First computer software from Activision

Games cartridge manufacturers Activision have just announced software cartridges for the Atari 400 and 800 home computers.

First titles are River Raid and Kaboom and their introduction marks Activision's entry into the computer software market. Up until now they have been producing plug in games programs for dedicated games playing consoles such as the Atari VCS and Matell Intellivision.

Both these titles retail at £29.95 and can be obtained from all good computer stores.

Continued on page 5

Joystick update and Spectrum amp from AGF

AGF have announced that it is reducing the price of its Programmable Joystick Interface to £26.95. Cheaper components and improved production techniques account for the reduction in price together with the omission of the second player socket. An 'auto-fire' feature has been added to compensate for this. The original Interface Module II

new Spectrum Adventure

Spectrum Safari

CDS Micro Systems
10, Westfield Close, Tickhill,
Doncaster DN11 9LA.

On a hostile planet deep in space
an earth patrol is marooned.
Only one person can save it.

TROOPA TRUCK

**The galaxy's most lovable
battle wagon.**

Narzon Heatseekers from the back. LasaSlamma Tanks in front.
HeliChargas from above.

A friendly mission to Zon has become a desperate fight for survival.

Now, as Troopa Truck trundles and leaps across Zon's surface, only one person in the galaxy can save it.

You.

The ticket to Zon is £5.99 (RRP inc. VAT), and the journey starts at Boots, WH Smith, Rumbelows, or any intergalactic computer games shop.

Your Commodore 64 will love it to bits.

RABBIT SOFTWARE LTD

Brilliant on Spectrum, VIC-20 & CBM-64.

"Bits" he says.
That's not the idea
at all. But send the coupon
for my catalogue anyway.

Lynx disc drives

Owners of the Lynx can now add on up to four 5¼ inch disc drives, each with a capacity of 200K (formatted). Each comes in its own metal case with illuminated on/off switch and disk access light. The operating system, Lynx DOS is fully functional and available now. It adds 19 commands to the existing BASIC and allows all disk functions to be carried out. Connection is easy and made via the plug in disk interface with a simple keyed cable connector.

Computers, 33A Bridge Street,
Cambridge CB2 1UW

War Games from CCS

Latest in the range of war games from CCS is War 70, a Napoleonic war game in the tradition of the great war games that can last for days, and Pacific War, a simulation set in the Second World War on the Battle of Guadalcanal. War games fans will remember that CCS won the 1983 Cambridge Award for their Battle 17 program. They are also hoping for great things with these two new cassettes.

Cases Computer Simulations Ltd, 14 Langton Way, Blackheath, London SE3 7TL

Joystick interface with sound

Rainbow Electronics have just launched a new programmable joystick interface which is dedicated to the Sinclair Spectrum yet accommodates any software, while also offering sound amplification to boost the weak sound output from the Spectrum.

It can be used to convert those games that depend on the keyboard for operation and is universally applicable to any of the 40 keys. Price is £24 plus £1 p&p.

From front page

River Raid, designed by Carol Shaw, is an adventure game in which you are a fighter pilot faced with the task of destroying bridges along a river while the enemy does its best to shoot you down. The further you go, the more difficult it gets. Originally developed for the Atari VCS, the game is now enhanced with striking new graphics and outstanding sound effects.

Kaboom is billed as a whacky fast action reflex game in which you can either be a Mad Bomber or a fast catching Bucketeer, charged with the job of catching his bombs. Again full use is made of the Atari computer's improved graphics.

Activision Software Ltd, Goldins Hill, Loughton, Essex IG10 2RR

From front page

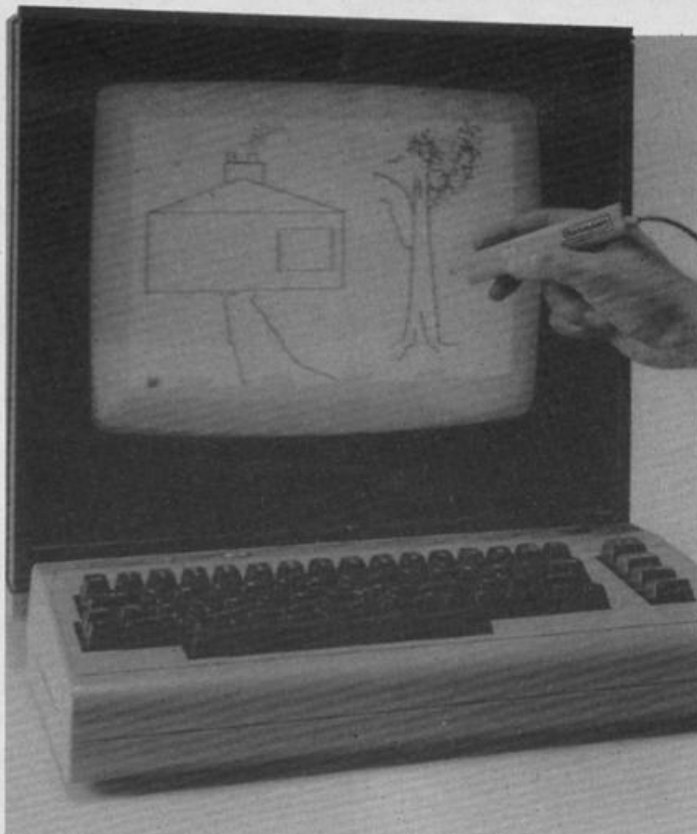

has been similarly modified and will now retail for £13.95 plus £1 p&p.

New from AGF is an amplifier and lead switching unit for the Sinclair Spectrum. Called Amplisound, it connects between the cassette recorder and computer taking its power from the computer itself. A three position switch allows you to LOAD or SAVE without removing any leads while the third position is for amplifying the BLEEP command. Retail price is £24.95 with £1 p&p.

Extender boards are also available price £5.95. They provide clearance between the back of the computer when cased in a keyboard and peripherals. These are available for both Spectrum and ZX81 computers.

AGF Hardware, 26 Van Gogh Place, Bognor Regis, West Sussex PO22 9BY

Drawing the light fantastic?

High-Res Draw program being used with the light pen

Lightpen technology comes to the Commodore 64 with the launch of the lightpen and compatible programmes from Datapen. Already experience has been gained on lightpens for the BBC B, Dragon 32 and VIC-20 computers; now this is applied to the Commodore 64 version.

There are three programmes supplied with each pen both on tape and as a listing which enables the user to incorporate the facilities offered easily into his own programmes. The first program is simply an introduction, highlighting all the features of the device.

The second, called colour draw, allows the user to produce a drawing by transferring the colour graphics characters from a menu to the desired position on the screen.

The third program, called Hi-Res Draw enables the user to produce a drawing down to 200 by 320 pixel resolution directly onto the TV screen. A Sprite creator and Editor will be available shortly.

The Datapen Lightpen for the Commodore 64 costs £25 including p&p.

Datapen Microtechnology Ltd, Kingsclere Road, Overton, Hampshire RG25 3JB

Opalsoft Alphabet

Just out from Opalsoft is Alphabet, a game designed by David Millidge. Designed as a spelling aid for young children, Alphabet, costs £6.95 and can be obtained from many good computer stores, or by post direct from the company. It is available for use with the BBC B computer only.

Opalsoft, 112 Arterial Road, Eastwood, Leigh on Sea, Essex SS9 4DG

You could be on our pages

We welcome programs, articles and tips from our readers.

PROGRAMS must always be sent on cassette. Listings are helpful, but not necessary. Check carefully that they are bug-free. Include details of what your program does, how it works, variables you have used and hints on conversion.

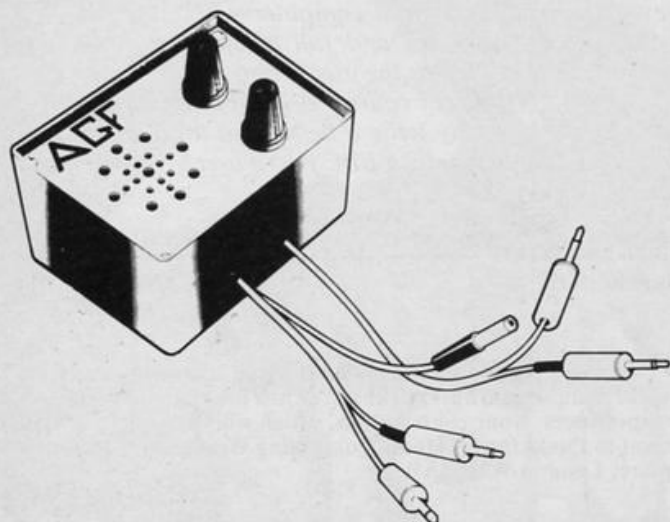

ARTICLES on using home computers should be no longer than 2,000 words. Don't worry about your writing ability — just try to keep to the style in HCW. Articles most likely to be published will help our readers made better use of their micros by giving useful ideas, possibly with programming examples. We will convert any sketched illustrations into finished artwork.

TIPS are short articles, and brief programming routines which we can put together with others. Your hints can aid other computer users.

Competitive rates are paid.

Keep a copy of your submissions and include an SAE if you want them returned. Label everything clearly and give a daytime and home phone number if you can.

Paul Liptrot, Home Computing Weekly, No.1 Golden Square, London W1R 3AB

The AGF Amplisound for the Sinclair Spectrum

Low cost printer and typewriter from Brother

Two new products just launched are the Brother EP44 Electronic typewriter and the HP-5 printer.

The EP44 runs off four 1.5 volt batteries, weighs less than 5lbs and offers all the facilities of a full typewriter as well as 15 character LCD display and full RS232C serial interface so it can be hooked up into most computers.

The 24 by 18 dot matrix printer gives letter quality print with full ascenders and descenders and can print either onto thermal paper or with a heat transfer cassette ribbon onto smooth finish plain paper. As well as the standard 44 character keyboard, a second shift key allows access to an additional set of foreign language characters and accents.

Simple word processing is possible with a standard letter being entered into the 4K memory and stop codes halting printing to allow individual items such as names and addresses to be entered.

Other functions include a printing calculator — four arithmetic functions are included plus percent and the results can be displayed on the LCD display alone if preferred.

As a computer printer the EP44 has the RS232C interface which allows easy connection to any model with a similar output. Print speed is 16 characters per second and continuous roll paper can be used.

With hardware connection or via an acoustic coupler, the EP44 can be used as a full function computer terminal. Baud rate is variable from 75 to 1200 and bit length can be either 7 or 8. And the price? £220.

At £179.95, the HP-5 printer brings good quality hard copy within the reach of many computer users. Column width is a full 80 characters with graphics capacity and the 9 by 9 dot matrix printer will use either thermal paper or plain paper with a heat transfer ribbon. Print speed is 30 characters per second. The full USA ASCII character set is available plus 63 block graphics and 17 international characters and symbols, and the HR5 can be supplied with either RS232C serial or Centronics parallel interface.

Brother Office Equipment Division, Shepley St, Guide Bridge, Audenshaw, Manchester M34 5JD

Integer BASIC compilers from Oxford

Oxford Computer Systems has developed a set of integer basic compilers that allow you to convert BASIC text files into machine code. This allows speed improvements of between 100 and 1,000 times those normally achieved and has been developed for the Commodore 64, 700/B-128 and the 3000/4000/8000 business computer range.

The package consists of two compilers — a resident compiler for experimentation and a disk to disk compiler. Unfortunately new programmes have to be drafted on the Commodore 8000 business machine before being cross compiled for the CBM 64 or 700/B-128, although it does mean that business programmes developed for the 8000 can now be used on the other machines.

Oxford Computer Systems, Hensington Road, Woodstock, Oxford OX7 1JR

Crazy about their status symbols...

About two years ago I got hooked on computers through a computer club at my school. I rushed into buying a TI-99/4A, which wasn't for me. I'm not saying it's rubbish — some of the cartridge software can't be matched and the speech synthesiser is brilliant — but I felt its BASIC was too limited and slow.

When I got my TI there were only four, maybe five, people in my form with computers. Since Christmas I estimate that more than half now have them. But instead of learning on them, all they do is play games such as Jet Pack and Horace Goes Ski-ing.

I think it's a waste of time for parents to fork out over £100 for a computer to play games on when you can buy an Atari games player for less than £80.

To most children the computer is a status symbol. All you hear is "...my computer has more memory than yours", "...my computer has better graphics than yours" and so on. One boy I know makes fun of the memory of another boy's ZX81. He has a VIC-20. But if you compare it with, say, the Commodore 64, who has the skimpy memory then?

Everybody is going computer crazy.

I've recently been bought a BBC micro and I've discovered the benefits of its superb BASIC and graphics. I must admit that at first I only played games on it. But now I've stopped playing games and have nearly finished reading the advanced user guide. Other kids are still playing games.

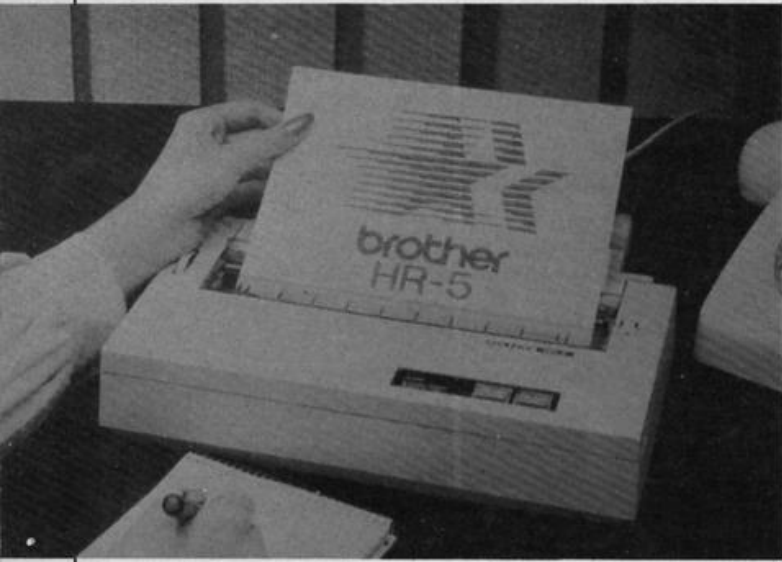

Children, including me, talk non-stop about computers. My mum sometimes gets worried about me because since I got my computer I very rarely go outside. I just sit in my room tinkering on my computer for at least five hours a day.

What really gets me is that some people think that if they get a really advanced computer with, say, 128K of RAM, proper keyboard and full colour high-resolution graphics, they think that the user is also great.

That's not true, of course. A good programmer on a ZX81 could probably write a better and more interesting game than, for example, a BBC micro user given the same time and effort.

Julian Shawcross
Manchester

Originals, but how do they rate?

You won't find any arcade clones here. All have that novel touch — read how they performed for our reviewers

Chuckman 48K Spectrum £5

CCI, Units 2, 3 and 4, Shire Hill Industrial Estate, Saffron Walden, Essex CB11 3AQ

No, this is not another version of the ghost gobbling arcader, but an ingenious and very professional original game.

Some nasty soul has hidden time bombs within a massive maze which is 60 times screen size. These bombs have burning fuses which are much too short for comfort. Our hero — yes, you play him again — must rush around trying to defuse the explosives before the big bang. If that isn't enough, between you and the bombs stand the dreaded

booties, fearsome footwear Chuckman, who taps his foot impatiently while you think, can dig potholes for the boots to fall into. Energy can be replenished by paying a visit to one of the delightful little eateries scattered about. From time to time the computer decides to create an earthquake, which damages paths, often forcing you to change route.

The maze is very well programmed, and easy to get lost in. But for me the most entertaining section is the superb routine at the end of each game. Full screen size letters drift across with messages such as "you can do better".

Pengwyn 32K BBC £6.95

Postern, P.O. Box 2, Andoversford, Cheltenham GL54 5SW

I quite enjoy strategy games such as noughts-and-crosses and Othello. I also really enjoy fast-moving arcade games. I was therefore delighted to discover that Pengwyn has magically captured the essential features of both and put them into one.

Pengwyn, the cute little polar inhabitant, has been given the job of lining up three special flashing ice cubes side by side. He can move the cubes by giving them a sharp kick and can clear a path for them by either moving or melting other blocks that can get in the way. Seems simple enough doesn't it? The only trouble is

that "smiley" monsters keep emerging from random ice blocks and coming to attack him. Pengwyn's only escape is to crush the monsters by kicking blocks at them (splat!)

A super game with good graphics. My only criticisms are that I found the keyboard controls too widely spaced for easy use and that the random element allows monsters to jump out immediately adjacent to Pengwyn — giving no chance of escape.

Danger Ranger Dragon 32 £8

Microdeal, 41 Truro Rd, St Austell, Cornwall PL25 5JE

Here is an unusual game which still retains the flavour of the arcades. It's a fast moving machine code presentation where the object is to collect keys and treasures.

The animation is superb with an initial choice of different coloured screens: black, buff or green background. This can affect the quality of the drawings where — in the buff version, for example — the score was decidedly blurred. I found green best, a compromise between colour choice and clarity.

You guide a man down a series of shelves picking up keys while

avoiding bats and laser firing urns. Why urns, I ask? They could equally have been robots! If you succeed then you proceed to the second screen where you negotiate acid coming from top and bottom. There are four demons which can be shot and treasure to collect.

This was a very addictive game initially but with only two screens it proved limiting. As you got better more hazards were added but the incentive to go on was lacking. These days it's not enough to see a mounting score — one has to be visually rewarded.

PI-Eyed 48K Spectrum £6

Automata, 27 Highland Rd, Portsmouth, Hants PO4 9DA

If lavatorial humour and boozing are for you, then you may enjoy this. The PI Man, a huge-discovered dodging cars along a busy road à la Frogger. Steer him to avoid the cars and into one of the many buildings, and your senses are assaulted by either an excruciating 'joke' or the inside of a pub, where obstacles like people, pool tables, dogs, crisp packets and "certain substances" must be negotiated. To escape and return to the street you must consume all the beer on the bar, avoiding the obstacles.

The scoring system is strange.

You start with huge quantities of points which are lost as PI Man is knocked down, obstacles hit or beer drunk. When you run out of points the game stops. However, each pint the PI Man sinks is totted up to give the final score. So avoid cars and obstacles and sink as many pints as possible to amass millions.

The graphics are certainly not up to the highest standard achieved on the Spectrum, but are acceptable, though controlling the PI Man without a joystick is very tricky. The humour is not to my liking; I got over the excitement of dog *? years ago, but then I am 13 next birthday(!) All this game needs to be complete is a low score hall of fame!

Counter Attack 32K BBC £6.50

OIC, 15 Burghead Cl, College Town, Camberley GU15 4XL

Amid arcade and adventure games, there remains a nebulous area of computer entertainment like noughts-and-crosses and Othello — the strategy games. Inventing a new game in this category must be the hardest task given to anyone; Counter Attack is a very good try.

The game involves a seven by seven vertical grid, into which the players may place their counters. The object is to produce a row of four counters of your own colour (horizontally, vertically or diagonally). This would seem pretty trivial, and far below the level of "serious games players",

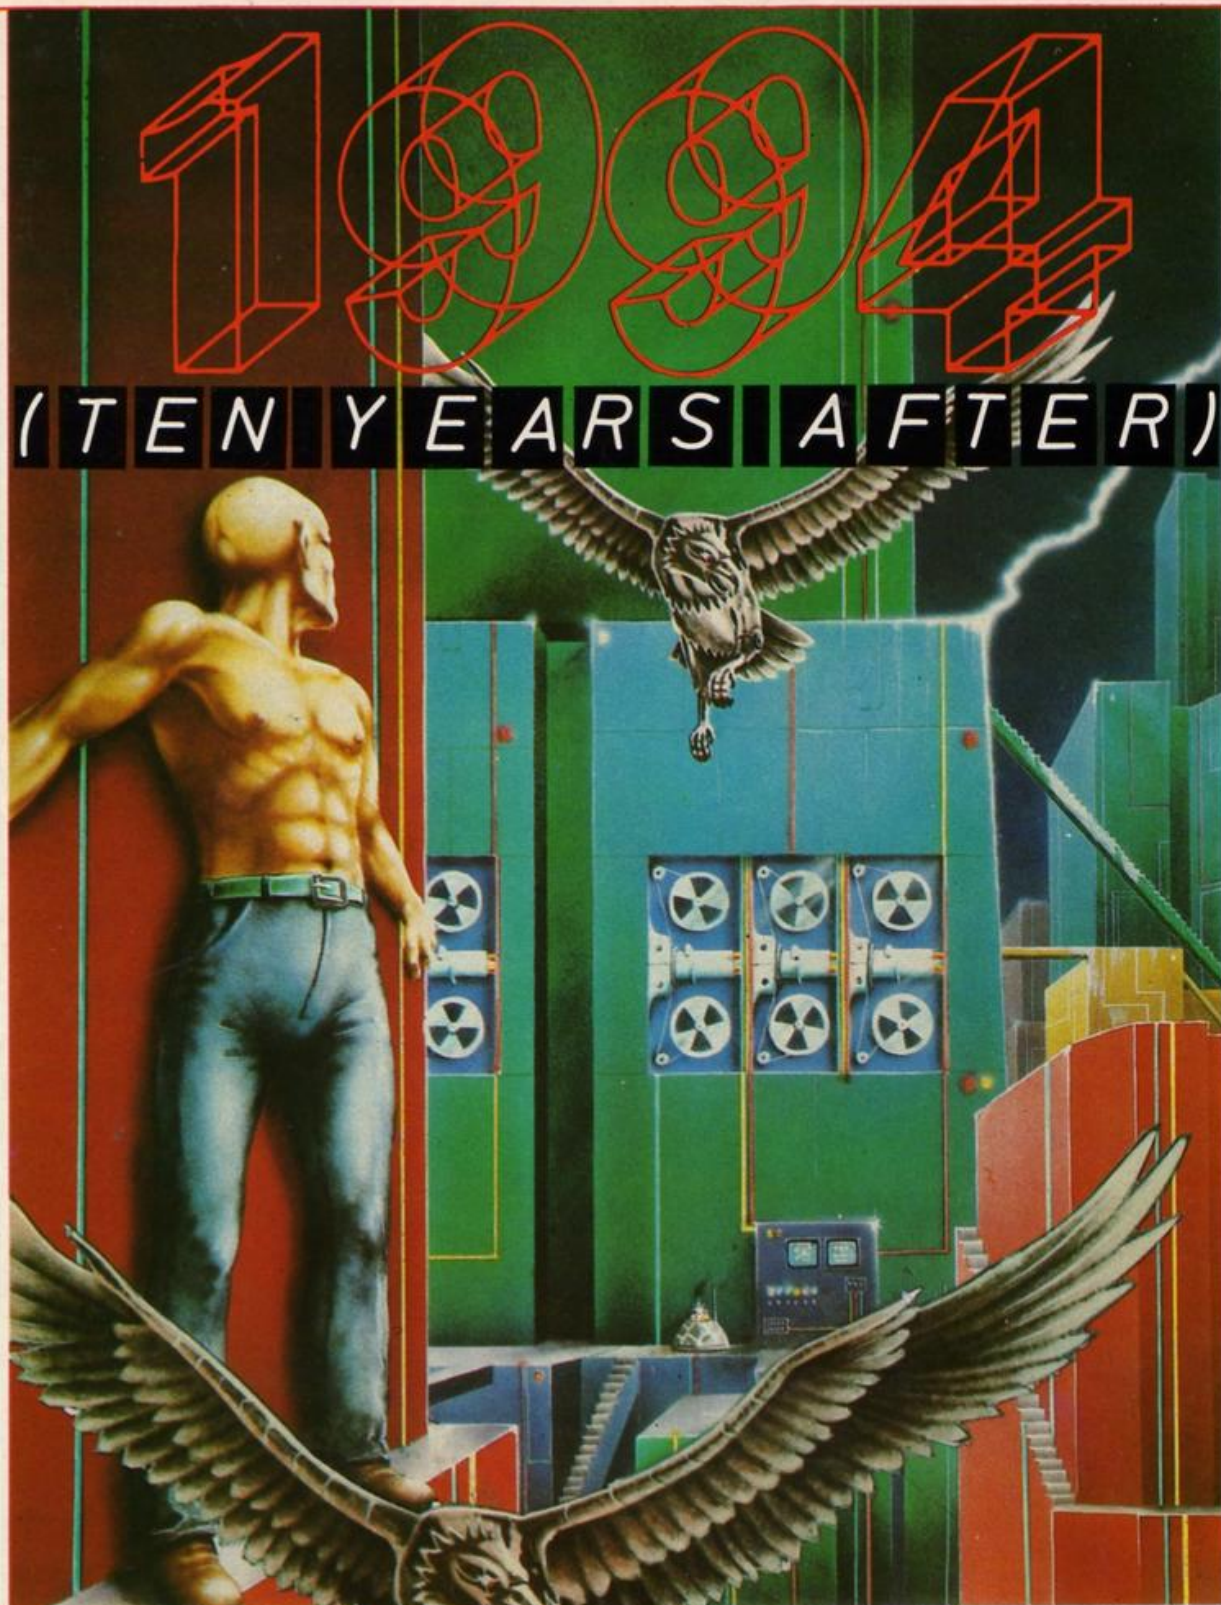

were it not for the opportunity for each player of shifting a whole row or column of counters by one square, up, down, left or right. So the playing area takes on an almost spherical dimension, with players having to watch possibly important pattern changes.

As a computer game the advantage lies in the fact that tedious counter manipulations are carried out automatically, and it is in this way similar to computerised Orthello. As an adult I found the feel of the game rather slow, but I imagine that it will be popular with younger children. A good but not a great game. Needs O.S. 1.2.

The contents of the BASIC ROM in the Commodore 64 can be copied into RAM and then altered as you wish — in just the same way as the character ROM can be copied and then certain characters redefined.

In fact, the copying of BASIC is even easier because there is no need to switch off the interrupt routines. This article will use this technique to enable Commodore 64 users to redefine any error message or BASIC keyword — and in doing so gain a greater understanding of how the computer works.

Program 1 shows how this can be done. The loop in lines 10 to 30 copies the ROM into RAM, one byte at a time. Line 40 switches out the BASIC ROM, so that the RAM at the same locations is used instead. If you were to enter POKE 1,54 without copying the ROM, the computer would just do a warm start (same as pressing the RUN/STOP and RESTORE keys), leaving the BASIC ROM as it is.

Note that we are using RAM which shares the same memory locations as the BASIC ROM and is normally not used. This leaves the normal 38K free for BASIC programs.

The second part of Program 1 demonstrates how the BASIC vocabulary can be altered. The error messages and keywords are stored in ROM as blocks of ASCII code. Now that the BASIC language is in RAM, it is possible to POKE new values, representing characters, into the message tables to define alternative error messages and keywords.

Line 50 declares the memory location of the first character in SYNTAX. Line 60 is the string which is to replace SYNTAX. The loop in lines 70 to 90 takes each character in turn and POKES the ASCII code of each character into the message table.

While entering line 60, hold down the SHIFT key while pressing the last character to be printed. The program will take about 40 seconds to RUN, almost all the time being taken by the first loop. After running the program, enter something which would normally generate a SYNTAX ERROR (not difficult to do!) and see what happens. By changing the string in line 60 you can invent your own alternative to the dreaded SYNTAX ERROR.

The last character of each message in ROM is indicated by being a shifted character. Should you forget to shift this character, the next message in the table will be printed as well. Strings of more than six characters may be used (whole sentences may be entered if required), but the next message

Write your own BASIC ...almost

It's easy to tinker with the BASIC in the Commodore 64 — and gain more knowledge of the computer at the same time. S. A. Sassoon explains how to use his two short routines

Program 1 — copies the BASIC ROM into RAM

```

9 REM **** COPY BASIC ROM INTO RAM ****
10 FOR BYTE=40960 TO 49151
20 POKE BYTE,PEEK(BYTE)
30 NEXT BYTE
40 POKE 1,54 :REM SWITCH OUT BASIC ROM
47 :
48 :
49 REM **** REDEFINE SYNTAX ERROR *****
50 LOC=41525
60 MESSAGE$="SILL I"
70 FOR I=0 TO LEN(MESSAGE$)-1
80 POKE I+LOC,ASC(MID$(MESSAGE$,I+1,1))
90 NEXT

```

Program 2 — lists the computer's BASIC vocabulary alongside the memory locations

```

1 REM ** LIST MESSAGES IN BASIC ROM **
2 REM ** WITH THEIR MEMORY LOCATIONS **
3 :
10 PRINT CHR$(14):REM LOWER CASE
20 BEGIN=41118 :FINISH=41767 :GOSUB 100
30 BEGIN=41829 :FINISH=41865 :GOSUB 100
40 BEGIN=44284 :FINISH=44316 :GOSUB 100
50 END
98 :
99 :
100 PRINT:PRINT BEGIN:
110 FOR BYTE=BEGIN TO FINISH
120 PRINT CHR$(PEEK(BYTE));
140 IF PEEK(BYTE)>128 OR PEEK(BYTE)=0 THEN PRINT:PRINT BYTE+1;
150 IF PEEK(BYTE)=13 THEN PRINT BYTE+1;
160 NEXT BYTE
170 RETURN

```

in the table will be corrupted. In the case of SYNTAX error, the RETURN WITHOUT GOSUB error message will be affected.

Program 2 will list the computers' vocabulary in the BASIC ROM alongside their memory locations.

The messages are stored in three blocks within the ROM. The first of these, which is by far the largest, contains all the BASIC keywords and error messages — including a few file errors not mentioned in the manuals. The second block contains general messages such as "READY.", and the third holds the two INPUT error messages. By altering these you can avoid the rather disconcerting "?REDO FROM START" and "?EXTRA IGNORED" messages from appearing while your programs are running.

These messages are terminated by a carriage return (ASCII value 13) rather than a shifted character. Also they must not be replaced with a string of greater length.

Lines 20 to 30 of program 2 give the memory locations of the three blocks. Each location is passed to the subroutine at line 100. This subroutine PEEKs each location in turn and prints the value as a character. If the character has shifted (has an ASCII value of more than 128) or is a null character (ASCII of 0) or is a RETURN character (ASCII value 13) then the next location is printed on a new line.

While entering Program 2 don't forget the semi-colons at the end of lines 100, 120, 140 and 150.

By noting the memory location of any message and replacing the value of LOC in line 50 of Program 1, any message can be redefined. Any location that is listed by the program, but is not followed by characters, must not be altered.

Commodore 64 users may wish to extend those ideas further to generate error-trapping routines — a feature which Commodore V2 BASIC lacks.

These programs show only the beginnings of what can be done by altering the BASIC language. However, it is not only the 64's vocabulary that can be changed. Using machine code routines it is possible to adapt the way that BASIC works — to add new commands or extend those already available. For those who are really adventurous, the Kernal operating system can be copied and altered in just the same way.

LLAMASOFT NEWS

NEW for the 8K Expanded VIC:

HELL GATE

A very fast-paced Arcade game featuring simultaneous control of 4 high-speed laser cannon. Unique game action is easy to learn yet difficult to master. Features include 20 levels to challenge you; automatic Smart bombs; seven-place High Score table with score signature memory feature and full Attract mode. A superb Jeff Minter design presented immaculately on a 25 x 30 screen.

£6.00

COMMODORE 64: After finishing HELL GATE Jeff took a couple of days to pop the code onto the '64. Whilst this is no Revenge or Hover Bover, we are offering HELL GATE 64 at the bargain price of £5.00... an interesting diversion to occupy a little time while you wait for Jeff's next '64 epic, which we can now reveal will be called

SHEEP IN SPACE — for which Jeff promises the usual great graphics and sound — and also a totally new control concept... so prepare to feel extremely sheepish in a few month's time.

Until then — to all our followers

A) HAPPY BLASTING/MOWING/SPITTING ETC.

B) DON'T SHOOT THOSE GOATS!!!

AWESOME GAMES SOFTWARE

This program allows you to define characters and sprites very easily on a large grid. It will run with BASIC I or BASIC G on the Sord M5.

When this program is run you will see a 8×8 grid on which one of the dots is flashing. This flashing dot is your current position and you can move this anywhere on the grid by pressing the cursor keys.

To create a dot at that position press the space key and to erase a dot, press del (found at the top right hand corner of the keyboard).

When you are satisfied with the character press 'e', then you will see the numbers necessary to create that character. At this point you can press 1 to edit the character you have just made, 2 to define another character or press 3 to quit the program altogether.

When you are defining a character, you can rotate the character by pressing 'r', upturn the character you're creating by pressing 'u', mirror the character by pressing 'm', or clear the grid by pressing 'c'.

Improve your characters the easy way

Type in Shingo Sugiura's character generator program for the Sord M5 and make your own characters and sprites

How it works

- 10-20 REMs
- 30 define DIM
- 40 select GII graphic mode
- 50 initialise DIM
- 60-70 set up the screen
- 80-90 print the grid
- 100 initialise X and Y coordinates for the cursor
- 110 scan the keyboard
- 120 indicate current position
- 130 update grid
- 140-230 see what keys pressed and take appropriate action
- 240 if key pressed isn't 'e' go back to beginning
- 250-290 work out the numbers for the character
- 300-320 print the numbers for the character
- 330-340 print the options and wait for a response
- 350-360 clear the grid
- 370-420 rotate character
- 430-480 mirror the image
- 490-540 upturn the character

Notes on typing in: In lines 40 and 60 obtain the inverse character by pressing SHIFT + CTRL and the appropriate character. To obtain the down arrow in line 330 press SHIFT + CTRL + ? simultaneously.

Unlock Your Imagination

SCOPE

Computer Graphics Language

- ★ A VERY POWERFUL, TRUE MULTITASK LANGUAGE
- ★ AS FAST AS MACHINE CODE
- ★ SIMPLER THAN BASIC

Write Machine Code in a fraction of the time currently required

SCOPE is available from most good quality dealers and selected branches of

WHSMITH

For details of how to get your games published commercially contact ISP Marketing

TECHNICAL DETAILS

SCOPE is a fully structured multitask language specifically for writing *graphics, animation and sound*. Being fully compatible with BASIC it is ideal for writing both arcade and adventure style games. Additionally, with SCOPE present in high memory it can be used as an assembler with SCOPE words as plain language mnemonics. Therefore no knowledge of machine code is required. The language is extremely easy to comprehend and is very powerful indeed providing many features not available from BASIC.

SCOPE HAS TO BE USED TO BE BELIEVED

COMPETITION

Are you taking 'O'-levels soon? Do you want to revise for GCE and other exams?

Whether you're a pupil, parent or teacher, this week's competition is for you. There's 70 prize packages of educational software to be won from Scisoft.

The programs run on the 48K Spectrum, ZX81, Dragon and BBC model B.

Scisoft, specialists in educational software, thoroughly tests its programs and many schools use them.

All of its growing range is written by teachers and is on sale in the shops, including larger branches of W. H. Smith.

Our 70 prize packages, each of two tapes, are worth about £15 each — total prize value of £1,050.

The prizes are for three age groups: 5-8, 9-13 and over 13. Please make sure you note your preferred age group on the coupon.

As with all educational software, it is available to check with the exam syllabus that all parts of the program/s are relevant.

Some examination boards may not require knowledge of all the contents of the packages.

The prizes

Each of our 70 winners will receive two titles drawn from Scisoft's range of programs. They are:

Jungle Maths	Astromaths
Wizard Box	Star Reader A
Star Reader B	French
Middle School Maths — part I	
Middle School Maths — part II	
Maths part I	Maths part II
Physics	Chemistry
Biology	Computer Studies
Teacher's Mark Book	

Wherever possible, the problems in the software contains randomised data so that they can be used time and time again with increasing benefit, says Scisoft.

Most also contain sets of multiple

choice questions typical of those found in examination papers.

Each has a book of revision notes and a program of hints on how to revise at home.

The programs are written to be compatible with most 'O'-level boards and are also useful for the most able CSE pupil.

Note: not all programs run on all the named computers, so Scisoft's

choice of prizes may not match the marked age group, although every effort will be made to match requests.

How to enter

All you have to do is study our word-square to find the titles of Scisoft's programs. All of them, and more, are in the list under the section headed The Prizes.

Mark the titles you find by ringing

Exams coming up? Win programs to help from Scisoft

**Your computer can help you
get through those
examinations. Try our
wordsquare competition and
you could win a share of
£1,000-worth of educational
software of Scisoft**

them with a ballpoint pen or marking them with a semi-opaque felt-tip pen.

Fill in the coupon clearly — if you are a winner it will be used as a label — and send the wordsquare with coupon attached to us. You must mark on the back of the envelope the number of software titles you found in the wordsquare.

Please ensure that the coupon, wordsquare and envelope are correctly filled in. Entries which are incomplete cannot be considered.

You may enter as many times as you wish but each entry must be on the official coupon and wordsquare — not copies — and be sealed in a separate envelope.

Do not enclose anything else.

Post your entry to Scisoft Competition, Home Computing Weekly, No. 1 Golden Square, London W1R 3AB.

Closing date is first post on Friday March 2.

The winners will be the first 70 correct entries opened at random after that date, regardless of computer or prizes chosen.

The prizes will arrive from Scisoft within 28 days of the publications of the issue containing the names of the winners and the solution.

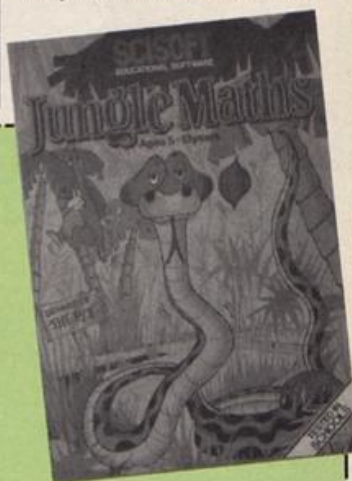

The rules

The first 70 correct entries opened after the closing date, Friday March 2, 1984, will win the prizes. They will be selected at random, regardless of computer owned or age group selected.

Entries which do not follow the guidance in the How to Enter section cannot be considered.

Entries will not be accepted from employees of Argus Specialist Publications, Scisoft and Alabaster Passmore & Sons. This restriction also applies to employees' families and agents of the companies.

The editor's decision is final and no correspondence will be entered into.

Kongo Kong £6.95

Mogul, 90 Regent St, London
W1R 5PT

Yet another version of Donkey Kong for the CBM-64, but I found this one nicely fills a gap in the "Kong market". The game has a slightly unusual screen layout and is quite easy to play on level 1 but rather hard on level 9.

Comparing it with other versions, Anirot's is far superior but requires quite a lot of skill and practice and Interceptor's is inferior and harder to control.

The first screen comprises of getting past barrels and working your way to the top. Screen two is a set of conveyor belts on which you must travel. The third screen is a complex set of gaps in the

floor through which you must jump and moving girders to hold onto. In the final screen you must collect the supports holding up the platforms. On doing this there's a nice display of collapsing platforms. You now go back to the start but the speed is faster.

Quite a few inaccurate things happen, such as barrels moving up ladders or over mid-air. These can be quite annoying as there is neither a pattern nor rules in play that the computer sticks to.

A quite good version, but overpriced compared with Anirot's version. **K.I.**

Revenge of the Mutant Camels £7.50

Llamasoft, 49 Mount Pleasant,
Tadley, Hants

Beware, ZZaxians! Those camels are back on our side now, and ready to take everything you care to throw at them!

This game is very well presented, with a video-type case containing the cassette and a little instruction leaflet. One of the best things about it is that it loads fast — no more 15-minute waits before you can play. There's an experimental "Turbo" format recording on side one, and a normal version on side two in case your equipment won't accept this (mine did).

There are 42 different waves of nasties for your mutant camel to spit at, jump over or duck under, some of them extremely odd. Telephone kiosks, walking sticks, flying saucers — you name it and it's probably in there somewhere. You can work your way through the waves in order, or opt to have them selected randomly, when only the first 32 are available. You have five camels per game, each of which can survive quite a lot of hits before collapsing with legs in the air.

An extremely entertaining game, which will really challenge arcade aces as well as giving the rest a lot of fun. **M.N.**

Hunter £7.95

Terminal, 28 Church La, Prest-
wich, Manchester M25 5AJ

This game has its origins in Pacman but it's sufficiently different to be original. It is also reminiscent of the motor cycle race in Tron.

You are chased by six enemy planes around a maze of 'corridors'. You can fire at, and destroy, an enemy plane when it's in the same corridor. However your shots go straight and the enemy plane doesn't hang around.

While you are moving around trying to destroy the planes they are inclined to ambush you. But at least you have five lives.

It's easy to clear the first screen of its six enemy planes. On each succeeding screen, however, the enemy move faster and by about the sixth you're a nervous wreck. At the start you type your name in and the screen displays the top three scores.

I enjoyed this game and kept coming back for more. It is addictive because it becomes more difficult slowly, so you think next time you'll be able to go a little bit further. **L.C.**

Five more for your CBM 64

As proof of the computer's popularity, software houses have been beaver away with their Commodore 64s. Here's what our reviewers think of some of the latest

Stellar Dodger £7.95

Terminal, 28 Church La, Prest-
wich, Manchester M25 5AJ

This game involves piloting a shuttle vehicle between a mothership and supply dumps. The mothership moves slowly across the top of the screen and the supplies, on red and yellow platforms, are at the bottom of the screen. In going between the two you have to pass through an asteroid belt.

The screen displays current score, high-score, trip number and fuel gauge — a vertical bar down the right of the screen. You only get topped up when you complete a round trip.

If you don't want to avoid the asteroids you can blast them, but there are rather a lot. While

you're positioning yourself to blast one you're likely to be sideswiped by another.

I was not very impressed by this game. The instructions were rather vague. The card said it was self demonstrating. Having loaded the program I sat for quite a time waiting for it to self demonstrate, but it never did. I eventually decided that you had to select the keyboard option and then do nothing for a demonstration.

The graphics were relatively crude. When the shuttle got hit or crashed several parts of the display started to flash in multicolour unison. Not a game I feel like coming back to. **L.C.**

Arcadia 64 £5.50

Imagine, 5 Sir Thomas St, Liver-
pool L1 6BW

Having seen this game advertised for just about every machine except the CBM-64, I often wondered if the opportunity to master it would come my way.

Arcadia consists of you, a galaxian-style laser base and various ships coming at you in fleets. The object is, as usual, to blast anything that moves. If you do not manage to get everything when directly above you then you get killed by missiles from them. This makes the game tedious and impossible at times.

The game uses 16 sprites (or at least it seems to). You may remember CBM claims you may have up to 256. The fault is that

only eight may be displayed each time the screen is scanned. The result is a constantly annoying flicker in the graphics. This could be the cat amongst the pigeons because the rest of the program is quite well written.

The game loaded perfectly each time, though there is one slight snag — it takes 20 minutes. The instructions are adequate and cover all aspects of play.

This is not exactly my type of game. Although I like space games on this theme, this one has less lasting appeal. However, after saying that, it is worth considering because of its price. **K.I.**

TI-99/4A PROGRAM

How it works

100 REM
110-160 Y or N to instructions
170-290 instructions
300-830 define characters for screen, laser beam and set screen
840 set random column for alien descent
850-920 define alien, move alien
930-950 limit quantity of aliens
960-1090 fire laser beam
1100-1120 limit quantity of laser shots
1130-1140 stop alien when laser is fired
1150 decide if laser is on target
1160-1240 laser miss routine
1250-1270 score generator
1280-1430 game over
1440-1680 explosion routine

Laser Defence seems simple to play — there's just one key to press — but it's not as easy as it looks.

Use any key, I recommend the space bar, to fire your laser beam at the aliens as they ascend.

Only one alien will appear at a time and your number of shots is not restricted, although you can be attacked by up to 20 aliens and then you have a maximum of 20 shots.

Variables

E random position of alien between columns 1 and 24
C row number of alien in steps of one from row 1 to 21
I column number of laser gun in steps of -1 from column 29 to 1
The other variables explain themselves

Don't be fooled... it's not so easy

Here they come again. Those aliens are determined to conquer us. You can stop them. Quickly type in Tim Freeman's program for the standard TI-99/4A

Hints on conversion

TI BASIC is fairly standard with two main exceptions. Single statement lines are used and sub-routines for graphics and sound are available, prefixed with CALL, as detailed below.

CALL CLEAR clears screen
CALL SCREEN defines screen colour

CALL CHAR defines a character with a 16-digit hex string from an eight by eight grid. Other machines will use a different method

CALL COLOUR (character set, foreground, background) sets colour of character

CALL HCHAR (row, column, character code, number of repeats) places character on screen at co-ordinates specified and optionally repeats character horizontally

CALL VCHAR similar to HCHAR but repeats character vertically

CALL GCHAR (row, column, variable) similar to a screen PEEK on other machines. Gives the ASCII code at the given screen co-ordinates

CALL SOUND (D,F,V) gives sound of duration D, frequency F and volume V. Three sounds can be produced at once

It is wise to aim carefully and hit each alien in turn.

The best score possible is zero, which means that all aliens were destroyed without any harm to the city or its people.

IT'S HERE. ANDROID TWO IN 3D.

A NEW DIMENSION IN EXCITEMENT FROM VORTEX SOFTWARE.

Stop the advance of the Millitoids. Survive the maze of death, rationalise the paradox zone and overcome the dangers encountered in the flatlands.

Achieve this and return to the transporter capsule before the deadline. But beware. There are lethal Hoverdroids, Bouncers and land mines everywhere.

3D full colour graphic effects, machine code fast action and multi-screen wraparound zones make Android Two a mindblowing action game.

SOFTWARE REVIEWS

McKensie 48K Spectrum £5.95

Software Projects, Bear Brand Complex, Allerton Road, Woolton, Liverpool L25 7SF

An adventure game with the unoriginal scenario of having to escape from an abandoned space station before your oxygen runs out. Instructions consist of two sides to aid the beginner entitled "What is an adventure", "Courtesy P. Kemp" — whoever he is. Then some Quicksilver-type blurb which says about as much as my first sentence, and finally half a side of loading instructions, very apt because the program didn't load until my fourth try. However, they don't actually tell you how to play! They don't say you must type "protein" — yes

protein — instead of "pills"; they don't say you can type the first three letters of certain objects. I only found out by listing.

Yes folks, it's written in BASIC. Not that I hold this against anybody, but I agree with John Braithwaite (One Man's View, HCW 45): "Machine code, BASIC or Chinese hieroglyphics, the buyer should be able to repeatedly load it, play it and enjoy it." It is too slow to be enjoyable. Faster adventures can be written in BASIC:

This comes from the same stable as Manic Miner, but is not of the same class: it is outstanding only in its mediocrity. As for why it's called McKensie, your guess is as good as mine.

Chuckie Egg Electron £7.90

A&F, Unit 8, Canal Side Industrial Estate, Woodbine St, Rochdale, Lancs.

Just when you thought it was safe to go back on the farm, this game makes you think again. The idea is to collect eggs before storks devour the corn or you. The eggs are on different floors. Using ladders you can climb up or down. You can also jump down but, beware, if you fall below the ground floor the undertaker is in business.

The program lets you get used to the game gently. Climbing ladders and dodging nasties is great fun. Later it becomes very

skilful with the introduction of lifts as well to gain access to different floors. Everyone knows the dangers of falling down lift shafts, so be very careful.

You use two sets of keys and the space bar. Combinations of these allows you to move up or down, left or right and jump.

An enjoyable game with good graphics. If you are wondering what that duck is doing in the cage, clear eight sheets of the game to find out. The nightmare has begun.

Di-Lithium Lift Spectrum £5.95

Hewson, 60a St Mary's St, Wallingford, Oxon OX10 0EL

The most compulsive games are usually the simplest in concept. Be warned: this game is no exception.

Remember the Sieddabs? We battled them in Hewson's last effort, 3D Space Wars. Well, they're back with a vengeance. Their armour division has to protect the priceless di-lithium crystals from light fingered Spectrum owners.

You must rush around the grid and grab as many as you can before enemy droids line you up in their sights. Each cluster of jewels is in a pattern, and each jewel must be grabbed before you can progress to the next, and more

hostile Sieddabs. A clock is ticking away, only replenished by grabbing red crystals.

Simple? It is. But don't let this fool you. This is one of the most difficult and compulsive I have ever played. Having stayed up all night I can report that I have cleared the first screen! Only seven more to go...

The most maddening aspect is that when you lose a life all crystals are replaced. In fact this game requires a different strategy to any other game I have played. Instead of watching your man you must keep an eye on the Androids who patrol the edges of the screen. An excellent game which I will still be playing months from now.

Once more into the arcades

**Arcade-style games star-rated
by our reviewers. Read before
you buy**

Birds of Prey Electron £6.99

Romik, 272 Argyll Avenue, Slough, Berks

A fast-moving invaders-type game where the aliens in space take the form of birds. At the start the birds appear in formation at the top of the screen. Your gun is stationed at the bottom and is moved and fired by either keyboard or joystick. There are four skill levels.

For each bird destroyed points are scored, these being lowest while the birds stay in formation, but as the game progresses they break ranks and attack begins in earnest.

There are three categories of bird: the Swoopers, these circle down the screen dropping bombs

as they come; the Death Bombs, to be destroyed before they reach the bottom of the screen or a life will be lost; and the Kamakazee Birds — the most elusive yet these will score the most points.

As each screen is cleared another formation appears and for every third screen completed an extra life gained. The game ends when no lives are left and a table of high scores displayed.

Additional features of the program include commands to turn off the sound, and pause to stop play when finger fatigue sets in.

Dragon Hawk Dragon 32 £8

Microdeal, 41 Truro Rd, St Austell, Cornwall PL25 5JE

Dragon Hawk is a "busy" game — there is a lot going on and you have to be on your toes. Your job is to prevent the hawk from carrying Freddy off and to score points. Armed with a rifle and a basket you have to shoot the hawk and then fetch the basket to catch Freddy. Other targets present themselves — flies, larvae and eggs — all of which are a potential nuisance. Although what the flying larvae are doing up there I've no idea!

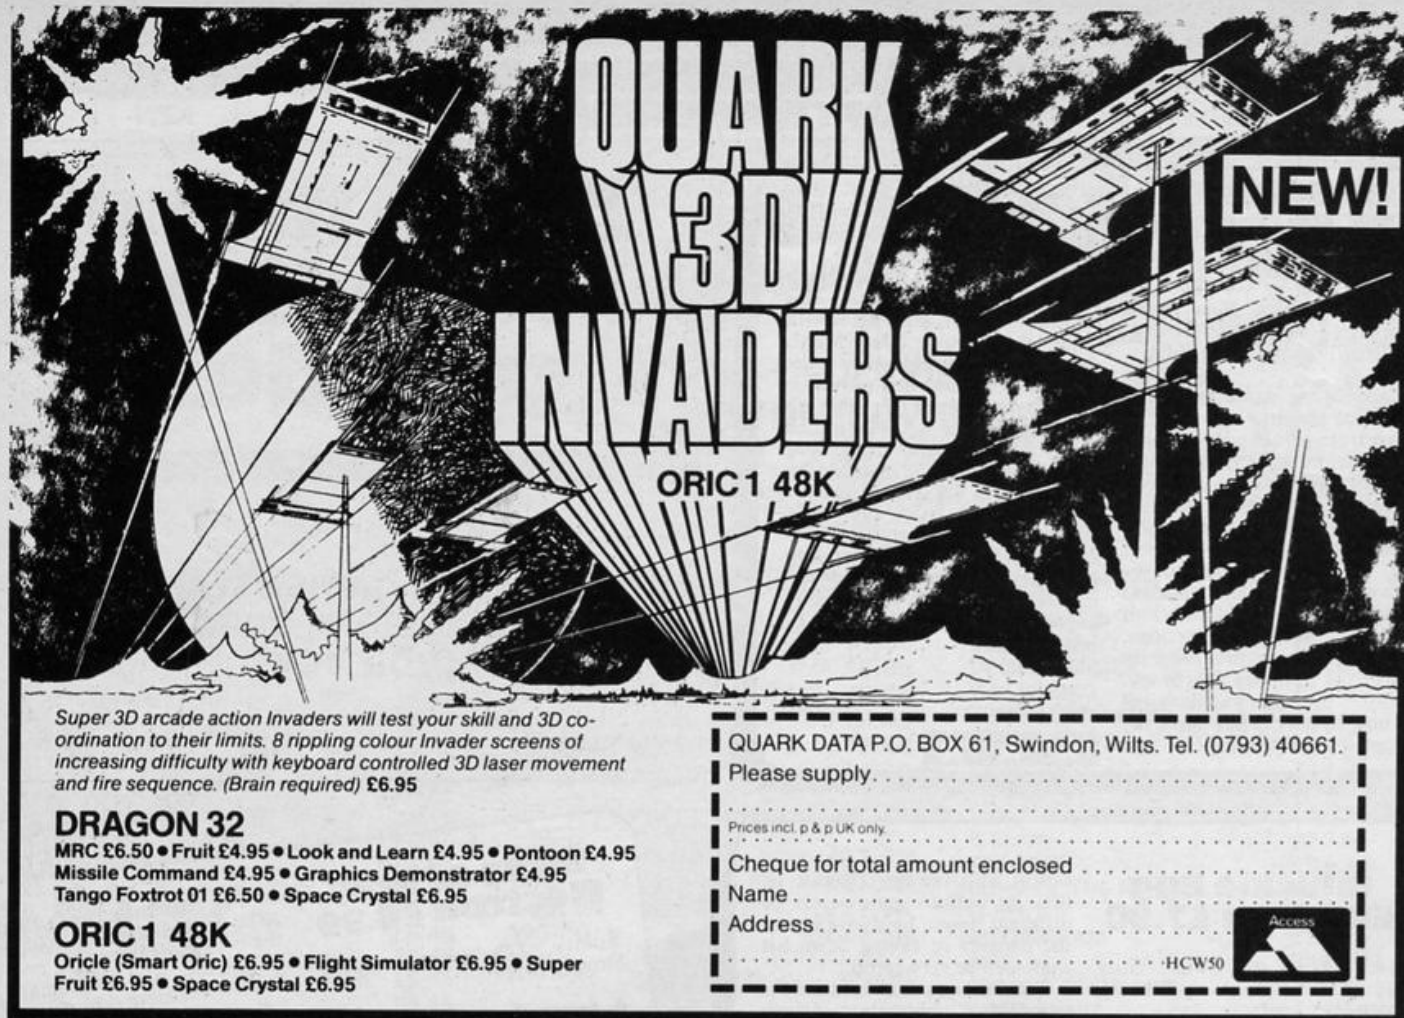

Loading was no problem and the game — joystick or keyboard control — ran smoothly. What I found annoying was the very

messy screen presentation that spoiled some of the very good graphics. When the hawk rose to carry Freddy a thick black and white bar appeared. The larvae created a stepping stone barrier which you had to shoot through and sometimes prevented your reaching the basket. At some stages you have a littered screen which simply clogs up the game.

A good idea with some nice animation. A Top 10 score table is included and an auto mode. A lot of nice features but not enough to save the game.

SOFTWARE FOR SPECTRUM AND ZX81

OUR POLICY

We aim to create programs which you will keep on using until your computer wears out. You won't find our programs in the top ten and you will look in vain for colour adverts and fancy packaging. Nevertheless we have built up a solid following of discerning users in all parts of the world. Read the reviews of our programs if you can find them. We have been consistently praised for quality, originality and value for money.

WHAT DO YOU GET?

The bulk of our cassettes are now made by the factory which produced the Horizons tape. Programs are recorded twice and carry on the reverse side an audio narrative to supplement the operating instructions. Where appropriate, cassettes are accompanied by a comprehensive and clearly written instruction manual.

48K SPECTRUM

"Day of the Match" £5.00

Fascinating and realistic simulation of an entire football season. Name your own teams if you wish (English league provided on cassette). Rate each team from one to nine in various success categories such as attack, defence, manager, etc. Watch the season unfold. Includes knock-out cup option.

"Ball by Ball" £5.00

Simulates a test match series or one day international series. Set up your own teams and pool of players (England v Australia provided). Rate each player's capabilities as batsman and bowler on a one to nine scale for qualities such as talent, effort, etc. Pick your teams and play the match. Electronic scoreboard shows progress of a match. Full supporting score card and series averages.

"Superplan Generator" £12.00

Spreadsheet type program with variable column width and variable number of columns. Lets you sacrifice columns you don't need to get more lines.

"Superplan Pack 1". Business Applications £7.00

Ready-made applications programs for sales day book, purchase day book, cash book and petty cash book.

"Superplan Pack 2". Home Computing £7.00

Ready-made applications programs for home budgeting, nutrition tables, car running costs and bank statements.

"Superview" £5.00

Simple but effective information display. Up to 42 pages of text and low-res graphics. Access pages on demand or run in perpetual 'slide-show' mode. Full facilities to create your own pages and build up an information library on cassette.

16K SPECTRUM

"Superdraw" £5.00

Create full colour high-res pictures and store them on cassette for use as titles or background screens in other programs. Or just have fun doodling and build up a cassette library of your creations. Slide show option allows you to review pictures stored on cassette.

16K ZX81

Here is a selection of titles still available for ZX81. Send s.a.e. for illustrated catalogue. These are the ZX81 equivalents of the Spectrum programs described above. Although similar in concept the specifications fall short of the descriptions given for the Spectrum.

"FOOTBALL-LEAGUE" Forerunner of "Day of the Match" £4.00

"TEST-MATCH" Forerunner of "Ball by Ball" £4.00

"VIDEO-PLAN" Forerunner of "Superplan" £7.00

"VIDEO-AD" Forerunner of "Superview" £7.00

"VIDEO-SKETCH" Forerunner of "Superdraw" £7.00

Many independent computer shops now stock our products but we continue to supply by mail order on an off-the-shelf, immediate delivery basis. Prices include VAT, post and packing in U.K. Add a bit for postage if you live in Outer Mongolia. (Note: "Day of the Match" not available until late October 1983).

VIDEO SOFTWARE LTD.,

Stone Lane, Kinver, Stourbridge, West Midlands.
Telephone: 0384 872462

LETTERS

Reviewer writes

I read with interest the letter from Neil Stelling, of Stell Software, in HCW 48. I reviewed his Maths Invaders program and I feel he deserves an apology. The points he makes are quite fair and, therefore, I would like to recommend this program to a far greater extent than my review would suggest.

The reason for my change of heart is that since the review was completed I have had the opportunity to test the program in school and with some reluctant learners. Unfortunately, the review was written during the Christmas holidays when no children were available for testing.

I hope Mr Stelling will, therefore, accept that while my opinions were sincerely held at the time the review was written, it is since then I have good reason to change them. I wish him every success with this program.
D.C., Home Computing Weekly software reviewer

Maths Invaders costs £7.95 and runs on the 32K BBC or Electron computers. From Stell Software, 36 Limefield Ave, Whalley, Lancs BB6 9RS

Spectrum isn't so bad

I am fed up with people complaining about the Spectrum and making jokes about it so I thought I would write in and tell your readers that it isn't so bad after all.

The times I have been in Boots or W. H. Smiths where computers are on show and I hear: "Ugh! Look it's one of those Spectrum things. It's so small. These keys are made of rubber."

Admittedly, the keys are not all that spectacular. But then again the keys on an Oric are bad. Also the sound isn't supposed to be very good. If you pass it through the tape recorder, or the TV (with an add-on) it sounds perfect.

Some people say the graphics are terrible, look at Ultimate's Atic Atac. On that they are excellent.

I noticed that in HCW Nos 46 and 47 you published letters showing you how to get to any level in Manic Miner. If you want to have endless lives, when loading, before the program to load the picture starts press C/S and B/S to break into the program. Then at line 25 insert POKE 35136,0. Now run the program and start the tape off again.

Send your letter to Letters, Home Computing Weekly, No.1 Golden Square, London W1R 3AB. Don't forget to name your computer — the best letter could win £5-worth of software. Got a problem with your micro? We'll soon be starting a queries page, so send your technical questions to Queries at the above address

Another tip: if you want top scroll the screen up by one line then type LET L=USR(3280). Also, to find how much memory you have left type PRINT 65535-USR 7962.

Mark Crisell, aged 14, Great Totham, nr. Maldon, Essex

Any old computers?

I wonder if I could use the letters section of your magazine to make an appeal to your readers. I am involved with an ILEA Saturday school project in Islington. As part of our activities I run a computer group and although we have access to three Spectrums, we desperately need more facilities. There must be a number of people who have discarded to a cupboard their old ZX80 or ZX81 having bought a Spectrum or other micro. Perhaps some of these people would feel able to loan or donate such unused micros as the funding for this project is minimal. If anyone can help in any way perhaps they would contact me.

Stephen Oxford, Senior Teacher, Highbury Fields School, Benwell Road, London N7 7BW

Flight plan

As I am an avid user of the Psion Flight Simulator, I have found a novel idea to make it more interesting. All you do is find a map, around five miles to the inch, and draw grids on it the same as on the map in the program, for example 16 miles square. If you live in the S.E. you will find that the main runway in the program could represent the runway at Heathrow, and the club is in virtually the same position as Ipswich. Thus, if you take off from Heathrow, example (MAIN), you can count the squares in relation

to where you are on the program map and you will see where you are. You can also tell how long it takes to fly from one place to another. Of course, this idea will work on any simulation program that has a map, with scale grids.

S. Warcand, Gillingham, Kent

Miner tips 1

In his letter about Magic Miner (HCW 47), S. Holland amended G. Holding's letter (HCW 45) by supplying the codes for all the caverns. They both appear to have forgotten about the indefinite amount of lives you can have.

Put MERGE "" and ENTER then LOAD first part, stop tape when 0 OK,01 appears at the bottom of the screen, put 25 POKE 35136,0 ENTER RUN,ENTER. Start tape when loaded, press ENTER 6031769 with boot on screen. You now have unlimited lives as well as access to sheets.

P. R. Capstick, Leeds, West Yorkshire

Miner tips 2

Having read tips on Manic Miner for the Spectrum on your letters page, I have a tip that may be of some use. Stop the tape about 11 seconds after it has begun to load, break the program and type 25 POKE 35136,0 ENTER it, push run and start the tape and let the program load. This enables you to play the game without losing any lives.

Steven Sheppard, Redfield, Bristol

More for the Oric

Magazines I buy nowadays are all featuring articles on Spectrums, BBCs and other micros. Hardly any of them have articles on the Oric-1. I must admit that HCW does feature most things about the Oric, but please could you print more than you do?
Alistair Crichton, Ayrshire, Scotland

We always take note of letters like this because we try to balance the content of the magazine according to the demands of our readers. But, please remember, that there are more than 20 home computers on the market. As always, contributions — programs and articles — are welcome for all home micros under £400. Oric owners take note!

While reading an American computer magazine, I came across a program to put more than one colour on a mode 8 display, without altered display lists or any interrupts.

Eager to see the new colours, I typed in the program.

Disappointingly, all I got were ugly green and blue stripes. I investigated and found that the program plots the different coloured dots on an American TV, here the correct colours didn't show.

Program 1 should put nice shades of orange and blue on a US TV, but horrible shades of green and blue on a British TV.

By plotting every eight dot on our TV system, then every eight dot but with an offset of four across and one dot down, we get a coloured line.

If we zig-zag these dots down the screen we get a graphics 8 screen filled with a new colour.

By plotting dots in between these we can get a more distinct colour. Program 2 demonstrates this.

By starting the loops at

**Program 2 —
more distinct colour**

```

Plotting the dots for extra colours

Follow the advice of Anthony Ball for more colours on any Atari. His three programs show how it works

Program 1 — horrible shades of green and blue

```
10 GRAPHICS 8:POKE 710,0:POKE 709,14:
COLOR 1
20 FOR X=1 TO 300 STEP 2:PLOT X,50:
DRAWTO X,90
30 NEXT X
```

various points we get different colours. Program 3 shows this, and also demonstrates a way in which these "new" colours can be used in a "serious" application.

If you leave the program for about a minute it will shift the colours — not normally possible with these colours — by moving the screen up and down by one pixel.

A lot of American games use these "artifacts" to get more colours without using the resolution of mode 8. Unfortunately, these haven't been converted to the UK's TV system and so we get the ugly colours from program 1.

The only solution to this is to write two versions of each program: one for America and one for the UK. The sooner American games writers realise this the better!

Note: Due to colour balances on some TVs, these "extra" colours may not appear. Try turning up the colour/luminance controls on your TV.

TI99/4A SOFTWARE

Four great games for the unexpanded TI99/4A

PILOT £5.95
Flight simulation game for one player. Graphics display of landing strip and terrain map, plus updated instrument panel. Options for take-off, landing or in flight. Full instructions included. Graphics and sound.

TI TREK £5.95
Defeat the Klingon invasion fleet. Features include 5 skill levels, graphics quadrant display, galaxy map, phasors, photon torpedoes, long range scans, damage reports, shield control, impulse and warp drive. Eight by eight galaxy. Full instructions included. Graphics and sound.

CATERPILLAR £3.95
Arcade action in an insane country garden! Shoot the giant caterpillar to increase your score. Exciting colour and sound combine to give an addictive game you will want to play again and again!

TEXAS PROGRAM BOOK £5.95
35 programs for the unexpanded TI99/4A, including 3-D Maze, Lunar Lander, Caterpillar, Horse Race, Invader, Morse Code and much more.

Send cheque or P.O. or telephone with Access/Visa for immediate despatch. Please add 50p p&p to orders under £7. Orders over £7- post free.

BANISH THE BLOT!

Creator's Revenge £7.95

Mogul, 90 Regent St, London W1R 5PT

My four year old loves this sort of game — waggle the joystick and fire like mad while sound and colours pour forth. For me, the enjoyment won't be so lasting. Yes, there are some splendid targets to shoot at, there are ants, butterflies, birds, wasps, rockets, tanks and even bonus "treasure" to collect as it slips down amongst the nasties. But the addiction soon wears off.

There is little or nothing in the packaging to indicate what to expect, and the address of the supplier is nowhere to be found. It has a pause facility, for when the telephone rings, and a restart

option for when you lose a life early on. I especially like the ability to type 'EX' and exit the game back to BASIC. That's so much better than turning off and on again — other programmers please note.

Once upon a time, when Space Invaders was giving way to Galaxian, this would have been knockout. Now it's good but unexceptional, and a little bit overpriced. The computer games industry is a place of tough competition. If this company, wherever they are, can't do better than this one, they won't be lasting very long.

Manic Miner £7.95

Software Projects, Bear Brand Complex, Allerton Rd, Liverpool

This game is excellent, not perfect, not incapable of improvement, but definitely top class. It's not even totally new as it was translated from a Spectrum program. But the 64's sprites, colour, graphics and sound are all used to produce this remarkable piece of software.

The concept is in the Crazy Kong mould, but there are 20 screens to negotiate. The assortment of obstacles to be jumped over, platforms to be leapt from and pitfalls to avoid is the product of an extremely fertile mind.

Unfortunately, the first screen

is one of the hardest and since there is no choice of starting screen, I can only comment on the first half dozen. Once you sort out exactly where and when you make your moves, it's a case of maintaining your reactions and concentration. Mine usually desert me at the vital moment. It does have a pause facility, music on/off option and choice of keyboard or joystick control, all useful features. A word of warning: it takes 13½ minutes to load! Mind you, it's worth waiting for.

B.J.

How good are your reactions?

Another five games for the Commodore 64 — a computer that seems, from the amount of software being released — to be rapidly increasing in popularity

Crazy Balloon £7.95

Software Projects, Bear Brand Complex, Allerton Road, Liverpool

Another arcade classic translated and enhanced for the Commodore 64.

In case you don't know the idea, you guide a balloon around prickly mazes — one touch and pop! The balloon sways gently from side to side and some obstacles have to be passed at just the right angle. To add to your problems, there are assorted mobile balloon-bursting shapes to dodge, plus bonus squares that you do want to bump into to collect the bonus. Scores for each of the 26 screens depend on how fast you complete them. You start with five lives but gain an extra

one for each screen successfully completed.

There is a choice of keyboard or joystick control and I found the joystick very smooth and pleasant to use. Colour and graphics generally are pleasing, with a lovely looking and sounding balloon burst.

Moans: I'd prefer a choice of entry screen; it displays score of "Player 1", but there is no two player option as far as I can tell; the packaging and instructions aren't terribly helpful. Nevertheless, it's a good game, tolerably well implemented.

B.J.

instructions	60%
playability	85%
graphics	82%
value for money	70%

Annihilator 2 £5.99

Mogul, 90 Regent St, London W1R 5PT

Annihilator 2 seems to be a descendant of the popular arcade game Defender. It is not quite as good but almost equally addictive.

The object is to blast everything in sight, except certain space beings and debris. You may fire horizontally and move in all directions. All this would be quite easy if it was not for the fact that the objects tend to move in your direction. If you do not keep moving it's fairly certain you will not last more than a few seconds. The game is played on a series of levels; each consecutive level being harder.

You need fast reactions and a

high quality joystick is necessary (I used a Quickshot). The game is harder to play using a cheaper, less sensitive model.

The program loaded well, although it is only saved on one side. I would have thought it common practice to use both sides by now.

The graphics could be improved considerably in places. For the sake of a few more hours when writing the program, a potentially very good game has been downgraded.

The instructions, on a program title page, are badly set out and hard to read.

K.I.

instructions	15%
playability	70%
graphics	50%
value for money	75%

Paratroopers £5.99

Rabbit, 380 Station Rd, Harrow, Middlesex

A game for people with limited skill and a perverted sense of humour.

You have control of a gunner, who has to shoot down helicopters and the paratroopers who jump out of them. Every now and then a bomber comes over. You cannot shoot these, but must shoot or dodge the bombs they drop.

You have only one life, which you lose if a bomb or a paratrooper lands on you. If you allow too many paratroopers to land, they march off and fetch a tank to shoot you with; your controls

freeze when this happens, so you just have to sit there and wait to be blown up.

The graphics are very good. The gun rotates nicely, and the helicopters and tank are very well drawn. Sound effects are limited to boom! boom! bang!

You can choose vertical or angled fire, a stationary or mobile gun base, single shot or rapid fire. I found rapid vertical fire with a mobile base was best. The game still didn't last long, though.

It seems a shame that such good graphics and programming should have been wasted on a game like this.

* ZX81 Chart

Home Computing Weekly
1.8.83 and 1/11/83.

Comments about the game from press and our customers.
"FOOTBALL MANAGER is the best game I have yet seen on the Spectrum and my personal favourite of all the games on any micro. To the ordinary person it is an excellent view of what can be done in the field of computer games. The crowning glory of this game is the short set pieces of match highlights which show little stick men running around a pitch, shooting, defending and scoring. It is a compulsive game but people who cannot take game sessions of 9 hours or so, which happened on one happy Sunday, will be grateful to know that there is a 'save to tape' option. FOOTBALL MANAGER has everything it could. The originator, Addictive Games, certainly deserve the name." Rating: 19/20 (Practical Computing - August 1983)

MISSION - 1

BECOME A SECRET AGENT

PROJECT VOLCANO

Mission Software's complete package on Project Volcano, is probably the most advanced Adventure Computer Game Package you have considered this year. It is not just for the dedicated game player but for those that want to get involved in Secret Codes - Messages, and the scary side of DIB (British Intelligence) and the K.G.B. IT IS A MUST FOR THE SINCLAIR SPECTRUM 48K AND DRAGON 32 HOME COMPUTER OWNERS.

When you receive your Adventure Game from Mission Software Limited, included in the package is your Passport to the international workings of the Secret Agents. Your personalised Passport will assist you in negotiating the K.G.B. network in the Soviet Block Countries and vital to the success of your mission. Command Headquarters will give you information that other Agents have recorded, together with their Communication Log, Mission Instructions, Secret Memos, Classified Diagram, Full Briefing Instructions and other Secret Data. IT'S UP TO YOU TO BREAK THE CODE AND BECOME A SUCCESSFUL SECRET AGENT. We rely upon our Agents to feed back information to make further projects interesting and complex, to tax your ability and to guarantee many hours of enjoyment. We believe Mission Software Limited is the only company that supports its Field Agents with a mass of Secret Information to make the Mission exciting and enjoyable which makes it a must in Computer Games.

- We know your friends will want to become Secret Agents and use your game, we will be quite happy to supply them with their Passport and Documents for £2.95 per kit. This way you always retain your personal Passport and Secret Information.
- The moment you tell us you have completed your current assignment we will advise by Secret Data, details of how to penetrate one of the World's most secret establishments.
- To obtain your Game and personal Passport with all its Secret Documents send a Cheque or Postal Order for £6.95 (inc. P.P. & V.A.T.) with the Coupon at the foot of this advertisement.

ORDER MISSION 1 TODAY AND JOIN THE GROWING NUMBER OF SECRET AGENTS OPERATING FROM COMMAND HEADQUARTERS.

Let's zap a few aliens again

Fancy another trip into space? Here's a batch of the latest space games for the Spectrum, Dragon 32 and TI-99/4A

Skramble Dragon 32K £8

Microdeal, 41 Truro Rd, St Austell, Cornwall PL25 5JE

Starting with three spacefighters you must penetrate the enemy's defences which are on five levels. On level one you must avoid the ground defences. On level two you must fly through a cave where there are UFOs. The next level, also in the caves, contains meteorites. Levels four and five are a fortress and a maze respectively. Points are gained for each enemy destroyed and there are fuel dumps along the way. It is important to destroy some of these to maintain your fuel level, displayed on-screen. An extra ship is awarded at 10,000 points.

Two players can compete and you can use joysticks or keys. I preferred to use keys for finer control. The screen display is a side view of the area over which you are flying. At the top the score for both players and the highest score is displayed. The number of fighters for each player is also shown. Your fighter can fire a cannon and launch two bombs at a time. At the end of the game there is a high score table.

Graphics are smooth flowing and I quite enjoyed playing this game, although the price could be lower. Full instructions are on the insert, but in very small type.

J.E.M.

value for money	70%

Tobor 48K Spectrum £5

CCI, Units 2, 3 and 4, Shire Hill Industrial Estate, Saffron Walden, Essex CB11 3AQ

Exciting instructions and a very attractive title screen, but the game fails to live up to its image.

According to the blurb, you have made a forced landing on a distant planet and must collect fuel capsules to escape. Unfortunately the planet Kalanium is populated by rather hostile robots who are understandably upset that you are ready to gun you down. They are quite stupid too — for no apparent reason they will often bump into each other and disintegrate.

A tediously long introduction has to be sat through at the beginning of each life as your humanoid and the robots take up positions. On losing a life the computer plays a very downbeat version of the Funeral March.

Use of graphics is very limited, although sound and colour are quite good. You soon find to your cost that the green robots are indestructible.

Although I cannot understand why, I found the game quite compulsive at first. This soon wears off when you are faced with more and more robots to disintegrate.

T.B.

Aries TI-99/4A £6

Stainless Software, 10 Alstone Rd, Stockport, Cheshire SK4 5AH

A dodge-em and blast-em type game set in outer space.

Your space pod descends from its mothership at top left of the screen. This must be manoeuvred through debris that continually crosses its path until in line with an alien space craft and its cargo. After blasting the alien and collecting its treasure you return to the mothership before your pod's fuel runs out. This continues until all cargo has been collected. The number of these depend on the rounds completed, there being five in all. After every round an alien control ship

appears which must be blasted six times in succession to destroy.

Points are awarded for the number of cargoes collected and ships destroyed as multiples of rounds played and skill level adopted. There is a choice of five skill levels. Extended BASIC and joystick are needed.

At the end of a game the score is given and if sufficiently high you enter the Hall of Fame. Here there is an option to save and load your high scores on file. Unfortunately the scoring system of the game is at fault as in all following games the program fails to reset to zero.

Stonkers 48K Spectrum £5.50

Imagine, 5 Sir Thomas Street, Liverpool L1 6BW

Having invaded, you command the port and supply facilities for tanks, artillery, and infantry. You keyboard or joystick over the battle area, divided by a river with a single bridge, with a large cursor. This cursor area is examined in larger detail by pressing fire. In magnified mode, using fire button and smaller cursor, you deploy your forces to new positions, check their status and move supply trucks to them.

A "Tickertape" displays a sample message: "Division needs supply". It would be helpful to know which division. Mine stopped and gave "instructions

understood" long before I had got them where I wanted. And my supply trucks must be black marketeering, since they rarely reach where I sent them. Even my infantry have a distressing tendency to die miles from the enemy and yards from the supply area.

Perhaps I am not cut out to command or the program is bugged. I tried two different cassettes and both sides of each either crashed or NEWED after about 10 minutes of play.

Pleasant graphics, not a lot of movement. Too little action for arcaders — not enough information for strategists. A bit disappointing, really, from D.C.

instructions	90%
playability	40%
graphics	60%
value for money	70%

Lunar Rescue 48K Spectrum £5.95

Lyversoft, 66 Lime St, Liverpool L1 1JN

The scenario is quite straightforward — you must navigate a rescue craft from the mother ship at screen top to the moon surface at screen bottom to rescue a team of marooned scientists. You are only able to carry one passenger at a time so six trips are needed through space littered with asteroids. Having successfully completed the mission the cycle is repeated.

There is a joystick option. With only three controls, left right and thrust this is far from essential. An annoying feature is having to enter a keyboard/joystick option

after each game. I would have thought this only necessary after initial loading.

Graphics are nicely presented but it does look odd to see the asteroid belt halt just because a scientist is running to the rescue craft! Lyversoft claims "machine code sound", but my version was as silent as real space.

I found the game too predictable and slow moving on any of the four skill levels even with my clumsy fingers. I doubt its ability to sustain long term interest.

48K SPECTRUM OWNERS *Read This From* **...LET'S GET DOWN TO BUSINESS...**

★ ★ ★ **FINANCE MANAGER** ★ ★ ★

Voted "the best value financial program available" by SINCLAIR USER

FINANCE MANAGER is a powerful, flexible and very fast MENU DRIVEN general purpose ledger package which includes both standing order and special forward planning features. The program will handle up to 255 separate accounts and 1800 transactions. The power of MACHINE CODE has enabled us to produce the very latest "on the page" presentation which lets you enter and edit data naturally, as if you were filling in a form.

These screens are just a sample to show the style of the program:

But that's not all, not by a long way. This program **automatically** raises a corresponding debit or credit for every entry, and will even open a new account if an entry features an unrecorded account name.

Information can be manipulated in various ways — you can call up your bank or credit card account, or analyse expenditure according to a variety of categories which you assign to the transactions. Instant Account balances can be listed at any time. A great time saving feature of this program is that account names and transaction descriptions need only be recorded **once**, as all the input fields will scroll existing files. There are many, many more features which make this the most powerful finance package around, we even include a test file for you to experiment with before getting started.

★ ★ ★ **ADDRESS MANAGER** ★ ★ ★

ADDRESS MANAGER utilises the same "on the page" presentation as **FINANCE MANAGER** and offers Spectrum owners a professional standard address filing, indexing and retrieval system. Below are examples of the screen presentations.

ADDRESS MANAGER has been carefully constructed to provide the user with a tool that is extremely friendly and easy to use, the speed and presentation of this program are second to none.

ADDRESS MANAGER features **MULTIPLE INDEXING** via our 3 way 3 character index, an ability to store over 400 full names and addresses or 1500 individual names/titles.

USES include storing and updating names, addresses and phone numbers, printing out Xmas card lists etc, mail order work, customer classification by type size, (doctors have used this program to catalogue patients by treatment).

★ ★ ★ **80 COLUMN-PLUS 80' VERSIONS** ★ ★ ★

VERSIONS OF BOTH THESE PROGRAMS ARE NOW AVAILABLE FOR USE WITH AN 80 COL PRINTER. WORKING IN CONJUNCTION WITH THE KEMPSTON CENTRONICS INTERFACE THESE "PLUS 80" PROGRAMS CONTAIN ALL THE NECESSARY SOFTWARE AND CONTROL CODE FACILITIES TO OPERATE ANY KEMPSTON COMPATIBLE CENTRONICS PRINTER.

VISIT YOUR LOCAL SOFTWARE STORE NOW AND ASK FOR **FINANCE MANAGER** AND **ADDRESS MANAGER** BY NAME —

also available from selected branches of W. H. SMITH, BOOTS AND J. MENZIES

SOFTWARE ★ ★ ★ SIMPLY THE BEST ★ ★ ★

If you experience difficulty obtaining your copies of these programs send a cheque or postal order for £8.95 (£19.95 for **PLUS 80** versions) or telephone your details to (0753 888866):

Oxford Computer Publishing Ltd.
4A HIGH STREET, CHALFONT-ST-PETER, BUCKS, ENGLAND

I'm lost in the jungle... help me get back to base camp

I have always wanted to travel and see the world and when I was invited to join the 1984 expedition to Africa to search for the legendary Sea of Blue Water, I leapt at the chance.

I am not so sure now that I did the right thing!

How it works

60 game lost when error is generated
70 disable escape key
80 disable break key
90 selects MODE 6 and chooses colour
100-110 initialise variables
120 defines envelope for sound effects
130 call instructions
140-180 fill arrays for locations, items and words understood
190-520 main control loop, repeats until location 24 (base camp) is reached
330 waits for response
340-510 calls PROCEDURE appropriate to input word
530-540 end of game
560-670 instructions PROCEDURE
660 waits for space bar to be pressed
680 data for sound effects
690-900 data for games "rooms"
910-920 data for objects
930 data for words understood
940-2220 PROCEDURES which have self explanatory titles, e.g. PROCget

The party leader sent me off yesterday to search for food and guess what... I have got myself lost in the middle of the jungle. Please help me to find my way back to base camp by telling me what to do in the form of two-word sentences.

Unfortunately, I do not speak very good English and if you find that I don't seem to understand you, try another word.

Here is a list of some of the words I understand:

GO, N,S,E,W, UP, DOWN, IN, OUT, PRAY, HELP, EXAMINE, SEARCH, SWIM, TALK, SAY, DROP, LEAVE, INVENTORY, SCORE, WAIT, DIG, THROW, JUMP, DIVE, ROW, CUT, CHOP, MAKE, UNLOCK, EAT, DRINK, SAIL, LOOK, RUB

...that's the plea from Steve Lucas, who wrote Jungle Search for the BBC and Electron computers. Type it in before something dreadful happens

```

Hints on conversion

● Few computers have REPEAT UNTIL loops. Then main REPEAT UNTIL loops from line 190-520 can be replaced by line 520 IF P% (less than or greater than) 24 THEN GOTO 200

● The REPEAT UNTIL loop in line 2160 is used to provide a time delay. Use a FOR/NEXT loop, e.g. 2160 K=1:PRINT "O.K.":FORX=1TO1000:NEXTX

● The PROCedures used will have to be replaced by sub-routines, e.g. Line 130 will need to be replaced by 130 GOSUB 570 (The line after DEFPROC statement) and all ENDPROC's will need replacing by RETURNS

● The biggest problem in converting this program for other machines is likely to be encountered when you try to enter lines of over 40 characters. Machines like Orics and Commodore 64s will not accept these long lines. If you split long lines beginning with IF THEN statements, you will need to start the second line with the same IF THEN statement!

Variables

Resident integer variables A%-Z% are used widely so as to increase the speed of the game.
P% current location
AA%-AJ% flags to test if certain events have taken place
E% flag to test if item is there
ZS,CS,BS,LS holds words entered
S%(X,Y) holds the map
QS(X) holds descriptions of locations
GS(x) holds descriptions of objects
VS(X) holds items carried
B%(X,1) holds locations items found in
NS(x) holds words understood
N%(x) pointer for words understood
YS holds message
XS holds message for losing game
H%,D%,D,X,Y used as counters in FOR-NEXT loops
R holds check for number of item

Important note: Do not type in lines 60-80 until you have fully debugged the program. Then SAVE a copy before RUNNING.

Prices rise over IBM

This week I thought I would let you know what the price trends of some of the major home computer manufacturers have been lately. Although people (me for one) feel that the IBM PCjr is quite overpriced for what it offers, there is no question that the relatively high price of the two models (about \$670 and \$1270) will serve to stabilise the market, at least price-wise.

Not only that, but such a move will also get customers used to paying more not only for the computers themselves but also for supplies and accessories. As soon as the IBM PCjr was announced and as soon as the industry learned of the demise of TI's 99/4A, several manufacturers announced price increases.

Atari added \$40 to the dealer cost of its 600 and 800 XL models (which incidentally completely sold out by the end of last month). It also added \$15 to the dealer cost of its Model 1027 printer and 1050 disc drive unit. Even before it becomes widely available, Coleco has increased the price of its Adam about 24 per cent to \$650 at the wholesale level.

The retailers of computers that will compete against the PCjr feel no threat at all. Most believe that some of the limiting factors of the PCjr will actually help them sell their competing lines. It is also interesting to note that Commodore has not reacted to the re-pricing of its competitors any more than it has reacted to the introduction of the Adam or the PCjr.

Ever wonder how many computers we have over here? Well, it turns out that computers can be found in approximately 15 per cent of all American households, and that there are about seven million installed micros altogether. In the same survey that revealed these figures it was also determined that most people who do not buy computers do so for one of two main reasons: the first is lack of need, and the second is high prices. The survey also revealed that people may change their minds about micros when they perceive that their children may need one to succeed in school.

While most interactive videodisc/microcomputer interface systems are usually quite expensive, a new low-cost system has been recently announced by a company called Lasersoft. The unit is called the Micro-Ed controller box, and has been announced for under \$200!

It has been designed to work with the Commodore 64, 1541 disc drive, and the Pioneer 8210 videodisc player (and probably its European equivalent). The unit itself is only slightly larger than a deck of playing cards and allows the computer to randomly access any of the thousands of frames (individual "still" pictures) on the disc and present them on a single colour monitor used simultaneously by the videodisc player and the computer.

Two programs, written by the makers of the Micro-Ed, are provided and have to do with understanding the globe of the world and maps. At one point in the program, instead of having the computer churn out a computer designed picture of how earth looks from outer space, the program calls up the appropriate frame on the video disc which then shows an actual reproduction of a photograph of Earth as taken from the Moon by astronauts. Besides these initial programming efforts, other applications are being developed to include a wide range of activities for families with children as well as adult interests. You can write to Lasersoft in Eden Prairie, Minnesota.

Out of room again. See you next week.

REVENGE

OF THE MUTANT CAMELS

At last the long awaited sequel to Attack of the Mutant Camels is available. You are controlling a ninety foot high, neutronium shielded, lazer spitting death camel; leading a rebellion against your evil Zzyaxian overlords. The game features beautiful smooth scrolling graphics and no less than 42 different attack waves, more than any game in video history. The challenge of play will last for months as you battle to see what's on the next wave.

Dodgy Dealer 32K BBC £6.50

OIC, 15, Burghead Cl, College Town, Camberley GU15 4XL

Ever fancied running your own business? You know the sort of thing... armed only with your £5,000 bank loan, and a number of advisors, you set out to make your mark on industrial Britain. Too risky? Fortunately this text-based simulation lets you play out exactly this business scenario without having to suffer any real sleepless nights.

Your goal is simply to try and make a profit, or avoid bankruptcy, in a set time. You are offered helpful advice by your managers, covering all aspects of your business, including production, marketing, transport and accounts. You must then

decide how much money and resources to allocate in the different areas of the business. Oh, of course, the advice doesn't come free!

If you enjoyed ruling your country in King (one of the programs supplied with your BBC) or Hmrabi, then you will find this quite gripping. Obviously the business simulation is not quite up to the level of Executive Suite on an IBM-PC, but I am sure any marketing man will have a challenge sorting out his market strategy on level nine! Rank novices should start on level zero. Needs O.S. 1.2 **P.D.**

City 48K Spectrum £6.95

Terminal, 28 Church Lane, Prestwich, Manchester M25 5AJ
Anyone who has nurtured ambitions to be a bloated capitalist can now act out the role with this game of property development speculation. It's for one to four players with the Spectrum playing vacant places. Each starts with £200,000 with the aim of making £1 million. You take turns — quickly or, as in real life, the chance may disappear — at moving round an on-screen map, building, demolishing or purchasing pubs, houses, apartments, shops, factories and banks. All the rent collecting, tax paying and other book-keeping is done for you. As the city is developed the map shows each

players' property holding in a distinctive colour. Realistic features include varying property values to reflect, for example with a pub, the building nearby of houses for customers.

City has four game lengths, each with slightly different characteristics, along with a "save game" facility, necessary because of the time taken to complete a game. There are even two colour schemes in case one does not suit your TV!

A very well thought out, well presented package and very enjoyable to play. I would suggest, though, printed detailed instructions as well as those on screen.

Bandit 32K BBC £2.99

CompuSoft, 32 Watchyard La, Formby, Liverpool L37 3JU

I still cannot see the fascination in playing a game which normally has money pouring out of a machine's mouth on a machine which has no mouth at all! Don't get me wrong, I like feeding the unidextrous thieves, but only if there is that chance of the big win. I really can't see any pleasure otherwise.

As you may have guessed, this is a fruit machine program and a very good one, with random holds, nudges, collect or gamble winnings and even a special Bandit feature offering even more mythical money to win. You start with 50p and it "costs" 10p a go.

There is nothing to criticise — plenty of colour, good graphics and sound. But you don't actually win or lose money and, in keeping with this, you can get another 50p any time! The best feature is undoubtedly price and if you want this kind of program you won't beat this value. It really is as good as others I have reviewed at twice the price.

Wait a moment. I've thought of a use at last! It's for gamblers who want to stop losing money but keep the habit. Eureka!

Are they like real life?

You can run your own business or play golf or pool or try golf in these simulation games. How well do they perform?

Eight Ball Dragon 32 £8

Microdeal, 41 Truro Rd, St Austell, Cornwall PL25 5JE

Dragon graphics aren't up to producing a playable game of snooker — not enough colours — so Microdeal has come up with this version of pool instead. It's a simplified game with no scoring. The first to pot all their own balls and the eight ball wins.

It's a two-player game, though you can play yourself if you can't talk anyone else into it. Play is controlled by joysticks. You position the cue ball (if necessary), press the fire button, position the cue, press the button again, select spin by positioning a small dot on a ball at the top, then hold the fire button down while a

"power bar" grows to the appropriate length for the force you want. The balls move smoothly around, making a fairly authentic click when they collide and disappearing if they reach a pocket.

Sound effects are good, though limited, and graphics adequate. There is a choice of three screen colours, but with the traditional green table the balls are none too easy to distinguish. It's clearer in black-and-white. It's not much like the real thing, but fun to play all the same.

Royal Birkdale 48K Spectrum £6.90

Ocean, Ralli Bdg, Stanley St, Manchester M3 5FD

This golf simulation takes its name from the well-known golf course, and promises a faithful reproduction of the 18 holes. The title page is spectacular in colour and definition, with a picture of the club house. That high standard of graphics is maintained throughout.

As with most computer golf games, you select the direction, club, and strength with which you wish to strike the ball. An added plus here is that you also have your reactions tested. The outcome decides whether the shot

is true, or whether you hook, fade, or slice the ball.

Once the ball is on the green, the display moves to a close up. Even the slope is taken into account as you attempt to putt. Again, there is a reaction test. This I found the most frustrating part — the strength of the putt is too sensitive to the test, and success is extremely difficult.

Apart from poor error-trapping of the INPUT responses, this is a well-written BASIC program which could provide a lot of fun — once you've learned to putt!

DRAGON 32 PROGRAM

It's a one-way flight, unless your bomb aiming is on target

As your target approaches you feel surprisingly calm. Your hand is lightly resting on the button ready to start bombing the centre of the enemy's industrial complex.

Your mission is one of high risk. To carry the maximum tonnage, you decided to limit your fuel.

It means this is a one-way journey. The only chance you have for survival is to clear the screen, enabling you to land safely, otherwise you will go down with guns blazing.

The game is played in high resolution graphics and the instructions are in the program. There is a choice of 10 skill levels relating to the height of the buildings.

How it works

60-80 set up and display title page
190-310 request skill level and
transfer this to the size of the
buildings. Graphics are drawn
while the text screen is dis-
played, a useful trick which
prevents people from having
to watch the graphics display
slowly evolve time and time
again

470-500 are put into action is
spacebar is pressed. This is the
bomb drop routine

510-520 are for when the aircraft
crashes. If it manages to land
safely, then lines 530-590
activate win routine. An inter-
esting point of note is line 600
which produces the striped
effect background for the win
routine

600-690 score, high score,
another game?, if so re-start.
Note use of fast POKE in lines
640 and 250

**WATCH OUT FOR THE WIZARD JOYSTICK
INTERFACE FOR BBC-NO SOFTWARE
REQUIRED.OPTION FOR 2 STANDARD
ATARI JOYSTICKS..**

TURN YOUR PROGRAMME UPSIDE DOWN

Now you can add another dimension to your games.
Swap direction, swap functions, confuse your friends.
In fact you can add almost any twist to your games with
Stonechip's Programmable Joystick Interface.

You can also listen to them
with **Stonechip's Echo Amplifier.**

Programmable Joystick Interface. This also enables any Spectrum software to be used with a joystick, irrespective of which keyboard keys have been chosen for function.

Programming is easy using only a single switch. Switch one way to program and another way to play. No tapes to load or links to worry about — all programming is achieved by hardware. Used with Atari-compatible joysticks. Simply plugs into rear expansion port of ZX-Spectrum. No other connections to make, no additional power supply required.

Echo Amplifier. How would you like to listen to the sound output from your ZX-Spectrum without ear strain? The Stonechip Echo amplifier can do this for you as well as easing the tedium of saving or loading of tapes and enlarging the range of tape recorder compatibility with the computer. The amplifier has volume control over a range adequate for most uses, and a tone control for harsh or mellow sounds. A switched interface removes the need to swap leads during 'SAVE'ing or 'LOAD'ing. Leads are left connected all the time and the desired function is selected on the three position switch by the user. Use of the 'CUE' facility enables an audio cue to precede the program being 'SAVE'd on tape, a decided advantage when searching through a multi-program tape. The Echo simply plugs into the Ear, Mic and Power sockets of the computer and does not require an additional power supply. The expansion port at the rear of the computer is left free for use with other peripherals and the unit is housed in an attractive case custom designed to complement the ZX-Spectrum.

SOFTWARE APPLICATIONS

SPECTRUM KOPYKAT IMPROVED PERFORMANCE

Simply the best. Copying any program is now as easy as LOADING and SAVEing your own programs. Any ZX Spectrum program can be backed-up onto a fresh tape. Even programs that cannot be stopped can now be copied. 100 per cent machine code. Prints file names. Copies headerless files. SPECTRUM KOPYKAT uses no program area so full size programs over 41.7K (9K for 16K machines) can be copied. PLUS FREE Header Reader program.

Despatched by first class return of post.

Send cheque/PO for £4.95 to:

MEDSOFT

61 Ardeen Road, Doncaster,
South Yorks DN2 5ER.

IT CAN EVEN COPY ITSELF

BACK-UP TAPE COPIERS

New and unique machine code programs that can provide security back-up copies of most software currently available. Supplied on cassette with simple instructions for the following machines.

COMMODORE 64	£5.95
VIC 20	£5.95
BBC MODEL A/B	£5.95
ORIC 1	£5.95
SPECTRUM 16/48K	£4.95

Price includes VAT, post, and packing.

Send cheques and P.O.s to:

WALLTONE LTD.

Crown Courtyard, Bridge Street,
Evesham, Worcestershire

BREAKER BREAKER

For the Commodore 64, this revised 1984 version will make back-up copies of most popular cassette programs. Why pay more? For a fast turn round on orders rush cheques/POs for £3.95 to:

C. KENT,

26 Northcape Walk, Corby,
Northants NN18 9DQ

Can you afford to be without one?

Spectrum Speedyload — Halve your waiting time! This short program lets you save/load at 3000 baud. Cassette (48K), £3.95. Ness Micro Systems, 100 Drakies Avenue, Inverness.

VIC-20 COPYTAPE

Produce security back-up copies of your programs. Efficient and easy to use program copies BASIC, Machine Code, Multipart and Auto-run programs onto a new cassette. Works on any size VIC.

For cassette with instructions send Cheque/PO for £5 to:

ROGER WOLFENDALE,
Dept HC, Laurel House,
Spinks Lane, Witham,
Essex CM8 1EP

● COPYMATE 64 ●

A back-up utility for COMMODORE 64. Will make security copies of most cassette based software. Supplied on a quality cassette with full instructions. Send £4.75 to:

HORIZON SOFTWARE,
15 Bamburg Close, Corby,
Northants NN18 9PA

TAPE COPIER 5 (new version)

Makes BACK-UP COPIES ALL types of SPECTRUM programs (incl. headerless, m/c unstoppable) easily with MANY unique features. FULL MONEY BACK GUARANTEE if you are not satisfied.

★ M/DRIVE copies Basic/mc/arrays on the microdrive STOPS programs to help the run.
★ LOADS in all program parts CONTINUOUSLY — even without pressing a key. Other copiers require many loadings — MASSIVELY saving you time and trouble!
★ MAXBYTES copies programs occupying the FULL 16K or 48K! Verifies. Repeat copies. Auto. Abort. HEAD data.

★ Full instructions, very user friendly. BREAK at any time (just save a header!), then carry on LOAD. Copies all programs that we are aware of.

Cost only £4.49 or £5.50 with M/DRIVE. (Overseas: + £1 Europe, £2 others).

Adventure Creator 48K ZX SPECTRUM

The Cheapest, Easiest & Better way to create Adventures!

No special language or programming knowledge is needed — the program simply asks for what it wants and the computer works out the rest.

It contains a large library of familiar tunes that you may call up at any time to create a musical adventure, plus there is the facility for you to add your own graphics.

This is the only program that lets you write quality, impressive adventures at a truly competitive price, with no legal restrictions or requirements placed on the adventures you create. This amazing program costs just £7.95 and comes with easy to read instruction manual and free classic adventure game, called "London Town".

Please send cheques/P.O. to:—

"FUSION"

17 Crome Close, Colchester,
Essex CO3 4QQ

(Dealer enquiries welcome)

NEW for the ATARI 400/800

Texas TI99/4A

ARENA III (EXT. BASIC) £4.95

Space war. Defend your ship from attacking aliens. Battle your way to Arga. To land, you *must* blast out a landing strip. Descend from ship through treacherous meteor storms. Laser cannon, neutron bombs, space walks. This game has the lot.

AZTEC GOLD (EXT. BASIC) £6.95

All text adventure for player who enjoys solving cryptic clues. Learn about genuine Aztec gods as you go around the island of Tencoatl in search of the Temple. Includes on-screen map. Full separate instructions.

POSTMANS KNOCK (BASIC) £4.95

"ON YOUR BIKE" says the Boss. Wobble through dense countryside. Post letters; empty postboxes; pick up parcels. Have you time to do it, before the post office does the sorting? Ride the regulation bike (with bell). It is not easy! Extra screen for High Scores, unless you are sacked first!

TI-99/4A **LANTERN** TI-99/4A

DADDIE'S HOT ROD (BASIC) £5.95

Drive through sheep fields, woods, over rivers and avoid all obstacles, then pick up hitch-hikers down perilously twisting roads. HCW gave five stars.

HUNCHBACK HAVOCK (BASIC) £5.95

Arcade action in TI-BASIC! Race with Egor through 24 different sheets. Superb graphics and great fun.

THE BLACK TOWER (BASIC) £5.95

Unlock the mysteries of the black tower and rescue the Lady Gwen in our latest full 16K adventure. Addictive and entertaining.

BATTLESTAR ATTACK (EXT-BASIC) £6.95

Stop the battlestar before it blows up your home planet. A fast game with excellent graphics. HCW gave five stars and said: 'even at level one a very addictive game'.

NEW ORIGINAL GAMES FOR THE COMMODORE 64

● **NIGHTMARE PARK** is in fact a compendium of 14 games. The task of the user is to gain as many points as possible travelling through a maze beset by obstacles at every turn. These infuriating obstacles are overcome by a combination of skill, sharp reflexes or by sheer good luck making Nightmare Park a suitable game for all ages.

PRICE £7.99

● **DOTS & BOXES** is an intelligent game where the user and the computer take turns in completing boxes by drawing a line between two dots. The aim of the game is to win the most boxes whilst skilfully minimising the number of boxes given away to the computer.

PRICE £6.95

● **HEXAPAWN** For strategic and persistent play. The opponent (computer) has no initial strategy but is programmed to learn from the user's wins to improve its own strategy.

PRICE £5.95

● **CHOPPER LAND** Your chopper is chartered to transfer goods from your base and land SAFELY. An exciting new game full of surprises.

PRICE £7.99

MAIL ORDER PROTECTION SCHEME

If you order goods from Mail Order Advertisers in this magazine and pay by post in advance of delivery, this publication will consider you for compensation if the advertiser should become insolvent or bankrupt, provided:

1. You have not received the goods or had your money returned; and
2. You write to the publisher of this publication explaining the position not earlier than 28 days from the day you sent your order and not later than 2 months from that day.

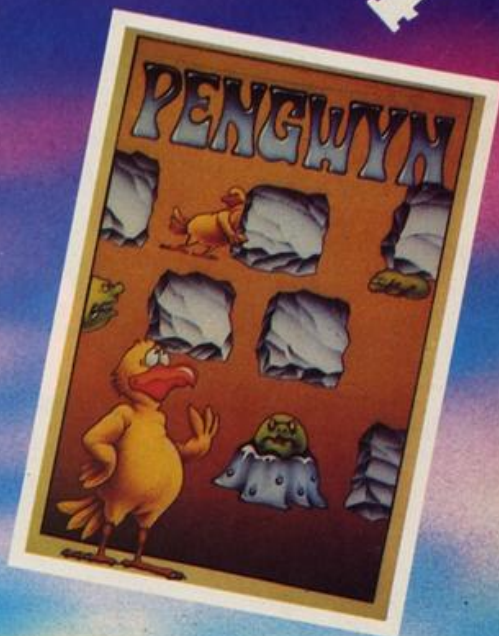

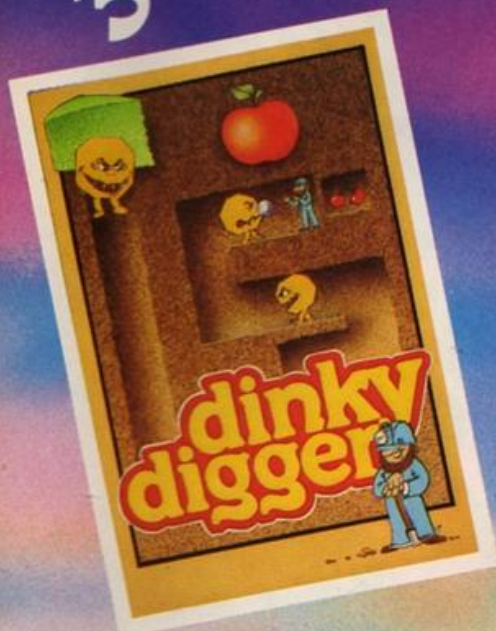

Please do not wait until the last moment to inform us. When you write, we will tell you how to make your claim and what evidence of payment is required.

We guarantee to meet claims from readers made in accordance with the above procedure as soon as possible after the advertiser has been declared bankrupt or insolvent to a limit of £1,800 per annum for any one advertiser, so affected, and up to £5,400 p.a. in respect of all insolvent advertisers. Claims may be paid for higher amounts, or when the above procedures have not been complied with, at the discretion of this publication, but we do not guarantee to do so in view of the need to set some limit to this commitment and to learn quickly of reader's difficulties.

This guarantee covers only advance payment sent in direct response to an advertisement in this magazine (not, for example, payments made in response to catalogues, etc. received as a result of answering such advertisements).

CLASSIFIED ADVERTISEMENTS ARE EXCLUDED.
