

Lotto generates 6 random numbers for Wednesday & Saturdays main UK Lottery draw.

I have written this program using the Fuse Spectrum Emulator on the Apple Mac & compiled using the HiSoft Basic Compiler, I have saved it as a Spectrum +3 disk, and will auto start from the +3 Loader Menu.

NOTE:

Pressing any key after the numbers are displayed will generate a new set of numbers. Press the q key to stop Lotto, then press arrow down, otherwise the +3 Loader will run again.

Thats it. Enjoy

HiSoft Basic Compiler is copyright HiSoft (uk) and freely available from World of Spectrum web site
