organised than the American, but there are a number of companies with interesting games on offer. Most of the games are of American origin, but British designers are beginning to fight back.

The oldest British PBM company is now called International Computers by Mail — a name chosen to provide the acronym ICBM — although it used to be Flying Buffalo UK. It is the English half of a trans-

atlantic partnership. The US end is Flying Buffalo Inc — or FBI.

ICBM runs a number of games in the UK, and acts as a postbox for FBI games as well. All its games are computer moderated, as you might guess from the company's name.

The most famous game run by ICBM is **Starweb**, a very early space conquest game in which the players choose to be different character types. You can be an Empire Builder, out to control the universe; or a Berserker, the leader of a race of killing machines which exist only to destroy organic life-forms; or a Merchant, a Pirate, an Artifact Collector or an Apostle. Each character type has strengths and weaknesses.

Other games run by ICBM include **Terra 11** and its offshoot **Conquest 11**, basically strategic wargames with a medieval setting; **Universe 11**, in which players explore, colonise and conquer an alternate universe; and **Feudal Lords**, a diplomatic game of the struggle for the throne of an Arthurian type Britain.

ICBM's offices are located in a working iron foundry in the West Midlands. The base for one of its main rivals, Mitre Games, is a former Estate Agents in Balham High Road.

Mitre only run two games at the moment, but both are very popular.

**Tribes of Crane** is an open ended game set on a fantastic world, many aspects of which may well be familiar to Science Fiction and Fantasy readers.

Although magic doesn't work, there are many wonderful creatures, including the giant warhawk. These creatures can be ridden into battle, as can zebras and rhinoceroses.

**Crane** is human moderated, and there is an immense amount of imagination apparent in it. There are around 600 players, many from Europe and even further afield. Since the game is only restricted by what the players can think up and the gamesmaster allows, some very strange things have happened.

There is a city built by a group of German players; other gamers whose tribes approach it are warned of the inhabitants lack of a sense of humour. One player has been searching for months for the Great White Albatross, a marine version of the warhawk — but it doesn't exist. He has been following a fairy tale. Another has solved the problem of navigation in the polar latitudes, and regularly uses the icy

# CRASIMOFF'S WORLD

The international game  
for the  
modern thinking mind

wastes as a short cut while everybody else gets hopelessly lost.

**Crane** players tend to become fanatical in their devotion to the game. Feuds are a recurring feature in the game, as is treachery and betrayal.

One player rose to become leader of the most powerful player alliance in the game — and was then murdered by his trusted lieutenants. His wife rang one of the traitors at dawn the next day and hurled abuse at him.

The other game Mitre run is **Starmaster**, a science fiction game. Each player begins by designing his or her race, spending a set number of points on a shopping list of different racial characteristics and abilities. For example, it's entirely up to you how many legs you have — if you have any at all. At least one race has wheels! You choose what sort of body, the number and type of limbs, brain power — everything you could imagine is catered for. The only real disappointment is that so many of the players end up with recognisable Science Fiction stereotypes — Terrans, Vulcans, Klingons, Kzin and so on.

Mitre is linked with one of the larger US PBM companies, Schubel and Son. It also has a marketing deal with Games Workshop, which is selling boxed sets of **Tribes of Crane** and **Starmaster** rules, hints and two free turns for a very reasonable price.

The game with the most players in the UK at the moment is probably **Crasimoff's World**, which has the distinction of being UK produced. It was also the first British PBM game to be sold to an American company — usually the licensing deals run the other way.

The player controls a small party of humans wandering the surface of the eponymous planet. There are four types of character — Chieftain (you), Fighters, Mages, and Clerics. Magic works, and your Mages and Clerics can cast spells. Action is fast and furious, and the turnaround by the human gamesmasters (two of them) is very prompt.

**Crasimoff** is another game which inspires fanatical loyalty. As with **Crane**, this is largely due to the amount of work the gamesmasters are prepared to put in. If you have a good idea which appeals to them, you have a greater chance of succeeding with whatever you plan to do than if you send in the same dull and lifeless instructions every turn.

KJC Games, who run **Crasimoff's World** from a games shop on the Blackpool sea front, also run **Earthwood** in the UK.

KJC are about to launch a new science fiction game called **Capitol** which will be run by an IBM PC.

The other major game being run in the UK at the moment is **Keys of Bled**.

Launched at around the same time as **Crasimoff's World**, it was a similar scenario — a small party wandering a fantastic planet — but is supposed to appeal more to those gamers who prefer careful planning and strategic thinking to charging in with all guns blazing (or, should that be all spells?).

**Keys of Bled** is run by the aptly named Spellbinder Games of Ramsgate, Kent.

There are a number of other PBM games running in this country including **Starglobe** and **Globemaster** from Birmingham based Time Patterns. **Starglobe** is a space exploration game whereas **Globemaster** players forget about space travel and get down to the fighting. **Starlord**, another space game written and moderated by Mike Singleton, better known to computer gamers as the man who wrote **The Lords of Midnight** and **Doomdark's Revenge**.

Mike isn't the only PBM gamer to have moved over into the computer games field. Richard Bartle, who wrote **Multi User Dungeon** (**MUD** for short) used to edit the Dippy zine **Sauce of the Nile**. Simon Dally, the man who commissioned the infamous **Hackers' Handbook** for Century Communications, and who is now selling **MUD** as a commercial proposition to British Telecom, was once rated one of the top three Diplomacy players in Britain.

Perhaps this cross over from PBM gaming to computer gaming is just an indication of things to come. Many of the American PBM companies are already geared up to allow players to send in their orders by electronic mail, and ICBM are likely to be doing the same soon in this country.

**Diplomacy** has been run on Prestel for some time now — Bulletin Boards offer a perfect medium for this type of game.

In fact, many observers of the PBM hobby have begun to extend it to cover Play By Modem games as well as the original Play By Mail.

If you have a modem and know the right numbers to dial, you can already play **MUD** via your micro. Pretty soon, you could be playing all sorts of other games as well.

In EARTHWOOD, twenty-five players compete to be the ultimate ruler by controlling all the developed cities, either singularly or with an alliance. A typical game will last about 18 months with the first knockouts usually starting after six months.

Each player is either a king of a fantasy race or powerful charismatic character. Your character or king controls several groups each of which is totally independent of each other. You can recruit trolls, wildmen and others into your armies, and even control powerful creatures such as dragons. Your characters will capture and control cities, upon which you can spend gold to improve security, increase your workshop's production, build defences and maintain and enlarge your army. With gold your wizards undertake magical research, learning new spells. Spies search out enemy strongholds and then attempt acts of sabotage, theft and assassination. These are just a few options available to a player in EARTHWOOD.

EARTHWOOD is computer moderated but the turn sheets and replies are written in plain English so that you can easily understand them. No need to look through complex charts and code books to understand this game.

# KJC GAMES

To enrol in Earthwood send £5.00 cheque/PO payable to KJC Games. For this you receive the rulebook, setup and first three turns. Future turns are £1.50. Send to KJC Games, 5 Vicarage Avenue, Cleveleys, Blackpool, Lancashire. FY5 2BD.

## GLOBEMASTER

The 3-D space combat play-by-mail game.

Fly your command ship and its fleet of fighters from star to star into combat with ships controlled by the other players. Find and capture the MASTERSTAR and become GLOBEMASTER.

Turns 1 fortnightly £1.50 per turn.

The GLOBEMASTER plays for free while he survives. First 2 moves and rules free.

## STARGLOBE

This is an adventure in space and time. You must navigate your well-equipped starship through 3D space, filled with 2000 stars. When you reach a star, you can explore the planets, establish colonies and factories, build up an empire, meet aliens and fight other players.

Moves £1.50 each. No deadlines. Details and launch £2.

Send to: TIMEPATTERNS, 97 Devonshire Road, Birmingham, B20 2PG. Tel: 021 523 4446.

KJC Games, Britain's leading Play By Mail company, introduces to you our new Play By Mail game of Xenophobia, Conquest, and Space Warfare called ...

# CAPITOL

### CAPITOL Features —

- A strategic space warfare game, completely computer moderated.
- Approximately 35 players per game.
- Players design their own race's characteristics and description.
- Design your own starships and build them at your star bases.
- Expand your empire and conquer other races.
- An 'advanced stage' of the game introduces new technologies of stargates and improved ship movement capabilities.
- CAPITOL's simplified order formats are easy to remember. No coding your orders onto computer cards or other gimmicks.
- CAPITOL has an easy to understand rulebook, complete with numerous examples.
- CAPITOL was subjected to the largest playtest of ANY commercial PBM game. Over 100 players played over 1500 turns of CAPITOL prior to release.

"CAPITOL is fast becoming the standard against which other space warfare games are compared"

- With each rulebook you receive a set of overlays to use in mapping the game and moving ships.
- Mapping CAPITOL is extremely interesting, using the computer printed maps you receive with your turn results.
- No due dates. CAPITOL allows you four turns per month. Most other computer moderated games have the usual one turn every two weeks.

KJC Games has been running Play By Mail games for about 5 years now and our reputation for giving good, exciting games and a first class service is second to none. Our team of professional Gamesmasters will usually reply to your turn with 48 hours.

To enrol in CAPITOL send a £6.00 cheque/PO/international money order payable to KJC Games. For this you will receive the Rulebook, setup and first two turns. Each turn of Capitol costs £1.75 for the first 60 orders. Each additional 30 orders costs £1.00. European players are welcome. Reply to: KJC Games, 5 Vicarage Avenue, Cleveleys, Lancashire FY5 2BD.

**KJC**  
**GAMES**

Here is a guide to the symbols used to illustrate the game reviews.

## Eecaans Star Guide

- Black Hole** —  This should be avoided at all costs as anything that gets too close to it is immediately sucked into the vacuum. A game given this description is totally void of any interesting features.
- White Dwarf** —  This is a small dying star that is now far from it's best. Any similar games may lack lasting appeal.
- Bright Star** —  Like you sun, games given this description will be bright and interesting and will support intelligent life.
- Red Giant** —  Brighter than a bright star such a game will have an outstanding feature or game system.
- Nova** —  If you see a game with a Nova rating you should immediately rush out and buy it. Novas are bright and spectacular and can influence neighbouring planets.
- Supernova** —  This is the ultimate in stellar systems for this incredible explosion of a star can effect entire galaxies. If a supernova game runs on a computer that you don't have then buy the machine and then buy the game!
- Nebula** —  Although at first nebulae look bright and interesting they are in fact constructed totally from hot gasses. Beware of any game carrying this symbol as you will probably find it disappointing.

## Planet ratings

Planet ratings are marks out of five for specific areas of a game. These include Originality, graphics, use of machine and value for money.

**Originality** — How original is the game? Is it a completely new idea or is it the 83rd version of Pac-man.

**Graphics** — Do the Graphics amaze your friends or send them to sleep.

**Use of machine** — does the game push the machines hardware to the limits or was it written in three lines of Basic.

**Value for money** — Is it daylight robbery or a steal?

## Game symbols.

These symbols indicate which category the game belongs in. It is however possible for a game to be in more than one group in which case more than one symbol will appear by the review.

**Title:**  
**Computer:**  
**Supplier:**  
**Price:**

**Amazon Warrior**  
**Commodore 64**  
**New Generation**  
**£7.95**

A blowpipe and forty darts are all you have between you and a grisly death in the new fantasy action game from New Generation.

The game is played in a series of screens in which an assortment of nasties attempt to eat or drain you of your blood.

The first threat lies in a forest and comes from deadly red snakes complete with sinister black and yellow spots. These snakes usually attack in pairs and so you should ensure that you don't get trapped between them.

Your main problem is that when you've fired a dart you have to stop to reload but while you're doing

this your perfecting your sitting duck impressions.

Hours of practice have developed the load and run technique which involves a lot of running away whenever a snake's fangs come to close. Then a well timed turn and fire often results in a hit. Enough of these hits and your on to the next level.

This is infact easier as the foe are giant scorpions that are larger than the snakes and crawl towards you along the ground. A few well aimed shots will soon despatch these. However, if your caught you will be stung and then eaten in full gory graphics.

Next on the agenda are the head hunters which are a particularly violent bunch that not only attack you with swords but also throw spears at you.

# W "E" W "S"

You then leave the forest behind you and enter the caves. This is a particularly silly idea as you are immediately swamped by vampire bats that are then replaced by wraiths. The wraiths are undoubtedly the hardest to kill as a hit will only score if it is on the wraiths head. Darts aimed at the body will only pass through it as it carries you away screaming.

Your troubles are still far from over as you have yet to face spiders and blocks that drop on you and then a rather large dragon. This plummets to the ground with a satisfying thump when you finally manage to kill it. Your reward for completing all this is to be transported back into the woods with the snakes, but this time they're really mad.

It will take most people many months to complete this cycle as you only have three lives. I was also provided with an unlimited lives cheat option which allowed me to complete the game using only 87 amazon warriors.

The games graphics are superb and create some interesting 3D displays but I would imagine that most people will be too busy trying to stay alive to look at the scenery. They will however notice the sound which consists of eerie tunes and realistic sound effects. For example if you run away from the bats in the cave the sound of their flapping wings will die away, but if you stop they will return.

Excellent graphics, great sound, impossible game, need I say more. Buy it as soon as it is released on June 20th.

STAR RATING  
Nova

Title:  
Computer:  
Supplier:  
Price:

**REVS**  
**BBC**  
**Acornsoft**  
**£15.95**

Revs has received the type of pre-release publicity that Elite got before its release — and with good reason.

The game itself is a highly accurate simulation of formula three racing — the very same formula that Acorn themselves sponsor in the form of David Hunt, James Hunt's brother. It was from this experience of racing that the game was born. The game was written in conjunction with David Hunt and the author of the immensely popular 'Aviator' 3D game.

The 3D effects of Aviator have been kept except that they're in full colour. The screen display is excellent and the track is represented perfectly. It is a scale copy of Silverstone with all the twists and bends of the original. One detail is that the hills and changes in level are also featured. Most (in fact all the ones that I have seen) racing games don't bother with hills at all. Not being able to see over a hill to see the road conditions ahead adds quite a lot to the game.

There are two modes of operation. The first practice is where you race around the track on your own to try to get a decent time.

This isn't qualifying practice but merely a chance to get used to the track and conditions.

In race mode you get a chance to run some qualifying laps, and you can allocate a certain amount of time to practice in before you start the race proper.

In this mode of practicing your lap times are taken officially, and influence your position on the start grid. There are also other cars on the track practicing as well.

Once you start the race it really hots up. the parallel here will obviously be with Pole Position from Atari, this game was — until now — the best racing game that you could get for the BBC, indeed for other machines as well. Now even this classic has been surpassed. When you are on the starting grid and see all those cars spread out before you (and they will be!) the sense of realism is incredible.

Start the engine and your off. A point needs to be made here that it is a proper race, and once you have overtaken a car it will stay overtaken. In Pole Position and most other race games, even if you are in pole position (at the front at start up and on the inside for the nearest corner) you will find cars ahead of you once you have started.

All the cars you are racing against have individual characteristics and highly

amusing drivers' names such as Max Throttle, Hugh Jengine, and others. the status line on the screen informs you of who is in front and behind you in the race.

Control of the car is through five forward gears and one reverse, accelerator, brake and a clutch type arrangement. Once in the pits you can change the wings on the front and rear of the car which changes its handling characteristics.

All in all the best racing game I have ever seen on any computer, and I play a lot of racing games. A real must for any BBC owner.

STAR RATING  
Super Nova

**Title:** Boulderdash II  
**Computer:** Commodore 64  
**Supplier:** Monolith  
**Price:** £9.95

Boulderdash II, which is subtitled Rockfords Revenge, is the sequel to the hugely popular Boulderdash which was one of the best games of 1984.

The game chronicled the attempts of the games hero, Rockford, to dig for diamonds while avoiding falling boulders, amoebas and deadly fireflies. Most of Rockford's problems stemmed from the fact that when the earth surrounding a boulder was dug away, that rock would fall and if Rockford was still under it then a life would be lost. However boulders had to be moved to get at the diamonds and so each of the games 16 screens posed a different logic problem which then had to be solved with a joystick. Some screens were confounded by deadly fireflies, growing amoebas and butterflies that while death to touch turned into diamonds when crushed by a boulder.

Boulderdash II includes all of the old features and a few new ones that will give even experienced Rockfords a run for their money.

The first difference between the two games that springs to mind is the increase in time that you have to complete each screen. This is on average 4 minutes which is a lot more than the 100 seconds allowed in Boulderdash. This is because the screens are even more involved and pose more difficult problems. These include a screen where you are literally showered in boulders and diamonds and another which contains only one boulder. Unfortunately there is a horde of fireflies on your tail from the start so any wrong turn will be your last.

There are also some new features including a watery style barrier on which objects will settle for a few seconds before sinking out of your reach. A particular-

ly intriguing feature is an expanding wall that grows as the surrounding earth is dug around it which will surely catch unsuspecting Rockfords.

As with the original Boulderdash the secret of success lies in knowing your enemy. Particularly useful is the knowledge that fireflies will always turn to the left (at a junction) where butterflies will always turn right. However in a panic situation it is often difficult to remember which is left and which is right and then you have to manoeuvre in the right direction.

As a bonus, Monolith (see new pages), have included both versions on the same cassette so that new players can practice on the earlier, easier version, before tackling this one.

The original Boulderdash was one of my favourite games of 84. Boulderdash II is even better. Perhaps in time we will see Boulderdash III and IV, as far as I'm concerned Rockford will run and run.

STAR RATING  
 Nova

**Title:** Stringer  
**Computer:** CBM 64  
**Supplier:** Addictive Games  
**Price:** £7.95

Stringer is an ace reporter with the Daily Blurb and as such you have been given the task of getting an exclusive shot of Polly Platinum who is staying at a local hotel. Your equipment is hidden in various rooms of the hotel and you must collect all four items, avoid the hotel staff and take your photograph in time for your editor's deadline.

The game is a platform game, having the usual flights of stairs and lifts. Stringer must search every room until he collects his camera, flash bulb, press pass and the key to Polly's penthouse suite. Beware because behind one of the doors lurk Mr Angry who does not appreciate being aroused from his slumbers.

The graphics are chunky and pleasant but control of

Stringer requires care when climbing the stairs. If you are not careful it is easy to walk off the staircase and plummet to your death. Stringer can walk or jump and in certain cases he can even jump past the hotel staff if he is cornered.

Though pleasant to look at, the game does not require a high degree of skill at the lower levels but heats up as the program goes on to more complex hotel layouts. The game is neither good nor bad, it depends on your reaction to platform arcade games. Perhaps a greater variety of problems to be solved could have saved this game from mediocrity. **J.G**

**STAR RATING**  
 Bright Star

**Title:** Parky and the Yellow Submarine  
**Computer:** CBM 64  
**Supplier:** Cheetah Soft  
**Price:** £6.95

Parky the penguin has to rescue his brother, Perry, trapped somewhere in an endless maze of subterranean caverns at the bottom of the sea.

First you must help Parky to find the three parts of his yellow submarine avoiding a myriad of deep sea creatures which dart about the caverns menacingly. To help you in your task you are provided with a map on which you can mark the locations of such useful items as 'smart' bombs, lanterns and Parky's energy source — plates of fish and chips.

By rubbing the magic lantern Parky becomes temporarily invincible, eating a fish supper adds to his energy store and the smart bombs destroy all of the dangerous creatures and obstacles within a particular cavern.

Scattered around the screens are the letters of the word 'help' which, when collected in the correct order, cause all of the food, lanterns and smart bombs to re-appear in their

original locations to give you a better chance to help Parky complete his task.

The game is very difficult to play, especially because the walls are lethal to penguins, and it will take many hours of intense concentration to complete the mission successfully. There are 91 caverns in all and many of them are identical in shape, variety being attained by varying the speed and type of creatures found in them.

There are three levels at which the game can be played which vary the amount of energy which Parky can attain, making it more difficult to survive.

Cheetah are offering a free copy of the sequel to Yellow Submarine to the first fifty people who submit a map showing the location of every item in the game. **J.G.**

## "R" "E" "V" "I" "E" "W" "S"

**Title:** Combat Lynx  
**Computer:** Amstrad CPC464  
**Supplier:** Durell Software  
**Price:** £ 7.95

Let's get one thing straight before we go any further. This is an absolutely brilliant game. The fact that I am completely unable to play it is neither here nor there!

Combat Lynx is an incredibly detailed simulation of a war scenario in which you pilot a helicopter. The playing area is a vast simulated terrain (north and east coordinates are four-digit numbers), and located within it are from three to six bases which you have to support with troops and air cover.

Base 1 has an endless supply of fuel and can instantly cure any injured personnel you transport there (not too realistic, but without it you wouldn't stand a chance). The other bases depend on you to remain viable.

You constitute the only allied air support. The enemy seem to have almost unlimited aircraft to throw at you, and there is the added complication of ground vehicles, both Allied and enemy, which are involved in independent battles all over the map. Your mission, should you decide to accept it, is to ferry armed troops and casualties between the Allied bases as required, while maintaining sufficient weaponry on board to harass and destroy enemy craft. This is not easy!

Apart from some convenient fictions mentioned above, to make the game actually playable, this is as close to real life as you can get. I seemed unable to shoot anything down, another glance at the instructions revealed that I had forgotten to load any weapons at the start of the game. None of this Space Invader infinite ammo rubbish here. The games graphics are superb for example while fitting out your Lynx, you are treated to a three-D perspective rotating wire-frame view of the chopper.

The instrument panel is equally impressive, sporting a weapon status and

selection system, navigation console, fuel gauge, engine instruments and altimeter. But the most mind-blowing thing of all is the cockpit view which shows, in real-time and full colour, the actual view as you fly over the terrain. Hills and valleys rise and fall (their shape is accented by contour lines, a bit of poetic licence that actually adds to the realism), trees and houses appear as dots in the distance and stream past you out of sight, enemy planes flash across the field of view and over the horizon. I take my hat off to the programmer this is a work of genius.

Sound isn't neglected, as there is the steady background beat of the rotor blades with a pitch depending on your flight speed, and explosions where necessary.

It's going to take you hours to master this game, just learning what the couple of dozen key options are takes some doing. You can use just the keyboard, keyboard and one joystick or keyboard and two joysticks, depending on how you prefer to control a game. If you want a game which presents a satisfying and difficult challenge that will take perseverance to master, put down the magazine this instant, and go buy Combat Lynx. You won't regret it.

#### PLANET RATINGS

Originality  
 Graphics  
 Use of machine  
 Value for money

**STAR RATING**  
 Nova

**Title:** Gates of Dawn  
**Computer:** CBM 64  
**Supplier:** Virgin  
**Price:** £8.95

Where am I? What am I doing? Is this a dream?

Such were the thoughts which went through my head when playing this game from Virgin. The game is based on the nightmare world of sleep and you dream that you are a knight in armour wandering through an ancient world fraught with dangers.

As you progress from room to room, your progress is mapped out on a chessboard to the right of the graphic action screen and the aim is to reach the gates of Dawn or, in the words of the song, to help

me make it through the night.

Weird and wonderful challenges await the dreamer with spiders and bats featuring strongly in the action. Occasionally a room contains an object or two which may be useful later on and these may be carried until required or dropped if you later decide they are useless. As usual in adventures you are limited in the number of objects which may be carried and in this game that means only five.

The instructions are sufficiently detailed to allow you to commence the game, but no clues are given to the method of play so trial and error is the watchword.

Graphically, the game is

to that of curiosity. Perhaps persistence might lead further to addiction. I must admit that this is the first action adventure which has given me the usual initial feeling of despair which I experience with text-based adventures.

If an object is selected for use, the computer may ask how it is to be used. For example, having collected a mushroom I gave the command 'eat' and for several screens every object took on the appearance of a mushroom, and all of the

sophisticated one moment and blocky the next and like most 3D screens it is difficult to judge depth and relative positioning. This means that death occurs frequently through miscalculation and a lot of chance is involved in success.

As I played the game I found that total confusion gradually gave way to a vague sense of purpose. I also felt my reaction towards the program change from one of dislike

listed objects which I was carrying changed to read mushroom. I've yet to find if the mushroom has a real function other than as halucigenic relief. Weird.

**Price:** £ 7.95

The fairey Swordfish was used for aerial search and destroy missions against

submarines during the Second World War. This game invites you to take the role of a German submarine commander given the task of delaying the allied landings in the Mediterranean under the relentless attacks of the marauding Swordfishes. Nothing is wrong with the games concept but its realisation is a different kettle of Swordfishes.

The only controls you have are the function keys for dive, surface, open and close hatch, with the

joystick being used for targetting torpedoes, moving the anti-aircraft gun and firing these weapons.

The screen shows a view across a bay and the convoy ships move across your line of sight with the planes flying towards you Beach-Head style. To stave off this bombardment you must shoot down the 'planes and torpedo the ships without sustaining too much damage yourself. Therein lies the problem. The gun can only be launched underwater. The result is that you have to decide which is the greater threat, the reality is that you get shot to pieces.

I found the game frustrating to play, the torpedoes leave no trace of their progress and the fun

is difficult to aim correctly. Also the amount of damage which the submarine can sustain is set to such a low tolerance that the game no sooner starts than it ends.

Despite the similarities to one of the Beach-Head screens, this game adds just enough to make it acceptable as a game in its own right. It is limited in its scope and frustrating to play. In my case frustration has given way to indifference.

**Title:** On-Court Tennis  
**Computer:** CBM 64  
**Supplier:** Activision  
**Price:** £10.99

With Wimbledon in mind, Activision have released their 3D simulation which enables you to join in the on-court excitement.

Streets ahead of Psion's abysmal Match Point, this package shows how it should have been. You choose your style by selecting one of the four players which each have their own strengths and weaknesses. You must also choose the playing surface; grass, hard court or clay.

Once the type of game

has been selected, the screen reveals a view of the court looking along the line of play, with player 2 in the near court sporting a yellow shirt and player 1 in the far court in blue. In the one player version the computer takes the role of player 1.

The first problem is serving the ball. The computer sees to the process of throwing the ball in the air but it's up to the player to time his swing and calculate the strength and direction of the serve using the joystick and the fire button.

Assuming the serve is

## "R" "E" "V" "I" "E" "W" "S"

legal, the computer again takes over to position the player for the return shot. Again the joystick selects the type of shot, giving the choice of slice, lob, drop, topspin or flat shot, the timing of the swing determining the direction of the ball. If your opponent lobs the ball back you then have the opportunity to place a smash into his court.

Scoring follows the sequence of the professional game including the use of tiebreakers to decide drawn sets. The match can consist of three or five sets, or it can just be a one set practice match.

From the players point of view the play is by no

means easy and practice is essential, just as in the real game. As your game improves so does that of the computer making an almost unbeatable opponent.

If you've ever wondered what its like to face John McEnroe, Jimmy Connors or Bjorn Borg then this game is definitely for you.

**Title:** Arnhem  
**Computer:** Spectrum  
**Supplier:** CCS  
**Price:** £8.95

In 1944 three Allied airborne units were dropped into Holland to secure vital bridges and therefore clear the way for the Allied advance. This wargame simulates five different scenarios in this campaign.

The game can be played by up to three players. In the one player game, the player controls the allies against a computer opponent and in the three player game, separate players play the British and American units that make up the Allied force.

The battles are fought on a map far bigger than the computers scrolling screen therefore the enclosed full map is useful for planning tactics.

The scenarios range from the shortest which depicts just the advance to Eindhoven to the full Market Garden scenario which takes about ten hours to complete.

Each of the scenarios consists of a number of turns during which a player can advance his units or perhaps order them to dig into defensive positions.

Arnhem is a well designed wargame and as most of the Allied forces are airborne and therefore can land anywhere, each game will be different.

**Title:** Super Pipeline II  
**Computer:** CBM 64  
**Supplier:** Taskset  
**Price:** £8.90

If, like me, you enjoyed Super Pipeline, then this sequel will not disappoint you. Once again Foreman Fred and his band of eager workmen must keep the

water flowing through the convoluted pipes to fill the water barrels at the bottom of the screen, fending off the attempts to sabotage this aim are rogue tools and hostile insects.

Despite the graphics being identical to the earlier version, this game is much

more challenging having more frequent attackers and an increased workforce of two cute little workers (could this be the start of Maggie's industrial recovery?). The variety of foes has also been increased, with the familiar six-legged Venusian Pipe Spider and Hard-case Lobster being complimented by caterpillars, drills and hammers. Fred

**Title:** Spelunker  
**Computer:** C64  
**Supplier:** Ariolasoft  
**Price:** £9.95

Despite having to make continual disk accesses this is a highly excellent game. The depth of detail and imagery of the playing areas is wonderful. The problems that need to be solved are also very good.

But first let me fill you in on the game. You are going

down a mine that has claimed many other miners after the usual treasures that anybody would find down a mineshaft. On your way the ghosts of previous miners try to attack you (however you have an anti-ghost gun to fend them off), bats drop things on you,

can blast any of these enemies with his gun but an occasional shower of tacks is unstoppable and a worker may have to be sacrificed to protect Fred. Ignoring the sociological implications of the expendability of menials in a consumer society, I shall concentrate on the gameplay.

Touching any of the insects or tools is fatal to Fred and his workforce but the real problem is caused by the breaks are made in the pipeline which allow the water to drain away. The water supply is limited, so Fred must collect one of his workers and lead him to the break as soon as possible so that repairs can begin. Whilst the little worker hammers away, Fred must protect him against the many dangers until the leak is repaired.

Taskset's cartoon-like graphics are delightful and the game is fast and challenging. **J.G.**

**Title:** Bounty Bob Strikes Back  
**Computer:** CBM 64  
**Supplier:** US Gold  
**Price:** £9.95

The return of Bounty Bob from Miner 2049er has been well worth waiting for unless your name is Yulon Uohan, Bob's arch-enemy. Again we join Bob down a mine full of manic mutants intent on murder in this platform game.

Each of the twenty-five screens must be solved if Yohan is to be defeated and with the mine alive with mutant beasts and rogue machinery it is not easy.

The mutants evolved from small furry animals when radioactive waste from Yohan's dump seeped down into the mine, contaminating their food. In some of the caverns this waste still drips dangerously from the stalagmites adding to Bob's nightmare journey. One touch from a creature or a drop of this acid rain costs our friend a life but if he collects one of the many items left by the mine's previous occupant,

Bob becomes temporarily lethal to the creatures and one touch from him will give them terminal relief. The mutants know this and assume less hideous appearances whilst Bob is in his supercharged state.

Completion of a screen means that you have guided Bob over every inch of ground. As he moves on a new area it becomes a solid block of colour and lifts, suction tubes and matter transporters are there to assist you.

A sufficiently high score allows you to enter your name on the high score board which is an entertainment in itself. Two bulldozers are used to select the letters of your name which are pushed onto a conveyor belt. From here they are picked up by intelligent pigeons which swoop around the board moving until the board is correctly reorganised. Any names which are pushed off the board are deposited underneath the board where the two bulldozers

crush them into a solid block which is unceremoniously kicked into touch.

Function keys may be used to select display screens and the left arrow key permits you to pause the game so that a route can be planned through each new cavern.

Great skill and fast reactions are the order of the day if you are to get through every ordeal before your air runs out and I hope US gold have more than just a miner success with this program.

**Title:** Grog's Revenge  
**Computer:** CBM 64  
**Supplier:** US Gold  
**Price:** £9.95

Grog's Revenge is the second game based on the BC cartoons and follows hard on the wheels of Quest for Tires. Once again our intrepid hero, Thor, is wandering around his prehistoric world on his stone-wheeled monocycle but this time he has forsaken the neolithic plains for treacherous mountain tracks.

The game is a race to collect sufficient points so that Thor can pay a toll allowing him across a rope bridge leading to the next, more challenging level. Points are gained by rolling over coloured clams strewn along the narrow winding mountain path. The path is also covered with cracks and rocks which will smash the monocycle and, as the levels increase, these obstacles increase.

Along the cliff walls beside the path the occasional cave is found. Entering a cave causes Thor's

light to go on and the view is limited to its 'V' shaped beam. Strange little creatures scurry about amongst the stalegmities in the dark and Thor must mow these down, avoiding the rock formations, to score more points. At the end of one of these tunnels the toll booth is found and when enough points have been gained the game proceeds to the next level. If there are any points left over after the toll has been paid a new wheel may be acquired which means an extra life for Thor.

Where does Grog come into all this? He is rolling along the same mountain path collecting points of his own and Thor must avoid meeting him or sacrifice all his lives if he does.

The steering of the monocycle requires deft joystick control and each new level demands greater steering ability. The graphics are cartoon quality and the game, though limited in variation, is enjoyable but can be very frustrating initially until control of the monocycle is mastered. **J.G.**

**Title:** Squash  
**Computer:** C64, Spectrum  
**Supplier:** New Generation  
**Price:** £7.95

Jonah Barrington's Squash (to give it its full title) is a superb simulation of a frantic sport, which features animated players and even speech.

The game accurately represents the game of squash and is played to the International Squash Federation's rules which are included on the cassette inlay. The players are moved around the court by either defined keyboard keys or a joystick. I found

that using the joytick was a distinct advantage as you are more free to think about your shot than which key you should press.

In the Commodore version the two players are distinguished by their shirt colour one of which is white the other yellow. White always starts the game by serving so I would suggest you take account of this slight advantage particularly when playing the computer opponent (as you will need all the help that you can get).

The Spectrum version sacrifices the colour for a

**Title:** Superstar Challenge

Joysticks everywhere are in for another pounding as another decathlon style game is launched. This time the hero to be challenged is Brian Jacks and competition is played over eight events.

These include, canoeing, cycling, sprinting and swimming where speed is important. However the game features a system

called powersync where the best acceleration is achieved by a steady build up of pace leaving the frantic joystick waggles on the starting line. Swimming also poses the additional problem of breathing at the right time or valuable seconds will be lost.

In the football event you have to co-ordinate speed with control as you have to dribble round three cones before shooting.

The pace slackens for the other three events.

playable black and white display with the players distinguishable by a white band on one players shirt.

The tactics and feel of the game are the same in both versions. Practice will show you how to serve into a corner or play your opponent into difficulty. However you should avoid obstructing your opponent as a penalty will be called and a scoring chance may be lost. These calls are the score announced by a synthesized version of Barrington's voice which is impressive on the 64 but barely audible on the Spectrum. Matches can be played at

a number of speeds depicted by the colour of the ball ranging from the possible (red) to the impossible (yellow) over 1, 3 or 5 games.

This excellent simulation should be enjoyed by gamers and squash enthusiasts alike.

Supplier:  
Price:

Runestone  
Spectrum  
Games Workshop  
£7.95

Runestone maintains the high quality that we have come to expect from Games workshop. It is a new type of game and is a combination of a Midnight style landscaping game and a text adventure.

The result is an enjoyable game with over 8000 views of 2000 locations filled with humans, elves, orcs and the evil Kordomir. The land in which the game is set is known as Belorn and has the usual stock of mountains, forests and icy wastes.

You control three characters as they try and complete a number of quests cumulating in the destruction of Kordomir and his Orcs. Your characters are Morval the Warrior, Eliador the Elf and a Wizard called Greymarel.

The game also contains an extensive parser which understands complex text

input and also allows you to issue several commands at once. This you should make good use of, if you are to survive and complete your quest.

To add to your problems the game is played in real time which gives you little time to plan your moves, especially when you have three characters to control at once. This problem is confounded by the fact that while you are taking Morval for a country stroll the other characters may be under attack, imprisoned or dead.

Runestone is a state of the art adventure which combines the graphics of a landscaping game with the depth of a text adventure.

STAR RATING  
Red Giant

However this is misleading as I found then the hardest to do. In the boar shoot you have to fire five crossbow bolts at moving targets attached to bulls. The squat thrusts poses an interesting co-ordination problem as it is extremely difficult to establish the rhythm you will need to ensure a good score. This is because each squat thrust requires three taps on the joystick in one direction but only two in the other. By far the hardest event is the arm dips where one mistake will end the event for you with a poor score. This will be disastrous and will end your challenge.

I found the game more difficult to play than other decathlon style games as

there are new techniques to learn and I would imagine that it will take most people some months to beat the computer opponent. Unfortunately you have to do this before you even get a chance to take on Brian Jacks!

The boar shoot is replaced by archery in the Spectrum and BBC versions which is a shame as it is my best event.

**Title:** Spitfire 40  
**Computer:** C64  
**Supplier:** Mirrorsoft  
**Price:** £ 7.95

Spitfire 40 — as you may suppose — is a simulator of the Supermarine Spitfire in the war-torn years of 1940. The plan is for you to rise through the ranks to Group Captain and to obtain the coveted medals of the VC, DSO and DFC.

The first thing that the program does is to enquire whether you want to use a saved or original log. You can save your progress through this game a very useful thing too if you are going to play it for any great length of time. There are three modes of operation for a flight. Practice, combat, and combat practice.

Practice mode lets you learn the controls, handling, and general performance of your craft without the general har-

assment of enemy aeroplanes. Your performance at this can be saved for experience points.

Combat practice is a mode where you find yourself in the midst of a battle and can practice dogfighting without the bother of landing and taking off etc. Your successes in this mode are not recorded. To do that you must fly in proper combat.

Combat mode is the heart of the program. To save any status here you must take off, fly and fight, and land before saving. To start with certain conditions and statuses will be displayed. This gives information such as the enemy's strength and position. Flying the plane itself is similar to any other flight simulator, so I will skip that bit and concentrate on

**Title:** Spy Hunter  
**Computer:** Spectrum 48K  
**Supplier:** Sega  
**Price:** 7.95

This is a race chase type of game where you assume the role of a James Bond like character equipped with a fast deadly car. Its deadly in that it can fire bullets and has the ability to fire ground to air missiles. The car is dropped by a transporter and the game then begins in earnest. The main idea is to destroy you. The baddies cars are easy to spot because they are black of course. Every so often a supply tanker will road past you and the idea is to dock with it for fuel/bullets and sometimes

a few ground to air missiles. The ground to air come in useful because the baddies have a helicopter that they use. Without the missiles things become slightly difficult.

Once you have completed a lap of the track a sign appears telling you that the bridge ahead is not in use, you must then guide your car down a tunnel that is to the left of the bridge. Failure to do so means that the car goes for a swim!

If you manage this then the game changes to a boat chase with all the usual bombs and mines.

This is a very high quality game that I highly recommend.

STAR RATING  
Red Giant

the excellent graphical display.

The graphics are based on two screens — the control panel and the forward view. The forward view is a 3D representation of whatever you should see in front of you. This is quite good apart from the sluggishness of some of the horizon drawing. The second screen is of the instrument panel. This is covered in copious dials and indicators and is much less cluttered than most of these simulators that try to put the external display on the same screen as the instruments.

The combat, which is the best part of the game is ex-

Robin Hoods everywhere firing arrows at you: Unless you have a magic spell on you, it would be best to jump over the arrows, before they hit you, and, of course, kill you.

You are reincarnated four times in all, starting at whatever screen you died at, which is good news if you jumped 10 bottomless pits, 6 arrows, and skillfully avoided the armed guards, only to be hit by a sword dropped from above, by soldiers sitting astride creatures that look more like green Parrots than Griffins.

The graphics are excellent, being colourful and smooth, the scrolling is not as smooth as Castle Quest, a

game to which Wizardore bears a great resemblance (ducking, running and picking up things in a similar environment), but as a whole, it is well implemented. There are treasures along the way which can be collected and used, and some are purely for show.

My only real criticism is that Wizardore, at early levels of the game, is far too difficult. Jumping over the arrows requires precision timing, and only the slightest miscalculation can make you fall into the bottomless pit, thankfully, the game did not get too difficult from there on, so if like me you feel like giving up on the first level, do

what I did and come back to the game a week later, it does wonders.

As a whole Wizardore is a well implemented version of a popular game scenario, it uses the BBC's graphics capabilities well, and is complemented by good (if repetitive) music. There is no option for a joystick and there is a single high score number. The characters fit in reasonably well (although I'm not too sure about those parrots!), and Imagine's choice of keys are comfortable. Wizardore is a well paced game, certainly, timing is far more critical in Wizardore, than many games available and should be action packed for just about anyone.

Recommended, if you like 'Arcade Adventures.'

# 59

**Title:** Theatre Europe  
**Computer:** Commodore 64  
**Supplier:** PSS  
**Price:** £9.95

Theatre Europe simulates the first 30 days of the next war as the forces of Nato and the Warsaw pact battle for control of West Germany. The Warsaw pact will win if they smash the Nato forces by taking West

Germany, Nato by stopping this and therefore halting their advance. As the supreme commander of either side you control an impressive force of conventional forces as well as chemical and nuclear weapons.

Theatre Europe is played in game-turns in which you move your forces (via

joystick controlled cursor) and attack adjacent enemy. Whenever possible you should attack enemy units with at least three of your own.

Each unit has a specific combat or ARM strength which is reduced by combat. When this reaches 0 the unit is lost. Units also need supply (SUP) and AIR cover. These will also be depleted but along with ARM strengths, can be reinforced at the end of most turns.

Each turn you will also be given an opportunity to flex your fire button finger on the games action screens. These are used to simulate one of the battles fought that turn. Using your joystick you must fire and guide missiles to

**Title:** Elite 64  
**Computer:** C64  
**Supplier:** Firebird  
**Price:** £15.00

At last! the program that jealous C64 owners have been looking for. Ever since Elite turned up on the BBC micro about nine months ago every computer owner has been lusting after it.

I'm sure that everybody has heard of the BBC version and knows it to a cer-

tain degree so I will concentrate on the additions to the Commodore 64 implementation. There are three Acorn implementations at present BBC disk, BBC tape, and Electron tape. The disk version is the most complete and the tape versions have certain bits removed in the case of the Electron quite a large amount. The BBC has half the memory of the Commodore 64 and needs to make a lot of disk accesses to make up for it.

The Commodore 64 can accommodate Elite in its entirety, and then some more. So no extra disk use in necessary with the Commodore disk unit that is probably just as well!; The main difference in the controls is that it doesn't use proportionate joysticks and the way the keys are laid out is a bit different. One extra function turns off the planetary lines for extra speed. On speed for a moment most people's worst expectations were not realised, as this version is not as slow as I feared.

The screen display is

similar to the BBC original, there are more colours of course and there is a different sight for each type of gun — ie. military lasers have a different sight to the original pulse lasers.

Music and sound effects abound, different sounds for different lasers, and docking music like in 2001 a Space Odyssey. Trumbles are another problem altogether.

Trumbles are modelled on Tribbles from Star Trek. To the uninitiated a Tribble is a little furry and loveable creature that multiplies like crazy, until they eventually take over your ship.

Trumbles are the same, once you get one in your hold you end up with thousands after they breed, and breed, and breed. You pick up one by buying it! for 5000cr no less. Getting rid of them is harder and Firebird aren't telling anybody. Even ejecting doesn't get rid of them entirely.

As they fill up your hold you cannot carry as much cargo because they take up

so much room. After they fill up the hold they move onto filling up your cabin, and eventually start covering up the screen thus reducing your available view. Ever tried fighting with a trumble annoying you on the screen?

There are no words to express how amazing this game is despite the hype. The Commodore version is a great improvement over the BBC version. Get it now!

NB. Having had a quick peak at the Spectrum version (due out in a few months) I am not so impressed. The Spectrum just cannot handle this type of game. There may be more missions, but the hardware cannot cope. Go get a C64 instead.

destroy enemy tanks and planes. Your performance in assisting this attack will effect all of the other battles one way or other. Therefore if your not a joystick genius you should ignore this phase or you will give yourself a handicap you could well do without.

As well as controlling his land forces a player can command air missions and launch chemical and nuclear strikes. You have only a limited number of planes in your airforce and so should allocate them carefully to the various missions at your disposal. These include reconnaissance to determine the strength of enemy units, counter air to weaken the enemy airforce and interdiction attacks to delay and destroy enemy reinforcements. In addition there is the continuing battle of air superiority which will effect the success of other missions. You can also use your aircraft in assault breaker attacks on enemy units to support your ground troops.

The enemies supply and reinforcements can be affected by a strategic chemical strike which will destroy an important enemy supply city. Nuclear weapons may also be used in this manner or against individual units. Obviously there is a risk of a response from the enemy in using these weapons which is likely to result in the destruction of the world in which case no one would win.

In the top right hand corner of the screen is the defcom display which begins the game set at 5. Every time a warhead is launched the figure is reduced. When this reaches one, the enemy will launch an all out nuclear attack with predictable results.

Your computer opponent will employ a number of strategies depending on the game level you have selected. At level one it will avoid nuclear weapons unless provoked. Level two follows accepted Nato or Warsaw pact strategies and level three may launch an all out attack at any time.

At the end of the game you will be awarded a command rating which indicates your success. My first few attempts resulted in the end of the world and a 0% rating. Twelve hours of continuous play later and I was able to win as either side with a rating of over 80%.

One final gripe is that the choice of colours for the units, a predictable red or blue, means that the game is almost impossible to play on a black and white TV.

Amstrad, Atari and MSX versions will be available soon.

**Title:** Master of the Lamps  
**Computer:** CBM 64  
**Supplier:** Activision  
**Price:** £10.99

Activision threatened the world with a new series of programs which would explode like an expensive fireworks illuminating the dusky sky of the software market. If this is the example then it's going to be more like a damp squib.

There is great similarity between this and Simon, the mimic the tune game much beloved by program contributors of magazine listings.

Colourful it is, exiting it is not. Basically, you must travel through a corridor in space on your magic carpet. At the end of the corridor is the Genie's room which has an array of gongs. Three beats on the gong will summon the Genie who blows smoke rings of pure music. As the smoke disperses a

range of notes is played which you must repeat exactly as heard. If you do not play fast enough, a musical note gradually descends and throws you back along the passageway.

Your lives are unlimited and so is the boredom of having to renegotiate the passages to have more musical smoke blown in your face. I must admit though that the graphic effects of the passages are very well done, it's just a pity that the rest of the game is one long technical colour yawn.

like Scramble there are things on the ground to hit. You are supplied with 100 missiles and as you cross the landscape 3 different types of helicopter attack you. Fast and manoeuvrable solo fighters, bigger gunships and the transporters that drop nasty things like Flack Bombs and Radar Jammers.

The graphics are good but really they're only decoration because the ship only moves in 2D. Never the less they are very smooth and as fast as is necessary. Once the controls have been mastered the game becomes quite

**Title:** Ghostbusters  
**Computer:** Amstrad CPC464  
**Supplier:** Activision  
**Price:** £ 10.99

This is the game of the book of the T-shirt of the pop video of the film. The plot is that the Ghostbusters team has become so successful, they are offering franchises, and you have taken one up. Starting with a bank loan of £10,000, you have to purchase the equipment you think you need to run the franchise successfully. The object is to make sufficient profit during the main sequence to qualify for the short end game in which you tackle the evil god Gozer at his headquarters, the Temple of Zuul.

Equipment selection is made by menu, and can only be done at the start of the game, so choose carefully! You'll discover the optimum of vehicle and equipment by trial and error. For instance, there's a choice of four cars ranging from a clapped out VW which is cheap, but slow and not very spacious, through an old hearse and a station wagon to a fast sports vehicle (the latter actually car-

ries fewer items than the previous two).

Once you've picked your car, fit it out. Here there's a trade-off between the money you've left yourself, the prices of the various items and the load your vehicle can carry: one of the strategy elements in the game. The equipment menus are graphical, and you make your choices by driving a little fork lift truck around the screen and moving the items into position on the car. Choose from PK detectors, ghost

vacuums, Marshmallow Man detectors (look, I know it sounds silly if you haven't seen the film!), ghost bait, ghost traps, image intensifiers, and a portable laser confinement system. (This is very expensive and you won't be able to afford it until you've won a few games and built up your bank balance).

Once equipped, the main game starts. A map of the city, centres on the Temple of Zuul, indicated locations where Slimers are manifesting themselves. At the same time, Roamers are drifting in from the edge of the screen, attracted by the PK energy build-up at the Temple. Plot a course to the trouble spots, if possible touching Roamers to freeze

them. You then get an aerial view of your car as you drive along the streets, and if you bought a ghost vacuum you can suck up the frozen Roamers on the way.

You need two men and an empty trap to catch a Slimer once you get to the scene. Drop the trap in the centre, use the proton lances of your men to manoeuvre the ghost over the trap, and fire it. Success boosts your bank balance, failure gets one of your men slimed. Trips back to base are necessary to empty traps (unless you have the laser system) and replace Slimer victims. Towards the latter stages of the game, you need to drop ghost bait at just the right time to stop the giant Stay-Puft Marshmallow Man from demolishing city blocks.

As more Roamers arrive at Zuul the PK level rises, and everything happens faster until the PK hits 9999. If you haven't made a profit, the game ends here. Otherwise you get the chance to sneak at least two of your men into the Temple for a final confrontation with Gozer.

It's hard to be objective in an appraisal of this version because I've seen the far superior Commodore 64 game. The Ray Parker theme tune, which plays over the title page (complete with displayed lyrics and sing-along bouncing ball!) and throughout the actual game, is not bad, but the speech synthesis doesn't really come off. The hardware just isn't built for it, and it might have been better to drop it (then there might have been room for in memory for the large logo on the title page, which has been omitted).

The graphics flicker a lot, which suggests the programmer didn't bother with the frame flyback sync on the CPC464 which should minimize the problem — I wonder why? It gets a bit hard on the eyes after a while.

To sum up, a strategy/arcade game with a difference, and the bonus of a tie-in with a popular film and pop song, but tries to stretch the 464's capabilities just a shade too far for comfort.

**Title:** Key of Hope  
**Computer:** Spectrum  
**Supplier:** Games Workshop  
**Price:** £7.95

Tower of Despair, which was Games Workshop's previous Quilled adventure, and by all accounts was a goodie. Key of Hope is the sequel and, I suspect will be equally well received by the adventuring community. It's a two part adventure, though to be honest I haven't got very far in the first part as the problems I've faced aren't easily solved. But, they are enticing enough to ensure that I'll be going back to the game to try and get through.

The adventure is very well constructed, and has the wonderfully frustrating habit of dangling things right before your eyes, but just out of reach. I suspect that when I do stumble across the answers I'm looking for, they'll be so obvious I'll kick myself for not guessing them sooner.

The plot is the old 'find the parts of a treasure' chestnut, but the actual design of the game is excellent. The authors have redesigned the character set into a nice medieval script, which suits the mood of the game. The location descriptions are very good, and the addition of graphics, courtesy. I assume, of The Illustrator, has not detracted from this. Obviously, these graphics occupy a fair chunk of memory, but the authors have chosen to stick to a basically text only approach, with just a small number of illustrations for the most important locations and objects, and I think they have just about got the right balance between text and graphics.

My only, minor, criticism of the game is that it suffers a little too much from the 'you are on a grassy plain that stretches as far as the eye can see' syndrome, which makes mapping a bit long-winded. Apart from that, it makes excellent use of the Quill and Illustrator (the first commercial product that I've seen using the Illustrator, by the way), and sets a high standard for other Quilled games to achieve.

C.J.

**Title:** Chuckie Egg 2  
**Computer:** Spectrum 48K  
**Supplier:** AnF  
**Price:** £7.95

The long awaited sequel to the spectrum mega smash Chuckie egg, but is it as good as its predecessor, well yes and no. Yes it is better than Chuckie and no it isn't up to the standard that we now expect from Spectrum games. Anyway here's the game. Henhouse Harry now resides in a chocolate egg factory which contains 120 rooms so its not small. The aim is the game is more or less as before but 2 has much more of an Adventure feel to it. For instance in 2 you have to collect objects on screen that will only become useful on later screens. A nice touch but its a real bind having to retrace your steps if you get stuck. There are pink elephants and a creeping hand after you as well as sail the usual ledges and ropes to negotiate as you attempt to collect the parts of the toy kits (to put inside the eggs of course).

One other feature that makes this an arcade/Adventure is the Adventure style Save game feature that means yhou don't have to do all 120 screens in one go.

# 63

**Title:** Ashkeron  
**Computer:** Spectrum (48)  
**Supplier:** Mirrorsoft  
**Price:** £5.95

'A new and different adventure, featuring the unique Walk-Thru Graphics System', announced the press release accompanying this new adventure game. Well, it is new, I can't deny that, but it's not particularly different from the average run of the mill adventure.

An evil Wizard has stolen the five treasures which will ensure the well-being of the people of Ashkeron, and bless the coming marriage of the Princess Zeraphina. Your task is to take on the role of Stephen the Blacksmith and brave the Wizard's castle in order to return the treasures (although why the Princess' prospective hubby can't go and do it himself remains a mystery).

You'll see from the plot that it's a pretty standard sort of adventure scenario. That wouldn't both me if the game itself were well done, but Ashkeron, though quite competent, never really caught my imagination. The Walk-Thru graphics simply mean that instead of the location pictures flashing up as you move around, they scroll across the screen in order to give the impression that you are actually 'walking thru' the game. So, if you enter 'Go East' as a command, the picture of the new location scrolls onto the screen from right to left. This doesn't add anything to the gameplay though, and the graphics themselves are small and not very detailed, being drawn mostly with small block graphics rather than pixel lines.

There are a few nice ideas in the game, such as a spell which reverses the meaning of your commands, and it was quite fun figuring out how to say the opposite of what I actually wanted to say (such as 'Ignore book' instead of 'Examine book') but the game overall just didn't hold my attention. The screen

display is very cluttered since it doesn't clear old input and descriptions very often, which makes reading the text a bit of a chore. Another oversight is the frequent lack of 'visible exits' which wastes a lot of time while you type in loads of direction commands to see where your way out is.

Ashkeron isn't actually a bad game, just very average — if it were a budget game it would be worth a look, but for six quid I can't recommend it.

**Title:** The Wreck  
**Computer:** All MSX  
**Supplier:** Electric Software  
**Price:** £14.95

When I first saw this game I thought "Not another 3D maze" but my yawns were soon stifled by the ingenuity of the programmer.

The game requires you to negotiate three mazes, but within those mazes you must kill the guardian jellyfish and you can also stun marker fish to help

you to orientate yourself as you move.

The booklet accompanying the program tells a tale of how you are on your uppers having sunk your savings into diving expeditions to find the gold ship the Beaulieu Ann which sank during the mutiny. On meeting an old seaman in a bar, you discover that he was the only survivor of the wreck and that he not only knows its location but also

# 64

**Title:** Minder  
**Computer:** Spectrum  
**Supplier:** Dk'tronics  
**Price:** £7.95

Taking the part of Arthur Daley, you have two weeks, £2000 and various goods with which to deal in order to earn as much money as you can. Starting from Arthur's home you can visit various locations, such as the lock-up, where you keep your stock of goods, Terry's flat, the Winchester club, or a number of dealers, to try and sell your goods.

The buying and selling is the heart of the game, and it's quite impressive the way that the game simulates artificial intelligence when dealers actually make the first approach and try and sell you a motley assortment of items. The language handling of the program is very good and allows you to type in some quite complicated sentences when you're discussing the prices and quantities in a deal. Try not to be too rude though, as some of the dealers can get rough.

The dealers and other characters all have animated faces that move in time to their words, and all the locations are drawn in the top half of the screen display, above the area used for text. Between locations there's an animated car that plays a strangled version of the Minder theme on its horns.

Minder isn't mentally taxing like an adventure, or a fast-paced zap game, but like I said, it's original and fun. So, if you see one falling off the back of a lorry, grab it. **C.J.**

 Red Giant

"R" "E" "V" "I" "E" "W" "S"

has a scribbled grid which will help to decipher the codes revealing the treasure's location.

Back in the maze you discover clues scrawled on the wall which, when deciphered, give the combination of the safe which is also located somewhere on the ship's labyrinthine deck. Inside the safe on the first deck is the first clue for the combination of the second safe, without which the rest of the code cannot be broken. The second safe has a similar clue for the lowest deck where the safe contains the gold.

Ingots are not all that lie inside the final safe because a strange egg is lurking there ready to

hatch, which it does of course. The alien thus born starts to develop and has homicide on its mind. While racing against time to recover as much of the gold as possible, the alien tries to creep up behind you murderously.

Two of the mazes are non-linear and therefore require the use of a mapping card which is supplied with the game. Added to this you only have ten air tanks which are lowered to the entry hatch when your current tank is 60% empty (or 40% full if you're an optimist).

The graphics are excellent and though I originally saw the fact that shooting your harpoon gun

was a fairly hit (and usually) miss affair as a weak point of the game, once you master the technique it becomes relatively easy.

Currently Electric are running a competition related to the game, and later this year, another one will be run which is why my review game was doctored to prevent me from descending beyond the first linear maze. **J.G.**

# 1<sup>st</sup> AN<sup>NU</sup>AL<sup>0</sup> GAMES

In the third part of his action-game writing series, Rory Newman peeks and pokes the computers screen.

# 66

By R P Newman

On computers, to control most things, you use POKE. This magic word means "put in the specified box". For example:

Poke 36879,8 on the Vic 20 will turn the screen and border black because LOCATION 36879 is the screen and border colour box on the Vic and by Poking it, "8" it puts 8 into that box. The No.8 for location 36879 is black and black.

Vic owners type in Program 1 and have some fun.

1 REM SINCLAIR VERSION

10 CLS

20 LET X=0: LET Y=0

30 BORDER 0: PAPER 0

40 LET A\$=INKEY\$

50 IF A\$="A" THEN LET X=X-1

60 IF A\$="Z" THEN LET X=X+1

70 IF A\$="N" THEN LET Y=Y-1

80 IF A\$="M" THEN LET Y=Y+1

90 PRINT AT X,Y;"\*"

100 GO TO 40

READY.

```
10 PRINT CHR$(147):REM CLEAR SCREEN
20 INPUT "LOCATION":X
30 INPUT "CHARACTER":Y
40 PRINT CHR$(147):REM CLEAR SCREEN
50 POKE36879,8
60 POKE X,Y
READY.
```

Use key "Z" to change the screen colour. Use key "M" to change the border colour.

Conversions:  
C16 and Plus 4: use the commands 'Color 1, number' for screen 'Colour 4, number' for the border  
Colour codes are:

1 Black	These are the main colours, but with experimentation, it should be possible to find what the other numbers are.
2 White	
3 Red	
4 Cyan	
5 Purple	
6 Green	
7 Blue	
8 Yellow	

On the 64, use POKE 53280,... for the border and POKE 53281,... for the screen.

On the Spectrum, use the commands Border, number and Paper, number.

The numbers are:

0 Black  
1 Blue  
2 Red  
3 Purple  
4 Green  
5 Cyan  
6 Yellow  
7 White

So, that's colour — very nice. Originally we used POKE so what's PEEK? Well, PEEK means "see what's in the specified box". Therefore if you (on a Vic) type:

? PEEK (36879)

you will get 27, for white screen, cyan background is 27. PEEK and POKE go hand in hand.

Perhaps Vic owners will now understand PEEK (197). 197 is the POKE location for key input, each dif-

ferent key has a different number. It's great!

Possibly a better way of explaining POKE is to use the screen. Type in Program 2.

Use locations:

Vic 7680-8185

Vic + 16K 4096-4601

C64 1024-2023

C16 3072-4071

The characters are between 0 and 255. This character will work on Commodore computers only. Line 50 will need to be changed accordingly.

Line 60 needs explaining. x is the screen location and y is the number of the character code you chose; so really it is "Put character x in box y". This explains it more clearly, I think. The screen is a grid, a set of boxes. Any character can be put in each box. That is poking.

This is the most important part of computing, but on the Spectrum it is different. They do not use PEEK and POKE so much for the screen they use:

PRINT AT location down, location across; "WHATEVER IS TO BE PRINTED"

To check what is in the square this is used:

IF (SCREEN\$ (location down, location across)) = "Whatever character you

want to check" THEN...

As you can see, they are slightly different.

PEEK tells you what is in a certain location, while SCREEN\$ checks to see whether a certain character is at a certain location.

It is clear that the use is unlimited. With screen\$ in a Pac-man game you use:

If at location (Pac-man +1, Pacman) there is the character for a dot, then give a point.

If at location (Pac-man +1, Pacman) there is the character for a ghost, then GO TO the end game routine.

While with PEEK it would be:

If at location Pac-man +1 there is the POKE code for a dot then...

If at location Pac-man +1 there is the POKE code for a ghost then...

So you see, with Commodore machines you poke a number in a square and read a number in a square. With Sinclair Computers, you print a character at a location down, across and see if there is a certain

#### 1 REM SINCLAIR VERSION

10 CLS

20 LET X=0: LET Y=16

30 BORDER 1: PAPER 1

40 PRINT AT X,Y;"\*"

50 LET A=INT(RND\*22): LET B=INT(RND\*32)

60 PRINT AT A,B;"+"

70 LET A\$=INKEY\$

80 IF A\$="Z" THEN LET Y=Y-1: PRINT AT X,Y+1;" "

90 IF A\$="M" THEN LET Y=Y+1: PRINT AT X,Y-1;" "

#### 1 REM COMMODORE VIC VERSION

10 PRINT CHR\$(147):REM CLEAR SCREEN

20 X=7680

30 POKE 36879,8

40 GET A\$

50 IF A\$="A" THEN X=X-22

60 IF A\$="Z" THEN X=X+22

70 IF A\$="N" THEN X=X-1

80 IF A\$="M" THEN X=X+1

90 POKE X,160

100 GOTO 40

READY.

character at that down, across location. Different formats but the same principle.

Well that's the teaching! Before the Games, let's recap.

To move:

GET A\$ or A\$=IN KEY \$  
if A\$="" THEN  
A GOSUB must have a return  
PRINT TAB(x) "PRINTS"  
" x spaces along  
RND is used to generate random numbers  
RND(1)\*100 generates a random number between 0 and 99

(NOTE: leave out the (1) on Sinclair computers).

(RND(1) x 100) + 100 generates a random number between 100 and 100. DON'T FORGET.

INT(RND ETC) rounds the number off, give whole numbers INTEGERS.

Colour commands vary from computer to computer.

POKE location 36879,?

POKE 53280,?

Colour 4,?

Colour 1,?

Border ?

Screen ?

The screen is a grid

Use PEEK and POKE or PRINT AT and SCREEN \$ for putting characters in location and seeing what characters are there.

In Program 3 you can draw pictures using the Keys A-Up, Z-Down, N-Left, M-Right.

Changes that have to be made are: C64 Line 30 to POKE 53280,0:POKE 53281,0 and line 20 to x=1024. C16 line 30 to COLOUR 1,1:COLOUR 4,1 and Line 20 to x=3072. On both computers the "-22" and "+22" in lines 50 and 60 should be replaced by "-40" and "+40" respectively.

For the Spectrum just type in Version 2.

Now you will be able to make patterns. Good for a ten line program, but how does it work? Well...

Line 10 clears the screen  
Line 20 on the Commodore version sets the POKE location while on the Sinclair set the position for the PRINT AT.

Line 30 sets the screen and border colour. Change them and see what looks best.

Line 40 gets the Key input. Lines 50-80 analyse the key and move block in the appropriate way. It is self-explanatory on the Spectrum, but the reason why on the Commodores you have +/-22 (or +/-40) is because that is the width of the screen and 22 locations back on the Vic is one square above. You can also change the key input if you wish to suit your fingers. Line 90 either POKES or PRINTS your square in the appropriate place. Line 100 goes back to move again.

This is fine for a ten line program, but how about constantly changing colour? Just add this line:

95 Z=INT(RND(1)\*255)  
96 POKE 36879,Z

This is for the Vic, but for the C16 and 64 use:

95 A=INT(RND(1)\*15+1)  
:B=INT(RND(1)\*15)  
+1

# 67

```

1 REM COMMODORE VERSION
10 PRINT CHR$(147):REM CLEAR SCREEN
20 X=7691
30 POKE 36879,8:REM BORDER/SCREEN FOR VIC
40 POKE X,42
50 A=INT(RND(1)*506)+7680
60 POKE A,160
70 GET A$
80 IF A$="Z" THEN X=X-1:POKE X+1,32
90 IF A$="M" THEN X=X+1:POKE X-1,32
100 IF PEEK(X+22)=160 THEN GOTO 500
110 D=D+1
120 PRINT
130 GOTO 40
500 PRINT CHR$(147):REM CLEAR SCREEN
510 PRINT "YOU SCORED "D
READY.

```

# 68

and for the 64

```
96 POKE 53290,A:POKE
53281,B
```

for the C16

```
96 COLOUR 4, A: COL-
OUR 4,B
```

and the Spectrum

```
95 A+INT(RND*8)+1:
B=INT(RND*8)+1
96 BORDER A: PAPER B.
```

Now that is done, how about just moving, no trail. Well, on the Vic add to

```
line 50 "POKE x + 22,32"
line 60 "POKE x - 22,32"
line 70 "POKE x + 1,32"
line 80 "POKE x - 1,32".
```

32 is the POKE code for a space.

On the C16 and 64 use the same changes as on the Vic, but now use for lines 50 replace 22 with 40 and line 60 the same.

On the Spectrum, you need to add to:

```
Line 60 "PRINT AT x +
1,Y;" SPACE "
Line 60 "PRINT AT x -
1,Y;" SPACE "
Line 70 "PRINT AT x,Y+1;
" SPACE "
Line 80 "PRINT AT x,Y-1;
" SPACE "
```

Having done this, you now have a number of variations and should be in position to write your own games. How about a game where you have a random location? The random character is only possible at the moment on Commodores, but Spectrum owners with imagination will, I'm sure, think of something.

The Final Program this month is Asteroid Dodge. You use the star at the top of the screen and you must avoid the blocks, which are asteroids. To move use Z and M, but you may change them if you want. Here again there are two versions, one for the Commodore Computers and one for the Spectrum. A score feature is included and, with a bit of patience, you should be scoring over 500 points.

To convert this to 64, the following changes will be needed:

```
Line 20 to x=1044
Line 30 to POKE 3280,0:
POKE 53281,0
Line 50 to A=INT(RND(1)
x1000)+1024
Line 100 to IF PEEK
(x+40)=160 THEN GOTO
500
```

On the C16 change:

```
Line 20 to x=3072
Line 30 to Colour 4,1: Col-
our 1,1
Line 50 to A+ INT(RND(1)
x1000)+3072
Line 100 to IF PEEK
(x+40)=160 THEN GOTO
500.
```

NOTE: You can change the screen and border colours

to suit you and Vic owners can use PEEK(197) in the usual way. How does it work?

Line 10	clears the screen
Line 20	sets the POKE location or the PRINT AT variables
Line 30	sets the screen and border colour
Line 40	POKES or PRINTS your space ship (a star) in the middle of the top line
Line 50	chooses a random POKE location for the asteroids (or random variables for PRINT AT)
Line 60	POKES the asteroid (or PRINTS it)
Line 70	gets a key input
Lines 80 and 90	see if you move. If you do, it deletes the old space ship and repositions you in the appropriate place
Line 100	checks to see if you have hit a piece of trash, an asteroid; if you have, it jumps to 500 (i.e. if the square in front of your space ship has the POKE code of an asteroid (or the graphic of one) it jumps to line 500)
Line 110	increases your score, D, by one
Line 120	PRINTS a line of spaces. This scrolls the screen upwards
Line 130	goes back to 40; if you have crashed, you will now have jumped to line 500 (see line 100)
Line 500	clears the screen
Line 510	PRINTS your score.

That's Asteroid Dodge. I hope it gives you some ideas. Next issue I shall be dealing with UDGs (User Defined Graphics) with which you will be able to use professional looking graphics games, instead of relying on keyboard characters. Until then, good luck with writing your own games and good computer gaming!

Many thanks to D Tuffitt and R Hearn for help with Spectrum and C16 programming.

# Take Control

## The Design is Delta.

Voltmace is the UK's largest computer joystick manufacturer. Last year Voltmace produced more joysticks for more computers than any other British company.

The famous delta shaped joysticks are now available for over twenty different micro computers including the BBC, Acorn Electron, Dragon, Commodore 64, Sinclair QL, Spectrum, Amstrad and Tatung Einstein.

Our success is our design—Super sensitive fingertip control with fast, centre sprung return action, means you always know where you are.

Tough, solid steel shaft, encased in a smooth nylon sleeve, handles even the roughest treatment and ensures hours of easy, fatigue free use.

Make the most of your micro computer with delta superior joysticks.

### For the BBC

- Delta 14b—An analogue joystick with 12 button programmable keypad; full use is made of keypad when connected via delta 14b interface. Colour matches BBC £14.95 △
- Delta 14b interface—An interface to allow full use of the delta 14b £14.85 △
- Delta driver—A cassette based utility program for the delta 14b £5.95 △
- Delta 14b system—As above £35.75 △
- Delta 3b 'single'—A 3 fire button analogue joystick £12.00 △
- Delta 3b 'twin'—Two analogue joysticks on one plug, 3 fire buttons each £19.95 △
- Joystick utility tape—Convert keyboard programs to run with joysticks £5.95 △
- Delta 16b datapad—A 16 button keypad programmed with software supplied £34.95 △

### For the Dragon

- Delta 3d—This analogue joystick comes with the choice of either red or green fire buttons for easy recognition £10.00 △
- Delta 14d and interface—Analogue type joystick with 14 button programmable keypad £29.95 △

C.A.D. 32—Computer aided design on the Dragon with the delta 14d and C.A.D. 32, complete with 14d keypad overlay £4.95 △

### For the Electron

- Delta 3sc—Switch type, 3 fire button joystick, use FBC interface £10.00 △
- Delta 3b 'single' and delta 3b 'twin'—For details see BBC above. Both use Plus 1 interface 'single'—£12.00 △ 'twin'—£19.95 △

### For the Commodore 64

- Delta 3sc—Switch type 3 buttons £10.00 △
- Delta 16c datapad—A 16 button keypad programmed with software supplied £29.95 △

### For MSX micros

- Delta 3sm—Switch type joystick with 3 fire buttons £12.00 △

Please send me the items I have indicated above

Name .....  
Address .....  
Post Code .....

All prices include VAT and P&P (Overseas add £2)  
Callers welcome at the factory—Monday to Friday

I enclose Cheque/PO for £ .....  
Please allow 28 days for delivery.

made payable to  
Voltmace Limited.

# Voltmace Limited

Park Drive, Baldock, Herts. SG7 6EW

### For the QL

- Delta 3sq—Switch type joystick with 3 fire buttons, no interface needed £12.00 △

### For the Amstrad

- Delta 3sa—Switch type joystick with 3 fire buttons, no interface needed £12.00 △
- Delta 3sa splitter—Run two delta 3sa joysticks from the joystick port £4.95 △

### For the Spectrum

- Delta 3s1—Switch type joystick with 3 fire buttons to run on your interface 2 or Kempston interfaces £10.00 △
- Delta 3s2—Switch type, 3 fire buttons, to run with Concom interface £10.00 △
- Concom interface £19.95 △

### For the Einstein

- Delta 3e—A 3 fire button analogue type joystick, no interface required £12.00 △

For EXPRESS delivery telephone us  
on Baldock (0462) 894410 with your  
Access or Barclaycard number

For detailed product information  
please send SAE indicating your  
requirements on the order form.

Telephone (0462) 894410

Andrew Shaw

The object of the game is to guide your boat through the harbour. Full instructions are included in the program.

I have used various machine code routines in 'Crazy Sailing'. The object code for these has been stored in Data statements in lines 30,000 onwards. Be careful when you are entering lines, as one wrong character may cause your system to crash. SAVE "D:CRZYSAIL" or CSAVE the program before attempting to RUN it.

Poke 16,64: Poke 53774,64 has been used to disable the "break" key.

Press 'System Reset' to exit.

```

## Steve Lucas

Many years ago, I set out from Earth on a routine trading mission to Hlor, a small but friendly planet in a far distant galaxy. On my journey, I was attacked by a strange alien spacecraft and was forced to land on a planet inhabited by some weird creatures. My spaceship is damaged and I'd like your help to repair it so that I can return home. You should give me instructions in the form of one or two word sentences such as **get food**.

## Note

All instructions must be given in lower case. The program is written in the lower/upper case mode and you should enter this mode before typing in the program (line 50 locks the program into this mode).

## Words Understood

Here is a list of some of the words I understand.

n,s,e,w,go,in,out,up,down  
get,take,inventory,drop,  
leave,help,examine,score,  
eat,drink,blast,burn,shoot,  
kill,swim,insert,throw,tie,  
climb,rub,wear,mend,repair,fill,use.

## Hints

These should only be read if you are stuck, as the fun of playing comes from finding the solution for yourself.

1. You'll need a flame thrower to get past the triffid!
2. You can only get the coin if you are invisible...try vanishing cream
3. You'll need a rope which is firmly attached to climb the cliff!
4. Fat monsters are supposed to like alien art
5. Try using the jetpack to get back to your ship

I'm not giving any more away!

# the miner

## E. McPherson

This game is about 7K long and will run on a model B, model A (32K) (any operating system) or an Electron.

In this game you are a coal miner working down the pit and your job is to try and collect coal from the bottom of the shaft, and then travel through the maze of shafts to the surface, which is then added to your reserves.

However, your progress of moving coal is hindered by a picket who moves blockades around the maze to try and stop you. Also he chases you and if he catches you your reserves will fall rapidly until you escape. Luckily you have a weapon against him, you can drop obstacles which if he comes across them he will stop at for a certain time, you are allowed five flags on the screen at any one time.

```

**SPECTRUM**

# SPACE STATION ALPHA

Adam Manning

Space Station Alpha is a game set in a time about 700 years from now, depending upon the year you are told by the program. The planet Earth has united in-

to one government and is in the process of setting up a small federation of the surrounding solar systems. To make the naming of new planets more logical, Earth

81▶

has been re-named Sol III, Mars is Sol IV etc.

Recently though, things have been going wrong for this promising start for intergalactic man. People from the Centauri system (colonised way back in 2350) have become troublesome, if not to say aggressive. They wish to be the new power in the W.A.S. (Western Alliance of Systems), of which the Sol system (colonised -100,000) is at the moment the predominant member. They have cut off all their trade and communication with the rest of the W.A.S. and several scout ships from the Procyon system (colonised in 2435) have spotted ship years in orbit around Centauri AIV (formerly known as Darcog) manufacturing large war-ships, similar in design to the familiar Harmis stormer ship of Eridani system (colonised in 2410, one of the co-founders along with the Sol and Centauri systems in 2290).

In readiness for the attack from the Centauri system, the Sol system set up the highly-secret Omega, series of space stations. These ranged from the first and nearest to Sol III, Space Station Alpha made in 2455 to the newest; Space Base Tau set near Sol VIII in 2490.

The attack began, and the Centaurians swept through the outer fringes of the Sol system towards Sol III, destroying Space Station after Space Base.

They completely annihilated Sol VI and its surrounding satellites and several space stations. The only one left is yours, Space Station Alpha, after which this game is named. You must defend Sol III, by warding off their attack. After a certain time, the Centaurians will give up. This is because they are a poor planet, starved by their economic sanctions against the rest of the W.A.S., and have a few of their star stormers.

If you can survive the onslaught for that time, you will have saved Earth. Complete game play instructions are included in the program.

## Hints and Tips

As the space-ships always start off at the top of the screen, and your sight begins at the bottom of the game play area, it is a good idea to press the down key as soon as you start. This will mean that you get to the spaceship faster because if you go off the bottom edge of the screen you re-appear at the top.

## Keys

The keys used to control the sight are:

**Q-up, A-down, I-left, P-right, O-fire laser, space-fire matter disintegrators, S-turn sound on/off**

Matter disintegrators have a choice of blowing up on you. This is because they are under development and is explained fully in the programs instructions.

## Scoring

You will get more points for destroying a ship the nearer it is to your space station and the fiercer it is. The ferocity of the space ship is shown by its colour of class. You will get more points for destroying a white class spaceship than a green class. You also get a bonus for how long you survive.

## Docking

Once the spaceship has got to the outside rim of your space station it will make a bee-line for your docking portal (the same place as you fire from). If they successfully dock, they will capture Space Station Alpha and your go will be over.

## Damage

Every time a Centaurian spacecraft it inflicts a certain amount of damage. This is dependant upon how near it fires to your docking bay (the nearer the more damage). Once Space Station Alpha has taken more than about 95% damage, it will disintegrate and your go will be over.

**Gary Biasillo**

You have to guide your ship through the screen collecting various objects, then escaping through the escape door. This may sound easy, but the planet

you have been transported to 'Nilgypon', has hostile aliens and a special type of radioactive electricity which attacks stationary objects (like the objects you have to collect), which will kill anything which makes contact with them, so you have a 50/50% chance of

collecting the object. You start off in 'HI' gear which can be switched to 'LO' gear by pressing the 'FIRE' button, and the same goes for 'LO' to 'HI' gear.

Use joystick in port #1 or use keys: CTRL=left, 2=right, 1=up, =down, space bar=fire.

# 87

BBC 32K

# SNAKE MAZE

**Carlos Augusto  
Duarte Dondão**

Snake-Maze is a machine code game for the 32K BBC computer or Electron. You are in control of a laser green snake through five different mazes, fighting a red snake and some evil ghosts.

To go to the next maze you must kill the red snake, but the only way to do it is to shoot her from behind. You must avoid collisions with the red snake head and with the red ghosts. You must also avoid

the spin bullets fired by the red snake, they will kill you if they hit you on the head or make you lose a segment if it is in your body.

With a new and more difficult maze the number of ghosts increases to a maximum of five on the fifth screen. Completing the fifth screen will give you a bonus depending on the time taken to do the task, and bring you back to the beginning.

If you eat the strawberry the ghosts turn to green for a while and then you can

shoot them getting extra points. As your snake is in continuous movement you must have a quick finger to decide which direction you want to go. Otherwise she decides for you when she hits a block, but you're always in control.

One last warning, don't shoot yourself or you will have a nice and inglorious death.

As you see the game is in 3 parts and you must carefully type each one of them (special care to program 2) and save them one after another on the same

tape. To play the game just type CHAIN" and that's it.

The game itself runs on an Electron, only the mode 7 statements for instructions and Hi-score table will look a bit strange but this can easily be changed by Electron users.

# A great NEW game from A&F.

## CHUCKIE EGG 2

EXTRA EXTRA EXTRA!!!  
CHUCKIE EGG 2 COMPETITION!

Our intrepid hero "Hen House Harry" of "Chuckie Egg" fame has been called in to help a "Chocolate Egg" manufacturer sort out his automated factory, which has gone hay wire. Harry, using all the skills he acquired working in the Hen House must get the wheels of industry moving.

Not only does Harry have to collect the ingredients to mix the eggs, but he will also have to collect the parts for the toys that go inside the eggs.

As if all these problems were not enough there are a number of other items that Harry will need to find and use to be able to complete the task. Things like ladders, bits of girders, keys and many more.

Chuckie Egg 2 contains 120 screens, plenty of surprises, and it is a true Arcade/Adventure game - you don't just find things, you actually move them and use them.

Great games. Great ideas.

AVAILABLE FROM GOOD COMPUTER STORES  
(R.R.P) £6.90 ALSO AVAILABLE DIRECT FROM A&F
