

INSTRUCTIONS FOR USE OF "YOUR TEAM" (SPECTRUM version)

"Your Team" is a program which will store the results of your favourite football team throughout the season. Details of each match can be entered week by week and saved on a cassette tape as a file of information. "Your Team" will process the information and produce a full catalogue of results, a list of goalscorers in order, a summary of the season's playing record, details of home attendances, and goalscoring averages — all the facts you want to know about your team displayed in their colours. You can keep a separate file on your favourite team, your local team or your school team.

INSTRUCTIONS FOR USE

The program is in four parts. Typing "LOAD" will load and run header and title pages and then the main program will be automatically loaded and run. When asked "Do you have a file?" type "N" on the first time of use and "Y" on each occasion afterwards. When "N" is the response you are given the opportunity to type in certain information in answer to questions on the screen. Press (ENTER) after each answer. Be sure to answer these questions carefully as this information is stored on cassette and will appear on the screen each time that the program is used. The opportunity is then given to choose your team's colour for both the background and foreground (text) to be used on the display. You will finally be asked to input the points which are given for Home and Away wins in your team's league (this is to allow for the difference in Scotland for instance). If when the Test page appears you are unhappy with your selection of colours you may start again by following the screen instructions. The main Menu presents all the options that are available. Press "1" to enter the details of the last match in response to the questions on the screen. Be careful to type accurately as this information will be stored and cannot be changed later. Use numbers for the date, attendance and scores and press (ENTER) after each entry. Note that the program will only accept scores up to 9 goals. Care should be taken when entering the information. Once (ENTER) has been pressed the data cannot be changed without re-loading and starting again. The results of several matches can be entered one after the other by selecting "1" from the Menu each time. It is important to remember to SAVE the file onto cassette each time before ending the program. Pressing (SHIFT/BREAK) will exit and corrupt the program.

COMING SOON

Before the end of the season will be a program that will take a file containing a full season's results and process information into a Season-by-Season record of your team's performance. Watch out for the perfect companion to "Your Team".
