Tandy in Dragon rescue bid

Dragon bosses are fighting to save their company. Talks were going on with Tandy about a possible deal.

Dragon had announced that the company was going into liquidation. Despite efforts in the last 12 months, a severe cash crisis had arisen. The turnover had escalated from nil to £18m and the problem was cash flow.

Brian Moore, Dragon Chief executive, was unavailable for comment as he was in a meeting with the receivers.

Andrew Barwood, financial director of Tandy's UK arm, said: "We are having preliminary discussions with the liquidators of Dragon. We may buy particular parts of the

Computer sales rocket

Sales of home computers boomed in the first quarter of 1984, according to a new report.

Micro purchases rose by 75 per cent against the same period last year. About 200,000 home computers were sold in the first quarter of 1984, compared with 114,000 in the first-quarter 1983. This means that more

Dragon

From front page

company. We may be interested in taking on Dragon's service and repair department, but it's unlikely that we would want the whole business."

"There may also be some interest in Dragon's software. However, I don't want to preempt things by saying too much," Mr Barwood said. Talks will be continuing this week to decide whether to proceed with negotiations.

Mr Barwood said: "Tandy computers haven't been the cheapest available but we've always had the feeling that some manufacturers were sailing too close to the wind and as a result would fall out of bed. It's an inevitable consequence of the competitiveness of the business. We have deliberately kept well out of it."

"Tandy has been successful because we have steered clear of the price war and we maintain a broader base of products."

Tandy is a multinational company based in Fort Worth, Texas. UK offices are in Walsall, West Midlands, and Tandy owns scores of UK high street shops.

Another company, Camputers, which makes the Lynx computer, is also facing financial difficulties. Camputers held a creditors' meeting on Friday. The legal procedure is that if the creditors wish to pursue the matter, a shareholders' meeting is then held and the company may then have to go into liquidation.

A spokesman for Camputers, based in Cambridge, said: "The company is actively looking for a buyer, and we have strong hopes that we will succeed. It's in a lot of people's interests that the Lynx should continue."

"The Lynx has sold very well overseas. We have a substantial market in Europe and anyone interested in buying out Lynx could expect for our sales to remain high there. The mood here is of fairly well grounded optimism."

Camputers has had substantial redundancies.

Sales soar

From front page

than 10 per cent of British homes have computers, and the UK still leads the world in acceptance of computers.

Dick Jenkins, client service manager at AGB Home Audit, explained: "The reason for the massive increase in computer sales is partly due to the

manufacturers successfully resolving their distribution problems. Other factors include the increased options open to consumers. This time last year the Commodore 64, Electron and Oric/Atmos weren't available.

"Advertising obviously plays a key role. The Commodore 64 sold well because the sales reps were in the shops two months before, assuring the dealers that there would be extensive TV coverage. Then when the elephant and mouse TV ads were seen, the machines were available in the shop, so the supply met the demands."

"Also I think the syndrome operates that if you know someone who owns a computer, you're more likely to want to go out and buy one," Mr Jenkins said. "Availability of computers is better now. Last year there was a shortage of components, which caused problems for distributors."

"The growth of the home computer industry follows the pattern of a logistic curve," said Mr Jenkins. "First a slow growth is succeeded by a fast then very rapid growth, finally tailing off when the market reaches saturation point. At the moment we are into the fast or very fast growth period."

"The rest of 1984 looks very promising. The market is very buoyant. If the manufacturers can get it right for Christmas and the main impact they are hoping for and then sustain availability, sales should continue to soar."

The AGB Home Audit survey provides a breakdown of computer buyers and users. It appears that the market is shifting; originally the principal buyers of home computers were the professional, managerial type. As with all consumer durables, it is the lower income group which really motivates growth, and this category of consumers is now heavily involved.

"Our research shows that kids are the main users of home computers, and 83 per cent are boys, Mr Jenkins said. "More than half of those who use micros are under 16. Both the Spectrum and CBM 64 are orientated towards children. However, although the BBC has attacked the educational market through schools, its main target is adults."

"The use of computers in educational establishments has given them status and credibility," he went on. "Parents are more willing to buy computers for their children now, as they believe they will learn from them. In

fact, most children use their micros for games."

"Where you buy your computer from is also changing," said Mr Jenkins. "There has been a very substantial growth of sales from electrical retailers, who now have one-third of the market. Computer specialist shops have declined markedly. I think this is because the credibility of home computers is now established, so that electrical retailers, who previously supplied mainly hi-fi and TV sets, are now willing to stock micros and are now dominating the market."

AGB Home Audit carries out a continuous survey of 25,000 homes in the UK each quarter. It provides a record of the acquisition of a wide range of consumer durables, and sells the data on an annual subscription basis.

AGB Home Audit, Research Centre, Westgate, London W5

You can do magic

If you want to learn how to program your Spectrum but can't cope with pages of incomprehensible text, Spectrum Magic could be just what you're looking for.

Written by Steve Betts and published by Foulsham, it's an illustrated book which aims to lead you through the fundamentals of using and programming your Spectrum while relating keyboard instructions to everyday events.

Spectrum Magic is designed for 8-14 year olds but could also appeal to adults who want to start somewhere. Price: £4.95.

Foulsham, Yeovil Rd, Slough, Berks SL1 4JH

Our winners

The solution to our Mogul word square competition: **Horizontal words:** Las Vegas Lady, Pollywog, Earthquake, Tiny Compiler, Kongo Kong, Zeus, Crash, Pyramid, Metamorphosis. **Vertical words:** Super Trek, Maths Tutor. **Diagonal word:** Potty Planter. Winners of approximately £22 worth of software each: Mrs T M Britton, S. Glamorgan; Deborah Bruce, Stirlingshire; Mr C Crane, Stoke-on-Trent; Glen Parebrother, Stonehouse; E H Bond, W. Yorks; Mr R P Smith, Middx; Robert Spick, Northants; A Urguhart, Avon; Mr B Davies, W. Mids; Myra Noble, Fife; Mick Goater, Bingham; Darren Thompson, Stockton-on-Tees; Mr A

Sussex; Henry Shades, Glasgow; Kevin Wheeler, Cumbria; C Dunford, Welling-ton; Andrew Morrison, Alloa; Graeme Banks, Edinburgh; Mr G J Howell, Worcs; Alan Keates, Manchester; Stephen Platt, Chorley; Colin McDermid, Scotland; Mrs A Lewis; Mrs T R Irvine, Manchester; Robert Eden, Norfolk; R Randall, Dunbartonshire; S Tonge, Manchester; Mr I Bebbington, Cheshire; Mr W Leving, London; P A Day, Aylesbury; Colin Blair, Glasgow; Clive Spells, Belvedere; David Taylor, Tyne & Wear; Iain Radford, Derbyshire; Mr A P Watson, Manchester; Richard T Dunham, Pendleton, Salford.

Byte off a chunk

Wall's has launched a 15p ice lolly called MegaBytes, and to celebrate is organising a competition for schools. Your school could win one of 25 BBCs. All you have to do is devise a computer game featuring ice lollies and list as many words as possible using the phrase 'Wall's and Acorn'. Send 15 MegaBytes wrappers with your entry to arrive not later than 28 July 1984.

Entries will be judged on originality, graphics, speed, sound effects, playability and presentation. Each MegaBytes wrapper also carries details of how to win one of 50 Acorn Electrons. MegaByte is available in two combinations of flavour: banana and chocolate and toffee and chocolate.

MegaBytes, PO Box 4XZ, London W1A 4DZ

Briefly

Ocean has brought out a new maze game for the CBM 64 and 48K Spectrum. Called Cavelon, it has you riding through a maze to rescue Guinevere. There are six levels of difficulty, and your powerful weapon is Excalibur. Once you have found the imprisoned Guinevere, your horse sprouts wings and turns into Pegasus, so that you can both fly away into the sunset. Spectrum: £5.90; CBM 64: £6.90.

VIC-20 PROGRAM

This program is for the unexpanded VIC-20.

You are the spider in this game and you are hungry for crunchy flies. You are on a desktop and there are appetizing flies scattered around you. You scuttle around eating them, but watch out! Blobs of ink fall on the desk at random, and you must avoid them or be swamped.

Hints on conversion

Conversion shouldn't be too difficult. CBM BASIC has no sound commands and the POKes used for sound are:

36874-36877 sound voices
36878 volume
The POKes used for screen are:
7680 start of screen memory
30720 (+7680) start of colour memory
36879 screen colour
36865 location of byte to control horizontal position of screen

You must attempt to eat as many flies as you can while avoiding the ink and the trail of sticky silk you leave behind you as you walk.

How it works

10-70 instructions
100-180 set up graphics
200-210 initialise variables
210-250 put flies in screen
260-305 put spider in centre of screen
310-315 decide to put fly or blob on screen
320-365 check keyboard
390 put trail behind spider
1000-1050 put blob or fly on screen
2000-2020 check if spider is about to hit anything
3000-3020 print score. Check if time has run out
5000-5060 end routine
6000-6040 spider eats fly
7000-7010 move to new screen
8000-8060 between screen instructions
9000-9050 data for graphics
10000-10010 scroll screen

You have 40 seconds on the first screen, and you get an extra three seconds on each following screen as more flies appear and more ink is dropped.

You can escape from a screen if you find you cannot eat a fly. Hit E and move on to the next screen. However, you can only do this once every 50 points and the penalty for ducking out is the loss of one-third of your score.

The control keys are Z left, X right, K up, M down, E escape.

● We have inserted REMs in the lines above control characters to guide you as you enter the program. Do not type in these REMs. And remember to use abbreviations — they are in your manual.

Variables

L level
NF number of flies to be printed
FG number of flies eaten
SP which spider to print (up, down, left or right)
CO find colour memory
C number of escapes available
SC score
CS flag used to see if bonus escape is to be given
TH either fly or blob
TC colour of TH
K current key pressed
F flag
LMS time limit

Come into my parlour

Lure the flies into your web and devour them, in this game by Albert Plattner. Mind out for ink pellets though — they could mean the end of your career as a gourmet insect-eater

COMPETITION

Win a backstage tour of

Discover how the games you play are dreamed up, designed, programmed and reproduced.

We're offering a special outing to a brand new software house, CheetahSoft, to the top winner of this week's spot the difference. Thirty runners-up will receive 3D Bat Attack and Conquest, two new releases from CheetahSoft. Both run on the 48K Spectrum and cost £6.95.

If you're the first prizewinner, CheetahSoft will pay for your surface travel expenses from anywhere in the mainland UK. As the guest of honour, you will be given a guided tour of CheetahSoft

and you will also be able to visit BiBi Magnetics duplication house, to see how games are mass produced. Lunch will be provided for you and CheetahSoft will present you with both new games.

The trip will take place on a weekday convenient to all parties. You must be 10 or over and accompanied by an adult if you are under 16.

"CheetahSoft is a fresh new company," said Peter Hardingham, marketing director.

"Our motto is CheetahSoft: soft we're not, and we aim to produce quality games. We plan to launch new games for the Commodore 64 and the Spectrum."

CheetahSoft burst on to the scene with two games, 3D Bat Attack and Conquest. 3D Bat Attack is a maze-type game, while Conquest is a game of strategy.

In 3D Bat Attack you must find your way around a maze collecting

an exciting introduction to professional software.

How to enter

Study the cartoons — there are a number of differences between them. Circle the differences on cartoon B and seal the cartoon in an envelope. Write clearly the number of differences you found on the back of the envelope.

Post your entry to CheetahSoft

CheetahSoft

bars of gold. Beware the vampire bats who are after your blood! The only respite you will find is if you eat cloves of garlic — but the bats won't be deterred for long. Four levels of play test how fast your reactions are.

Conquest is a game of tactics: set in Mediterranean Europe, you are the Emperor and your ambition is to broaden the empire. You must gain 100 of the territory grid squares as quickly as you can, while fending off barbarian counter-attacks. Progress is hard; you may be struck by random plague attacks or afflicted by civil war. However, whenever you cover five squares you gain an extra legion.

Your opponent is the computer, joined at higher levels by rival Emperors who are as wily and nasty as you.

So, if you're interested in an insight into how the software industry runs, and perhaps hope to pick up a few hints about how you could market your own software, then this is for you. Enter our competition and this could be

Competition, Home Computing Weekly, No. 1 Golden Square, London W1R 3AB. Entries close at first post on Friday June 29, 1984.

Important: please follow carefully the guidelines on entering — incomplete coupons and entries in envelopes with no numbers on the back cannot be considered. If you are a winner, the coupon will be used as a label to send your prize, so clear writing is essential.

The winner will be the first entry opened at random after the closing date. The next 30 correct entries will win 3D Bat Attack and Conquest from CheetahSoft.

The prizes will arrive from CheetahSoft within 28 days of publication of the issue containing the names of the winners.

The rules

Entries will not be accepted from employees of Argus Specialist Publications, CheetahSoft, BiBi Magnetics and Alabaster Passmore & Sons. This restriction also applies to employees' families and agents of the companies. The How to Enter section forms part of the rules.

CheetahSoft Competition Entry Coupon

Number of differences found _____

Complete clearly and fully — if you are a prizewinner, this will act as a label. Post to: CheetahSoft Competition, Home Computing Weekly, No. 1 Golden Square, London W1R 3AB. Closing date: first post, Friday June 29, 1984. Don't forget to follow closely the guidelines in the How to Enter section, including writing the number of differences on the back of the envelope

Arena 3000 Atari £8

Microdeal, 41 Truro Rd, St Austell, Cornwall PL25 5JE

Set in the year 3000, this game creates a fast-action intergalactic war. You take the part of a human/machine hybrid called a Cyborg. Your mission is to battle against deadly robots. You must frantically fire at them until you have destroyed them all.

Then, surprise surprise, you begin again only this time the hyper spheres, saucers and baiters etc move a little faster.

Similar to space invader-type games, Arena 3000 is technically very good with superb graphics and sound effects. It is played using joystick and is fairly easy to get used to. I suppose the

game's failing is its lack of originality. But, after saying that, this must rank as one of the best of its kind. It can be played by one or two players and also has a facility to record your highest scores. If you like the invader type games this variation is certainly worth a try.

Maybe different skill levels would have improved Arena 3000, although it does get progressively more difficult. I have to admit that getting beyond the fourth arena is something I have yet to achieve.

Galagon Dragon 32 £8

Microdeal, 41 Truro Rd, St Austell, Cornwall PL25 5JE

A machine code arcade game in which you must destroy as many aliens as possible before they get you.

You can select one of three colours for the background. If you do not start a game immediately the programme will go into demonstration mode.

Your ship is positioned at the bottom of the screen. It can move left and right and fire missiles.

Aliens appear from left and right in small groups and move into formation at the top of the screen. They dive towards your ship. Some drop bombs while

they more into formation. You can destroy them at any time. When you have destroyed several waves you play the challenge stage for bonus points, in which the aliens cannot fire back and don't move into formation. The aliens come in several varieties and colours, and points are awarded depending on who you hit and what they are doing.

The instructions are included on an insert and explain the game sufficiently. The program loaded with no problems. It is a thoroughly enjoyable game with very good graphics.

Crazy Fun House Texas TI-99/4A £7.95

Timeless, 3 Bridgend, Fouldhouse, West Lothian, Scotland EH47 9HF

Crazy Fun House is a maze game. At certain points there are trip squares; if you land on these certain things will happen.

The maze becomes invisible, only reappearing when a second trip square is reached. Sometimes a ghost chases you around the maze. At one point the screen turns black and seven ghosts float across the screen.

Sometimes a blue square lights up in the centre of the screen and if you reach this square you can shoot the ghosts for extra points.

When you are chased by one ghost the screen suddenly turns red and you become the chaser.

Full instructions are printed on screen before hand and I found them perfectly adequate. The graphics and action are very good and come up to the expectations of a game written in Extended BASIC. There are no facilities for keyboard operation and joysticks must be used.

On the whole a very entertaining game and well worth the money. Needs Extended BASIC.

Star rated for fun

Our reviewers are hard to please. So these games, all with four or five stars, must be really good

Buzzard Bait Dragon £9.95

Tom Mix (Microdeal), 41 Truro Rd, St Austell, Cornwall PL25 5JE

Wow! What a game! Now I know why they decided to protect it so well. Yes, this is the game with the dangle, a black plastic box which plugs into the joystick port and which must be present every time you load the game. If not you can't get it fully loaded and have to start again and it is a particularly long loading game.

The game is great however and will provide you with many happy hours of relatively non-violent fun.

You have a winged steed to

help you topple the enemy off his animal and turn him into an egg.

The game can be played by two players, although it is easy to find that you have been killed by the other player.

The graphics are the very best I have seen and for the Dragon the choice of screen colours is a worthwhile feature. The sound is also remarkable due to its restrained yet very fitting nature. A real winner which I would like to see on other machines too.

Quack a Jack Oric/ Atmos 48K £750

Severn, 15 High St, Lydney, Gloucs GL15 5DP

Jack the duck has found himself trapped in the palace dungeons. Frantically he must smash the Terraducktile eggs before they hatch and come flying after him. However, there are some snags, such as the stones crumble away as he steps on them and it becomes increasingly tricky through which to pick a route. Also the dungeons are inhabited by some amazing creatures such as duck-eating micros, prawns and teddy bears. They are out to get Jack and have also left their cooking pots around for him to fall into.

The display is colourful with clever use of Oric's attributes and I also liked the sound effects. Since the normal text screen is used, the movement is of the step-by-step sort but in a game of this type that is no drawback. The 16 skill levels increase gradually, and should provide an appropriate range of difficulty for a wide range of players — what goes on in the top ones is still a mystery to me.

In all the game is very well put together and should provide lasting entertainment — but don't let those eggs hatch because the beasts are really mean.

ARTIFICIAL INTELLIGENCE AND JAPAN'S COMPUTER CHALLENGE TO THE WORLD

THE FIFTH GENERATION

Edward A. Feigenbaum & Pamela McCorduck

This most vital and disturbing book about computers is the story of the superbreed of machines now being planned by the Japanese. They will contain knowledge, think and make decisions better than any human. The rest of the world will need to buy their expertise . . .

'Essential reading for anyone concerned with computers in Britain.'

CLIVE SINCLAIR

'Undoubtedly the year's most important book about computers.'

CLIVE COOKSON, THE TIMES

Paperback, £2.95

New and
revised edition

ON SALE IN BOOKSHOPS NOW!

U.S. SCENE

Now, stop worrying

One of the biggest worries facing computer buyers is wondering how long the companies who make their new wonder machines will stay in business. There is little that is more unsettling than learning that your very expensive Doeverythingfornexttonothing Mark I has just turned into a very expensive paperweight due to the demise of its manufacturer. At second glance, this may not be as much of a worry as it originally may seem, at least not in this country.

There are two main aspects to operating either an obsolete machine or one made by a defunct company — software availability and hardware support.

A few years ago this was more of a problem than it is today. There are several large service firms in many parts of the country which are quite able to repair most machines. Very rarely do any of the custom integrated circuits made for specific machines ever fail. Aside from those, most defective machines can be repaired using off-the-shelf components. So much for hardware worries.

In terms of software, the situation is more variable, but far from hopeless.

There are many examples of software companies which have sprung up solely or primarily to cater for users of a defunct computer or company. For example, United Software Company, of Tulsa, Oklahoma, has just released two programs in a planned series to support the Victor 9000, whose parent company filed in the bankruptcy court several months ago. You might recognise the Victor 9000 as the Sirius, distributed by ACT and going strong. Another firm, called Drive C, exists solely to support the Osborne 1, whose company also went under a while back. Drive C makes RAM discs and sales have actually increased since Osborne's demise.

Similarly, there are several firms who are making quite a good living, thank you very much, supporting the dearly departed TI-99/4A. The users number about two million, a very tempting number to software authors and publishers. For example, a company called J&KH Software of Arlington, Virginia, has just come out with SXB, for Super Extended Basic, designed to help programmers of the TI-99. The program costs only \$99.95 (never mind that many paid half of that for the machine itself), including a binder and 76 pages of documentation, along with a six month subscription to a newsletter called SX Briefs.

If a machine was popular enough before its demise, chances are it had a users group devoted to it. In such cases, the demise of the machine or its company actually contributed to the growth of the users group. As you might guess, people are scared to be stuck with a useless/unsupported device and turn to the user groups as a logical source of information and support. Often, as in the case of FOG (the Osborne users group) thousands of programs are available.

A similar phenomenon has arisen with obsolete or discontinued video game machines, such as Mattel's Intellelevision and Aquarius. A company called Intellelevision started up last year to ship machines and supply new and existing games to retailers. You can contact them at 5150 Rosecrans Road, Hawthorne, California, 90250.

Another company, Odd Lot, has bought up the entire remaining Aquarius inventory including hardware and software, and is reselling directly to users. Furthermore, Odd Lot also buys brand name high quality products from any American manufacturer that has been discontinued for one reason or another. If you want to see what they have, and/or you want to buy an Aquarius-related product, contact them at Odd Lot, Empire State Building, 350 Fifth Avenue, Suite 1330, New York, NY 10118.

That's it for this week. See you next time.

Bud Izen
Fairfield, California

GEM SOFTWARE

OH MUMMY!!

Your party of archeologists enter the pyramid in search of the mummies of the pharaoh's household. There are five burial chambers containing treasure, secret scrolls, keys, royal mummies and some nasty surprises. To pass from one chamber to the next, you must find the key and royal mummy, but beware, you may uncover a guardian, who will chase your group to avenge your desecration!!

A Machine Code game for those with nerves of steel and great courage.

Price (ZX81 & SPECTRUM) £4.95

DISCO DAN

Can poor Dan decontaminate the atomic fuel rods in time?! In this new 3D machine code game, you control Dan Dan The Atomiser Man, jumping him from disc to disc, trying to reduce the ever increasing radiation levels, in the atomic pile. However, Up'n'Atom'Arry and his gang of vagrant particles are thirsting for the energy in your back pack, which makes life a bit awkward at times. Then there's Ron the Rapacious Robot, not the sort to meet in a dark alley (or anywhere else for that matter)!!

Price (48K SPECTRUM) £4.95

MIKRO-GEN

44 The Broadway, Bracknell, Berks RG12 1AG Tel: 0344 427317

Bridgemaster Spectrum £12.95

Bridgemaster, PO Box 163,
Slough SL2 3YY

This super package features 26 hands of the game, chosen to teach specific ideas, together with a spoken commentary tape.

The screen shows the bidding, according to the Acol system, and you take the only human part. Your Spectrum is both partner and opponents. Once a contract is made, the display changes, and yours and the dummy hand are shown. The commentary guides your play and you win!

You can summon up several modes. AUTOPLAY allows you to sit back, watch and ponder the

play, PEEP lets you see all the hands, FREEPLAY adds the facility to play all the hands yourself, and RESTART means just that.

The graphics are superb, the user inputs idiot-proof, and the action fascinating. There's even a help feature. I would have liked the facility to play without the computer stopping me making wrong decisions. This is, however, a teaching program, not a simulation. A little pricey, and you should know quite a lot about the game before you use it. Bridgemaster is excellent. D.M.

Holy Grail 48K Spectrum £5.95

Dream, PO Box 64, Basingstoke
RG21 2LB

"The world's first funnyised graphic adventure" proclaims the smart packaging of this tape. You are cast as Sir Tappin the Basic, and your task is to find the holy grail and return it to Camelot Castle.

The screen presentation is very reminiscent of the Hobbit. The standard of graphics is high, but that's where the similarity ends.

Humour is a funny thing, no pun intended! This didn't make me laugh! The CND picket by the nuclear powered lamp, the nurk who battered me to death with a VIC-20, and drowning in

a cess-pit all left me cold. The only thing to produce a reaction was the French guard, who smothered me to death in a nasty green substance from his nose.

There are stinking forests, muddy verges, motorways (in the Middle Ages?) and, whoopee, more cesspits! The accompanying instructions set the low tone.

It's undeniably clever, well executed, and very good value for money. I, however, was so unamused that, after my third death, I didn't want to go any further. If you're into lavatory humour you may like it better.

D.M.

instructions	95%
playability	95%
graphics	95%
value for money	100%

Hotline 48K Spectrum £11.25

Chalksoft, 37 Willowslea Rd,
Worcs WR7 7QP

Hotline is a quiz program, driven by sections of machine code, with some stunning graphics and sound effects.

The hotline from Washington to Moscow has broken down, and you mend it by answering twenty questions correctly. The phones and lines are graphically and sonically illustrated. The questions are set on words, geography, cowboys, pirates, food, monsters, two medleys and a Mastermind section.

There is a good supply of questions and an excellent set of instructions. What makes this program different is that you can add your own question sets, modify the number of correct questions needed, add extra questions to the current set and save the whole lot to tape for future use.

So you have a complete framework for checking knowledge of facts, at any level from junior school spelling lists to 'O' Level test questions. One of the big plusses of this program is that it runs quickly.

I found this far more impressive than other quiz programs I've seen, and of much easier lasting use. At this price, and with this structure, however, it should have been in Microdrive cartridge. D.M.

value for money	80%

Top of the class!

Our reviewers gave all these new games for the Spectrum high marks. Read their views and see if their enthusiasm is catching.

Dungeon Builder 48K Spectrum £9.95

Dream, PO Box 64, Basingstoke
RG1 2LB

This is a masterpiece. A complete do-it-yourself kit for creating a graphic adventure. Don't be misled by the title; you can create anything. The only real limitations appear to be time and your own imagination.

You mark out your adventure on a huge scrolling grid of eight-sided rooms, each side representing a point of the compass. As you define each room, you open up passages, write descriptions, place objects and decide the verbs necessary to pick them up. Similar procedures are

undertaken to create cliffs, stairs and monsters.

The really amazing bit is the facility to draw the pictures. You can gradually produce a really effective illustration in multi-colours. This is then recalled when that location is reached.

You won't write your game in a day. It's quite hard, even given the excellent power at your fingertips. If you do create something great, you can save it to tape as a stand-alone adventure, or even market it. Dream gives its express permission for this. Outstanding. D.M.

instructions	100%
ease of use	90%
display	100%
value for money	100%

Blade the Warrior 48K Spectrum £5.99

Cable, Limbury Rd, Luton, Beds
LU3 2PL

This is an all text adventure, but don't let that put you off! Your imagination paints far better pictures than your Spectrum can.

You are Blade the Warrior, a macho-man who is an expert with weapons and has some knowledge of magic. You are to follow the trail of Mazar the Wizard in seeking out the Black Witch and defeating her.

You start at a wall with an open door. You are attacked by a horde of bloodthirsty Orcs, mythical birds. I must have been killed a dozen times and, boy, are those Orcs bloodthirsty!

In the forest lurk goblins, ogres, magic trees and weapons, spells and caves and the occasional human body or limb just lying about. There is a tremendous sense of evil, suspense and magic hanging over the whole game, and the descriptions really did conjure up some marvellous pictures in my mind.

This adventure isn't easy, but you can write for a hint sheet which helps without spoiling the game. Highly recommended and excellent value for money, there's just one moan; why the odd spalling mistook? D.M.

Save £1 and you could strike gold

You are now one week nearer saving £1 off the price of joining a £30,000 treasure trail.

We have ensured you can be among the first to take part in the hunt by reaching an exclusive agreement.

You'll need the voucher on this page, the voucher from last week's issue and the coupon which will appear next week.

The treasure, made of gold and set with precious stones, is the Jewelled Hare of Masquerade which set off a nationwide hunt in August 1979.

A book called Masquerade, written by Kit Williams, gave clues to its hiding place and it was finally found in 1982 by a man called Ken Thomas.

Mr Thomas has now sold it to a new company called Haresoft — and now the hunt begins afresh.

But this time the clues are in two adventure game tapes. The first, called Hareraiser Prelude, is launched this month. Both cassettes run on the Commodore 64, Spectrum, expanded VIC-20, Oric/Atmos, 32K BBC and Dragon, with the Amstrad to follow.

The tapes will cost £8.95 in the shops.

But to readers of Home Computing Weekly, the price of Hareraiser Prelude is just £7.95, by mail only and including postage and packing.

This special price is only available by collecting the two vouchers — on this page, and in last week's HCW — and sending both to Haresoft with the coupon in next week's magazine.

This offer is made through this magazine by Haresoft, to whom all enquiries should be addressed. Haresoft says your tape will arrive within five days and that it guarantees replacement of any faulty tapes.

It's the second week of our special offer which could make you £30,000 richer. You'll need our vouchers — and the patience to wait for next week

Hareraiser Prelude will get you started on the hunt, but will not alone provide the solution. You will also need Hareraiser Finale (not part of this offer),

which is due out in mid-September.

Another difference between this and the earlier hunt is that the treasure has not been

**£1 off
Hareraiser
Prelude
Voucher
2**

buried, to avoid damaging the countryside and to give an equal chance to young people who cannot travel freely.

Instead the winner just has to pinpoint its location.

Haresoft has also taken action to prevent piracy:

- copied tapes will not contain all the data
- registration numbers of the two tapes must be held by the winner

Purchasers of the first tape, including HCW readers, who register will be offered the second by mail on the day of issue.

Haresoft says the hare was first valued by Mr Williams at £5,000 and then valued by the press at £20,000. Now the company believes its value has risen to £30,000.

The winner may take £30,000 in cash as an alternative to the hare.

- Hareraiser Prelude may also be ordered, at the full price of £8.95, including postage and packing, from Haresoft, P.O. Box 365, London NW1 7JD

BBC/ELECTRON ADVENTURES LEAVE REALITY BEHIND YOU WITH THESE AMAZING ADVENTURES FROM MP SOFTWARE

★ ★ NEW ★ ★ WOODLAND TERROR £7.48 (CASS) £10.50 (DISC)

The sequel to FIREWOOD, many years ago an intrepid adventurer embarked on a quest for the Golden Bird Of Paradise. Although successful, our hero released a sinister force which now lurks within the enchanted wood. Your mission is to return the terror to its original resting place and restore peace to an unhappy land!!! This is a complete game, knowledge of Firewood is not required.

FIRIENWOOD £7.48 (CASS) £10.50 (DISC)

An evil wizard has captured the magic Golden Bird Of Paradise and imprisoned it in a weird castle in the middle of the enchanted Firienwood. Your quest is to find the bird and set it free, in return the bird will give you health and prosperity. BEWARE! many perils lie before you and every move is fraught with danger!!

BLUE DRAGON £7.48 (CASS) £10.50 (DISC)

Somewhere in a strange and dangerous land lies a fabulous treasure guarded by a fierce dragon. Can you survive the perils that await and recover the treasure or will you meet a nasty end!! What is making terrible slurping noises deep underground and what use is the strange black cloud? Play the game and find out.

SURVIVOR £7.48 (CASS) £10.50 (DISC)

The year is 1910 and you are sailing on a steamer bound for Borneo when there is an explosion and the ship sinks. Shipwrecked on a tropical island can you survive and escape back to civilisation, or will you end up in someones cooking pot!! There is more than one ending to this game, not all of them bad!

All the games are in machine code for fast responses and are text only. Please state which machine when ordering. Prices include VAT and postage within U.K. Cheques payable to MP SOFTWARE or write/phone with your ACCESS/VISA card number. Send S.A.E. for full range of programs and price list or ask your local dealer. Trade enquiries welcome.

You could be on our pages

We welcome programs, articles and tips from
our readers. If you feel that your work meets our
standards, please submit it to us for
consideration for publication.

- Programs must always be sent on cassette. Listings are helpful, but not necessary. Check carefully that they are bug-free. Include details of what your program does, how it works, variables you have used and hints on conversion.

- Articles on using home computers should be no longer than 2,000 words. Don't worry about your writing ability — just try to keep to the style in HCW. Articles most likely to be published will help our readers make better use of their micros by giving useful ideas, possibly with programming examples. We will convert any sketched illustrations into finished artwork.

- Tips are short articles, and brief programming routines. Your hints can aid other computer users.

All submissions will be acknowledged and the copyright in such works which will pass to Argus Specialist Publications Ltd will be paid for at competitive rates.

Keep a copy of your work and include an SAE. Label everything clearly and give a daytime and home phone number if you can.

All work for consideration should be sent to:

**Paul Liptrot, Home Computing Weekly,
No.1 Golden Square, London W1R 3AB**

A Penny For Your Thoughts

Actually MicroQuest offers you rather more than a penny.

£1,000 to be precise, if you can come up with an idea for an innovative and original use of microelectronics.

MicroQuest is organised jointly by Williams & Glyn's Bank and MAP, the Department of Trade and Industry's programme to encourage the application of microelectronics. The competition aims to encourage young people to take an active part in the development of British industry and business.

WHO CAN ENTER?

MicroQuest is open to everyone between the ages of 16 and 21, and is divided into two categories. The first is a general category allowing entries from anyone between 16 and 21, and the second dealing with those over 16 in secondary education.

We require entrants to MicroQuest, to submit a 2,500 word report, identifying a new use for microelectronics and explaining how it could be implemented.

The applications can be literally for anything from musical instruments to control systems for mining machinery. The idea of the competition is to produce applications that will improve and develop original products or processes. It is important, however, that you keep in mind that the applications must be practical and

therefore realistic in terms of cost.

The report itself should give us a clear description of the area where you see the application being made, and what will be the benefits of the application. If you wish to illustrate your report, make sure that all your designs/illustrations are on A4 paper and that there are no more than 6 of them. When you send in your report it should include a summary of about 300 words of its contents.

The prizes for the general category will be a first prize of £1,000, with runners-up receiving prizes of £500 and £250. The schools category will have a first prize for the winner's school of £500 of computer equipment of its own choice, plus a cash prize of £150 for the winner. The runners-up will receive £100 and £50.

HOW TO ENTER

Simply tear off and complete the attached entry form and submit it with your report, which should also include a 300 word summary and any designs you have produced. The completed application form should be signed by your employer, teacher or supervisor.

Send the completed form to: "MicroQuest", Williams & Glyn's Bank, 20 Birchin Lane, London EC3

But hurry. Entries for the competition close on the 30th June 1984.

MICROQUEST APPLICATION FORM

Complete this form, which should be signed by a representative of your employers' company, or your training officer or teacher, and send it with your report and a 300 word summary, to:

"MicroQuest",
Williams & Glyn's Bank,
20 Birchin Lane, London EC3

snakes

In this game you play the part of a snake and your main aim in life is just that — to stay alive. You do this by crunching cockroaches, feasting on fleas and swallowing superfrogs.

To move on to the next screen you must gulp down all the cockroaches. You will find more and more on subsequent screens!

To gain points, fleas come in handy and you find them delicious. The superfrogs are just what you fancy too. They flash until you can get your jaws round them — then they transport you to the next screen.

However, life is not just one big teaparty. Your life is endangered by huge hairy spiders. One brush with them means death.

How it works

3-4 routine to find random location not on top of a cockroach
10-55 set up a screen and wait for key depress
100-200 main game loop
7000-7070 clear sheet routine
8000-8150 routine for UDGs
8500-8600 routine for machine code sound effect
9000-9030 lose life routine
9500-9030 game over routine
9800-9907 title display routine

The cruellest touch is the hidden trap. Ever since the garden of Eden, man and snake have not got on, and your arch enemy has set up an invisible trap to send you slithering into destruction! There's not much you can do about this one except wish for good luck.

To start this program, enter

You want a long life. To fulfil this dream, you must beware of spiders, cockroaches and hidden traps. Timothy Keen's game has you feasting on cockroaches, fleas and superfrogs

user defined graphics program and run it. Type NEW to erase everything except the graphics. Next enter the Snake program.

Then type SAVE "SNAKE" LINE L (ENTER) followed by SAVE "SNAKE" CODE USR "A", 103 (ENTER).

Hints for conversion

1 Graphics would have to be changed (where there are letters in between quotation marks, i.e. lines 35 or 195, there is a UDG

2 PEEK 23560 (line 100) reads the keyboard. This could be replaced with other keyboard scans (GETS for example)

3 BEEP, FLASH, BRIGHT, OVER, BORDER, INK, PAPER, INVERSE are all unique to the Spectrum. Either omit or replace them

4 ATTR (line 152) would have to be replaced with other ways of reading locations on the screen

5 RANDOMISE USR 30000 is a machine code sound effect — either omit or replace it

6 The 9800 routine could easily be omitted

Variables

t=255,0=1 throughout to save memory in DATA and elsewhere
sp skill level (decreases when more sheets and more spiders)
sx,sy random numbers position fleas, frogs, spiders, traps
nu number of cockroaches on sheet
qw number of cockroaches eaten
sc score
hs high score
li lives
a ATTR value of snake
tx,ty CO-ORDS of trap
x,y CO-ORDS of snake
q PEEKed value to read keyboard (alternative to IN-KEYS)
qS linked with q above
z number used in defining snake direction
aS linked with z above
f,g dummy variables used in loops

You start the game with three lives, and you lose one if you bite yourself by going over your own trail, if you bump into any of the four screen walls or if you run into a spider. If you are swallowed up by the trap you run out of chances and the game is over. One consolation is that if you manage to reach the fifth sheet, you gain an extra life.

Each time you clear a screen you get a bonus, which increases as more screens are cleared. You get one point for moving. A full score and high score are kept, and you will hear a little tune if you equal the high score.

When you load the program from tape it will run automatically, using the UDG.

Now you must VERIFY the main Snake program. Start the game by typing "GOTO 2". You must use this whenever you run the game.

Here is a guide to the graphics. When you see these lines enter GRAPHICS mode.

Line	Graphics
30	A,B,C,D
35	I
104	N
120	G
130	H
140	E
150	F
195	J
196	K
197	L,M
5801	I,K
5802	J
5804	L,M,E
5805	I,J

The No.1* Football Game

Football Manager

Designed by Kevin Toms

Some of the features of the game:

- ★ Matches in 3D graphics
- ★ Transfer market ★ Promotion and relegation ★ F.A. Cup matches ★ Injury problems ★ Full league tables ★ Four Divisions

★ Pick your own team for each match. ★ As many seasons as you like ★ Managerial rating ★ 7 skill levels ★ Save game facility.

addictive

Comments about the game from press and our customers.

"FOOTBALL MANAGER is the best game I have yet seen on the Spectrum and my personal favourite of all the games on any micro... To the ordinary person it is an excellent view of what can be done in the field of computer games. The crowning glory of this game is the short set pieces of match highlights which show little stick men running around a pitch, shooting, defending and scoring... It is a compulsive game but people who cannot take game sessions of 9 hours or so, which happened on one happy Sunday, will be grateful to know that there is a 'save to tape' option. FOOTBALL MANAGER has everything it could... The originator, Addictive Games, certainly deserve the name." Rating: 19/20 (Practical Computing - August 1983)

Maths 32K BBC/ Electron £9.50

Scisoft, 5 Minster Gardens,
Newthorpe, Nottingham NG16
1AT

This company was one of the
first to produce educational
programs for the BBC and so far
I have been impressed.

This package contains five
programs for the 9-13 age range.

In Symmetry you draw a shape
and see its rotational or reflected
forms. Whilst this is interesting it
isn't taxing or educational.

Fractions is better in that you
have to say which is the larger of
two fractions and then they are
drawn for comparison on screen.
This is good although the range
of fractions is not large.

Shape is a naming game but

your wrong answers are drawn so
you have feedback and will learn
from your mistakes. The
problem here is that the circles
are elliptical.

Factors is the most interesting,
involving a balloon which
collects each correct factor you
choose and then the number
pairs are shown.

Finally there is the well worn
game of Battleships which
teaches co-ordinates but you can
only guess the computer's square
and cannot set up your own.

Fair programs but vastly over-
priced. **D.C.**

Physics Dragon 32 £9.50

Scisoft, 5 Minster Gardens,
Newthorpe, Notts NG16 1AT

If you are preparing for 'O' level
Physics then this tape is for you.

The basis of the package is a
set of programs and revision
notes which try to cover the
syllabus of most examination
boards. It is up to you to check
that it does, though!

The cassette starts with a
program of hints and tips for
organising revision schedules, all
the usual stuff about being
methodical, but no less useful
because you've heard it before.
The programs all involve
multiple choice questions and the

idea is to get 100 points from the
tests.

The scoring is on an
exponential basis (wrong answers
cause you to get fewer points) so
that you really have to work hard
to get your 100.

This program cannot make
you pass exams but if used wisely
it could help you greatly. Two
small criticisms are that it can
ask the same question twice in
one test, offering the same
answer in two ways, e.g. 'rise in
temperature' and 'temperature
rise' but only one is correct! **D.C.**

instructions	90%
ease of use	90%

Olympics 84 48K Spectrum £14.95

Storm, Wooton Grove, Sher-
borne, Dorset

This program ought to be called
Everything you Wanted to Know
about the Olympic Games but
were too Lazy to Find out!

This is a complete database of
the results of the Olympics from
1896 to the present, classified by
years, medals, events, sports,
sexes and countries. The
program calls up the results,
together with winning times, etc
in response to your combination
of input factors. It will even
draw a bar chart of certain
comparisons. It is extremely fast
and well laid out.

A second cassette in this very
professional package allows you
to input the results of this year's
games in detail, then compare
them with those of the previous
two Olympics.

The two cassettes are
accompanied by a high quality
instruction manual, which also
gives a potted history of the
Games.

If you're a facts and figures
orientated sporting computer
buff, then buy this with
confidence, although it's
expensive. But don't expect to
read the manual in five minutes
and rush into using it. You need
to practise to get the best from
this 'program with a purpose'.

Let your micro teach you a lesson

Learn something new from
your computer. These
programs can teach you a
thing or two. See how our
reviewers rated them

123 32K BBC £5.99

Compusoft, 32 Watchyard Lane,
Formby, Nr Liverpool L37 3JU

Another education for me. If I
carry on at this rate my brain will
reach genius level. Seriously
folks, this isn't very funny.
Boring display, pricey and
familiar.

You have a choice of three
sections: 0 to 9 display, numbers
display and games.

This is designed for children
who are learning to recognise
numbers, but I find it difficult to
understand how they will be able
to use a computer keyboard.

The 0 to 9 display simply
draws out each number from 0 to
9 along with a picture. Very
monotonous even for a four-

year-old.

In the number display the child
picks a number which is
displayed.

You have a choice of three
games — number, picture and
hard number game! You must hit
the key corresponding with the
number or picture on the screen.

In today's difficult market I
can't see how a piece of
educational software of this
standard can sell at £6. I'm no
expert but if the standards are as
high as for games then this
program can't possibly sell. **D.B.**

Reactions 'O' Level 48K Spectrum £8.50

Cloud 9, 4 Dolvin Rd, Tavistock,
Devon PL19 9EA

A printer would be useful for
recording the results of the
simulations in this 'O' level
chemistry revision program
dealing with the rate of
reactions. If you choose
Revisions Notes, information is
given a little at a time, and you
must run side two to answer
questions posed about the two
simulations.

A graph of evolution of
oxygen against time from
hydrogen peroxide is shown,
followed by clues to its
interpretation. Then, using a
collision model the effects of
concentration, temperature and
pressure upon particles is shown.
Other factors are mentioned and
graphically explained, followed
by the definition of a catalyst.

Side two offers simulations of
the decomposition of hydrogen
peroxide and the reaction of
marble chips with hydrochloric
acid. The former allows choice
of temperature, catalytic mass,
concentration and volume of
hydrogen peroxide and time.
Then the experiment runs,
followed by options including
tabulation and plotting of
results. Similarly with
experiment two, where carbon
dioxide bubbles match plots on
the graph, shown on screen,
which can be printed.

A simplistic program making
use of some of the interactive
potential of the computer. **T.W.**

Run round the rugged rocks

In this game you have to reach the top of the Hex mountain to collect sacks of gold, avoiding the falling rocks as you climb.

Points are awarded for every move but energy is subtracted. On reaching the gold extra points and energy are awarded. Falling off the edge loses energy and one life. An extra life is awarded for every five sacks of gold collected.

The game starts with one falling rock. If you reach 1,500 points then another rock is added.

Up right F, up left A, down right C, down left Z.

Hints on conversion

PLOT x,y is similar to PRINT 0 x,y. When PLOT is followed by a number this is a colour attribute i.e. 0 to 7 are foreground colours 163,164 are characters in inverse colours.

KEYS scan, **WAIT** pause, **SHOOT**, **ZAP**, **EXPLODE** sound commands, **MUSIC** PLAY SOUND control sound generator.

How it works

1 clears screen, sets colour
2 switches off cursor and key-click; GOTO instructions
10 set high score
25-264 sets up strings to display on screen, variables and colours
400-499 main loop, move man, checks for hit, fall, or gold
500-700 move rocks routine
1000-1075 fall routine
3000-3100 reach gold routine
5000-6000 re-define characters
7000-7130 game over routine
8000-8120 instructions

TI-99/4A **LANTERN** TI-99/4A

DADDIE'S HOT ROD (BASIC)

Drive through sheep fields, woods, over rivers and avoid all obstacles, then pick up hitch-hikers down perilously twisting roads. HCW gave five stars. **£5.95**

HUNCHBACK HAVOCK (BASIC)

Arcade action in TI-BASIC! Race with Egor through 24 different sheets. Superb graphics and great fun. **£5.95**

THE BLACK TOWER (BASIC)

Unlock the mysteries of the black tower and rescue the Lady Gwen in our latest full 16K adventure. Addictive and entertaining. **£5.95**

BATTLESTAR ATTACK (EXT-BASIC)

Stop the battlestar before it blows up your home planet. A fast game with excellent graphics. HCW gave five stars and said: 'even at level one a very addictive game'. **£6.95**

SOFTWARE FOR SPECTRUM AND ZX81

48K SPECTRUM

"Day of the Match"

Fascinating and realistic simulation of an entire football season. Name your own teams if you wish (English league provided on cassette). Rate each team from one to nine in various success categories such as attack, defence, manager, etc. Watch the season unfold, includes knock-out option. **£5.00**

"Ball by Ball"

Simulates a test match series of one day international series. Set up your own teams and pool of players (England v Australia provided). Rate each player's capabilities as batsman and bowler on a one to nine scale for qualities such as talent, effort etc. Pick your teams and play the match. Electronic scoreboard shows progress of a match. Full supporting score card and series averages. **£5.00**

SOFTWARE LIMITED

SPECIAL OFFER FOR TI-99/4A OWNERS

FREE 16K BASIC FULLY GRAPHIC AND TEXT ADVENTURE. BUY ANY OF THE GAMES LISTED BELOW FROM US MAIL ORDER BEFORE 12TH JUNE AND WE WILL GIVE YOU A FREE TI GAME.

BENEATH THE STARS (TI BASIC) JUST RELEASED

DEFEND YOUR SPACE BASE USING 9 CONTROL KEYS TO DRIVE YOUR REPAIR CRAFT, FLY YOUR CANNON, FIRE YOUR GUIDED MISSILES AND NEUTRON CANNON. FIRE YOUR GUIDED MISSILES & NEUTRON CANNON. EVEN THE ALIENS ARE ANIMATED. FEATURES: SELECT YOUR OWN KEYS, 5 SKILL LEVELS, HALL OF FAME & SOUND. VERY CHALLENGING AND ADDICTIVE. **£5.95**

ADVENTUREMANIA (TI BASIC NO COMMAND MODULE NEEDED)

OUR NO. 1 FULLY GRAPHIC & TEXT ADVENTURE. H.C.W. GAVE 5 STARS. CAN YOU DISCOVER THE ULTIMATE QUEST IN THIS SPECTACULAR MISSION (30 LOCATIONS)? **£5.95**

MANIA (TI BASIC NO COMMAND MODULE NEEDED)

H.C.W. GAVE 5 STARS AND SAID "I WOULD CERTAINLY BUY MANIA" FULLY GRAPHIC AND TEXT. CAN YOU SURVIVE IN MANIA AND ESCAPE TO THE CORRIDORS OF TIME... **£5.95**

LIONEL AND THE LADDERS (EXTENDED BASIC)

SUPER SPRITE ANIMATION. HELP LIONEL IN HIS SEARCH FOR HIS CAPTURED PRINCESS BUT MAKE SURE THAT HE DOES NOT GET CAUGHT BY THE SUNS OF MARS, THE SHADES OF WRATH OR THE DEATH STARS. FEATURES MULTI SCREENS, HALL OF FAME, ETC. **£7.95**

ASA Ltd, Brook House, Torrington Place, London WC1E 7HN.

Brave the elements to ban the bomb!

far side of the screen it will drop to the other side, dumping you in the water!

Each time you make it to the red pad your score increases depending on the skill level. The skill level increases by one, the red pad moves a little nearer to the house and you are awarded bonus points for each part of the fuse left.

The red pad reaches the house every five crossings. It then returns to its starting position, and the speed of vehicles and obstacles increases. There is a total of 25 skill levels.

At the end of each game the top 10 scores are displayed. One or two players can play. SELECT this option at the start

How it works

7-16 title sequence and initialisation
20-50 draw play area, print score
200 start of main loop
200-240 move vehicles and river obstacles
300-310 shorten fuse if TI = 0
400-410 check player missile graphics collision registers
800-806 create sound effect while playing
809-840 scan joystick and increase x and y co-ordinates of Dropbut if necessary
850 end of main loop. Return to start of main loop
6000-6025 routine to move Dropbut if he is on an obstacle in the river
6100-6120 routine to move Dropbut to bottom of screen
6200-6250 routine for when Dropbut reaches the red pad
6500 subroutine to draw fuse wire
6600-6640 routine when Dropbut dies
6800 subroutine to set screen colours
7000-7030 subroutine to swap players over
9000-9120 create user defined characters
9500-9520 POKE in machine code for fast vertical movement of Atari's PMGs
9550-9900 set up PMGs
100000-10010 subroutine to place PM graphics at random horizontal starting positions
12000-12418 game over routine, place scores in top 10 table if they are high enough, print top 10 table
12420-12460 play a little tune
12500-12650 wait for user to select a 1- or 2-player game, press start

of the game. If there are two players, they alternate in turn until both have lost all four lives.

Your score is displayed at the bottom of the screen with lives remaining and skill level.

Good luck with your chaotic crossing — I'm worn out just thinking about it!

Hints on conversion

It should be possible to convert this game for another computer with sprite graphics, although you may find it difficult. If you want to have a go, here are some hints to help you.

The program is in graphics 1 + 16, a text mode which divides the screen into 20 by 23.

Dropbut, the vehicles and obstacles are player missile graphics (sprites). The house, river, road, fuse and pad are redefinable characters.

STICK reads the joystick controller, PLOT places a single character at position x,y on screen. DRAWTO draws to position x,y from the last position plotted.

POSITION puts the cursor at position x,y on the screen (rather like TAB(x,y) and PRINT at x,y). COLOUR determines which character and what colour will next be plotted with the plot command.

POKES 53248 to 53251 control the horizontal positions of the PMGs. A=USR(UP, PLO) and A=USR(DOWN, PLO) simply call on machine code routines which move Atari's PMGs up or down the screen by one pixel. On your computer replace these with COMMANDs or POKEs which move the sprite graphics up or down the screen.

Variables

TS game title
x,y horizontal and vertical position of Dropbut
x1,x2,x3,y1,y2,y3 horizontal and vertical position of the three vehicles and three obstacles
AC horizontal position of the fuse wire
ST value of stick (0)
N note for tune
L length of note
HMP how many players (1 or 2)
HS() top 10 high scores
CHNS characters to be redefined
CHB starting address of custom char set
CHD starting address of each char held in CHNS
UP address of machine code routine which moves PMGs up
DOWN address of machine code routine which moves PMGs down
PM set up PMGs
TI,ETI TI is set at the value of ETI and decreased by one each time the main loop is completed. Each time TI reaches 0 part of the fuse burns away until the fuse wire or Dropbut reaches the house. On harder levels ETI is lower, so the fuse wire burns more quickly

These arrays hold information on players 1 and 2:

LI() lives remaining
SC() scores
LEV() level being played
LP() red pad's horizontal position
SP(1),SP(2),SP(3) store the three vehicles and obstacle speeds for player 1
SP(4),SP(5),SP(6) store the three vehicles and obstacle speeds for player 2
ETI() see TI and ETI above

Cross land and sea to rescue your kin from being blown to oblivion! Take part in Victor Thorn's obstacle race and save the world

This game runs on any Atari computer with 16K or more and one joystick controller.

A bomb is going to explode in your family's house. You must try and reach your home and prevent it from going off. If you can't get home before the fuse burns away, everything will go up in smoke!

Use the joystick to guide Dropbut to the red pad at the top of the screen. You have four lives and you can lose them by being run over on the road, by falling in the river if there are no objects for you to land on, by touching the poisonous grass at the top of the screen or if the bomb goes off before you can get home. Sounds quite an obstacle race, doesn't it!

You can ford the river by jumping on objects. Your timing must be spot on, though — when an object reaches the

Breakout Sord/CGL M5 £5.95

Hamsoft, 5 Greenfield Link,
Coulsdon Woods, Coulsdon,
Surrey CR3 2SW

As the name suggests, Breakout is the classic bat 'n' ball game, but don't let that put you off.

You have three balls to knock down as many bricks as you can and with every complete brick wall you knock down, the game gets harder. It features very smooth sprite graphics and appropriate sounds.

Considering the memory limitations of the standard M5, a number of nice touches such as Freeze, Halt and the facility to skip through screens makes this program a very slick product.

The instructions, laboriously typed out, are comprehensive. Although the inlay card and the

instructions do not look very professional, the quality of this 100% machine code game is far higher than that of cassette-based games produced by CGL. For BASIC-G owners, there is a free game called Codebreak included.

M5 owners aren't exactly spoiled for choice when it comes to software — in fact they are positively starved — and any game is welcome. Admittedly Breakout isn't the most original nor the most exhilarating game ever created, but at £5.95 it is a great deal cheaper than cartridge software and represents good value for money. S.S.

Cuthbert in the Jungle CBM 64 £8

Microdeal, 41 Truro Rd, St
Austell, Cornwall PL25 5JE

This must be one of the best games from Microdeal. There are 120 different screens in the game. Although they are different they are very similar.

The aim is to run through the jungle and collect the treasures. Many obstacles are included to bar your way or kill you — such as tar pits, snakes, crocodiles etc.

There are two levels on the screen at any one time. The top half contains the jungle while the bottom half is an underground tunnel. Access to the two is available by holes and ladders which are on certain screens.

More points are gained by using the underground system. Exactly why this is I do not know as the top level is much harder.

A time limit of 12 minutes has been imposed for collecting all of the treasures.

The game loads quickly and is problem free. A recording has been made on both sides of the cassette. You may play with either joystick in port 1 or by using the keyboard.

The instructions are well written and concise. They even include tips for getting high scores. K.I.

Haunted Abbey 32K BBC £6.90

A & F, Unit 8, Canal Side Industrial Estate, Woodbine Street East, Rochdale, Lancashire OL16 5LB

Being a little slow, and decidedly unsuccessful in adventures, I was not looking forward to attempting this one.

After reading the small list of instructions my immediate thoughts were "Instructions? sounds more like threats to me!"

Haunted Abbey is a purely text adventure in which your objective is to find Phibe's Book of Incantations, and pick up a few treasures to boost the score.

When you are playing this game remember the three golden rules for adventures, don't rush, don't die, and don't think that because you have a sharp sword you can kill just about any type of monster your Beeb can manage to contrive, because you can't.

After about two hours of disobeying the rules I managed to enter the Abbey. Once you are inside the creepy building the fun begins, and there are numerous locations, red herrings and puzzles.

If you are not a born adventurer either, but feel that with a bit of practice you can get somewhere, then I would say this is your first rung on a very long ladder to the top. M.B.

— read that they say**

Alpha Blaster VIC-20 £7.95

Sumlock, Royal London Hse,
198 Deansgate, Manchester M3
3NE

Much to my surprise, "shoot the aliens" games are still being produced in large numbers.

This rather unimaginative offering is yet another.

This is a sort of Space Invaders cum Galaxians cum Arcadia game which has none of the strengths of those games mentioned.

You control a space ship at the bottom of the screen and you must destroy waves of nasties and meteors which move from the top.

The attacks come in three

waves, each with slightly different attacking tactics. The first and third waves are quite tough, the middle one is ludicrously easy.

Destroy three waves and (surprise, surprise) you get a nastier lot.

The graphics are tolerable albeit very flickery. As for sound, forget it.

I'm afraid that when one considers the delights that Sumlock is producing for the 64, this can only be seen as a dead loss. A.W.

Space Walk Commodore 64 £1.99

Mastertronic, 48 George St,
London W1

This is a topical game. You are an astronaut and must retrieve stray satellites and direct them into the shuttle loading bay. There are problems. One is the passing asteroids, which you must avoid, and the other is alien cosmonauts with space lasers.

The cassette card gives the barest outline of the plot. On loading, instructions are displayed but these are still minimal.

The graphics are well designed. The behaviour of the satellite when handled by the astronaut is very space-like. It floats around and goes off in all directions with the slightest touch. After a while I got the hand of spacewalking and usually managed to dock the first satellite fairly quickly. Not that it did me much good, I only went up one level of difficulty.

You have four lives. Remaining lives, current score and highest score to date are displayed at the top of the screen.

I found the game interesting but not very compulsive. It may appeal to space freaks. L.C.

Extended BASIC 48K Spectrum £9.95

CP, 2 Glebe Rd, Uxbridge,
Middx UB8 2RD

This package is not really Extended BASIC of the IF... THEN... ELSE, or PROC variety. It's a toolkit offering 10 extra facilities, which are accessed by a single key-press following an asterisk. The whole command is then printed on the screen.

AUTO line number, RENUMBER, line DELETE, TRACE, and list VARIABLES are offered, together with a real-time CLOCK, MEMORY left, EXAMINE a header, FIND a string in your listing, and SCROLL control. It occupies about 4.8K, sitting above a

suitably lowered RAMTOP, and is presented in a strong box with a clear, helpful manual.

It's very easy to use, and it really is a joy when developing your own programs. A few moans though. What's the point of a real-time clock, and one that loses time when you load a new tape? Similarly, scrolling is easily controlled by poking the system variable at 23692.

If space is at a premium then this might be for you. This toolkit does not appear to be compatible with the Microdrive; it crashes, so if you're thinking of upgrading, it will have limited use.

DRS (Data Retrieval System) Dragon 32 £14.95

Salamander, 17 Norfolk Rd,
Brighton, Sussex BN1 3AA

I am very impressed with this piece of software. Although it has some omissions it is well thought out and a very flexible disc and cassette filing system. What's more, it makes use of the discs, allowing seven times more data to be stored on disc than on cassette.

The output and input routines are particularly good. They are entirely user defined and give you the facility to display a file in one format whilst printing it,

selectively, in another one, which may be completely different.

The screen data can be similarly formatted; this can lead to some attractive and easy to use databases. The defining of a screen layout is not too easy, however, as the manual is very vague on the facilities here.

The other criticisms to make are that it lacks wildcard searching facilities and that it can only sort in one field. Having said that however, it is a program that will provide much needed data handling facilities to satisfy many Dragon owners.

Turtle Graphics Dragon 32 £9.95

Salamander, 17 Norfolk Rd,
Brighton, Sussex BN1 3AA

This is a logotype package and, for those who are not familiar with this language, this is a new command set for picture drawing in which all commands act as if there was a creature doing the movement. For example, the command F50 moves the creature (turtle) forward 50 units and draws a line where it has walked. The language is very simple to learn, as it is related to body movement.

It also includes the ability to define words which can be long sequences of commands, e.g. draw a square. The use of defined words in further words is allowed, giving a good programming structure.

This implementation is good and fairly comprehensive although it does have its idiosyncrasies. One of these is the inability to type the commands in the same mode as the display is drawn, meaning that you cannot see the result of a command as it is drawing.

On the plus side are the excellent range of variables and functions and the printer routines. All told a good, robust, capable package.

Tiny Logo 16K ZX81 £5.95

Softchoice, 52 Platts Lane,
London NW3 7NT

Tiny Logo, it would appear, is a sibling of Logo, a computer language developed, I believe, at that august seat of learning the Massachusetts Institute of Technology.

Logo is described as easy to learn, fun to use, and quite capable of handling serious computer applications. If that is the case one could be excused for wondering why home computer manufacturers didn't incorporate the language in the computer system in the first place.

This version, presumably tiny because it has to fit into a 16K

ZX81, takes you beyond the rigid confines of the BASIC supplied courtesy of Sir Clive. At least, that is what the booklet says.

Using the ubiquitous turtle to draw the graphics you type in "Forward 20, Right 90 and Forward 10" to get the turtle to draw a large letter L on the screen. The tiny booklet — what else? — supplied, gives comprehensive instructions for using the language, and is easy to follow.

However, it seems expensive to me.

Oricaid Oric 1/ Atmos 48K £11.95

Micrograf, P.O. Box 17, Bracknell, Berks RG12 3NQ

Oricaid consists of Toolkit, Monitor and Assembler.

Toolkit is for basic programmers and provides very useful facilities such as renumber, find, auto line numbering, old, shrink, and many others.

Monitor is a simple but useful machine code monitor. It has all the basic features such as fill, go, find, jump, memory display and relocate.

Assembler is very powerful. You write your assembly code as in BASIC and assemble it by typing "!.A". Assembly is very quick; if it finds a mistake, it reports it in intelligible English, none of this "Err 1.C at line 40" business. A very powerful facility is provided in the form of BYT and TXT. These replace the equate functions and are far easier to use. Assembled code can be converted into BASIC data statements by a command supported in toolkit.

Oricaid is very easy to use and the only bug I found was with the convert command in Toolkit. This didn't accept hexadecimal numbers so I had to use decimal. If you are seriously into programming, assembler alone would be worth the price. Very good value for money.

AGF JOYSTICKS ~~SPECTRUM ZX81~~ INTERFACES

Programmable Interface

Hardware programmed, this interface attains Joystick or Trackball compatibility with ALL Spectrum or ZX81 software.

Without internal memories or tapes to load the direct addressing mode offers the fastest computer response to controller movement with programming being retained when the power is off.

Eight directional capability is automatically achieved by just setting up, down, left and right.

The hardware approach is totally compatible with all key reading techniques unlike memory programmed devices.

Supplied with Quick Reference Cards, to speed up setting to your favourite games, demonstration cassette and twelve months guarantee.

26.95 plus £1 post & packing

Interface II 9.95

Now the AGF Interface II is even better value. Since we pioneered the cursor-key interface in October 1982 there are now over 100 games or utility programs with either the AGF option or cursor key controlled — that makes it unbeatable at this new low price.

Still incorporating the all important rear expansion connector which means other peripherals can be connected at the same time i.e. Ram Packs, Printers, Speech Units etc, and of course the key replication principle used guarantees this will never conflict electrically with any other add-ons.

RomSlot

Now is your chance to enter the growing world of instant loading games.

All ROM Cartridge software can be keyboard controlled so a joystick is not essential.

Only high quality programs are available on ROM and soon a whole new range is to be launched by Parker Games exclusively on cartridge, for the Spectrum.

RomSlot's unique 'Game Restart' will restart the game at any time during play. When no game cartridge is in use this becomes a useful computer reset facility from crashes or conventional machine code programs.

RomSlot is fully compatible with all other add-ons via a rear connector and is cased and fully guaranteed for twelve months.

Little Brothers should be seen but not heard.

**NOW ONLY
£159.95
inc.VAT.**

REGULAR, CONDENSED, OR EXTENDED FACES.

CUT SHEET A4 OR ROLL PAPER.

BATTERY OR MAINS OPERATED.

A maxim which eloquently describes the Brother HR-5.

Less than a foot across, it's nonetheless loaded with features.

The little printer that's low on decibels.

There's one thing the HR-5 won't give you. Earache.

For the annoying 'clickety clack' many printers produce is mercifully absent from the HR-5.

Quietly efficient, it delivers high definition dot matrix text over 80 columns at 30 characters per second (maximum).

Text or graphics with ease.

The HR-5 also has something of an artistic bent.

Being capable of producing uni-directional graphics and chart images together with bi-directional text. What's more it will hone down characters into a condensed face, or extend them for added emphasis.

At home with home computers.

Incorporating either a Centronics parallel or

RS-232C interface, the HR-5 is compatible with BBC, Spectrum, Oric, Dragon, Atari and most other home computers and popular software.

Perfectly portable, the battery or mains operated HR-5 weighs less than 4 lbs, and has a starting price of only £159.95 (inc. VAT).

Which is really something to shout about.

PLEASE SEND ME MORE DETAILS OF THE REMARKABLE BROTHER HR-5 PRINTER.
