More Tolkien adventures

The Lord of the Rings, J.R.R. Tolkien's cult best-seller, is being turned into three computer adventures by Melbourne House, following its success with The Hobbit.

Publisher Fred Milgrom broke the news at the launch of a batch of new games, including Sherlock, based on the Victorian detective, and Hampstead, a satire on social climbing.

Versions of both for the 48K Spectrum are due out later this month and are to be available for the Commodore 64 in October. Sherlock costs £14.95 and Hampstead is £9.95. Zim Sala Bim, a graphic adventure set in Arabia, will be available for the Commodore 64 as the first of a series.

Mr Milgrom said The Lord of

BT games at £2.50

The big boys have muscled in on the software market. British Telecom has announced that it will be branching out into software and is setting up Firebird as its software label.

And the big shock is that BT games will be sold at £2.50. Kicking off with a range of 20 titles, the cassette packs feature screen shots to give the customer a clear idea of each game.

Richard Hooper of BT said: "Firebird games will offer the same quality as some products costing twice as much. You can now judge a game by its cover. Firebird software is setting new standards."

To begin with, Firebird will be launching games for the BBC, CBM 64, Spectrum and VIC-20. The initial 20 games will be part of the Firebird Silver range and later a series of "premium-range" programs known as the Firebird Gold range will be released, at a higher price.

Firebird is buying in its software under contract, rather than employing in house programmers. British Telecom has reviewed 1,500 programs and is apparently rejecting

Match Point 48K Spectrum £7.95

Psion/Sinclair, 28 Stanhope Rd, Camberley, Surrey

It may be raining outside, but inside you can settle down with this number one best seller — beat McEnroe at his own game!

Match Point is a tennis simulation packed with features. Play the computer, a friend or watch an exhibition match. Use joysticks or keys to play an accurate game, with many complex shots possible. It's all there — ball boys, an umpire and an enthusiastic crowd.

Graphics are quite impressive, well animated and smooth. To stop colour resolution problems only two colours are used on court — green and black — and so it is a little difficult to spot

the (small) ball sometimes. By contrast, the crowd is every colour of the Spectrum!

If you like tennis, you'll love this. If you don't, you'll probably like it anyway. Game, set and match to Psion! **P.S.**

Perils of Bear George Spectrum 48K £6.95

CheetahSoft, 24 Ray St, London EC1R 3DJ

The movement keys are re-definable, which I like. I don't like wasting time finding out how to do things in a game.

You, the bear, have to eat apples to survive hibernation. Neither the screen nor the inlay card tell you how you eat the apples. The answer is to press the 'up' key, whereupon you lift your head to catch the apples in your mouth.

Fat lost during exercise, or put on by eating apples, is registered. Squirrels drop acorns which can knock you down.

After a fixed period you have to walk across a ski slope among

skiers. On entering the cave you have to pass spiders to reach the den. When you enter the den you walk to your bed and sleep, and the passing winter months are recorded on a calendar.

In spring you return to the orchard. During one game I made three journeys with no change of scenery, and there was no hall of fame at the end. Graphics are no better than I expect nowadays, and nothing in the game makes it stand out.

Beatcha! 48K Spectrum £5.99

Romik, 272 Argyll Ave, Slough, Bucks SL1 4HE

Combine the room exploration of Jet Set Willy with the maze wandering of Campbell Systems' Gulpman, and you have Beatcha in a nutshell. The plot casts you as a pupil of Qange Hill School, attempting to find the main door. You must dodge the teachers whilst collecting keys. For each key you collect, your stun-gun receives a charge, but you lose chances when you use it or get caught.

Frankly, if it didn't say so on the sleeve, you wouldn't know, as the graphics bear no resemblance to the story. Indeed, although adequate, they don't stand comparison with the best of today. The characters aren't animated, they are just moved about the mazes, which are many and various, each one being reached via doors in the previous one. Some are easy, some are almost impossible!

To be fair, the game is quite addictive, though a joystick is a real must. Another plus point is that the scoring system gives a good long game even if you're a beginner. Not original, but fun none-the-less. **D.M.**

Anyone for tennis?

Play tennis or manage your favourite football team. Fame and glory could be yours — but read our expert's reviews before you start

Football Manager BBC B £7.95

Addictive Games, 7A Richmond Hill, Bournemouth, Dorset BH2 6HE

This is a simulation game with you running a football team. It's comprehensive and packed full of features. Most of the game concerns textual information which is being constantly updated but this version does include "matches in 3D graphics".

A little disappointing at first because of the unrealistic effect of chunky low resolution mode, but I got used to it. The 3D effect gives you a grandstand view.

The menu driven options work well allowing you to view your fixtures, sell players, see the league tables and save your current position. This last option

was important and enabled me to make progress over a couple of evenings.

Of further interest was the ability to create a completely new team — well worth while for that satisfying feeling of having done it completely on your own.

One of the options is to choose your skill level. There are seven to choose from allowing plenty of scope to improve your managerial technique and make the going a bit more realistic.

An absorbing game which kept me and my son amused over many sessions. Good value.

M.P.

Tank Attack Sord £5.95

Hamsoft, 5 Greenfield Link, Coulsdon Woods, Coulsdon, Surrey CR3 2SW

Another game from the sole independent M5 software house, Hamsoft. In Tank Attack, you and the opponent — which can be the computer — control tanks in a maze and try to blast each other 21 times.

The most striking feature of this game is the number of options available. You can choose from four mazes, one or two player option, flying saucers, bullet ricochet on hitting wall, electrified wall which destroys tanks on contact, keys or joystick control and three varying speeds.

Considering the memory limitation of the unexpanded M5, this is some feat. Key response is good and the nicely defined sprites wander around the screen smoothly and quickly.

Sound effects are also very good, especially the UFO! The game itself, although very simple in concept, is quite addictive and in two-player games, it gets very compulsive. It is far better than a very similar cartridge game which costs a great deal more, and is easily the best tape software available for the M5. Highly recommended to all those who are put off by the hideously high price of cartridge software. **S.S.**

Tolkien

From front page

the Rings would be published next year as three adventures, each with a book. And he said the company was talking to other publishers about more major books.

Acornsoft has launched what it hopes will become a cult game. Elite, for BBC and Electron micros, puts the player in command of a spaceship for intergalactic trading and fighting off pirates.

The company is putting £150,000-worth of advertising behind its 20 new titles, including home education, a cocktail maker and a "sympathetic" slimming program.

Acornsoft's managing director, David Johnson-Davies, said he believed software distributors would no longer tolerate unprofessional products and this would lead to a thorough shake-out among home software houses.

BT games

From front page

games which include sex, satanism or killing cute, furry animals.

BT will be using established distribution companies and pledges Firebird's commitment to the home computer market. The Firebird Silver range will be launched in October, and advertising begins on October 23.

A spokesman for British Telecom said: "We're pricing our games at £2.50 because that's what we think they're worth. We are aiming at the lower end of the market but our games aren't rubbish, they're honest to goodness, pretty decent software."

He went on: "If you look around at the games available, you'll see that prices range from £5 to £11. But that's not a reflection of what the games are actually worth. That's why we're featuring screen shots on the packaging. The customer realises that if the graphics are good, then in general the game is good as well."

"British Telecom will be giving the punter value for money. We're committed to the market and we're here to stay. We don't see software as a skateboard market — here for

18 months and then gone for good. Home computers are here to stay and the market is there."

Eighteen of the new releases are arcade games, with one graphic adventure and a war/strategy game completing the line-up. Educational software and utilities are also scheduled for release in the future. New titles will be added to the Firebird Silver range every two months.

The pricing of BT's games and the commercial weight behind the operation are sure to put the cat among the pigeons. A number of software houses have already folded this summer.

Mastertronic is the company which was first on the market with cut-price software. Director Frank Herman commented on BT's entrance to the software market: "I'm delighted. They're taking a realistic approach to the market and I'm sure they won't pose any threat to us."

He continued: "We think that there is a right price for software, £1.99, and we sell our games at that price. We also realise that there is a market for better quality software at a higher price, and we have now moved into that market by taking over Carnell, and establishing Mastervision. We welcome the competition from British Telecom."

Firebird, Wellington House, Upper St Martins Lane, London WC2

Solo goes German

Solo has announced plans to open a new office in Hamburg, West Germany. The move is part of an expansion into the European market. All educational and most business software will be translated into German, as well as manuals and instructions.

Managing director Nick Bewley said: "We have always accepted that Germany is the largest market for Sharp in Europe but there is a shortage of well-marketed software."

Solo has always worked closely with Sharp (UK) in Manchester and says that it seemed a natural extension to talk to Sharp Europe about a similar working relationship. In order to reduce export transportation costs, Solo decided to open a new office out there.

Solo, Unit 95B, Blackpole Trading Estate West, Worcester WR3 8TJ

Go for it!

Now that the long winter evenings will be drawing in again, it's time to start watching American Football on TV again. Or otherwise, you could always play it in the comfort of your own home.

In the Mind Games range, Argus has released American Football for the Spectrum or Commodore 64, and is backing it with TV advertising on Channel 4's Sunday afternoon American football slot.

Football American style is a complicated game of strategy

which involves clever tactics. In the Mind Games version you can either compete with a friend or your computer. Don't worry if you don't know how to play; included in the price — £9.99 — is a guide which should help you out. Or if you're really stuck, go to the help page.

Also from Mind Games: Cloak of Death, a horror adventure. Price: £7.99 for the Spectrum, Commodore 64 and Atari.

Mind Games, Argus Press Software, No.1 Golden Square, London W1R 3AB

Ready to go, lads

CGL Christmas plans

CGL is all set to start a TV advertising campaign in the run-up to Christmas. Games and Watch will be promoted with a 30-second commercial running on TV-AM for the three months before Christmas. Extra spots will be booked for the half-term and Christmas holidays.

Children's comics will also feature CGL ads and the Wico joystick will be promoted in computer magazines. Managing director David Morein said: "We're all set for a very exciting season. Many new products have been added to our range."

CGL, CGL Hse, Goldings Hill, Loughton, Essex IG10 2RR

New life for Carnell

Mastertronic, famous for its cut-price software, has set up a new company, Mastervision, incorporating the titles of the previous adventure game company Carnell.

Carnell staff Roy Carnell, Stuart Galloway and Stephen

Kirk are concentrating their efforts on the relaunch of their Third Continent trilogy. Volcanic Dungeon has been upgraded to include graphics and, together with Black Crystal and Wrath of Magra, is being converted for other machines.

Alan Sharam, director of Mastertronic, explained that Mastertronic is eager to develop its range of adventure games. "We'd be pleased to hear from aspiring adventure writers or any software companies seeking assistance in launching a high quality game," he said.

Mastertronic, Park Lorne, 111 Park Rd, London NW8 7JL

The joke's on you

Here it is — the World's First Computer Joke Book. Brought to you by Computerworld, it's a cassette which contains 500 jokes including a laugh routine at the end of each joke. Printed on the inlay card is the warning: This program can seriously damage your parents' health, while another sign indicates: Not to be sold to anyone over 16 unless accompanied by a minor.

The program can be used as a

continuous demonstration, you can vary the speed or call up a particular joke by number, or you can try and beat the computer by typing in your own punch-line. If you get it right, the computer throws an egg at itself. If you're wrong, the computer laughs at you.

World's First Computer Joke Book runs on the 48K Spectrum and is available at £4.95 on disc, £8.95 on microdrive.

Computerworld, 208 Kent Hse Rd, Beckenham, Kent BR3 1JN

Hot from the press

Soon to be released: for the Spectrum, Alpha-Beth and Cylon Attack; Copter Capers for the BBC and Gumshoe for the Commodore 64. All from A 'n' F.

Alpha-Beth is an educational game, or in A 'n' F's terms "arcational". According to them education can be fun and they aim to prove it with this new game.

Alpha-Beth costs £5.75 and comes supplied with a built in database of general knowledge questions. Additional databases are available and there is also a separate database generator (£5.75) which may be used by teachers to add their own questions. Marketing manager Coleen Pimm said "It may be the first program to top both the arcade and educational charts at the same time."

Gumshoe is a private detective trying to trace the kidnapped daughter of a millionaire. He's tracked down the girl's abductors to a tower block and now has to overcome a number of obstacles to rescue her. There are ladders, trapdoors, gunfights and increasing skill levels and the game costs £7.90.

Cylon Attack (£6.90) has recently been converted for the Spectrum, and Copter Capers (£5.75) sends you on a trip to save survivors from a fishing boat; hostile vessels and bad weather try to stop you.

A 'n' F, Unit 8, Canal Side Ind Est, Woodbine Street East, Rochdale, Lancs OL16 5LB

The RAT is here

Cheetah Marketing recently unveiled the RAT, an infra-red action transmitter which could replace the joystick. It's a remote, hand-held unit which costs £29.95 and initially can be used with the Spectrum.

According to Cheetah, versions for other computers are in the pipe-line. The RAT comes in two parts: the black receiver which plugs into the edge connector at the back of your computer, and features a through connector so that you can add other peripherals, and the transmitter, which runs off a PP3 battery.

The transmitter has two touch-sensitive pads which control firing and moving. Cheetah claims that the RAT is the fastest and most flexible games controller ever. It's effective up to 30 feet and installation is simple.

CheetahSoft also launched three new games, two under licence from the American company Imagic. Dragonfire and MoonSweeper (both £7.95 on the Spectrum) are imported by CheetahSoft from the States, and The Perils of Bear George is a new release from CheetahSoft's own stable. It costs £6.95 and runs on the Spectrum.

Cheetah Marketing, 24 Ray St, London EC1R 3DJ

The year of the RAT

The official Memotech user club, Genpat, has now been formed. If you send in your subscription fee of £16 (£21 for overseas members) you'll receive 12 editions of the club magazine Memopad plus usual fringe benefits. The club has "many exciting things lined up for the future!"

Genpat, 3 Bulcock St, Burnley BB10 1UH

Here's a new company which will be making available to you new games from down under: Ozi Soft. The first program for

release is Space Age 2101, an arcade-strategy game. It's due on the shelves in September, and will cost £7.95. Ozi Soft plans to release several more programs shortly, and all games will be for the Commodore 64, on disc or tape.

Ozi Soft, London Hse, Baughurst, Hants

More winners

There were eight differences in our CheetahSoft spot the difference competition. Top prizewinner was Paul Thomas, of Sandiacre, Notts. He spent an exciting day being shown round CheetahSoft and Bibi Magnetics, before visiting the MicroTrade Exhibition at the Barbican.

These are the 30 runners-up, who will each receive a copy of CheetahSoft's 3D Bat Attack and Conquest: Naina Advani, Southgate; Neil J Dowds, Greenock; Mark Young, Liddington; Mr H Collings, Aldershot; Conrad Sweeney, Willenhall; Mrs A Adcock, Beetley Dereham; Mr P Clarke, Accrington; Mr K Ceaser, Rotherham; Andrew Kilby, Clydebank; Ian Bracken, Ashford; Jonathan Biddle, Suffolk; D Wilby, Batley; Andrew Farrell, London SW2; Steven J Kinsella, Leigh; Alistair May, Moray; Nigel Harrison, Wakefield; Stephen Haley, Coventry; A Campbell, Cheltenham; F A Beale, Blandford Forum; Nigel Hurst, Lewes; Phillip Davis, Hull; Paul Purves, Colchester; Clive Frank Huckins, London W12; Lee Shaw, Basildon; A

M P G Hamid, Plymouth; A J Greenwood, Rochdale; Nicholas Bishop, Loughton; Mrs M Neath, Congresbury; Matthew Jeffries, Christchurch; R G Tester, Hassocks.

Two in one bonanza

The Strangers, a group which has been together now for ten years, are about to launch their new LP, the first in over a year. Strangely enough the album will include an adventure game for the 48K Spectrum.

The album is entitled Aural Sculpture and is being released by Epic Records on November 5. The Adventure is Aural Quest and according to Epic it is probably the largest game on record and definitely the most ambitious.

The quest is for pieces of the ear and clues are in the shape of snatches of Strangers' music and lyrics. A classic role-playing adventure, it's written using Quill and has a built-in save routine.

Ideas for the game came from the Strangers themselves and it was designed by Mike Turner of Stardreams. Every cassette of Aural Sculpture will incorporate Aural Quest.

Epic Records, CBS, 17-19 Soho Sq, London W1V 6HE

HCW survey: your last chance

**It's not too late to win a prize
and give us your ideas**

IF YOU missed sending us the survey form last week, don't worry, because we're giving you another chance to get your entries in.

The purpose of our survey is very simple. We want to know

all about our readers and what they expect from us. The senders of the first 25 questionnaires picked out will each receive software or books as prizes.

All you have to do is fill in the form on this page. Just tell us who you are, what sort of computer you own and so on. There's also a section about HCW in which you can give your views on the magazine. Write down what your favourite HCW features are: it could be the reviews, the charts or the listings. Anything, it's entirely up to you.

We also need to know if there's anything that you dislike about HCW, or perhaps a feature that you like which needs improvement. Maybe you think there aren't enough listings for your particular micro — tell us, because that's the sort of information we want to find out. There's also a section where you can include your recommendations for making HCW even better.

From all this information we'll be able to discover what we're doing right (and wrong!) and so we'll know what improvements to make in the pages of your magazine.

So what are you waiting for? Simply fill in the form, mark your envelope HCW Survey and post it off in time to reach us by first post on Friday October 12th 1984. Remember that HCW is your magazine and we won't know what you think of it unless you tell us yourselves.

We're the duplicators that won't treat you like the next customer

Yes, we're experts in the business of data duplication, both in disc and cassette format. But that doesn't mean we treat our customers like duplicates too! What Micro Byte also does extremely well is to consider the special needs of each individual customer.

For a short run or full scale production, Micro Byte has the capacity (over 120,000 cassettes and 18,000 discs a week in fact) to give you the quality results you're looking for - time and time again.

With years of experience in this field and backed by the most efficient high-tech equipment, you can rely on us to deliver the goods within a speedy 7-10 working days. Both our duplicating service and our full printing and packaging service are so competitively priced, they won't give you any recurring nightmares!

Now you know a bit about us, perhaps you'd like to make yourself our next customer and feel the benefits of our special personal service.

Douglas Brothie will be pleased to answer any individual requirements.

Your guide to computer crime?

U.S. SCENE

Taking the theme from Wargames to its logical conclusion, how would you like to subscribe to a magazine featuring articles such as "Sequence to determine the current state of Soviet nuclear readiness," or — if your funds are low — perhaps you would be more interested in an article entitled "Transferring funds from high-balance bank accounts to low-balance bank accounts."

A casual glance at the new publication, Computer Raider's News, makes it seem like the ultimate hacker's guide to computer vandalism and miscellaneous mischief. In reality, the magazine is designed to be the computer world's equivalent to Mad magazine. Published and written by Dan Rattiner, many of the ideas in the magazine were actually inspired by genuine news articles from various publications whose common theme was young people getting in trouble for doing things that adults allowed them to do in the first place. The first issue will be out later this year.

Additionally, Rattiner probably got a lot of (negative) inspiration from the computers he has owned at various times, such as the Timex/Sinclair, the Osborne I, the TI-99, and the best one of all, an IBM 5110 that cost him roughly \$16,000 about four years ago and which he cannot get to run due to software problems. I suppose if I had problems like that, I could write good satire as well.

If you are interested in an issue or two, for more details you can write to Computer Raider's News, c/o Permanent Press, RFD 2, Noyac Rd, Sag Harbor, New York 11963, (516) 537-0500. It should be worth a few chuckles.

If you have a modem and are not hesitant to try using it to cross the Atlantic, you may be interested in this new service. In fact, if you are having trouble locating the right software, the expense of the call may be offset by the time and aggravation you might save by using this service.

I am talking about Software Library. Created by a company called Searchmart, this on-line database resembles a library card catalogue in the way it is used, and is available for no charge. Software vendors and manufacturers support the system, which is why there is no charge to users.

Searchmart offers the service in the hope of simplifying the software selection process, and to help consumers obtain up to date information on products and their availability. Searchmart, credit to them, does not sell any of the products advertised in the library; they are strictly offering a service. To be placed on line at a later date is an electronic mail service which will allow system users to send comments on products directly to the vendors.

Also in the works is a New Software Products file, to be made separately available to users only interested in recent releases.

So, all you need to access this service is a computer having communications capabilities and some motivation. Oh, and one more thing — you'll also need their phone number. Here it is, along with their address, just in case you want more information prior to dialing. Searchmart Corp., 745 U.S. Highway 1, North Palm Beach, FL 33408, (305) 845-2996.

See you next week. Same time, same column.

Bud Izen, Fairfield, California

Sprite Routines Sord M5 £5.95

Hamsoft, 5 Greenfield Link,
Coulsdon Woods, Coulsdon,
Surrey CR3 2SW

Every M5 owner knows that BASIC-I isn't the most comprehensive language when it comes to sprite handling. In fact, it is positively lacking in any commands! This package attempts to fill the gap left in BASIC-I by providing a set of powerful interrupt driven sprite routines.

It consists of five routines: On — which initiates the interrupts driving the sprites, Off — which stops these interrupts, Erase — which erases sprites, Joint — which allows you to join sprites, and Move — which allows you to move sprites in a variety of ways.

The first four commands are

self-explanatory. The fifth is the most complex but the most powerful and useful command in this package. Not only does it allow you to move sprites to a particular position, the great thing about this command is that because it is interrupt driven, once you set a sprite in motion you can forget about it and get on with something else.

These routines will be invaluable to those who do not own BASIC-G. I felt it was slightly overpriced at nearly £6 but since the free demo game in this package is better than any of the cassette based games by CGL, I can't complain.

Spoof 48K Spectrum £7.50

Runesoft, Charnwood Hse,
Lower Parliament St, Not-
tingham

A "Quilled" all text adventure,
Spoof is funny!

You play the part of Yaw-
Ning, setting forth to seek the
magic dragon Spoof. The trouble
is that as soon as you get stuck
into your adventure, people keep
giving you extra tasks. There's a
rather familiar Doctor who
wants a part for his time
machine, for example.

The descriptions are very
evocative, and there are some
nice touches like the ringing
phone which can be answered,
the boat journey across the
Essential Ocean, and the cryptic
help messages.

And the humour? For a start

you acquire an adventure kit, the
main component of which seems
to be sticking plaster, the three
headed vulture who requires all
manner of things, including a
Princess's dress to let you
through, the response from the
computer when you find the
dress and put it on and so on!
The best advice is not to kiss
frogs and *don't panic!*

Overall an amusing departure
from the adventure norm and
well worth a look, were it not for
the exorbitant price. How can
Runesoft justify this when they
use someone else's program to
create their own in half the time?
Naughty.

Billy Ball at the Hatchery TI-99/4A with Extended BASIC + Joystick £6

Stainless, 10 Alstone Rd,
Stockport, Cheshire

Not the sort of hatchery I'd care
to visit — out pop some
bloodthirsty monsters from the
eggs in this game.

The screen displays a set of
platforms which may be climbed
by a series of chutes. Hanging
below the platforms are egg cases
in which the developing monsters
lie. Using the joystick you
control Billy, a bouncy character
who must smash the eggs before
they hatch.

Fortunately, they only hatch
one at a time. As one starts it
becomes transparent and a timer
begins the countdown to show
Billy how long he has to reach
the egg. If he fails the monster
hatches out and gobbles him up.

The eggs are destroyed by the
powerful force of vibration —
makes a change from laser
zapping doesn't it? Billy either
jumps up and down on the
platform immediately above the
egg or may use one of two
hammers to make the whole
hatchery shake. In either case the
egg crashes to the ground and
points are scored.

After all the egg cases have
been dealt with,
the screen changes to a different
layout. Billy then has to work a
little harder.

Taking time for games and routines

More software reviews to give
you an insight into the merits
and the disadvantages

Bowls TI-99/4A £6

Stainless, 10 Alstone Rd,
Stockport, Cheshire

This is a really excellent version
of the popular game of bowls.
You either play against the
computer or another player.

Before starting you select to
either play a limited number of
ends or agree that the first player
to a set number of points wins.

The green is displayed from a
bird's eye view on which the jack
has already been placed, by the
computer. Players take turns
throwing their bowl, the course
of which is determined from four
parameters, input separately as
numerical values.

There are six possible starting
positions, each marked clearly
on the green, three directions —
straight, left or right — and
"finger" or "thumb" bias. The

latter influences which way the
bowl will curve as it slows down.

Finally comes the strength of
throw, having values from one to
nine. With such a choice of
variables, experience needs to be
acquired before bowling
becomes accurate.

After all values have been
entered you are offered the
opportunity to change them
before the shot is taken. A very
useful feature.

When the end is complete, the
computer measures to discover
whose bowl is nearer the jack
and how many points are
scored.

instructions	90%
playability	80%
graphics	50%
value for money	100%

Spectrealm 48K Spectrum £6.95

Runesoft, Charnwood Hse,
Lower Parliament St, Not-
tingham

This is a simulation of the
economy of a small rural
kingdom involving producing
corn, preserving or starving the
population, and, if you can
amass enough cash, buying
power stations and factories. If,
after five years, you have
honoured your election
promises, you survive. If not,
suicide!

Playing the game is good fun,
though not easy until you realise
that the king is easily worked
round and that some of the
population must go in order to
build up the cash! It's always
interesting to see what political
assumptions are incorporated in
games and that one is all too
familiar!

Variable factors are built in,
like the effect of the weather
on crops, invasion, and the
discovery of oil. The rest is up to
you.

Sadly, the screen presentation
is ordinary, and the game itself
reminiscent of a magazine
listing. None of the humour or
sound/visual effects of Dictator,
nor the sophistication of Great
Britain Ltd is here. There
appears to be only a rudimentary
attempt to trap input errors, and
the BASIC listing is easily
persuaded to reveal its secrets.

Two years ago, this would
have been acceptable, but users
have come to expect more
now.

Traffic CBM 64 £7.95

Quicksilver, 13 Palmerston Rd, Southampton

In the past I have always been disappointed with Quicksilver software. However, after looking at this game my opinion is starting to change. I could best describe it as an original and interesting arcade/strategy game which people of all gaming types should find enjoyable.

The screen contains a map of a town centre. On the map are about seven junctions with traffic lights. Using the joystick you should position a cursor/indicator over a junction and press the button to change the lights (I only wish that this was possible in real life). If the lights are not checked often enough then the traffic can build up and cause an almighty traffic jam.

As time goes on more and more vehicles appear and cause the traffic jams to build up much faster.

After each screen has been completed the computer will speak "NEXT MAP" through the TV set. The voice sounds slightly muffled but it is good considering that no extra hardware is required.

Loading the program caused many problems. It normally took about three times to load even after cleaning the tape heads.

Forbidden Fruit 32K BBC £6.50

Voyager, Wirral Busines Centre, Gorsey Lane, Dock Rd, Birkenhead

Forbidden Fruit could be described as a cross between Snapper and Cybertron Mission. After choosing the keys you wish to use a display of the objects is shown.

You must manoeuvre a man around a maze collecting fruit and the key to the door to the next level. A number of creatures also live in the maze and they make your job much more difficult. You can shoot the creatures when you move sideways but not if they are above or below you.

If you manage to escape this first level, bonus points are

awarded on the time taken and the fruit collected. There are 12 levels in all and each one is harder than the last.

The game is really fun to play. I had difficulty getting myself away from it. On the 'B' side of this cassette a 'zapped' version can be loaded. On this you never lose a life and it is possible to choose which level you start on.

At £6.50 this game is great value for money and far better than other more expensive packages.

D.B.

instructions	60%
playability	95%
graphics	90%
value for money	100%

Piromania 48K Spectrum £6

Automata, 27 Highland Rd, Portsmouth

This is the second of the two new releases from Automata, and this time I decided to play the audio side first. Described as 'as free audio track by Safety and the Matches' it's a little ditty entitled 'Put the cat out mother'. It's a good job it's free, I would never have bought it!

However, the game on the other side is worth buying. The Piman has a burning desire to toast the residents of Automata Towers. You have to guide Walter the fireman round the building, filling a bucket with water, and trying to douse fires. There are fire extinguishers around the place, if you want to use them.

Scattered inside the building are various treasures which you can collect, if you can find the time that is. Some careless person leaves dynamite lying around, so that has to be removed, but fast. Whether the author of the game is trying to tell us something I don't know, but on the top floor was a pink elephant doing a little dance, and squirting water all over the place. A hectic, but very playable game.

Amazing mazes

More tricky arcade games
reviewed by our experts

Quo Vadis CBM 64 £9.95

Softtek, 12/13 Henrietta St, Covent Garden, London WC2E 8LH

You are stuck in a maze of Roman architecture, or so it seems (instructions were not included with the preview copy). The game takes about three minutes to fast load, and you can see why when you play.

The maze has superb graphics (monsters, flaming torches, gothic ornaments, pillars etc.) and is huge, being many times the size of the screen. Your soldier is stuck in the centre while the maze scrolls around it.

You fight monsters, and can regain strength by finding treasure. You can hop, walk and jump, climb ropes, stairs and rocks but beware: fall in the bubbling pits and you're dead.

You have only one life, which makes the adventure more real, as well as frustrating and addictive.

There is only one maze, but it is large enough to baffle you. When you have discovered its limits, you can play for a record score.

Joystick movement is slightly too sensitive, and the background music is a bit quiet, but these are easily overcome.

Overall, this is a very good game. Its addictiveness, scale and variety justify its high price tag for most people.

D.R.

instructions	N/A

value for money	95%

Nightmare Maze BBC B £5.70

MRM, 17 Coates Rd, Grimsby, S Humberside

Not all good BBC software is expensive, as demonstrated by this excellent game.

It is a 3D maze game, with an overhead view of the maze. You control a small pyjama'd figure, Sleepy Joe, who races round the maze, collecting eight keys to unlock a door at the side. You are hindered by monsters which bound around after you.

On the first maze you are pursued by Springy Things and Bouncing Balls, Deadly Frogs and Hungry Hoppers. What lies beyond I cannot tell, the Hoppers saw to that! The monsters are difficult to avoid, but sometimes a cup of black coffee appears which will wake you up and the monsters disappear. You can then race round faster, but beware of collision with a reappearing nasty.

As if this wasn't enough, there is a 60-second time limit on each screen. Each maze is more complex than the last, and a good score requires skill and patience.

Nightmare Maze uses a colourful Mode 2 screen, with superb animation. Sleepy Joe springs smoothly along, while balls bounce realistically behind. Sound is well used, especially the croaking frogs! I recommend this as a fast-action game with an original concept.

WIN **£25,000** AND SAVE THE WORLD **Eureka!**™

**250 K OF PURE MYSTERY
BY IAN LIVINGSTONE**

■ 5 complete Adventures, each with its own Arcade, in one multi-load mega-program. "Eureka!" is the ultimate computer Epic.

■ Epic in scale: "Eureka!" spans five eras of history! You battle against the dinosaurs, outwit Nero and his gladiators, join the Knights of the Round Table, escape from Colditz, and finally into 1984 defeat the evil master of the Caribbean who is holding the world to ransom.

■ Epic in sheer size — there's more than 250K for you to get yourself killed in.

5 PROGRAMS IN ONE

■ All 5 Adventures are linked — but you can choose to play them separately. And they all have REAL TIME built in. So if you don't think fast, you wind up as a pterodactyl's lunch, die of over-exertion in a Roman orgy, or just lose your mind...

■ "Eureka!" is not just an Epic — not just an Adventure. At the start of each historical era, you face an Arcade Action test, to decide your strength level for the Adventure to come.

■ The better your score, the stronger and faster you'll be.

■ And it'll keep you on your toes, with constantly-changing, static and moving graphics. Brilliant music and sound effects add to the excitement.

■ As part of the "Eureka!" pack, you receive a full-colour illustrated booklet, containing cryptic riddles and mysterious illustrations. Using booklet and screen together, you steadily unravel the clues and build up a secret phone number piece by piece.

■ If you're first to ring it, you save the world and collect the £25,000!

■ Quite a package! And to give everyone a fair chance, "Eureka!" will be released simultaneously worldwide on October 31st, 1984. No packs will be available until that date. All orders received by mail or phone by 26th OCTOBER will be despatched by post on the 31st right across the world. So order now, and be one of the first off the mark.

Spectrum 48K or
Commodore 64
(TurboLoad)

Full-colour booklet,
packed with cryptic
clues to help you
unravel the mystery —
and win the £25,000
reward

Music and
sound effects
built in

High quality,
full-colour, static and
moving graphics

Just clip the coupon. Or, for even faster action,
order by Credit Card on the
"Eureka!" Telephone Hotline 01-460 6000.

Eureka!

THEN THE RACE IS ON!!!

**DEvised BY
IAN LIVINGSTONE**

The storylines for "Eureka!" are by Ian Livingstone, whose "Fighting Fantasy" books have sold over 2,000,000 copies. He's dreamed up some rather nasty tricks and twists for you in this Epic, because he has also devised the cryptic clues and conundrums in the booklet that goes with the program. He's the one who knows the answers.

"Eureka!" was programmed by Andromeda teams led by Hungarians Donát Kiss and András Császár. It took the equivalent of 5 YEARS to create, and the skills of 4 graphic artists, 2 musicians and a professor of logic too. We told them to stretch the hardware's capabilities, and make sure you were kept awake for hours! They've done it...

£7 BONUS

When you order
"EUREKA!" before 26 OCTOBER 1984, you
receive an additional bonus: £7 voucher
off the price of the **TROJAN LIGHT PEN**
from PSL MARKETING. Normal price is \$17.25.
You buy it for just \$10.25.

Send your order now to:

"Eureka!", FREEPOST, Dept 400, Mount Farm, Milton Keynes, MK1 1HQ

NO STAMP NEEDED

To: "Eureka!", FREEPOST, Dept 400, Mount Farm, Milton Keynes, MK1 1HQ
Please send me "Eureka!" packs, complete with cassette, full-colour booklet, instructions and rules, at \$14.95 each PLUS 55p post & packing. If my order is received before 26 October 1984, I will receive a free \$7 voucher towards a Trojan light pen. Please allow 14 days delivery for orders received after 26 October.

The race for the £25,000 starts on 31 Oct 1984 and closes on 31 Dec 1985.

Do you know all the answers?

So you think you know everything? Try this quiz on your Oric/Atmos — your family and friends must agree your answer is right before you gain points.
By Peter Hart

Tell Me

This is a general knowledge quiz for two to nine players. It has proved very popular with groups of children and families. To make the reading easy for young children, the text is well spaced and double height.

Oric first asks you how many are playing and then asks for their names.

Each player is then asked a random question and given a random letter with which the answer must begin.

Your Oric does not check the answer but asks if it is correct. If all the players agree that it is, then a score is given.

A score board is displayed after each round. There are random double score letters and questions. There are also lots of sound and colour.

Variables

QS questions
P number of players
X1 used to space out letters
Q number of questions (if you add your own Q alters)
D1,D2 flags for double score
C random colour
S random note
L random letter (ASCII code)
CD countdown

How it works

50-90 set up
100-390 asks how many players and their names
500-600 main loop
900-930 set up double height
1000-1070 read questions from DATA into array QS
1100-1990 questions data. QS is set DIM QS(100,2) so you can add your own
2000-2390 ask questions, picks letters, works out score
3000-3300 score board subroutine
3305-3500 someone has won, well done, play again Y/N
4000-4310 title subroutine
5000-5120 start game
6000-6090 title music
6100-6900 DATA for title music

adventure for commodore 64 and spectrum 48k

NO.1 SWORDS & SORCERY

Swords and Sorcery represents the first example of the ultimate in graphic adventures using the unique MIDAS system.

Swords and Sorcery differs from other adventures in that you guide your character through the unending corridors of the underworld on a quest for material, physical and/or spiritual power. The choice is yours.

You begin as a novice with limited abilities in the use of magic, sword play and stealth (lock picking, thieving etc).

As you wander the corridors, you will encounter beings meek and mighty, discover untold wealth and worthless trash. Some objects will increase your powers, whilst some will be dangerous and still others will be protected from pilferers (you!) by friendly ingenious traps, all designed to help or hinder you on your pilgrimage to power and glory.

You need never tire of Swords and Sorcery — when this dungeon can no longer hold you, the next awaits. . . there are a series of expansion modules planned to extend your enjoyment indefinitely.

There are quests within quests within Swords and Sorcery, for those who want to follow them. Some are given others must be found, and some are lost causes. There are many ways of opening the gate between the levels of the dungeons. Some are obscure and easy, others obvious and dangerous. The most profitable paths are both. The Ultimate goal of many will be to find the lost armour of Zob, which was un-made by its maker, and its parts scattered across the levels. What, where, how, who and why are answers to be found. All that is known is the prayer of the seekers:

WHEN DARK CABALLUS HIS COUNCILS LEND US
LET NOT THE RED CLUPEA HARANGUE US
TURN US FROM WHAT SEEMS TREMENDOUS AND
THUS TO ZOBS GREAT TREASURE SEND US.

WIZARDS power level 1 - 10

DRAGON power level 7 - 9

LYTCH power level 6 - 10

WEREWOLF power level 4

Spectrum 48k (Commodore 64 Available Soon)

P.S.S. 452 STONEY STANTON RD. COVENTRY CV6 5DG. TEL: COVENTRY (0203) 667556

Strange Loop 48K Spectrum £5.95

Virgin, 2-4 Vernon Yard, Portobello Rd, London

This program skilfully combines elements from a number of epics that have gone before. Initially, I was most impressed by the flash loading system, which rattles the program in at an astonishingly fast rate — the complete program loads in under 2½ minutes.

In this adventure you must regain control of a robot factory where aliens are programming robots to destroy Earth. There are some 240 rooms between you and the control room and most of them are filled with obstacles.

Many contain flying metal debris, which rips your spacesuit so the oxygen leaks away until

you suffocate. I was proud of myself when I worked out how to get the jet cycle, in a room which means certain death unless you do. You can make rapid progress with it, but watch the fuel.

Virgin boast days and weeks of entertainment from this program and I agree. Since it could take weeks to solve, there is a 'save the game' option so that you can start where you left off.

Finally, try crossing the void on the mechanical grab and you'll find there's humour hidden in the factory too! **M.B.**

Artist 32K BBC £6.95

MRM, 17 Coates Rd, Grimsby DN34 4QH

Drawing was never high on my list of enjoyable activities, and I can't say that this program has made me more learned in the profession of artistry, but it has often left me on the verge of threatening by Beeb with a hard reset because I couldn't correct some silly mistake.

Even after reloading and consulting the superb on-screen instructions I could only come to the conclusion that the mistake would have to be retraced and plotted over in the background colour, which is easier said than done.

The instructions incorporate splendid colour and graphics and make enjoyable reading. They cover most of the utilities

(including circles, ellipses and grid references), and they also show how to select each one.

Mode 2 gives a fairly low resolution screen, but a fantastic range of colours, which can help produce some very spectacular results.

Overall Artist is pretty absorbing once you get into a certain picture or design which can be saved or loaded on to cassette or disc. The rather more simple utilities like triangles and squares could be replaced by something more practical such as arcs or shades. **M.B.**

Match Halves/ Match Colours TI-99/4A £3.50

B Jackson, 21 Rowan Way, New Balderton, Newark, Notts NG24 3AU

This is a colourful, child-orientated, pair of programs which use the Speech Synthesizer and have appeal for the pre-reading-age child.

The first program, Match Halves, presents a sprite-filled title sequence followed by instructions, which, if spoken, follow the line-by-line presentation on-screen, making each line sound like a fresh sentence, possibly causing confusion.

Objects then appear, each split in two, requiring the child to use left and right halves of the keyboard to manipulate the two parts.

A bug appeared here: the program can respond when the halves are 'off' by about a keystroke. This lets down otherwise good Synthesizer use and excellent graphics.

In Match Colours, the child must press a key when an arrow points to a block matching the colour requested. If a wrong colour is repeatedly selected, the computer enters 'tutoring mode', where each colour is shown and named. The Speech Synthesizer is a necessity here.

The score shows overall performance, which could be useful in determining whether a child has difficulty naming colours.

The program is well-written, and excellent use is made of the Speech option. Needs Extended BASIC. **P.B.**

value for money	95%

Take your pick

An assortment of programs to catch your attention

Atlantis TI-99/4A £6.95

Intrigue, Cranbrook Rd, Tenterden, Kent TN30 6UJ

The artwork and protective wallet are excellent, although the print of the instructions requires good eyesight.

The game is loaded in two sections: the program is on side one, the data files on side two. I had difficulty with this second side because an insufficient tape gap had been left between the start of the tape and the start of the data files, but I sorted it out eventually.

The length of these data files means that you can not make mistakes while loading — it takes around eight minutes.

The instructions tell you to switch off if you experience difficulties and restart. This is unnecessary. Just rewind the

tape, wait for the computer to stop with an error, exit, and then RUN again.

The aim is to manoeuvre a diver through 84 screens, searching for the Tomb of Atlantis and its secret. You collect pearls and precious stones, avoiding fish bites and trying to keep up your energy and oxygen. The minute instructions contain some hints. The presentation is quite good on screen, but TI BASIC is not the fastest medium for such games. A creditable effort, though. **P.B.**

instructions	90%
playability	70%
graphics	80%
value for money	90%

Display Enhancement package TI-99/4A + MiniMemory + 32K RAM Expansion £20

Stainless Software, 10 Alstone Rd, Stockport

This is a set of assembly language routines which can be called from TI BASIC to give a powerful addition to the language. TI BASIC cannot normally access the RAM expansion — this is achieved by the MiniMemory module.

The documentation is brief, but discusses a wide range of useful utilities like windowing, access to 40 column mode, and paging — all can be used to great effect.

There is a demonstration program which puts the routines through their paces but cannot do justice to this remarkable product.

If you use its facilities to write a commercial program, you must obtain a licensing agreement from the distributor. Some restrictions are placed upon certain TI BASIC functions, the use of which interfere with the operation of the DEP.

The DEP is divided into four 'segments', each of which is loaded separately into the 32K and Minimem via the 'L' option in Easy Bug, and I experienced no difficulties in doing so.

The whole of the VDP RAM is available for your own programs, but I feel that a disc system is a necessity, although this is cassette-based. **P.B.**

A NEW TYPE OF ADVENTURE GAME

Hampstead is an adventure game for would-be social climbers. Speed of reaction isn't so important. What matters is your ability to solve complex problems, which get harder the further you proceed in the game.

Hampstead is a quest, but not for gold. The aim of it is to reach the pinnacle of social status, and acquiring wealth is only one part of the problem. If you wish to go up in the world you also have to gain the admiration and respect of your fellow men, and there's more to that than a fat bank balance.

In Hampstead it helps to know something about art — or rather, to give the impression you do. You must wear the right clothes, be seen in the right places, live in the right house with the right partner and use the correct mode of transport.

At the start of the game you are a nobody whose aim is to become a somebody. So lie, cheat, steal and defraud. You know it makes sense.

Questions People Ask About Hampstead:

Q: Is there life after Hampstead?

A: No, Only before and during.

Q: Why do dustbins have no lids in Hampstead?

A: In order that passers-by may see the week's completed Guardian crosswords stacked neatly within.

Hampstead — a new type of adventure game!

Melbourne House

Home Computing Weekly is proud to publish its first Amstrad program, written for us by regular contributor Steve

How it works

40 choose 40 column/4 colour mode
50 select colours
60 select background and foreground colour
70-80 initialise game
90-130 titles
140-150 read data
160-170 wait for space bar
180-680 main control loop
190-220 traps
230 describe location
240-290 directions
300-340 describe items
350-360 input action
380-680 call subroutines depending on action
690-2040 action subroutines

Variables

aa%-az% flags to test action
s% (x,y) holds map
p% holds locations
b% (x,1) pointer to items
q\$(x) descriptions of locations
s\$(x) descriptions of items
n\$(x) words understood
z\$ input sentence
b\$,c\$,d\$ substrings
1\$ second word input
n\$(x) pointer to word

Lucas. It's an adventure game in which you are sent on a difficult, probably dangerous mission to the Castle of Desolation.

Your task is to rid the castle of the evil forces which haunt it. Give instructions in the form of two word sentences, as RUB

Hints on conversion

This program makes use of the WHILE WEND loop, which is unavailable on most micros. It may be replaced by a REPEAT UNTIL s\$ = 10 loop if that is available or alternatively, a conditional GOTO.

LOCATE is used to place the cursor at x,y co-ordinate on the screen.

PAPER and PEN are used to select the colours.

LOWERS\$ is a function which converts all upper case input into lower case. Lower case letters are unaffected. This is not easy to achieve in most BASICs and you will probably find that it is easier to check just upper case inputs.

The Amstrad allows variables to be in either upper or lower case.

LAMP.

To move around, you only need to use a single letter such as N, S, E, W.

Here's a list of some of the words understood:

HELP, SCORE, PRAY, GO, NORTH, SOUTH, EAST, WEST, UP, DOWN, IN, OUT, RUB, EAT, DRINK, SHOOT, KILL, ATTACK, HELP, SCORE, GET, TAKE, GRAB, DROP, LEAVE, OPEN, UNLOCK, SHOW, INSERT

Here it is! Our first Amstrad program, by Steve Lucas

Brave the forces of evil in the castle of desolation

Choosing a printer is a lot easier than choosing a computer.

THERE are dozens of quality printers from which to choose. With quality price tags of around £250.

The Brother M-1009, however, breaks all the rules.

Stays defiantly below the £200 barrier.

Though it has far more than its fair share of features, it maintains the extraordinarily low price of £199.95.

Travels at a steady fifty.

In the speed stakes, the M-1009 is certainly no slouch, being fully capable of up to 50 characters per second.

Providing bi-directional and logic seeking printing for normal characters and uni-directional printing for super and sub script and graphics.

Prints on any paper.

Being an impact printer, the M-1009 will print on virtually any paper, including letter headings, invoices and standard office stationery.

It will even print two copies together with your original.

A superb character recommendation.

In its price range, the M-1009 has a great deal more character than many printers.

96 no less, plus international type and graphic characters.

Reliability comes as standard.

Built to the same exacting standards as Brother's elite office

printers, the Brother M-1009 already has faultless credentials for reliability.

Its 9 x 9 dot matrix head, for example, has an astonishing 20 million character service life.

One printer that doesn't block out the light.

Many home computers tend to be a little on the large side.

In contrast, the compact M-1009, at only 7 cm high, keeps a discreet profile.

Well designed, reliable – and conscientious.

The Brother M-1009.

The future at your fingertips.
