

PHYSICS 'A' LEVEL REVISION

Copyright 1983

LOADING INSTRUCTIONS:

Place the tape in your cassette recorder, check the tape is fully rewound and type LOAD" " then press PLAY on your recorder and ENTER on your Spectrum. If you have loading problems check that your recorder is correctly connected, any tone control is on maximum treble, the tape is fully rewound and, if necessary, experiment with the recorder's volume control. See Chapter 20 of your Spectrum manual.

INSTRUCTIONS:

After loading the program displays a single page brief resume of the test's purpose and instructions before displaying the first question. To answer just press the number key relevant to the answer which you believe to be correct. The computer will either acknowledge that you are right or inform you that it is incorrect and give the correct answer. Either way, the computer will then proceed with the next question, continuing in this fashion until a zero is entered to terminate the procedure. At this point the number of correct answers will be supplied as a percentage of the number of questions presented together with the option to continue or finish. If Y is entered the questions will continue otherwise the program will end at the entry of N.

We hope this program will assist you with your examination preparation either showing how well you know your subject (a good morale booster) or highlighting your weakest areas to enable you to concentrate your efforts appropriately.
