Silver-Reed-Right!

**THE DAISY PRINTER OFFERING UNBEATABLE PRICE/PERFORMANCE
PLUS COMPATIBILITY WITH MOST POPULAR WORD-PROCESSING PACKAGES.**

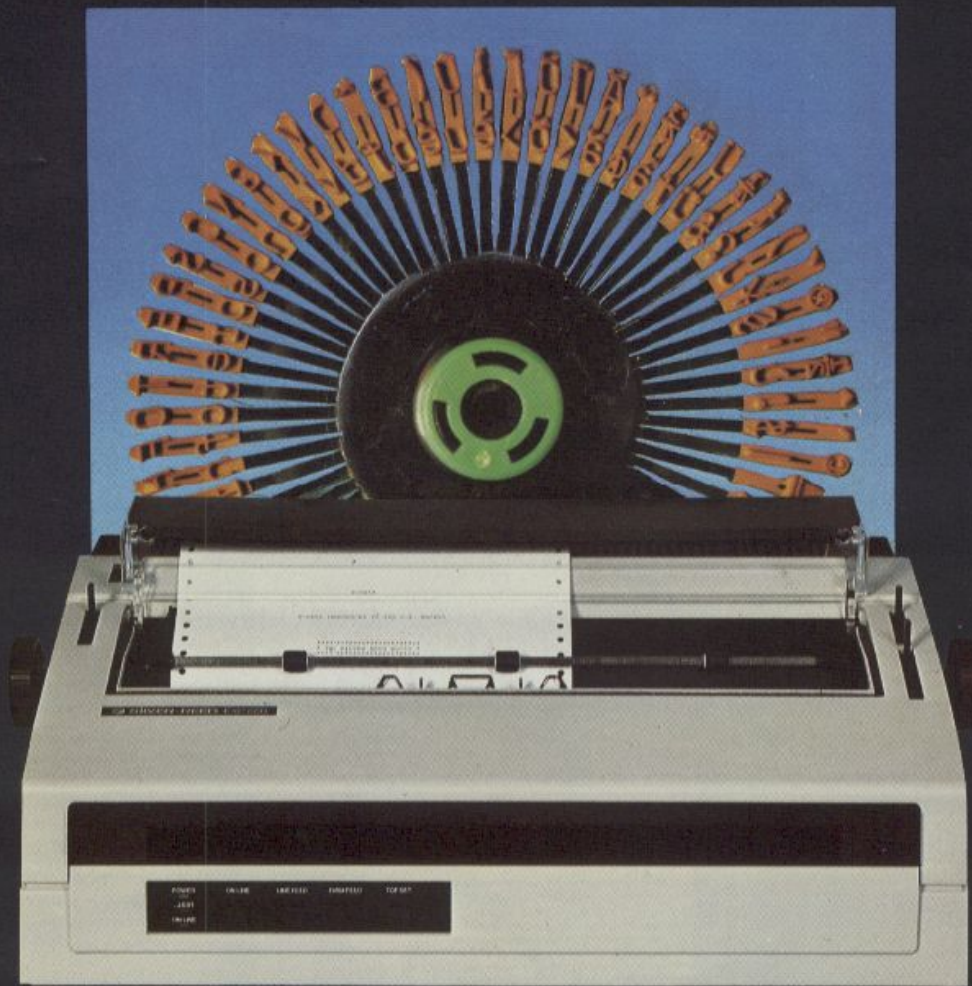

Superbly engineered, the Silver-Reed EXP550 provides the widest range of word-processing functions at a true entry-level price. Features include single pcb electronics and low compo-

nent count for ultimate reliability, and industry standard interfaces.

All backed by X-Data's renowned customer support service.

- 16 cps bi-directional
- original plus four copies
- up to 17in paper width
- easy-load cartridge ribbon
- quiet operation for office environment

Perfect print at a price you can afford.

Apple bruised by IBM

By PCN writers in London and the US

As rumours that Apple was heading for a financial crisis swept the UK computer industry, Apple executives have moved quickly to pour scorn on doubts about the company's future.

'Rumours of my death have been greatly exaggerated,' said Peter Cobb, managing director of Apple in the UK. 'With Apple set to announce world-wide profits of \$75-80 million and carry forward substantial cash reserves it doesn't sound like a company about to go down the drain.'

Suggestions that Apple could soon be fighting for its life emanated from the US. And despite the reassuring noises now being made, doubts remain.

Apple Computer expects its 4th quarter profit to be sharply lower than during the same period last year. Sales of the Apple IIe are slowing down and, while Apple leads in education, on the business front IBM is making cider.

Sales of Lisa have not been spectacular, but the recent price cut will bring a Lisa down to less than an IBM XT with a VisiOn software package. In the UK the price of the machine, including software, has been cut from £8,000 to £6,500.

Apple shares rose to 63 on Wall Street in the early summer, largely on excellent earnings figures for last year of \$61.3 million. Apple's net income for the year is anticipated at 25 per cent or so above last year, but with increased advertising needs plus flattening sales of business machines, profitably has decreased.

Two weeks ago Apple closed its Lisa assembly line at its Cupertino plant in California and shifted all Lisa manufacturing to the high volume plants in Dallas, and Cork in Ireland. At the same time Apple stopped making its own disk drives for the Lisa.

Last week the company laid off 40 per cent of the Dallas workforce (although it was pointed out that

they were temporary workers employed to meet the backlog of orders that built up when the IIe was launched at the beginning of the year).

But the Apple software advantage continues. While IBM has almost caught up in business applications programs, reaching 975 titles this week compared to Apple's 1,187 for the II and IIe, Apple is years ahead in educational programs — 1,805 to 48. In total applications packages it has 4,361 to 1,900, and there are games too.

Apple is publicly confident, and its founder, Steve Jobs, is telling anyone who wants to listen that Apple will be No 2 computer manufacturer behind IBM.

Meanwhile its stock stays in the doldrums — it was down at 20.38 this week.

Wall Street was already jittery about how well Apple will be able to compete with IBM's Peanut, due to be launched any day now. The Peanut is expected to cost around

\$500-\$600 and will undercut the price of the Apple IIe.

Clearly Apple is going to have its work cut out in meeting the challenge. Its first response is to launch an enhanced version of the Apple III at Comdex at the end of this month. It will feature the new operating system, PRO-DOS, which is designed to work with hard disks and add IIe compatibility.

To back up the launch, Apple will be running a major advertising and promotional campaign for the III. It will be followed up by the end of the year with new software packages, including an Apple version of the top-selling 1-2-3 program and possibly a Lisa-like operating environment with icons and windows.

Plans for the III are something of a holding operation, as the main response to the Peanut is bound to be the long-awaited Macintosh, a cut down version of the Lisa. Apple has now said that it will be launched on the Lisa's first birthday in January.

Microsoft releases OS 'standard'

Microsoft has made its bid to standardise 8-bit micros by releasing the MSX-DOS operating system.

Microsoft claims the backing of 14 Japanese and one US computer manufacturer for the MSX standard. MSX-DOS is CP/M-80 2.2 compatible and runs all Microsoft's 8-bit software including the programming languages MBasic, Cobol-80 and Fortran-80.

The first batch of MSX-DOS systems will be ready in January 1984, selling for under £100.

● More on the MSX-DOS operating system in next week's PCN.

Clean Orics by Christmas?

The long-awaited bug-free Oric ROM could be on the scene before Christmas.

Oric itself is tight-lipped about its infamous chip, but the word at the PCW Show was that the waiting could almost be over.

The evidence is circumstantial: Softek has an Oric Basic compiler for pre-Christmas launch.

Softek cannot pre-empt an Oric announcement and Oric is making no comment, but the speculation raises important questions for current Oric users: will Oric exchange new ROMs for old, and will Softek's compiler run with the old ROMs? The answers could be available within the next few weeks.

Cut-price dawn for the age of Aquarius

By Geoff Wheelwright

In the face of massive losses in the US and price-slashing by its competitors in the UK, Mattel Electronics has cut the prices of the Aquarius micro and the Intellivision computer games unit.

Mattel has reacted to its \$200 million loss in the second quarter of this financial year by cutting the price of its Aquarius 4K colour micro to £59.95 — from £79.95 — and the price of the mini-expander (which includes two games paddles and allows for games cartridges and memory expansion modules) to £39.95 — from £49.95.

The price of software has also been cut. Aquarius software was £19.95 for games and £49.95 for business programs, but has been reduced to £12.95 and £29.95 respectively. The 16K memory expansion module is still priced at £29.95.

It is the third price cut for the machine since it was announced (and reviewed by PCN) in April 1983. The Aquarius began as a £109 micro, dropped to £99 even before it was launched, moved to £79 last month, and became the cheapest colour computer in the country as it plunged to the £59 price.

And a Mattel spokesman said he expects some dealers will discount that price even further before Christmas to sell the Aquarius for £49.95. He said the price cut was caused partially by the announce-

ment of the 16K Oric's price cut to £79.95. The other factor in the decision, however, had to do with Mattel's poor sales figures.

'Our plan (for marketing the Aquarius) has been somewhat shaken by the losses of the parent company,' said the Mattel spokesman. 'We have obviously been forced to reduce prices.'

Meanwhile, the Intellivision games unit (whose computer adaptor unit and keyboard unit is pro-tested in PCN this week) is also

being packaged to beat the price cuts. The £59.95 Intellivision speech synthesis unit is being given away on a rebate basis with the £99.95 Intellivision games console — effectively bringing the price of the games unit to £50.

Heading up the new crew of cut price Mattel machines is former financial director Ian Wilson, who takes over from departing managing director Michael Lunch (who left Texas Instruments only six months ago to work for Mattel).

Michael Lunch: age of Aquarius must dawn without him.

Oric feels the strain

By Ralph Bancroft

Oric Products has become the latest UK micro manufacturer to be hit by growing pains and is to be acquired by property company Edenspring Investments.

The share transactions of a complex deal are subject to approval by Edenspring's shareholders at a meeting to be arranged for next month.

John Tullis, Oric's chairman, said that he had been looking for a deal along these lines for six months. It would, he claimed, help Oric in two ways. Firstly, it would increase Oric's capital base. 'The company was growing so fast that it needed to increase its working capital. We couldn't rely on retained profit,' he said.

Second, it could allow the company to be listed on the Stock Exchange.

It looks as though he may have

been defeated in this second objective, at least for the time being. Although Edenspring is quoted on the stock market, it will lose the listing as a result of the share transaction.

What the complex financial manoeuvres hide is the true extent of Oric's financial problems. Peter Jones, joint managing director of Edenspring, commented: 'Oric's cash requirements are, well, quite pressing.'

Under the terms of the agreement with Oric, Edenspring will pay off £1 million of loans to Oric by issuing shares to the lenders. In addition a further £750,000 is to be raised in cash by a further share issue (although Mr Tullis denies that this cash will go directly to Oric).

Like Dragon, but unlike Grundy, Oric's difficulties stem from growing too big, too fast.

Research and development also swallows up large sums of money that is not recouped until the new products are available in the shop. Both Grundy and Dragon were involved in the launch of disk systems when financial crisis struck. Oric appears to be no exception to this rule.

'We anticipate that the disk system will be in the shops by December,' said Mr Tullis, 'but we don't have all the components in our hands yet, all we have is promised delivery dates. I am not prepared to give a confirmation on

availability until those components have been delivered.'

Mr Tullis refused to give any information on when the modem, promised since last year, would be available.

Edenspring was formed in April this year out of an attempt to restructure a diversified firm called Pennine Commercial Holdings.

Mr Tullis is confident that if the deal with Edenspring goes through it will secure Oric's future. 'The argument provides a capital base for the expansion of the company over the next 12 months,' he said.

Spectrum keyboard solution

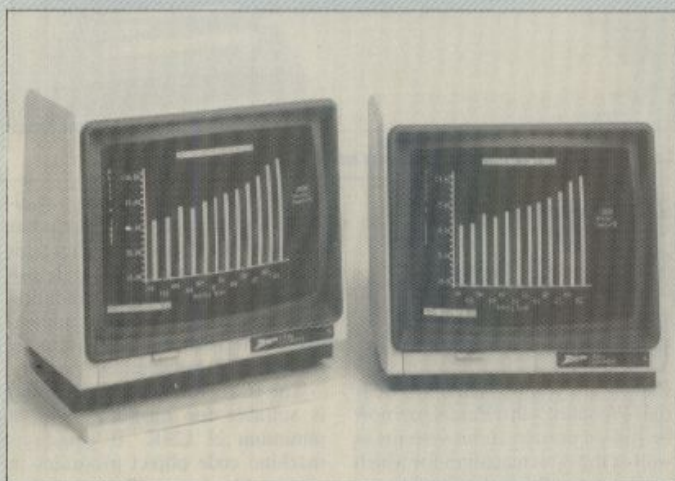

Since Sinclair changed its ULA in the Issue 3 and some Issue 2 Spectrums, you may have had problems reading the keyboard using the IN command. IN 57342 produces 255 in Spectrum before issue 3 and 191 in Issue 3 machines.

The solution to this problem in Basic, writes Mr W Smith of

Sedgely, West Midlands, is to use OUT 57342,255 directly before using the IN command. This method of reading the keyboard yields the same IN numbers for the whole Spectrum series. Try:

10 OUT 57342,255: PRINT IN 57342: GOTO 10

ZENITH TWINS — If you've just bought a micro and you're now looking for a monitor, Zenith Data Systems (0452 29451) has two new models available. For £109 you can buy the ZVM-123 which has a green phosphor display, or the ZVM-122 at £115 that gives an amber display. The 12in monochrome monitors display up to 25 lines of 80 characters, and a 15MHz bandwidth which enables them to show more than 800 lines horizontally. In addition to these standard features the monitors have optional tilt bases. Both are compatible with Apple II, IBM PC, Commodore 64, Vic 20, T199/4A, Atari 800 and 1200 and Zenith's own desktop computer.

Olivetti goes portable

Olivetti has followed Tandy and NEC with a version of Microsoft's A4-size portable. The Olivetti job, dubbed the M10, will be launched towards the end of the year and prices have yet to be fixed.

The M10's individual quirks include a 'pop up' 40x8 display — presumably to avoid having to prop the machine on a book Tandy-style. It has only two function keys — Tandy has eight and NEC five. Olivetti has its eye on some useful add-ons — a four colour printer/

plotter and an acoustic coupler. Both will be battery operated.

Other features follow Microsoft's hazy standard — a full size keyboard, 32K ROM and 32K RAM. Interfaces are RS232 comms, parallel printer, cassette and bar code reader. Built in software is Basic, a text editor, terminal program, diary and address book.

It seems as though these popular and useful machines are going to become a standard part of the business world. Hopefully, the specification will soon be extended to include an efficient storage media — microfloppy disks or even bubble memory.

Tandy aiming to put a mouse in your house

Tandy has jumped on the mouse bandwagon with its own Colour Mouse to be used with its colour computers.

At \$49, Tandy claims that this is the first time a mouse has been sold exclusively for home and educational use, unlike the mouse sys-

tems being sold for the IBM PC and Apple Lisa at much higher prices.

Tandy users here will have to wait for some time before they get a glimpse of this new mouse, as Tandy UK is uncertain whether it will be selling it over here. It runs on the Colour Computer and MC-10.

16/32-bit CBM

By Sandra Grandison

Rumours floating around Silicon Valley indicate that Commodore has a 16/32-bit micro up its sleeve.

If Commodore is in the process of building such a machine it could reach the UK sometime next year. At the moment details of the business computer are sketchy, but sources say that the machine will sell for under \$1,000, running CP/M 86 and compatible with some IBM PC software.

Elsewhere in the Commodore empire some existing machines still seem to be under a cloud. The Commodore 700 has hardly been heard of since its launch earlier this year. Some dealers are still not sure of the machine's capabilities.

A spokesman from Sumlock Bondain said: 'As far as we are concerned we're not going to stock

the 700. We aren't too sure of its reliability.'

Adda Computers told a different story — it has sold six of the 128K versions at £1,144.25 and six of the 256K versions at £1,374.25. Another dealer, Direct Data Marketing, claimed it had several of the machines in stock but had not sold any.

Commodore says it is filling a backlog of orders for the 700, but it says it's too early to tell how the system is selling.

If you've been saving up for a Commodore 500, you could be in for a long wait. Production of the machine in the US is said to be steady with a limited supply of the micros being shipped. But it's still unclear when 500s will reach the UK in any numbers, or even whether they will arrive at all.

VIEW FROM AMERICA

From Chris Rowley

Micro mania hits TV and stocks

It often seems that unless it's on TV, nothing in America is actual, real or believable — one reason perhaps for the hysteria already mounting about ABC's planned screening of an anti-nuke film on November 20 called 'The Day After'.

This week CBS put the official imprimatur on micros with an hour-long prime-time show called 'Whizz Kids' which fits the War Games formula on to the small screen. Everything centres on a suburban computer freak of 13, who inexplicably keeps \$1/2m worth of computers, monitors, modems, robot arms etc in his room.

Can this sort of thing fly? New shows are a dime a dozen at this season and few pan out for more than a couple of weeks. But if it does fly it could become an ideal forum for reaching the microcomputer audience. And microcomputer advertisers need new places to go.

Already TV ads for micros have proliferated on NFL football broadcasts to the point of absurdity. And last week Alan Alda, from MASH, could be seen in the first of 11 new commercials for Atari. Alda is something of a computer nut himself and seems genuinely convincing in assuring us that we'll be able to 'do more with an Atari'.

On the micro scene itself, however, the atmosphere remains that of a casino crap shoot. Players come and go, all the while nervously gazing over their shoulders at Mount IBM — enormous, inscrutable Big Blue.

Rumours a bound, including the increasingly common whisper of WHAT IF THERE REALLY ISN'T A PEANUT? Does it make sense for IBM to decimate sales of PCs with a cheaper home computer that is PC compat?

Does IBM really want hundreds of thousands of families as end customers with repair and services demands? An announcement from IBM is expected on October 18 by the market savants.

Not that IBM has said anything about a date, but because it's a Tuesday and the PC was released on a Tuesday this is thought to be IBM's favourite day for this sort of thing.

Coleco's Adam remains the hot play of the moment. In fact the market on Coleco stock options at the Philadelphia Stock Exchange remains the No 1 contract in the country. Since February 975,000 options of Coleco stock have been sold. At the moment there are 78,000 pessimists with Puts and 108,000 optimists with Calls.

Last week the FCC finally gave the nod to the Adam and Coleco's factory is now storming quota day and night.

Some of the gamblers will also have noticed the three law suits brought against Coleco by stockholders charging insider trading by Arnold Greenberg, Coleco president, who is said to have sold \$8m of stock in June when Coleco was at 60. Currently it hovers around 31.

New players continue to take their places. Acorn Computers announced that it already had \$21m of orders for the BBC computer it is touting for the educational market.

Analysts tend to dismiss the Acorn move, noting that 40% of computers now in US schools are Apples and that the BBC machine is listed at \$995, without monitor or disk drive. Acorn however, does have unique classroom training software and the BBC has received nothing but good reviews here.

Ex-players still make news too. Former Atari president Ray Kassar agreed last week with the SEC and gave up \$80,000, which sum represented the loss he avoided last December by selling his Warner stock 23 minutes before Warner announced trouble at Atari.

Those troubles were illuminated last week by scenes in Alamogordo, New Mexico where Atari dumped 14 truck loads of unwanted video games cartridges and computer debris in a land fill. While on-lookers whooped, workers then spread tons of concrete over the deposit creating an archeological marvel for future generations.

New business micros were unveiled by Wang and Lanier. The \$2,995 Lanier Business Computer is a dual Z80 and 8088 machine. Wang went a step further with its Professional Image Computer which can store images of texted pages.

Expanded Lynx

By Wendie Pearson

Dixons will stock the 96K Lynx from this week, according to Computers.

The machine will be circulated to Dixon's 50 main stores around the country and this will be followed by the arrival of the 128K with CP/M and disk drives in five weeks' time.

CP/M will only be available on the 128K, but meanwhile, the Lynx shouldn't be short of software. The 128K model will cost £455 when it appears later this year. A disk drive will add £344 to this. Abbersoft in Dyfed is writing games, and Bus-tech of Portsmouth is producing a

range of six games and an educational program designed to help you with mathematics.

Romik in Slough has three new games out for the Lynx, and Rad Systems in north London have written home economics software including Accounts and Bank Account, all available now. Acme Software in Liverpool, run by two ex-Bug Byte programmers, is also writing software for the Lynx.

The micro itself is doing well abroad. As well as selling in Scandinavia, it has done particularly well in France, Computers says.

Larger Lynx systems are on their way into the shops.

Prospero's Pascal for the micro

Pascal fans will be pleased to hear that Prospero's Pro Pascal can now be run on pseudo 16-bit systems as well as the 8-bit machines for which it was originally implemented.

Prospero (01-785 6848) has already released a version of its compiler for use under CP/M86 and later this month it should have an

MSDOS/PCDOS variant available. The company says that it has followed the definition of its 8-bit Pro Pascal, which has a British Standards Institution validation certificate, and that most applications programs will be directly transferrable between the two.

The 16-bit version costs £368 and is suitable for machines with a minimum of 128K. It generates machine code object programs in relocatable form. The compiler comes with a link-editor, a library of run-time routines, a library manager, and a Pascal cross-reference generator.

Attention all TI owners

Owners of the TI 99/4A home computer now have a new national club offering advice, software, and the strength of numbers. On receipt of £5 annual membership, the TI Home Computer Users Club will send you the first issue of the club's quarterly magazine and details on club facilities.

Members will be kept up to date with details of new TI accessory and software releases and will have access to the TI Home Software Library which will provide software at low prices. The club is independent of TI. Program writing could

earn you some cash if your software is printed in the quarterly mailing, and the full time staff at the club's headquarters are on hand to answer queries and give advice. The club is located at PO Box 190, Maidenhead, Berks SL6 1YX and is run by a company which handles various clubs in different fields.

The club is currently seeking regional organisers. Once this is done, regular meetings should be arranged to give people without a local group the chance to swap tips and ideas. At present, user groups are located in Brighton and Leeds.

On the Eve of Adam

Word processing is the latest stumbling block in the path of Coleco's Adam as it totters towards full production.

Reports from the US indicate that the word processing software to be supplied with the \$700 Adam is far from being the professional program that was promised. Coleco is said to have undertaken to improve the software with a \$30 or

\$40 utility package early next year, but this would contradict what it was saying earlier in the year: that the word processing would need no additions to function as a professional quality system.

Shipments of the Adam are due to begin this month; they were originally planned for the end of August but problems with the system's tape drive set it back.

Coleco is largely a victim of its own publicity — the Adam was launched with such a fanfare and it promised so much that it was bound to attract close interest. Perhaps it was naive to believe that for \$600 (now \$700) a system could offer the kind of features it does — full keyboard, high speed tape, daisy-wheel printer and more — without corners having been cut in its

design. This is a harsh, and unforfeiting business.

And demonstrating that it never rains but it pours, a Coleco shareholder has sued the company for misleading the public about the Adam.

It seeks damages for people who bought Coleco stock between the May launch of the Adam and the end of September.

That's the micro of Woolies

Woolies has plunged into the computer scene with the other big micro-selling chain stores.

Initially it will be stocking the new Atari 600XL, Vic 20, Commodore 64 and Spectrum machines at 160 Woolworth and Woolco stores. The computers will be supported by a range of games and educational software, which will include not only the manufacturers' own software but also programs

from Parker, Imagic and Activision.

A spokeswoman for Woolworth said: 'In our stores there will be a computer section for the range of machines, and, of course our staff will be trained. In the new year we shall be having discussions to decide whether or not we are going to supply a larger range of computers'.

Woolworth is following Tesco and the Co-op in its micro move.

Smiths cuts micro mag coverage

The range of micro magazines that you can buy at WH Smith is about to be slashed as the company cuts back on the titles it will stock.

Smiths has given its branch managers a list of 20 magazines that it regards as its best sellers. The branch managers are being asked to monitor their sales and to make sure that any magazine not earning its keep won't take up valuable shelf space.

A spokesman stressed that the list (which includes PCN) will not be a hard and fast rule; branch managers will still be able to decide

what they stock. The variety of titles will be cut, but you'll still be able to order a magazine if it isn't on the shelves.

Although the list hasn't been made public it is thought to include four Sinclair-related titles and three that concentrate on Acorn. It could be that Smiths is trying to use the magazine racks to support its own sales of micros. Of its 423 shops 250 have computer Know-How departments and there are now six 'Computer Shops', where Sinclair and Acorn systems share the space with Apple IIe and Commodore 64 machines.

The list is expected to change as new titles are launched or as existing ones become more or less popular. And the branch managers will still have the final word on what is displayed.

Piracy probe

Another voice has joined the chorus clamouring for sensible copyright laws — but there's no reason yet for the pirates to abandon ship.

A top Cabinet Office advisory team last week criticised current Government proposals on computer software protection.

Making a Business of Information, a report prepared for Mrs Thatcher by the Information Technology Advisory Panel (ITEP), states that the 1981 Green Paper on the reform of copyright law 'did not seem to us to cover all the needs of software suppliers and users,' and it calls for legislation that will not be outdated by rapid technological developments.

But an adequate copyright law on

software seems as far away as ever. The 1981 Green Paper is to form the basis of a new copyright law to replace the Copyright Act of 1956, which is now badly outdated, but the fact that new legislation is in preparation will tend to work against attempts to amend the 1956 law in the meantime.

The British Computer Society's copyright committee, for example, is currently pushing for a Private Member's Bill in the next session of Parliament to amend the 1956 Act (PCN, issue 29), but Lord Lloyd of Kilgarren, who is shepherding the proposals through Parliament, is not optimistic about their chances.

The problem is that governments tend to be against what they see as the haphazard amendment of existing legislation. 'They are dead against it', says Lord Kilgarren.

Gary Kildall: 'The way to move ahead is to have a computer system which controls functions in the home.'

DR homes in

By Cyndy Miles

Gary Kildall, the man who invented CP/M, is planning revolutionary changes in the way computers are used in the home.

Using technology already developed by the company he founded, Digital Research, he predicts that within two years home computers could provide a network of electronic links that will bring greater efficiency and greater security to life at home. And unless home computing develops in this functional way it'll run the risk of being little more than a game-playing fad for most of its users, said Mr Kildall in an exclusive interview with PCN.

He was on a fact-finding trip taking in Europe and Japan when he stopped in London and outlined Digital Research's plans for the home.

'Home computer use is really based on games and standard utilities at the moment. But the way to move ahead is to have a computer system which controls functions in the home,' he said.

He has no intention of publishing specific plans and prefers to keep the competition guessing. But Digital Research has in recent weeks launched products and outlined plans that hint at an increasing concentration on the consumer software market. It made its name with a business operating system,

but having changed one industry by developing a standard there seems no reason to suppose that it can't transform home electronics as well.

Forming the foundations of Mr Kildall's plans are the real-time operating system Concurrent CP/M, and the multi-functional, easy to use interface VIP (Visual Information Processor). VIP is Digital Research's answer to Apple's Lisa technique, enabling newcomers to microcomputing to use systems with ease.

Put these two together and you've the basis for a home control system, says Mr Kildall. The sort of system he has in mind would link home and office, include PBX telephone exchanges in the home and render obsolete switch and knob controls.

'The important thing is to make any computerised function better than the existing alternative. It should be better in terms of being simpler to use, more effective, cheaper and energy saving.'

This is what Digital Research will be studying in its electronic home showcase being built at its Californian headquarters.

Mr Kildall is confident Digital Research will lead the field. 'We have a clean slate; we have no baggage to carry. We don't have to worry about building hardware to test. We can get on with developing the software.'

Laser bonanza

Next spring could see the first appearance of a storage device that brings the price per megabyte down to \$7.

Shugart will unveil its optical disk drive, the Optimum 1000, at Comdex in Las Vegas in November. First shipments of the device, which is expected to sell for around \$7,000, should begin in the first quarter of 1984. UK users could see them shortly afterwards.

The Optimum 1000 uses non-erasable laser technology to store 1 gigabyte on one side of a removable 12in disk. Developed by a Shugart subsidiary, it can be connected to any micro that corresponds with the ANSI standard Small Computers System Interface (SCSI); this was previously known as the Shugart Associates System Interface but on becoming a standard it had to drop the developer's name.

Shugart sees the drive being used where large amounts of data are stored but not regularly accessed. The disk is removable but it is protected by a hard shell cartridge; double sided units will be available, and you'll be able to access the second billion characters by flipping the disk over.

An optical disk might be ex-

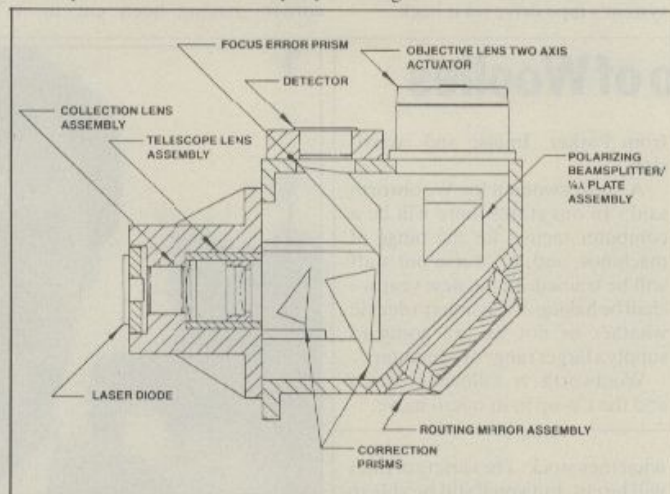

pected to operate at the speed of light but Schugart isn't yet confident enough to debunk all existing scientific theory: its device has an average access time of 100 milliseconds and a transfer rate of 5 megabits per second.

The drive occupies a space 7in by 19in by 24in. When it will occupy this sort of space on UK users' desks is not yet certain, nor is the price, but a spokesman for the company

said that shipments to the UK of Shugart products were not normally far adrift of shipments in the US.

Optical disk technology focuses a light beam through a protective plastic layer which serves as the disk substrate; the recording layer is deposited on the substrate and the light beam pierces the plastic to read the disk.

For more information contact Shugart on 04862-24527.

The collective lens assembly is the nerve centre of Shugart's optical disk.

Redwood puts Unix systems on the road

Software for Unix systems is beginning to appear at a pace that matches the hardware makers' announcements of 68000/Unix implementations.

St Albans-based Redwood (0727-38138) has launched integrated word processing and database software to run under Unix as the first elements of Uniplex. Peter Osborn of Redwood said: 'We are offering a suite of packages integrated at source code level as opposed to buying in several products and adding just a veneer of integration.'

Uniplex is intended to develop into a suite of software modules that will run on any Unix system regardless of hardware. The modules are written in C and can be customised.

The Uniplex word processor includes electronic mailing and a spelling checker. The Database is equipped with an applications generator and a report writer besides offering SQL, the relational query language used in IBM environments.

The next part of Uniplex due to emerge is a spreadsheet system.

Home runs and Sirius games

Business software for home micros and games software for business micros are among the crop of new software releases this week.

Micro Software (0473-462721) has brought out a database system for the Commodore 64 called Inventory 64. It is aimed at small businesses which want to keep track of stocks or parts. It can keep track of where the items are, who sold them, minimum re-order quantities and cost. Inventory 64 costs £29.95.

The company has also launched two educational packages for the Vic-20 called Sprinter and Tiny Tutor. The first teaches typing skills and the second maths skills for 2-7 year olds. Both packages cost £14.95.

For games players, Micro Software has Zeppelin Rescue for the Commodore 64 and Conqueror for the Vic-20.

The company encouraging business people to take up game playing is Merit Computers which has brought out a series of games to run on the Sirius.

The list is fairly predictable and among the titles are Cosmic Invaders, Speed Invaders, Mutant Birdmen, Speed Driver, Maze Craze, Climber, Galactic Invader and

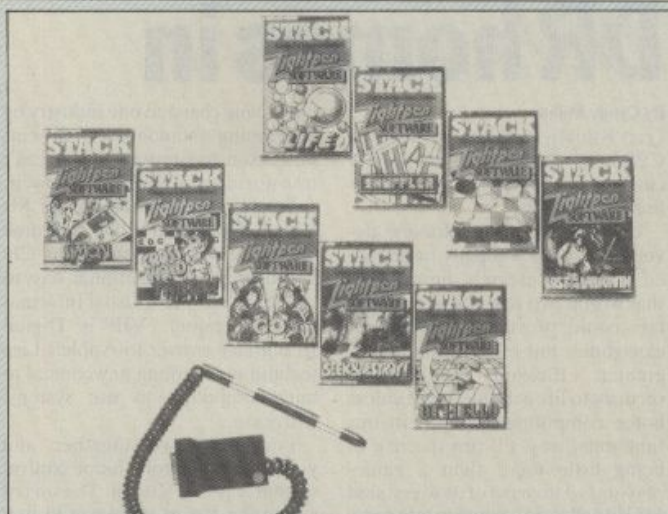

Super Othello. The games are available from Sirius dealers around the country.

For Spectrum owners interested in ball games, Abrasco (01-866 2518) has launched Pool and Golf. They cost £6.95 each and are available from dealers and high street chain stores.

Mikrogen has produced no less than 14 new titles for the Spectrum. They are Knockout, One Hundred and Eighty, Creepy Crawler, Star Trek, Mad Martha II, SAS Assault, Land of Sagan, Defender, Cruise Attack, Paradoroids, Laserarp, Pat the Postman, Naanas and Timequest. The games will be in the shops by the end of the month.

Imagine's new release is called Bewitched and is a continuous maze game to run on the Vic-20. You have to escape from a ghost-infested labyrinth of dungeons by escaping through a series of doors. Survive random attacks from the ghosts, or concussion from moving brick walls, and another maze scrolls up to delude you. The game comes on cassette for £5.95 and is available from usual stockists.

For £7.95 Brane of Penzance (073-62562) has a Spectrum program to attack your heating bills.

LIGHT PEN TOUCH — For those of you who prefer personal contact with your TV screen or monitor when playing games, Stack has produced a bundle of software packages for its range of light pens. Selling at £5.75 each, titles include Seek & Destroy, Crossword Twister, Simon, Shuffler, Life, List in Labyrinth, Othello, Draughts and Go. All packages run on the BBC, Vic 20, Atari and Commodore 64 and are available from Stack Computer Services, 051-933 5511.

Clubs merge to help out handicapped

Two Clitheroe computer groups have agreed to pool their resources and expertise to help the handicapped.

Ribble Valley Computer Club, formed about a year ago, has 70 members but has difficulties in

finding a regular meeting place.

In contrast, the Trinity Youth and Community Centre Computer Club has premises and organisers, but lacked expertise.

Now the two clubs have linked up and will work on programs that will aid the mentally handicapped.

Geoff Jackson, the area youth organiser based at the centre, said: 'The mentally handicapped have a communications problem and the two clubs will work together to find ways and means of helping them'.

Would you like a personal approach to your individual needs?

Here at DBCS being able to sell hardware, organise training, provide all business and games software, supply all types of computer stationery and offer a wages bureau, can only mean one thing:

INDIVIDUAL ATTENTION TO YOUR PERSONAL NEEDS
You can utilise our services as a package or pick the service that is suited to your needs, but whatever you do, our personal attention to your requirements will remain constant.

We can provide:

- 1 SOFTWARE SALES**
We supply a complete range of software both business and entertainment programs for most computer systems.
- 2 HARDWARE SALES**
We can supply the best known computers like Apple, Atari, Commodore, Epson, Sirius, and a full range of additional items like monitors, printers etc.
- 3 TRAINING**
While training is included when we supply a complete system, we can organise training for your staff based on your existing computer, teach programming and similar skills through our range of training courses.
- 4 STATIONERY SALES**
We can promptly deliver all your computer needs; paper of all kinds, printer ribbons and printwheels, floppy disks, binders, fire resistant storage and computer furniture.
- 5 WAGES BUREAU**
If you employ from ten to two hundred people we can handle your payroll, from the simplest of salaried staff up to the most complicated payrolls, including multiple rates of payment and deductions, L.V's, pensions, and agreed net pay amounts.
- 6 CONSULTANCY**
Which computer? Which system is best for you? Problems with your own computer installation? We will act as analysts and consultants to help you obtain the results you require.
- 7 SYSTEMS INSTALLATION**
We provide a complete installation service, including the necessary consultancy, training, systems analysis, and all other necessary tasks needed for an efficient cost effective "Setting up".
- 8 SOFTWARE CUSTOMISING AND PROGRAMMING**
We can design and write complete programs, amend your existing software (if technically possible), design and write application programs running under a range of general packages like: Silicon Office, D. Base II, Tomorrows Office, Supercle+k, etc.

If you require any information on the above services please circle the corresponding No. in the coupon.

French for flexibility

The French micro builder SMT-Goupil intends to launch its Goupil 3 business micro in the UK next spring.

The company hopes to have a London office open by the end of this year, and export manager Patrice Roucayrol says that it is currently translating the software and documentation on its systems into English.

The Goupil 3 is a multiprocessor system with a 6809 and an 8088 on

board. It can also take a Z80 card to add CP/M. In its minimum configuration it costs £1,100, and the price rises to £5,700 for a full system with twin 8in drives.

Besides looking chic in a thickset way, the Goupil 3 is a versatile machine in the range of its processors, the types of disks it can use, and the variety of operating systems (Flex, UCSD p-system, CP/M, CP/M86, and MSDOS) it offers. Memory can be expanded to 1Mb.

The company has no intention of developing a portable version, but plans instead to pay more attention to the system's communications facilities.

Goupil (the word means 'fox' in medieval French) was formed in late 1979 and has venture capital backing from the French Government. It claims to be the number two supplier of business micros in this class in France, behind Apple which is estimated to have 17 per

Thickset chic — the Goupil 3.

cent of the small business market.

Soft swap

Salamander Software has moved into the Spectrum market and will convert some of its best-selling packages for the machine.

The packages will be marketed by Quicksilver and titles now avail-

able include Traxx and Gridrunner at £6.95.

As a warm-up to the Christmas rush, Salamander has also released new software for the BBC, Oric and Dragon. 737 Flight Simulator, French Tutor and utilities package with four programs on one cassette all run on the BBC and cost £9.95.

Transtec's Krypton system — the latest to be given Perfect software.

Perfect pack

Transtec has joined the list of micro manufacturers offering a bundle of Perfect software free with its machines.

Transtec (01-2471327) makes the Krypton range of micros and from now on will give away Perfect Writer, Perfect Speller, Perfect Filer and Perfect Calc.

The total value of software is £1,500. But under the offer the Krypton remains at £1,695 for the basic 64K Z80 machine.

The Perfect packages are fully integrated using common commands and file structures. A virtual memory capability allows you to edit documents larger than your micro's memory. You can also work on seven files simultaneously with any two on display.

Tele-dragons

The Association of London Computer Clubs (ALCC) is turning adventure into a team game.

Through its arrangement with Essex University, 32 people at a time can dial into the university's system and play Multi-User Dungeons, from home computers of the calibre of the ZX81 upwards. Users are joining in from as far afield as the USA and Europe.

The club has a special interest in promoting communications using home micros like the BBC, Dragon and Spectrum and linking them to mainframes.

A modem plus software can turn an ordinary micro into a mainframe

terminal. For instance, if you use Computer Concepts' Termi software on the BBC, it becomes a standard network terminal, according to Len Stuart, secretary of the ALCC.

He went on to explain that any micro with a V24 serial interface, such as the BBC's RS232, can connect to a mainframe computer once it has been adapted for that particular purpose.

Anyone wanting to attend should go to the Community Computer Centre of North London polytechnic, Holloway Road, any Monday during termtime between 6.30pm and 9pm.

About face

If you own an Apple or an IBM PC and are getting bored with the obvious dot matrix typeface from your printer, you might be interested in a new package called Type Faces.

Sold by Pete & Pam Computers (0706-227011), it is a software package that configures your printer to produce 15 different type styles. More than 100 symbols are included to supplement your printer's normal character set.

The program comes complete with a simple text editor which, Pete & Pam claims, can be mastered by a novice within minutes.

The package costs £114 and works with Epson MX-series and IDS printers. The Apple version also works with the Apple Silentype printer.

You will require a dual disk drive system to run the program which is compatible with Wordstar, Apple DOS and IBM DOS EDLIN files.

The software was written by Alpha Software Corp.

No expense spared

Merit Computers has produced a package to keep tabs on your budgets — and at £920 its first job could be to work out whether you can afford it.

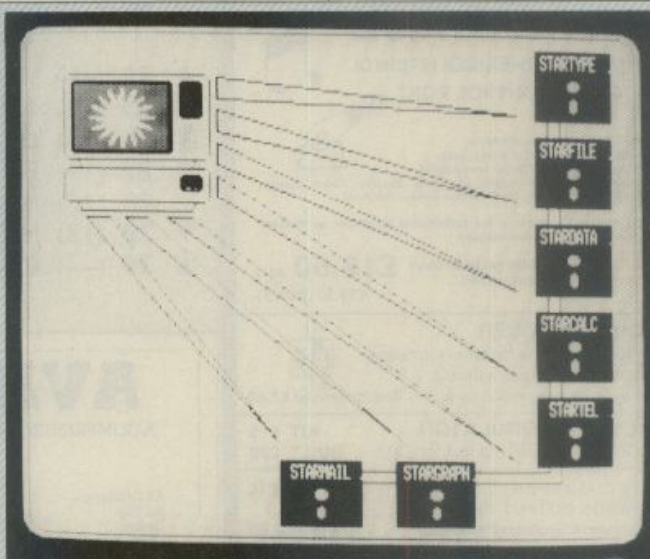

Running on most CP/M-based business computers, the software aims to let marketing managers plan, monitor and control budgets.

Committed and actual expenditure is compared with annual budgets categorised by product area, type of service and supplier name.

Each marketing activity is allocated a job number and details are entered into the job file giving budget and supplier information. Costs within a job are listed and as invoices are received these are matched by job numbers and budgets.

Depending on your needs, the package is also capable of giving various reports.

Merit is on 0942 495821.

STAR POTENTIAL — Rediffusion has added two new packages to the series of programs available with its Teleputer/3 business system. The newcomers are Stargraph, for business graphics, and Starmail, a mail merge utility. According to Rediffusion (0293-31211) Stargraph offers automatic scaling, multiple colours, a choice of charts, grid lines, and a complete set of default values. As with Starmail, the package can be integrated with the existing offerings on the Teleputer/3, which costs £3,595, hardware and software combined.

PCN Charts

This top 30 games list is compiled from both independent and multiple sources across the nation. It reflects what's happening in high streets in the two weeks up to September 29 and, like the micro charts, does not take account of mail order sales. The micro charts this week show the number of machines sold in the two-week period ending two weeks before publication date, so they tell the story in the high street between September 15 and September 29.

Shop assistants — beware!

I've read many letters recently in *PCN* on the subject of shop assistants giving incorrect information and in some cases not knowing the answers to basic questions.

Therefore, my friends and I who have all been subjected to this, set out to take revenge. When we had armed ourselves with sufficient information we set off down to our local computer shops and started posing simple questions.

The few assistants who answered these were subjected to even harder questions and only a handful managed our hardest questions.

The correct technique is for one person to start talking to the assistant asking them about a particular machine while your friends stand around, occasionally butting in to correct any mistakes they make and trying their best not to laugh.

Try it! It's really good fun.
Stephen Baker
St. George, Bristol.

I think I'm beginning to sympathise with shop assistants now...! Ed.

A very good question

Anybody wanting to buy a home computer will take their time to look around for the best to suit particular needs. I did, and bought a Sinclair Spectrum 48K.

PCN £10 Star Letter

Having read the instructions and used the keys to get the feel of it, I fitted a pre-recorded cassette into a recorder and loaded the program — but the game wouldn't start. I tried about ten games programs in all, varying from Hobbit and Inca Curse to Pitman 7 and Missile. They either wouldn't enter, start or store the game.

After testing the cassettes on a friend's 48K Spectrum and finding that they worked 100% I thought I had bought a malfunctioning console. Then I read an article in *PCN* which

Don't carry a LOAD on your shoulders,
unburden yourself on *PCN's* letters page.

told me that I might have purchased the new Issue 3 model, (the one with a different ULA chip). Having checked this, I established that I had, indeed, bought the most recent and up-to-date home computer — so up-to-date that most, if not all, software on the market does not work.

I telephoned some software manufacturers and although they knew of the possible 'problem' they were unable, at this stage, to say whether the new ULA chip would affect the loading and/or playing of their programs... it does.

Here I am, all keen to get on, but not able to have a break from the business side by playing software games.

To update a machine is all well and good but I wonder whether Sinclair warned the software manufacturers of its intention (the programs could have been written accordingly) so that I, and undoubtedly thousands of others, could use the hardware to its potential.

MJ Clements
Stockport

We were amazed too... but we might be able to help by publishing a solution to the problem in PCN. We'll get it into print as soon as possible. Ed.

Mike calls the tune in Gameplay

Could I inform Mike Gerrard (*PCN gameplay, issue 23*) that he nearly started a third world war in our house, by stating that the opening tune to Manic Miner was 'The Skater's Waltz'. I agreed with him, but

Mum insisted it was part of the Blue Danube. The argument got to such a point that we phoned Bug-Byte, to be informed that the tune is the Blue Danube. Apart from that, I would congratulate Mr Gerrard on his excellent and honest reviews.

By the way, my best score on Manic Miner is 19383, and I managed to get onto the 'Attack of the Mutant Telephones', which was pictured in the aforementioned review.
Darren Sargent
London E13

Whatever happened to the idea that music be the food of love? Ed.

Fading dream made clear

I read with some alarm your article entitled 'Job dream fades', (*PCN issue 23*). In it you make some statements which, to say the least, need clarification.

In the first paragraph you give the impression that youth training schemes have been promising young people that they will get full time employment at the end of their 12 months' training. This is not so. Youth training schemes have always made it clear that there is no such promise, but the high standard of training we give young people must go some way to helping them towards employment.

To take Patrick Raymont and Colin Stokes to task over their statements:— First, we give the trainees a detailed and intensive training in computer pro-

gramming, including keyboard skills, writing databases, using word processors and completing suites of programs. We also include such other skills as telecommunications and using PSN modems.

Regarding Mr Stokes' comment on training programmes, these are part of the pre-funding package required by the MSC from schemes, and cover the full twelve months' training period.

I am sure that the few comments which I have made will show that a number of youth training schemes are of a high quality, even though as I have already said, they are not a passport to full employment.

SJ Evans
Computer Project Supervisor
Merseyside Youth Training

Oddly enough your last sentence is exactly what we said in the first paragraph of our article — surely the point is that where full employment is concerned there is no substitute for job experience, and this is what Mr Raymont, Mr Stokes and others were saying. Ed.

What makes a Sinclair sick?

Your report on sick micros (*PCN issue 29*) said that Sinclair found more than 50 per cent of their systems returned not faulty.

My experience with buying a ZX81 leads me to think that most of Sinclair's faulty systems are in the ULA. I eventually found one working with my black and white TV. Those I returned to the shop worked with their colour TV. If Sinclair tested its returns on a right TV, they would not find the faults, and send them back to the shop again until someone with a compatible TV bought it. The public cannot be blamed for returning a black and white computer which will not work with a black and white TV.

ADS. THE ULTIMATE IN HOME COMPUTING PERIPHERALS

"Highest quality peripherals at the lowest possible prices" — that's the philosophy at Advanced Digital Systems. Our team of highly experienced designers use the very latest techniques to produce adaptable home computer peripherals — at a price you can afford.

- Boards are designed using CAD/CAM, giving a neat optimum layout.
- Gold plated connectors are used, wherever possible, to ensure good electrical contact.
- All products carry a 12 month guarantee.
- All units are "Plug in and go".

PRINTER INTERFACE 1

Centronics Interface for the Sinclair Spectrum. £34.50 inc. VAT. Comes complete with approx 1 metre of cable, centronics plug and software.

- Software recognises LLIST and LPRINT enabling Print-outs direct from Basic.
- Also adaptable COPY routine for graphics printers.
- Completely adaptable to 3 different Micros the Spectrum, ZX81 (write for details) and Jupiter Ace. (see below).
- Units are housed in custom designed black ABS Cases.

PRINTER INTERFACE 2

Centronics Interface for Jupiter Ace. £39.95 including VAT and Software. Same unit as the Spectrum Interface but with adapter card.

- Adapter Card has two edge connector outlets, one for ADS unit and the other a duplicate ACE Outlet for RAM PACKS etc.

PERIPHERAL INTERFACE 3 — ZX ACE Package
Using the adapter card and the Software supplied, the Sinclair ZX Printer can be connected to the Jupiter Ace.

Special Introductory Offer £9.95 inc VAT.

- Two versions of the driver software included:
 - One will run on unexpanded ACE, but will not deal with graphics or user defined graphics.
 - The other will run on expanded ACE and deal with all characters.

PERIPHERAL INTERFACE 4

Adapter for BBC Model B

Ring or write for details.

This gives an amazingly cheap entry into printing on the BBC model B by allowing you to use the ZX Printer — ideal for listings.

PERIPHERAL INTERFACE 5

See our future advertisements for our latest items to be released.

Please send me the items as ticked.
I enclose cheque/order for Total

Rent a personal computer from Hamilton and laugh all the way to the bank.

Buying a personal computer is a big decision and certainly no laughing matter. The range of systems available for you to choose from is bewildering.

If you buy the wrong one, you're stuck with an expensive mistake for years to come.

Worse still, can you be sure that what's right today will be right in two year's time? Few of us are that smart.

Still, here is one way that does away with gazing into the crystal ball – Hamilton Personal Computer Rental.

Hamilton PC Rental, from Hamilton Rentals, the UK's leading computer rental company, will let you choose from among the world's major manufacturers – Digital Equipment Co, Hewlett-Packard, IBM and Apple, and yet still allow you to upgrade the hardware whenever you need to – processor, memory, disc drives and peripherals.

And just look at the financial benefits: no capital outlay, with cash free to invest elsewhere and tax-deductable payments.

Rental terms are flexible – you can have a system for six months, a year, or more, and include maintenance. Should you grow to love your Hamilton PC, well, then you have the option to buy it at really favourable terms.

Give your Vic some stick

Q Do you know how I can use my joystick in a program on my Vic 20? I've seen sub-routines which do this but can't get them to work.

Sheldon Kenton,
Whytelgate, Surrey

A Reading a joystick on a Vic is no mean feat — you have to do it yourself rather than getting a ready-decoded result like you would on most systems. This short and simple subroutine is a crude and slow way to do it. But the idea is that it will help you understand how the joystick works. You can then have a go at some more sophisticated routines.

Where do you start? A Vic joystick is simply five switches, each of which can be on or off. Figure 1 shows these with some short names S0 (up), S1 (down), S2 (left), S3 (right) and FR (the fire button). Suppose you point the joystick to the northwest. This can be detected because both S0 and S2 will be on.

back a value from the ports. Finally, the result of the PEEK is a byte — a number between 0 and 255. Individual bits of the byte will be 0 or 1 depending on whether that particular switch is off or on.

Sounds awful doesn't it? It's easier if you try it. First of all, IOA is at location 37137 and its control register is at 37139. IOB is at 37152 with its control register at 37154. You've got to be careful with IOB because it's used for reading the keyboard. Forget to reset its control register to 0 and you'll cut the keyboard off!

You'll also need to know how the five switches are 'mapped' into the two ports:

S0 is bit 2 of IOA

S1 is bit 3 of IOA

S2 is bit 4 of IOA

S3 is bit 7 of IOB

FR is bit 5 of IOA

S3 is a pain — if it was part of IOA, you would only need to read one port. Oh well! Try the subroutine and one-line demo in figure 2. This prints out the values of the five switches as you play about with the joystick. Let's look at how it works.

First of all, the contents of IOA are read by setting its control register to 0 and PEEK-ing it (line 50). Next, line 60 reads IOB by PEEKing 37152. Since we only want to know if

joystick. Obviously, the results may not be in the most ideal form for your own particular programs. You could add lines to convert the switches into a form that's more useful or, better still, re-write the routine entirely.

One example is to add a line $80 D = S0 + S3*2 + S1*4 + S32*8$.

Now you'll get a value of D back from the subroutine as shown in Figure 3. The Vic 20 Programmer's Reference Guide lists a clever routine that returns a pair of numbers that specify exactly the direction an object would move in response to the joystick.

So start with a simple routine like this. Understand and adapt it. You'll soon be able to write your own fast and efficient routines.

Seasonal Spectrum sizzle

Q I bought a 48K Spectrum a couple of days ago — it worked fine, but:

1 As soon as the Spectrum is switched on, there is a slight rustling or chirping sound from it. I think the effect of this sound can be seen on the TV, where the letters iridesce. Is it normal, or could it be shorting somewhere?

2 After some time I notice that the underside of the Spectrum in the top right hand quarter, gets hand warm, say 25-30°C. As there are no cooling slots in the box, I wonder if that is normal?

A M Wasung,
Enfield

A As the nights draw in, you should already be getting the benefit of the second point you raise. Yes, it's perfectly normal for the Spectrum to get hot, and you'll find it a great comfort for your chilblains over the winter. This is caused by the Spectrum's heat-sink, which is a large metal plate which dissipates the power that the machine doesn't need in the form of heat.

As for the rustling and chirping, it's quite usual for the Spectrum to make a noise rather like shorting — or like an electricity substation — when it's on. If your micro is making a sound like feet tramping through dead leaves, or starlings at sunset, see your dealer. If it's just an electrical hiss, you're OK!

Better to BBC or await Elan?

Q I am new to computers and need to ask some advice about which micro to buy. After reading many magazines, I decided on the BBC Model B, which I think has a lot of potential. But then I saw the Elan Enterprise 64, with 64K memory, a graphics resolution of up to 672 × 512 and 256 colours. The Elan also has a built in word processor and joystick, and seems to be better value than the BBC.

Please could you put me out of my misery — should I buy the tried and tested BBC for £399 or the 'too good to be true' Elan for £200?

Paul Edwards,
Camberwell, London

A You've got it in one — the Elan Enterprise is too good to be true, because it isn't true — yet. Its specifications are certainly attractive, but so have been the pre-release specifications of many another micro.

So you've really got to ask yourself what you're contemplating — the BBC B has been our for some time now, and is a tried and tested machine with plenty of hardware and software support.

The Elan Enterprise, on the other hand, isn't going to be out until next year, and although it will support twin Sony microdrives through 'The Stack', there's no guarantee that it will be adequately supported by software and peripherals until some considerable time after its launch.

And note also that The Stack is — or is intended to be — an expansion peripheral, and that's there's no guarantee that it will be available at the same time as the Enterprise is.

Now don't misunderstand me — the Elan may well turn out to be the greatest thing since sliced bread, but it won't turn out to be so for quite some time yet, and if it's to secure the support it will need to survive, it will have to be very good indeed.

Things move so fast in the micro market that there is simply no point in waiting around for something better, because there will *always* be something better 'just around the corner.'

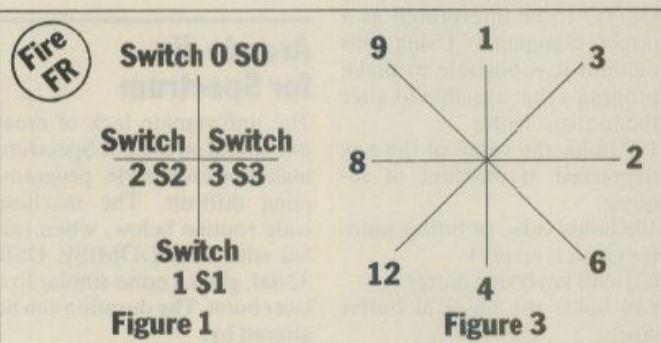

Figure 1

Bit 7 is 1 or 0, we can get the result simply by comparing with 128. Notice that the control register is set and immediately reset after use.

Finally, line 70 uses AND to extract the various individual bits out of IOA that relate to the

Figure 2

MICROWAVES

Scaled a new PEEK in microcomputing? If printed your tip will earn you a fiver.

If you've got something to crow about... a bit of magic that'll make the world a better place for micro users, then send it to **PCN Microwaves**—our regular readers' hints and tips page. We'll pay you £5 if we print it. We'll pay you even more if your little gem gets our vote as microwave of the month. Think on... and write to **Microwaves, PCN, 62 Oxford Street, London W1A 2HG.**

Friendly bugs in the Spectrum

I have found three possibly useful bugs in the Spectrum. They are:

1 10 PLOT 90,90

20 DRAW 66,32,599

This produces an excellent graphical effect which can be altered by changing the values in line 20.

2 Enter:

10 PRINT " "

20 GO TO 10

then type in

GOTO 10: REM PCNISAN EXCELLENT MAGAZINE

When 'Scroll?' comes up, press caps shift and symbol shift together for the first effect and then press enter for the second. To improve the first effect, write the 'GO TO :0:REM' in the keyboard control colour, the same as the paper colour, and the PCN etc in black flashing characters leaving the last E of magazine.

3 Type in:

REM (30 spaces) PCN IS GREAT

Then type in

PRINT USR 9010

Then look at line 13.

W Mitchel, Welton, Lincoln.

Putting off the printer

I have found a way of protecting BBC listings from being listed on either the screen or the printer. First enter, as a direct command:

*KEY O FOR A=PAGE TO TOP: IF !A=&21262A29 THEN !A=&15030C07:N,

ELSE N.:M Then somewhere at the beginning of the listings enter the line: REM)*&!

and when you have finished writing the program, press FO

Now whenever anyone tries

to list the program, the computer will make a small beep, turn off the printer, and then the screen will go blank so that control can be regained only by pressing BREAK.

If at any time in the future you want to relist the program then enter:

FOR A=PAGE TO TOP:

IF !A=&15030C07

THEN !A=&21262A29:N,

ELSE N.:M

It is best if REM)*&! is entered at the end of a long multistatement line, or else the line may be deleted.

David Clifton

Beckingham, South Yorkshire

CBM 64 magic writing

All Commodore machines employ a special technique for the entry of data through the keyboard. A knowledge of how this works allows a flexible system of data entry to be implemented.

Every 1/60th of a second the machine stops what it is doing to look at the keyboard, to see if a key has been pressed since the last check. It stores any key found on the top of the keyboard stack and whenever the machine is in direct mode, the computer will empty the stack to the system. This results in 'magic writing' seen if you type in something while the computer is listing a program. What happens is quite simple—while the program is being listed and you press a key, the corresponding character is pushed onto the stack. This stack or buffer is ordered in a first in first out system (FIFO). The same effect is also noticeable when a program halts in a get loop, waiting for a key to be pressed. The user may have accidentally pressed a key, which goes onto the stack and

the program ploughs on taking this key as the input.

The buffer has a capacity of ten characters and the key to this problem is to empty it before requesting data input by getting ten pieces of dummy data eg

1000 REM EMPTY BUFFER

1010 FOR A=1 TO 10:GET

AS:NEXT A

1020 REM NOW REQUEST INPUT

A simpler and more elegant way of doing this is to tell the machine that there is no data in the buffer by POKEing the pointer with a zero. eg POKE 198,0

If you are simply interested in whether a key is being pressed at the moment then use PEEK(197), which returns a unique value for each key pressed.

The buffer itself starts at 631 and goes on to 640. It is possible to put characters into the buffer and tell the pointer how many are there. If the program is then stopped these keys will be interpreted in direct mode. Printing lines on the screen such as:

GOTO 100

and then putting the current cursor position at the beginning of the line, and then put a character 13 (carriage return) into the buffer then STOP the program. This will cause the GOTO to be interpreted as a direct command. Using this method it is possible to make programs that are able to alter themselves. Note:

197 holds the value of the key depressed at moment of request.

198 holds value or buffer pointer (zero is empty)

631-640 keyboard buffer

649 holds the physical buffer size.

Paul Roper, Gosport, Hants.

Commodore merger bid

A simple merger routine for both the Vic and the CBM 64 can be devised with the knowledge that if the pointer for the start of Basic is set to the end of Basic and another program is loaded, then the new program will be stored just after the old. By restoring the pointer to the start of Basic, the memory will now hold a whole merged program. To do this, type in: POKE 43,PEEK(45)-2: POKE 44,PEEK(46)

Now load the new program and finally type:

POKE 43,1:POKE 44,16

Locations 43 and 44, on the Vic-20, hold the start of Basic whereas locations 45 and 46 hold the start of variables which follow the end of Basic. The end of Basic is two bytes behind the variable pointer, so we subtract 2 from location 45 accordingly.

Numbers 1 and 16 are the start of Basic for the unexpanded Vic.

To find the respective numbers for a 64/expanded Vic, type:

PRINT PEEK(43),PEEK(44) and write down the two numbers. This should be done before changing the start of Basic.

Steven Palmer, Gt Yarmouth, Norfolk

Arcade din for Spectrum

The unfortunate lack of creative sound on the ZX Spectrum makes arcade style programming difficult. The machine code routine below, when called with RANDOMISE USR 32400, gives a noise similar to a laser burst. The duration can be altered by:

POKE 32401,n

where n is a number which should be more or less around 20. The machine code will run on a 16K Spectrum although 48K users might like to locate it further up the memory.

10 REM LASER BURST ROUTINE.

20 CLEAR 32399

30 FOR a=32400 TO 32425

40 READ b: POKE a,b

50 NEXT a

60 DATA 6,5,197,33,0,3,17,1,0,229,205,181,3,225,17,16,0,167,237,82,32,240,193,16,233,201

O Hart, Southmoor, Oxon

*FX/OSBYTE for the BBC

Here is an undocumented *FX/OSBYTE call for the BBC micro computer with 1.2 OS.

*FX 117 Returns in the X register, a flag with:

BIT	SET	UNSET
0	VDU 2 used	VDU 3 used
2	Page mode on	Page mode off
3	Software scrolling	Hardware scrolling
7	VDU disabled	VDU enabled

To use this call do the following:

A%=117

X%=0

PRINT~(USR(&FFF4) AND &FF00)/&100

This prints the contents of the X register.

P K Hopkins, Withington, Manchester

Which book would your micro want you to buy? PCN's review page helps you choose.

commodore 64 adventures

A guide to playing and writing adventures

mike grace

'Commodore 64 Adventures' by Mike Grace, published by Sunshine Books at £5.95 (paperback, 215 pages).

Subtitled 'a guide to playing and writing adventures' this is actually a book about the writing of one adventure which is listed and described at great length.

Although this is the obvious approach, it is debatable whether or not it is the best. There is always the danger of overkill. True, you have a complete adventure at the end of it, but would you want to play something which you will undoubtedly know inside out? That reservation aside, Mr Grace has covered his subject with admirable thoroughness and anyone taking the trouble to digest what he has to say will be well placed to write their own adventures afterwards.

Everything is here, from writing the plot to flowcharting, mapping and — last and probably least — writing the code. The program itself is the least of your problems in writing an adventure in Basic. If you've written one, you've almost written them all since the core of your adventures will largely be transportable routines.

The question of portability raises another doubt: the publishers have probably done themselves a disservice by specifying the Commodore 64 in the title. With very few amendments, Mr Grace's comments and code could be converted for virtually any of the popular machines (unless, heaven forbid, we are in for a dozen books — Atari Adventures, Spectrum Adventures etc, all saying precisely the same thing).

The only drawbacks here to converting to other machines are the use of sound and sprites

but it must be said that these are little more than fripperies and their omission would matter very little. The actual 'playing' part of the books is very minimal and has the feel of padding. It has probably all been said before in magazines (and will no doubt be said again sometime).

If you are interested in writing adventures — perhaps you have a friend with the same machine with whom you could swap your efforts — Commodore 64 Adventures will go a long way to teaching you how to do it.

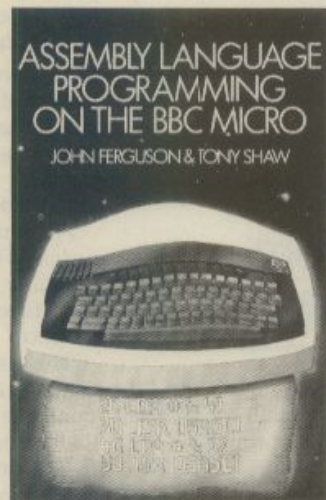

But if someone could persuade Scott Adams to reveal all.

PW

'Assembly language programming on the BBC micro' by John Ferguson and Tony Shaw, published by Addison-Wesley at £7.95 (paperback, 200 pages).

There are two good reasons usually cited for using assembly language. One is that the speed of execution of the instructions is much faster than the corresponding Basic code. The other is the generally accepted idea that using assembly language allows you to understand the fundamental operation of your micro.

However, learning assembly language is not exactly as easy as pie. It requires a lot to do a little, albeit at breakneck speed. Assembly language on the BBC micro is treated here in

an easy and informative style. The book kicks off with an explanation of bits and bytes, ASCII codes and the mundane but mandatory operation of examining and changing memory locations.

As you'd expect, there are

many listings and examples to facilitate the learning process. There are also useful diagrams of memory maps, tables, FX commands, stack commands and so on.

Arithmetic using assembly code is not handled till chapter eight which is quite a departure for books of this kind. Overall the book is well structured giving the necessary information without being overwhelming.

'A Young Person's Guide To BBC Basic' by Michael Milan, published by NCC at £4.50 (paperback, 166 pages).

Appearances can be deceptive. This unassuming cover belies an eminently readable guide for young owners of an Acorn machine, wanting to become 'computer people'.

The programs all work on a BBC Model B, and most work on the Electron, or the Atom with BBC Basic ROM.

Naturally, you're told how to 'make a start', and then separate chapters cover such subjects as writing longer complicated programs, good programming, the different modes, colour, sound, arrays and high-resolution graphics.

Everything is easy to follow, from the moment you are talked gently through your first programming attempt. Helpful hints are scattered plentifully throughout, as is constant encouragement to experiment with programming.

The book's only appendix is a checklist for debugging your own programs.

The illustrations are refreshingly to the point, if simple, while the diagrams are clear and instantly comprehensible.

Mr Milan doesn't bamboozle

with binary or excavations of the guts of a micro. Nevertheless, he does try to suggest how a micro operates. His children, who helped with the researching of this book, seem to have provided some excellent advice.

Obviously, good things come in plain packages.

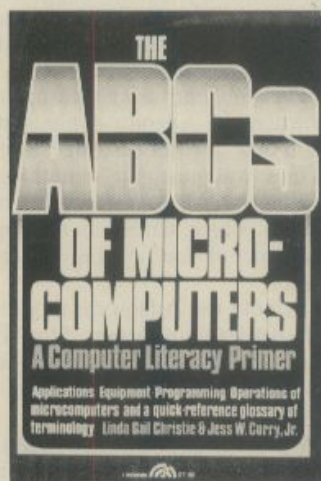

HA

'The ABCs of microcomputers' by Linda Gail Christie and Jess W. Curry, Jr., published by Prentice-Hall, at £6.75 (paperback, 218 pages).

The ABCs of microcomputers could be described as a computer literacy primer intended for the person with no previous knowledge. The text is written in a lucid style with simple and adequate explanations.

The introductory chapter explains what a microcomputer is and the basics of how it operates. The next section deals with different applications of computers ranging from business applications to the use of micros in the classroom.

The different types of printers, terminals, and other hardware available are discussed, and the pros and cons of various

memory and storage facilities are explained.

The extensive section on software gives some useful hints on how to evaluate programs and their documentation. Programming is dealt with very very briefly without giving any genuine instructions. This makes the subsequent discussion on which language to use somewhat superfluous. The last chapter ties together all the previous ideas and critically considers whether a computer is needed at all for a particular problem.

TJ

With the Mattel Computer Adaptor the Intellivision plays it your way. Richard King in command . . .

It's not often pointed out, but almost all the home video game type of machines have quite respectable computers inside them. Not only that, but the need for sophisticated colour graphics means that some of them have screen displays which compare favourably with the dedicated arcade machines.

Unfortunately, all these clever chips are completely inaccessible except when used under the control of a ROM cartridge, and the information about how to write these isn't available.

The Mattel Computer Adaptor is a unit which, when plugged into the Intellivision games computer, will unlock much of that power, turning the dedicated games computer into a small, but quite interesting, Basic microcomputer.

Presentation

We were presented with a pre-release unit which came in brown cardboard boxes, so the packaging isn't yet ready, but if the Intellivision unit gives any indication, it will be adequately robust, brightly coloured and very appealing to the eye.

The Computer Adaptor is a rather uninteresting ultra-dark grey block with grooves along the top, a hatch on the front edge, some extrusions and holes on the sides, and little else in the way of distinguishing marks.

On the left-hand side is a thick square tongue which plugs into the main console's cartridge slot. This is how the two communicate, with the Adaptor acting as a very big, smart cartridge, leaving the console free to handle the screen, sound, joypads and so on.

The other end has another cartridge slot, so when the Adaptor is plugged into the main unit, further cartridges can be used. In fact, you must plug something into this slot before the Adaptor will work at all, though which cartridge it is makes no difference if you're using the machine in Basic.

In looks the Adaptor is more 'modern', with hard square corners, Star Wars-style, and completely different from the console, which is styled along the lines of a '60s Buick.

When the system is assembled it's huge, with a footprint that feels like a football pitch. Put alongside an Apricot it would look distinctly freakish, and if the relative speeds and sizes of memory etc were considered, dinosaurs might well spring to mind.

The Adaptor itself is an extra bit, but apart from that the only essential is the TV lead. Eight feet or more of it seems a little generous, but better than too short.

To use the system properly you'll need a cassette recorder, and as usual most makes will suffice, though Mattel is understandably anxious to offer its own product. This is the unit sold for the Aquarius, and the printer from the same range can also be used with this system.

Adding these last two items would result in a most odd-looking arrangement with

three distinct colour-schemes and stylings, and though this wouldn't affect performance, the visual mish-mash wouldn't inspire confidence in its users.

Documentation

Documentation is one of the most important aspects of low-end machines, and one which is often badly handled. Mattel has made strenuous efforts to get this right in previous products, and the manuals provided with the Aquarius are quite exemplary.

The manual which comes with the Computer Adaptor is fairly good, but it isn't up to the same standard by a long way, which is surprising, since the two machines aren't that different.

It has all the necessary sections — introduction, setting up, detailed explanations and so on — but no index. The various sections are quite competent, especially Chapter 1, on setting up, which takes great pains to make sure each detail is covered clearly.

There are also various support sections, such as a glossary, and a dictionary of Basic terms, and this is where the book is a little

This is one of the major drawbacks of the system, since four-foot squares of empty space aren't easy to find.

The keyboard is a flattish rectangular slab with more-or-less typewriter-spaced keys. This is connected by a long lead to the Adaptor. Two sub-miniature D-type plugs are moulded together and plug into a pair of holes under the hatch on the Adaptor.

Unlike many in this keyboard, the keys aren't horrible rubber things. They look much the same, being little squares which poke through the surface, but are made of hard plastic. There's a real space-bar and two shift-keys, too.

Unfortunately, Mattel didn't make it that close to a 'proper' keyboard, so the arrangement of keys is distinctly odd. The letters are in the usual qwerty format, with the numbers on the top row, but the specials and punctuation are all over the shop, as are the various control-keys.

Return has sunk to bottom-right, on the outside of one shift-key, the cursor-pad is on the left, and has shifted values which produce ?/%. Escape is at top-right, which is much too close to the place normally occupied by Return, and the shifted values

The Mattel world

less than inspiring. It wasn't that it was bad, just that it was rather dull and sometimes a bit skimpy.

The glossary, for example, is barely two pages long . . . I may be wrong, but I'm sure there are more terms that might have been usefully included. The explanations were pretty terse, though, with far too much use of other, also skimpily-defined terms.

Don't think that I'm saying that the docs are poorly done . . . they aren't. In fact they are among the best I've seen, but that's not much of a compliment. Mattel

'The Adaptor acts as a very big smart cartridge'

excelled itself with the Aquarius, and I'd like to know why this isn't so here. It feels almost as though the two products were developed by two autonomous teams, who share little in common but paycheques from the same head office.

Construction

As I've mentioned, the whole system consists of bits . . . the console, the Adaptor, keyboard, power-supply, a cheapo tape-recorder, possibly a printer, and the family telly, and when they're all up and running, a fairly large area is occupied.

of the numbers are anything but standard [= "£\$-+/*()"]. The oddest thing is the presence of two slashes, one on shift-cursor-right, and another as shift-7. Why?

Considering the market at which this system is aimed, this isn't a serious failing, but it's a completely unnecessary one. Any mapping would have been just as simple to produce, so why didn't they stick reasonably close to the de facto standard, despite its well-known failings?

To have done so would have made the keyboard easier to learn, particularly for parents and others who might be proficient typists, as well as making it easier for owners to transfer to 'grown-up' keyboards.

All home video game units plug into an ordinary TV, and the Intellivision system is the same, but also like others of its genre, there is no provision for driving any kind of monitor.

The system, like most equipment which connects to a TV, puts out a signal on Ch36. For some reason I found that it wasn't all that stable, and if the machine is tuned in, then turned off and then on again, it needed retuning again. Apart from this small irritation, the quality was quite high, with good saturated colours and reasonable edge-definition.

One of the strong points of the Intellivision unit is the screen display — or rather, the very creative use that has been made of it by Mattel's programmers.

In fact, though it's about half the resolution of the displays of the TI99/4A or

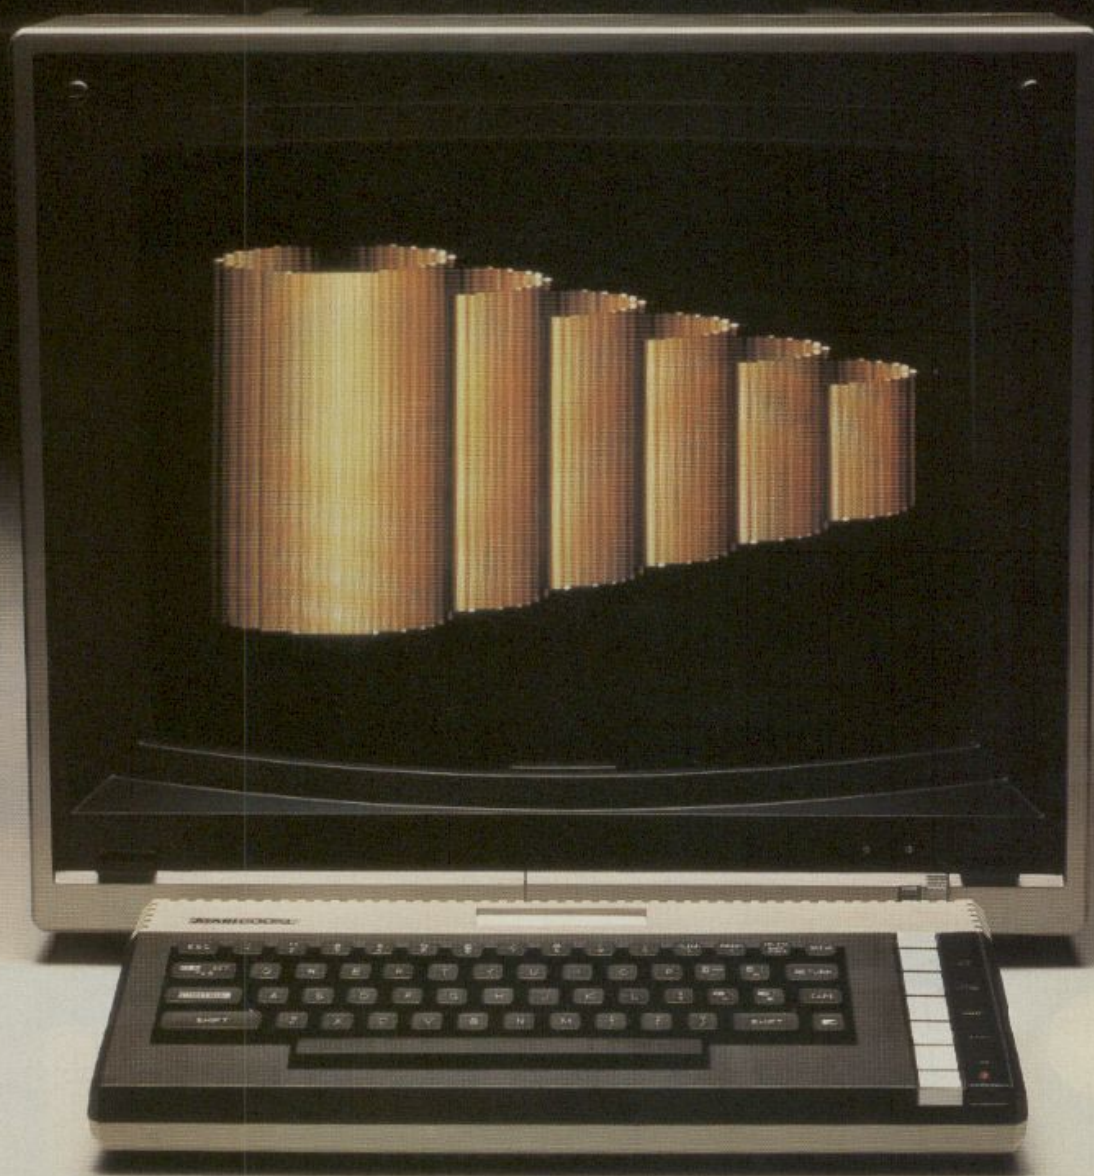

Mattel's plug-in-and-play system. From TV game (bottom) to computer (middle) to synthesiser (top).

ker

As your expe so can your

600XL Home Computer.

Whatever you want your home computer to do, the ATARI 600XL™ can do it.

ATARI 600XL product specifications.

Colour capabilities: 16 colours and 16 intensities, 256 shades.

Memory: 16K RAM expandable to 64K with memory expansion module. 24K ROM operating system including ATARI BASIC programming language.

Sound: 4 independent sound synthesisers. Each with a 3½ octave range.

Display: 11 graphic modes. 5 text modes. Up to 320 x 192 resolution. Maximum text display 24 lines by 40 columns.

Special ATARI integrated circuits: GTIA for graphics display. POKEY for sound and controller ports. ANTIC for screen control and I/O.

CPU: 6502C microprocessor. 0.56 micro-second cycle. 1.8 Mhz.

Extended graphics functions: High resolution graphics. Multi-coloured character set. Software screen switching. Multiple redefined character sets. Player missile (sprite) graphics. Fine screen scrolling. Changeable colour registers. Smooth character movement. Simple colour animation facilities.

Programming features: Built in ATARI

BASIC programming language plus 8 other languages. HELP key will provide additional information and menu screens. Syntax checking on entry.

Input/Output: External processor bus for expansion with memory and peripherals. 2 controller ports. Serial I/O connector. Monitor output.

Software: Over 1000 items of software available including self teaching programs with unique voice over. Education. Home management. Programming aids. Atari user written programs (APX). And Atari's famous entertainment software.

Experience grows Atari 600XL.

1. Program Recorder.

2. 64K Memory Module.

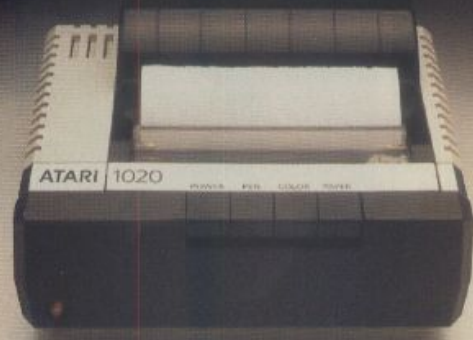

3. Touch Tablet.

4. Trak Ball™ Controller.

5. Super Joysticks.

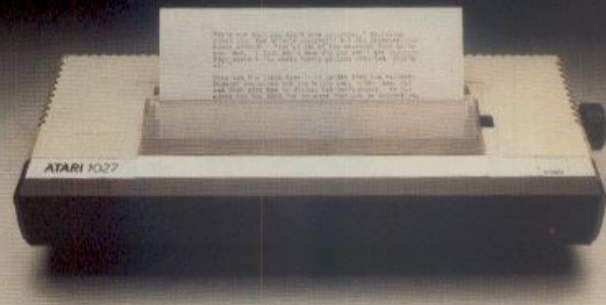

6. Colour Printer.

7. Disk Drive.

8. 80 Column Dot Matrix Printer.

9. Letter Quality Printer.

These peripherals will be available soon:

1. ATARI 1010™ Program Recorder for low cost storage and retrieval capability. Data transmission 600 baud. Storage capability 100K bytes on a 60 minute cassette. Track configuration 4 track, 2 channels (digital and audio). Auto record/playback/pause control.

2. ATARI 64K Memory Module gives the 600XL a massive 64K RAM.

3. ATARI Touch Tablet enables you to paint pictures and draw diagrams, with the touch of a stylus.

4. ATARI Trak Ball™ Controller enables

cursor movement in any direction; adds to the pleasure of Atari games.

5. ATARI Super Joysticks. Gives you a greater competitive edge over your games.

6. ATARI 1020™ Colour Printer plotter. Four colour graphic print capability. 40 column. 10 characters per second. 5, 10 and 20 characters per inch.

7. ATARI 1050™ Dual Density Disk Drive. 5¼ inch disks holding 127K randomly accessible bytes provides both expansion and flexibility for your 600XL system with DOSIII.

8. ATARI 1025™ 80 Column Dot Matrix Printer prints 5, 10 or 16.5 characters per inch. 40 characters per second. Ideal for program listings, financial reports, etc.

9. ATARI 1027™ Letter Quality Printer for word processing letters in professional type.

If you'd like to know more about the ATARI 600XL, write to Atari International (UK) Inc., P.O. Box 407, Blackhorse Road, London SE8 5JH and we'll send you all the details.

The new Atari XL home computer system.

◀18 the Commodore 64, with 16 colours, 20 characters on 12 lines or 167×104 pixels, and 7 'Objects' which are much like sprites, it often appears as good or better, due as much as anything to the way it's used.

The Atlantis or Tank Battle cartridges are particularly good examples, with shadings for the lit and unlit sides of objects, producing a much more 'believable' display.

Granted, the actual resolution is lower, and it looks like there are fewer sprites, but any single object can have up to 16 animated steps to it, and can also be flipped vertically or horizontally. To do the same thing with TI-type sprites, you'd need 28 sets of definition tables and a smart management routine.

A feature which TI-sprites don't have is a

way to set a speed of movement which can continue automatically. The Intellivision 'object' can have a vertical or horizontal velocity as well as an animation speed.

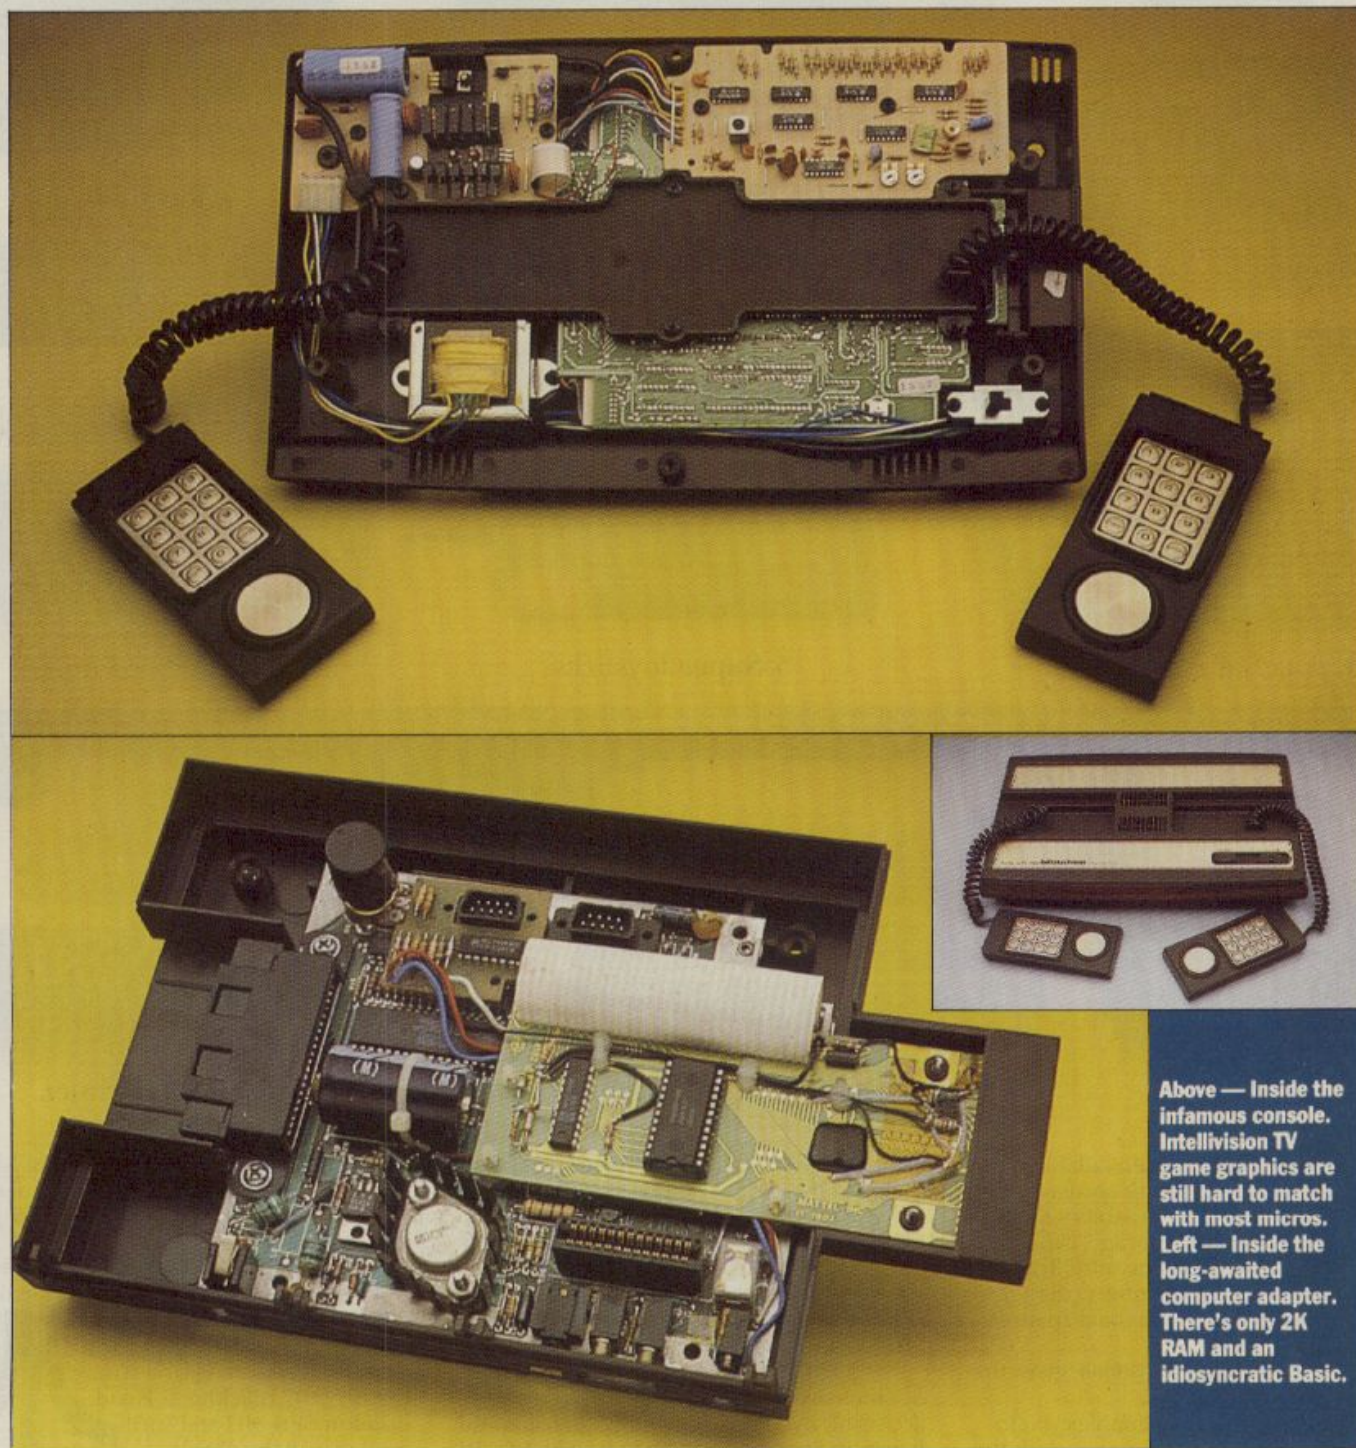

Storage

Program storage is, as expected, on cassette, and with that goes volumes of comments, none of which I'll repeat here. In use it's average, and due to the very small memory, the programs are so short that they can't be anything but quick to load... even at 300 cps, 2K is less than ten seconds.

As a result, multiple attempts (when setting the volume) won't take forever. Happily, named files are supported though not absolutely essential. Correct storage can be verified with the CVRF command, which will respond with the word 'VERF' in various colours, depending on the result.

Expansion

As might be expected, there isn't much

Above — Inside the infamous console. Intellivision TV game graphics are still hard to match with most micros. Left — Inside the long-awaited computer adapter. There's only 2K RAM and an idiosyncratic Basic.

future in asking if this machine will ever have disks or other add-ons, mostly because the whole thing is an add-on anyway. Any more probably wouldn't be practical, so apart from the printer and tape-connections and the TV socket there is no other access to the system.

Alternative keyboards are another thing entirely. The keyboard plugs into the system via two small D-type sockets, so clearly it isn't unreasonable to plug a different keyboard in there instead.

To exploit this, Mattel has produced an almost-real musical keyboard! In fact, to the computer, it's a perfectly normal letters-and-numbers device, but when the Music Synthesiser cartridge is plugged into the Adaptor or the Music option is selected from the main menu, the values sent by either will be reproduced as sounds.

The musical keyboard is impressive to look at, but not much more. It's labelled on the bottom with a warning that it isn't a toy, and shouldn't be used without adult supervision.

I beg to differ. If it isn't a toy, then why does it feel like one? The action is horrible, with a nasty unbalanced feel to the keys, which are too stiff at the top and too soft at the bottom, and wouldn't improve anyone's technique.

Operation

The Computer Adaptor is intended to implement Basic on the machine, but it's a pretty peculiar version. MicroSoft it ain't, nor any other recognisable dialect.

In fact, calling it Basic at all is almost poetic licence... it would be more accurate to call it a Basic-like control language which has faculties which take advantage of the Intellivision unit.

The principal difference is in the keywords, which are restricted to four letters each. Not four significant letters, with abbreviations permitted, but *four*. So PRINT becomes PRIN, and GOSUB, GSUB. There are some shorter words, like RD and IT (RND and INT, respectively) and a few, such as GET and GOTO, pass through unscathed.

There are some remarkable restrictions inherent in the language. Three strings and three arrays, which have predefined names (A\$, B\$ and C\$, and AA, AB and AC), and 26 simple variables (one letter for each). It doesn't seem to point it out specifically, but it would appear that several of these latter are reserved, and are used for passing values to the control routines.

For example, C = 0: V = 15: P = 200: CALL TONE will make a loud (V of 15) high-pitched (P of 200) sound on channel 0. If this works as it appears, then the variables C, D, E, H, L, M, N, O, U, V, W, X, Y and Z all have special uses.

There's a real funny in the use of IF, which doesn't have an associated THEN word. This usage is seen in other languages, notably C and BCPL, but never in Basic to my knowledge, and its absence tends to make the division between the condition and the subclause hard to see. In C or BCPL this is no problem, since the two

can be put on separate lines. No so here, though.

It seems that an unfortunate number of errors crept into the manual, which is accompanied by several pages of extra documentation. One of these is called a Troubleshooting Guide to Lucky Basic. This is presumably because Lucky Basic is so flippin' peculiar that you'd get into trouble for shooting somebody if they hadn't remembered to include it.

'There are two superb ideas which could be copied'

It's not what it says it is... in fact, it's a monumental erratum. It's when you look carefully at these that the real idiosyncracies of this machine become most apparent.

For example, you can't do INPU A, B, C, D if it's after IF, nor can you respond to any input with a negative exponent. You mustn't put an operator in a string constant after an IF, either, and you're only allowed six operators per calculation. Line numbers which are multiples of 128 aren't permitted! A string variable and a string constant can't be compared. And so on.

There's plenty more, but the overall result is that previous experience will prove little help on this machine; there are just too many differences to be comfortable.

In compensation, and justifying my comment that it's a Basic-like control language, are a whole load of special functions and routines concerned with making pictures and sounds, jobs at which the Intellivision excels.

Examples are YM(n) and XM(n) which flip the Object n vertically or horizontally, VS(n) which makes Object n visible or invisible, and so on. These extensions allow sequences to be animated at variable speeds, starting at selectable points in the sequence, as well as controlling the sound-generators and reading the hand-controllers.

Used as a control language, rather than as a funny-Basic, it's much more impressive, but hardly easy. In fact, in order to arrange suitable correspondences between the various features you'll have to write some pretty hairy code, which certainly won't be 'ground-level programming'.

Since it is intended for use by first-time users, there are a couple of quite superb ideas, which could well be copied by other

programs. One is to colour-code the various parts of a program, depending what they are.

This is used as a method of pointing out incorrect syntax and other errors. If a line is incomplete, and so can't be executed, the bit that was acceptable is displayed in grey. When a line can't be added because there's no room (inevitable with only 2K), then the whole thing is turned grey.

Another very neat idea is the keyword MENU. This may have an argument between 0 and 3, each of which will produce a list of keywords. Most times the sight of the word in the context of similar words will be enough to trigger a memory of how to use it.

Overall, this language has several good points, some idiosyncracies, and provided one doesn't think too much in terms of 'real' Basic, is quite useful and exploits the machine well.

Support

'Ninety days!' roared the Judge. Seriously, though such periods aren't uncommon, a bare three months' guarantee still seems pretty mean... almost as though that's the shortest period that can be suggested with a clear conscience.

If it breaks down afterwards, or you need some other help, the back of the manual contains sections on what to do.

Verdict

In essence the question is whether the price of this system would be better spent on a 'proper' computer, say a TI 99/4A or Mattel's own Aquarius, or whether owners of the Intellivision would prefer to expand the machine they're used to.

I can't really recommend it as an introductory machine, simply because despite the flashy colours and stuff, 2K is too cramping, and the Basic is so unusual. If you want to get some understanding of computers, I think you could spend money better. Certainly it isn't worth buying an Intellivision to run the Adaptor.

If you already have an Intellivision, like messing about with sophisticated graphics machines and can handle the oddities, I'm sure it would be quite fun, especially if you've used one of the larger programmable calculators at some point, which the organisation of the machine resembles quite closely.

Keith Hook shows you how to accelerate your Colour Genie by using the machine to the full.

Many first-time microcomputer buyers spend weeks typing in published program listings only to find that most aren't worth the effort.

The trouble with Basic is that it's just that — basic. And most computer manuals are less than basic. Like most versions of Basic the Colour Genie's Microsoft Basic is designed for ease of use, but because of this many exciting ideas have to be shelved while the user gains more knowledge.

The first step towards learning this is by PEEKing and POKEing. These routines can speed up an inoffensive, tediously slow game and provide reasonable results while you learn machine code.

First, a word about Listing 1. Hexadecimal is not everyone's cup of tea — so this program converts decimal to hexadecimal and vice-versa. It will also display the Most Significant Byte (MSB) and Least Significant Byte (LSB) ... more about these later.

MSB and LSB

Each memory location in the Genie is given a number (an address) from 0 to 65535. Any value you store into these locations is given an 8-bit binary number (one byte), which can be equalled to a hexadecimal number, which is easier to work with. One byte of memory can hold a value from 0 to 255 (0 — FF Hex). So, two bytes (16 bits) will hold any integer number from 256 to 65535 (100 — FFFF Hex).

Trouble is, in the Genie, as in any other Z80-based machine, the numbers are stored back-to-front after 255 (FF Hex),

The speedy Genie

and this leads to the confusion when first starting on the path of PEEKs and POKES. If you look in your manual under the USR command, you will see that you have to POKE the start address of your machine language program sub-routine into locations 16526 and 16527. You must POKE the LSB into 16526 and the MSB into 16527.

If you have a sub-routine that starts at location 31867 (decimal), what do you POKE and into where? Start by using the program from Listing 1. The LSB is 123 and the MSB is 124, therefore we POKE location 16526 with 123 and location 16527 with 124. When you have done this, every time you use the command USR(0), the computer knows where, in memory, your sub-routine starts and shoots off to do it, then returns to your Basic program.

POKEing a memory location is just like saying: Let X equal 16526 and let the address specified by X be filled with 124. Try this:

```
1 CLS
2 X = 18367 (last address on screen)
3 POKE X,209 (a graphic character)
```

If you add 4 Goto 4, you will see that your screen does not scroll. If you had tried: 3 Print@ 959,CHR\$(209), the screen would have scrolled.

PEEKing is just the opposite of POKEing. You are taking out of memory,

without disturbing memory, and assigning the value to a variable. For example: X = PEEK(16526). Let X equal the value that is in memory location 16526.

Before you start PEEKing and POKEing you need to know where things are in memory and then you know what you're looking at, or where you're putting things by POKEing (see *Memory Map*).

How do you go about using this information? Well, take a look at location 17180. This holds the current CHAR value. Try this:

```
1 CLS
2 FOR I = 128 TO 255
3 PRINT I; : NEXT
4 FOR J = 1 TO 200 : NEXT
5 POKE 17180,0 :FOR I = 1 TO 200 :NEXT
6 POKE 17180,8 :FOR I = 1 TO 200 :NEXT
7 POKE 17180,16 :GOTO 4
```

You will notice that some of the characters go blank, some of them stay and some change. You can look up the reason for this in your manual under the CHAR n command.

Under Basic you have a choice of eight colours. But now you know where the colour RAM is located you can experiment.

```
1 CLS : X = 17408 First screen location
2 FOR I = 0 TO 16
3 POKE X+I,202
4 C = X+I+&HAC00
5 POKE C,I
6 NEXT
```

Line 1 clears the screen and assigns the value of the first screen location to X.

Line 2 I is the loop counter 0 to 16.

Line 3 increments the screen and POKES a graphic character at that location.

Line 4 gives C the value of SCREEN LOCATION + I ... and what's this? It also adds a hexadecimal value to C. Now you've got a good tip. Adding AC00Hex to the screen location gives the equivalent location in colour memory.

Line 5 pokes the colour RAM with value of I.

Line 6 If I is not 16, go and do it again, else stop.

This little program shows the versatility of the Colour Genie. You can mix decimal and hexadecimal numbers together, or even octal if you wish.

How time-saving this is might be best explained by asking you to change &HAC00 in line 4 to its equivalent number (use the program from listing one), which is 44032. Now line 4 should read: C = X+I+44032. Run the program again. What do you get? A syntax error. To calculate an address to poke to over 32767 you have to subtract 65536 from it, so &HAC00 becomes -21504 and &HFFFF becomes -1.

On the Genie 1 this was the way all

```
10 PR=17462:X=4095
20 CLS:PRINT@0,TAB(18):"MENU"
30 FORL=17426 TO17430:POKEL+&HAC00,11:NEXT
40 POKE16419,7:PRINT@87,"TYPE 1 FOR DECIMAL TO HEX"
50 PRINT@127,"TYPE 2 FOR HEX TO DECIMAL"
60 PRINT:PRINT:INPUT R
70 IF R=1THEN 100
80 IF R<>2THEN40
90 GOTO210
100 COLOUR1:CLS:PRINT@0,"Input Decimal Number ":"INPUTDEC:IF NOT(DEC>0) OR NOT(DEC<65536) THEN PRINT@0,CHR$(30):GOTO100
110 DC1=DEC:DEC=DEC/X:GOSUB160

The most common variables used in listing 2 (above) are:

X = Colour RAM POKE position
Y = Screen RAM POKE position
XX & YY hold temporary values of X&Y.
F = Fault count **SC** = Score value
P = PEEK position on screen.

addresses over 65535 had to be calculated, and to find out why this happens refer to any good computer book under the machine's treatment of integers. But on the Colour Genie this doesn't matter as the machine takes all the hard work out of the calculations. Just use &Hnnnn. Without using SCREEN LOCATION + &HAC00 there is no easy way of changing the colour of a POKEd character under Basic.

Experimentation is the spice of computing, and this is how you find what the computer is capable of. Try typing: FOR I = &H4400 TO &H4425:POKE I,202:NEXT. Press RETURN. You should get a syntax error.

Re-type the line exactly like this: FOR I=&H4400TO&H4425:POKE I,202:NEXT. Press RETURN. Now it works.

Refer to the Keyboard Layout table for the layout of the keyboard matrix at locations 63488 to 64511. Try the program from Listing 2. This is a game to show how some of these POKEs can be put to use in Basic.

Your aim is to guide the graphic character through a series of electric fences with the aid of the Left Arrow and Right Arrow keys. You help it to the safety of the yellow block at the end of the wire fences.

Every time you touch the fence your character is given an electric shock and momentarily changes colour and the Fault count is increased by one. Each time you use the arrows and your character does not touch the fence, your score is increased by 10. At the end of the game, the fault count is multiplied by two and deducted from your score.

You will notice the statement: G=PEEK(-1984): IF G AND 64 THEN... It is the reason for the VALUE in the Keyboard Layout table. This is the value that G will take on if that key is pressed under that particular address PEEK(-nnnn) etc

MEMORY MAP

LOCATION	CONTENTS OF MEMORY
0000-16383	16K Read Only Memory (Basic ROM)
16384-17407	Communications area used by computer
17407-18431	Text Screen Memory (locations after 18367 not displayed on screen)
18432-22527	High Resolution Memory Area
22528-32767	Start of Basic programs to top of 16K memory. 32K ends at 49151
49152-61439	Reserved for cartridge programs
61440-62463	Colour RAM
62464-63487	Programmable Character RAM
63488-64511	Keyboard Matrix
64512-TOP OF MEM	Reserved for Disk Basic and I/O

USEFUL LOCATIONS

LOCATION	COMMENTS
16419	Holds current colour data. POKEing into this location with 0-16 changes colour used by PRINT
17180	Holds CHAR current mode. Change mode by POKEing 0;4;8 or 16, equivalent to using Char(n) under Basic
16416 16417 16435	Current cursor position in video memory
	You can use this location and the next to jump to a machine language routine, eg if you place (by POKEing) a 0 in 16405, which is in the Keyboard Data Control Block, every time the keyboard is scanned it will jump to this address
16422	Line Printer Driver Address
16424	Number of lines per page
16425	Current line number being printed
16548	Holds start of Basic program location.

Simon Williams springs into arcade action with a sprite generating package for the BBC.

Tales of teenage superstar programmers grossing large sums for yet more intricate arcade-style games can be a bit hard on us ordinary mortals. We may have elaborate ideas, but we have to rely on the sluggishness of Basic to interpret them. Sprite-Gen promises to rectify this by providing sprite graphics similar to those available on Atari or CBM machines.

Documentation

The well-presented manual is well printed and sets a fine standard for the producers of other programs. Each aspect of Sprite-Gen is covered in detail without adopting the patronising style often found in manuals intended for the novice user. Listings of the two games on the tape are included and may serve to further illustrate techniques of sprite usage, but a listing of the Sprite Generator itself is not supplied.

Features

The package consists of a cassette containing the machine code routines for handling the sprites, a Basic sprite generator program and two demonstration, sprite-ridden games.

Up to 32 sprites can be defined at once, although only eight independent shapes are allowed. Three 'clones', or copies, of each of these eight form the remaining 24. But each of the eight shapes may have two alternative forms, which allows animation of the sprites, as they may be displayed sequentially from within a Basic program.

All 16 colours, including the flashing ones, may be incorporated in each sprite, which means that any program using the code must be written for Mode 2. The code used for the sprites, once they are defined, may be saved and loaded with the parent game program and remains

Sprightly sprites

completely transparent in use. The code takes about 1K of user RAM, leaving about 8K for a parent program.

DACC will allow purchasers of Sprite-Gen to sell programs incorporating sprites, provided they inform the company in writing first.

In use

The first thing that has to be done is to reserve space for the resident machine code. To do this Page must be reset to &1200 before loading any sprite program or the sprite generator itself. The generator is then chained in and a Mode 2 screen comes up, displaying an 8x8 grid and asking for a sprite number.

Sprites are numbered from 0 to 31, with sprites 0 to 7 representing the primary shapes and 8 to 31 the clones. On entering the number of the primary sprite and clearing any existing figure assigned to that number, a flashing cross cursor appears in the grid and may be moved around using the cursor keys.

What is annoying is that to place a colour in any of the squares on the grid, a complicated sequence of actions must be performed.

Return must be pressed to obtain a prompt for the required logical colour, the appropriate number must be entered and Return pressed again.

At the same time as the grid is being filled with colours, two lifesizes sprites are built up alongside and represent the 'left' and 'right' images of the same primary form. These two images may be made different and used to animate the sprite.

To alter one of the images, eight is added to the number of the primary

sprite when using the generator, and the left image can then be edited or completely redefined. Having defined all the sprites required, the generator is exited and may then be wiped from memory, leaving only the machine code, including the sprites, in RAM.

To position a sprite on the screen, the x and y coordinates are assigned to two of the resident integer variables, the number of the required sprite to Z% and the machine code routines are called via CALL Y%.

Each primary sprite and its clones use a different pair of variables, running from A% and B% to O% and P%. Although it is easy to see why the author has chosen to implement the sprites this way, making use of the resident integers which are not cleared on Break, it may prove restrictive in that they will always have to be addressed explicitly.

It is not possible to move a series of sprites within a loop, addressing each indirectly, as would have been the case if, for instance, the x,y coordinates had been controlled within a two dimensional array. As it is, control of sprites could eat up a lot of the small amount of memory left for user programs.

The two demonstration programs supplied with Sprite-Gen are certainly very effective in demonstrating what it is possible to achieve with the package. Chopper Chase offers control of a small helicopter, complete with rotating rotor blade, in an attempt to bomb tanks, which travel across the screen in lines of four, while avoiding a hostile plane which tries to drop its own bombs on the helicopter. The second game, Space Pilot Test, is the more satisfying and involves shooting up various aliens with a small plane à la Defender. Both games demonstrate fast moving, smooth action graphics.

Verdict

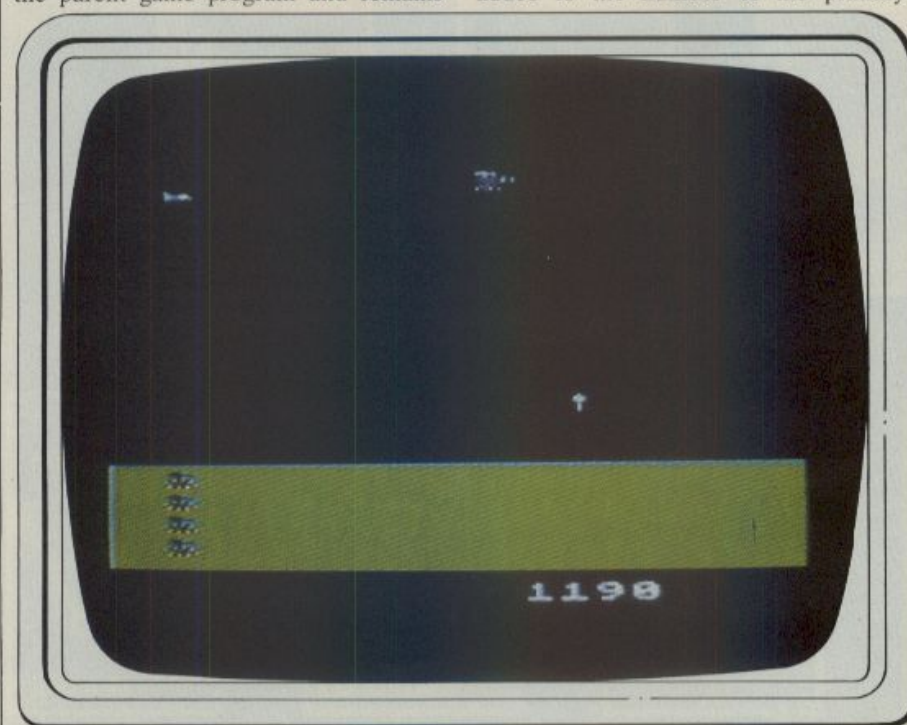

Sprite-Gen is an extremely useful utility which opens the door to high speed graphics for Basic programmers. While sprites may not be as fast as tailor made, machine code graphics, they should be quite fast enough to produce effective, arcade-style games.

Meet the Business Demands of Tomorrow, Today

Ormbeta business software has been developed to help your business overcome the challenges of the 1980's and beyond.

Ormbeta is the most flexible business software so far developed in the U.K.

Ormbeta systems are in UCSD PASCAL, the world's finest and most efficient operating system.

Ormbeta can be supplied to run on almost any business machine on the market. Apple, IBM, Xerox, Sirius, Victor, and Sage, and more to follow.

Ormbeta is already being developed for tomorrow's machines, such as the Apple LISA.

Ormbeta includes all the 'off-the-shelf' packages, Sales and Purchase Ledger, Payroll etc, but can also be customised to particular requirements.

If you would like to find out how Ormbeta can help you meet the business challenges of tomorrow, or if you are a dealer and want to help others, fill in the coupon today – or telephone us now on Ormskirk (0695) 77043. You will never look back!

P.C.N

Richard King learns to type with an educational package from Behavioural Engineering.

Hands on skill

Many uses have been suggested for microcomputers since they became cheap and plentiful, and one of the most interesting that has been put forward is as an 'educational' machine.

This term has several meanings, depending mostly on who's talking. To some it means a kind of referee for multiple-choice tests, to others a way of relieving the teacher by presenting 'boring' material in an 'interesting' fashion, and yet others feel that it is best for simulations.

The notable feature of most of these 'traditional' approaches is that they appear more to reflect the programmer's philosophy of education than to provide a more effective method of learning.

How many times have you found a so-called education game in which it is considerably more fun to get the answer wrong, thus producing a satisfying explosion or some such effect, than it is to get it right and be rewarded with an uninspiring 'Correct'?

The problem here is that the reinforcement is upside-down. It should be more rewarding to get the answer right.

A new series of programs running on the Apple II or IIe has been produced by Behavioural Engineering, and these are designed to reverse this unfortunate trend. The first two are designed to teach keyboard skills — not the musical variety, but typewriter or computer keyboards, though the system would be just as effective in teaching you to play an instrument.

Typing Strategy is designed to take a complete novice, engender some good habits, and thus produce a competent touch-typist in a period which may be as short as a few days.

Getting started

The theory behind these programs is psycho-linguistics, which deals with the methods people use to solve problems. For example, the difference between a good typist and a bad one, (me, for example), isn't so much a difference in speed, but more that the competent one doesn't need to look at the keyboard.

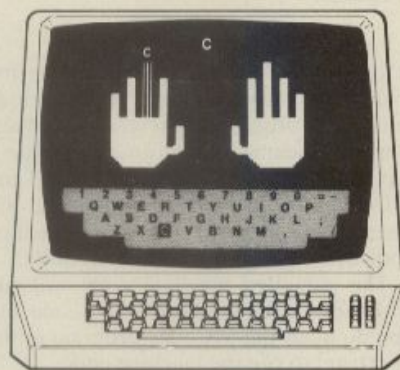

This is because the better typist has developed a 'strategy' which involves envisaging a keyboard in the mind, and then simply sticking one's fingers in the holes. Typing Strategy is designed to teach you how to do this, and though it sounds very difficult, it works.

In use

Provided you have an Applesoft machine, all you do is boot the disk. A fancy display draws itself on the screen, and you're away. This is pretty the first time, but gets to be a nuisance after two

repetitions, the more so when you find that the only way to make it go any faster is to press any key with the REPT key held down. I would like to have found some kind of 'skip to menu' here, for example when the ESC key is hit.

An uninteresting and rather uninformative main menu appears next, offering to run the training-program, demon-

Typing Strategy teaches finger usage

strate the program, let you design some exercises or exit. Selecting option 1 (Typing Strategy) produces some more questions. The manual isn't a lot of help in answering, because it refers to 'choice points' which are called menus in the program.

In fact the computer is asking you if you know anything about typing, and if so, whether you know how good you are. As an alternative, it's offering to test you, and to choose an appropriate level to start teaching you.

If you admit to being a total incompetent, or the machine delivers its judgement and decides that you are, you'll next go on to do some elementary fingering exercises. These teach you where the 'home' keys (ASDF and JKL;) are, makes sure you have your fingers on them, and then runs through the letters associated with each finger.

As the photo shows, the display consists of three parts — the letter to be typed at the top of the screen, a pair of hands in the central area showing in colour which finger should be used, and at the bottom a symbolic keyboard, which will have the required key highlighted.

When the machine wants you to press a particular key it will modify this display to show you how, and if (horrors!) you should mis-hit, it will beep, mark the incorrect key on the keyboard-picture, and wait for the correct one.

Each exercise consists of about a dozen keypresses, after which the Apple impassively reports your performance. This is where the surprises start arriving hard and fast.

I recorded the figures for my second session:

Using the left index finger:

	Accuracy	Speed	Adjusted WPM
1	84%	7	0
2	91%	11	6
3	100%	15	15

Then I changed and started using the right index finger:

4	100%	12	12
---	------	----	----

Of course, this all depends on your being totally honest, and rigidly refusing to look at your fingers or the keyboard.

The more advanced level of instruction requires you to type complete sentences, which may be set at the 'Author level' (Main menu Option 3). It's assumed that you'd need the 'magic hands' at this stage, so only the keyboard-picture is shown, with the exercise above.

The results are shown in much the same way, giving the error-rate as a percentage, speed in wpm and the 'adjusted speed', which takes both the former and integrates them. After doing these exercises for a while, I would be confident that most people would be quite competent typists, with better than 95% accuracy at 50 wpm.

The yes/no questions didn't always respond as expected, dumping me into an unwanted section of the program, from which there is often no escape apart from the end of the exercise.

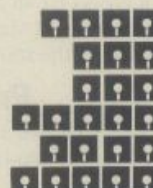

However, the program appears to be robustly error-trapped, but the handling is far from gentle, with an admonition to 'call Behavioural Engineering immediately' in every case. Expensive way to find out that Control-C (Break) is trapped as an error!

Verdict

Despite the shortcomings of the actual program, I can't recommend this product highly enough. It's inexpensive and adequately reliable, and not only fulfils a very important need but does so in an amusing and highly effective manner which is as applicable to small children as to adults. Definitely worth the price.

Ted Ball reviews a tool to speed up your Spectrum by converting Basic into machine code.

Spectrum MCode

Spectrum Basic is rather slow, and is particularly unsuitable for writing games that need fast-moving graphics. Machine code and Forth are much faster, but using one of these means learning a whole new programming language.

MCode is an easier method of producing faster programs on the 48K Spectrum — it is a compiler that takes programs written in a cut-down version of Spectrum Basic and turns them into machine code that will run 20 to 50 times as fast.

Features

MCode will not accept everything that will run under the Spectrum Basic interpreter, and before you can compile a program you have to write it — or rewrite it — so that it works using only the parts of Spectrum Basic that MCode can handle.

Although you can use most of Spectrum Basic with MCode — enough to allow you to write useful programs fairly easily — it is mainly the more powerful features of Spectrum Basic that are missing from MCode.

The most important difference is that MCode allows you to use integers only between -32768 and +32767. An obvious consequence of this is that you can't use the trigonometric and other functions that work essentially on floating-point numbers, and another is that the RND function in MCode gives an integer between 0 and 32767 instead of a fraction between 0 and 1.

The integer division in MCode normally gives an integer result, any fractional part of the answer being ignored. However, in the BEEP and DRAW commands fractional parameters are evaluated exactly, but they must be written as fractions and not as decimals. For example, you have to write 3/2 instead of 1.5.

Other important differences are that MCode does not allow numeric arrays of more than one dimension and it does not allow string arrays at all.

A number of other small differences are less important, as they don't restrict what you can do but do mean that things have to be done differently from interpreted Spectrum Basic. For example, you can't have STEP in a FOR...NEXT loop, so if you need a step other than 1 you have to rewrite the loop using IF...THEN...

Presentation

The cassette is clearly labelled on both sides, and has two copies of the program on each side.

The documentation is a small printed leaflet that gives information about using MCode and a list of the Basic commands and functions you can use with some notes on the differences between MCode and the Spectrum Basic interpreter.

DOLORIS FAIRMAN

Getting started

Anyone who is familiar with Spectrum Basic will be able to use MCode without much trouble. The documentation gives some help on writing and converting programs to work with MCode, but it does not help with using integer arithmetic, and this is the main area where you will find problems.

In use

It's easy to use MCode as a compiler: first load the MCode tape, then type in or load your Basic program from tape; to convert Basic to machine code all you have to do is type in "RANDOMISE USR 60000" and MCode does the rest. After Basic has been compiled you can run the machine code with "RANDOMISE USR 40000".

The compiled machine code will run without the original Basic source code, but you do need the MCode program in the Spectrum to run the machine code.

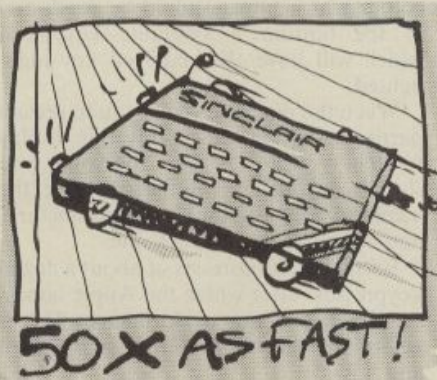

With the mixture of Basic statements you will have in a reasonable-sized program the average improvement will be between 20 and 50 times faster than what you will get from the interpreter.

What really impressed me about MCode was that I was able to use it to compile two programs I already had on tape.

The first one calculated and printed on the screen the prime numbers up to 25000. The only changes I had to make were a few lines of the form "IF V THEN..." which had to be altered to "IF V>0 THEN..."

The program took 18 minutes 50 seconds under the Basic interpreter, but only 30 seconds after being compiled by MCode — almost 38 times as fast.

The second program played the strategy game Four in a row. It needed more changes than the prime number program, but it didn't take long to alter even though it contained more than 200 lines, most of them having more than one statement. Running under the interpreter it took several seconds to effect a move, but after compilation it responded instantaneously.

Reliability

You need to debug your program under the Basic interpreter before you compile it with MCode, but MCode does provide extra facilities to help you debug compiled programs. If you try to compile something MCode cannot handle the compilation will stop and print a question mark after the problematic statement.

With run-time errors such as 'Division by Zero' or 'Integer out of Range' you get the usual Spectrum error message, but because the compiled machine code is called by an immediate-mode USR statement the error message refers to line '0/1'. However, MCode provides a trace option which allows you to compile your program so that the line numbers are printed on the screen as the program is executed.

The main points where MCode does not provide adequate error-checking are in bounds and string-lengths. Before you can use an array in MCode you have to include a dimension statement, just as in the interpreted Spectrum Basic, but MCode will not check that an array reference is within the limit specified in the dimension statement, so an error can give unpredictable results in the program.

Apart from array and string-size checking, and a few other points that the documentation warns you about, the only error I found was with the OR function. According to the documentation MCode allows the Boolean functions AND and OR in IF...THEN... statements. However, although MCode will compile statements like 'IF (A>B) AND (B>C) THEN...' it will not compile similar statements with OR instead of AND.

Verdict

Although MCode will not compile everything the Spectrum Basic interpreter will run, you can still do a great deal with it. The limitation to integer arithmetic means that you cannot compile scientific programs or programs involving complicated graphics that need trigonometrical or other essentially floating-point functions; and the absence of string arrays means that you cannot compile text handling programs.

However, you should be able to write almost any other kind of program in a form that MCode will compile, without much more difficulty than writing the program to run under the Spectrum Basic interpreter.

SKI RUN

SKI RUN
All the excitement and skill of the ski slopes with downhill, slalom and giant slalom. Put yourself to the test and record the fastest time! Nine levels of difficulty. High quality graphics and brilliant sound effects!!

Boom Software

It will blow your mind

LOGGER MANIA
Can you dodge the logs, traffic, jump your logs, slip the bears, and get home before sunset? A game with a difference written in all machine code with high quality graphics.

LOGGER MANIA

SPACE RAIDER
Engage in a furious intergalactic intelligence battle. As you try to blast and outwit the fast developing alien star ships. Incredible sound effects, smooth high resolution graphics in this top quality arcade action game.

SPACE RAIDER

ANNIHILATOR II
Defend your planet against a mighty alien invasion. All machine code makes for fast and brilliant arcade action!

H.U.R.O.

HIGH LEVEL USER FRIENDLY
REAL TIME GAMES DESIGNER

ALL YOU NEED
IS IMAGINATION

N.O.W...

THE GAMES YOU IMAGINE CAN BE THE GAMES YOU PLAY

DESIGN YOUR OWN COMPUTER GAMES IN MINUTES

Introducing the incredible H.U.R.G. — The ultimate game program for people who want to really play games. With H.U.R.G. the hardest thing you will have to do is to think of a game title, and design the characters.

HIGH LEVEL — requires no programming skills — simply design the shapes you want, and H.U.R.G. will animate them into the most amazing on-screen action you've ever seen. Choose any setting for your game, from mazes to outer space or sinister caverns — the only limit is your imagination.

USER FRIENDLY — H.U.R.G. will lead you through a series of easy to follow procedures, ending in the creation of a game that is as wild as your imagination!

REAL TIME — You can see exactly what you're creating at all times. Every game has hundreds of variations, and you can change its features at any time. You can speed up the action, change the size of the characters and even make them more vicious — it's all up to you; and you can see it all on-screen immediately.

GAMES DESIGNER — H.U.R.G. enables you to design and store the games you create on cassette and play them later using H.U.R.G. as the control program. It's the one program you will never tire of.

Now you can create all the stunning arcade effects that up until now have only been available to professional software houses.

To really fire your imagination, H.U.R.G. includes three ready-to-play fast-action arcade games, created using H.U.R.G.

Design a Game... WIN £3,000

Each month up until January 1984, three prizes will be awarded every month for the best games of the month

At the end, the best game will win a grand prize of £3,000

YOU could be a famous games designer! Every entrant has the opportunity of being published by Melbourne House and earning royalties.

Details of the competition are available with H.U.R.G.

PCN2/10

H.U.R.G. will be officially released at the end of October. Get your order in now, and reserve your copy so that you can be among the first with this revolutionary software! Access orders can be telephoned through on our 24-hour ansafone (01) 858 7397.

Burning EPROMS isn't difficult, but first take your burner. Richard King tests one for the Apple.

Burning desire?

If you've ever wanted to make a semi-permanent alteration in the operation of your computer, say to put in a different character-set, add a special routine or even give it a new language, then you might well want to make a special ROM. Quite often (on machines without disks, for example), it's the only convenient way, and to do this an EPROM-burner is essential.

The Cirtech EPROM programmer is sold as a set of units which work on Apple-bus computers, though the programmer itself, being driven by a parallel interface (unspecified format) could be used with any suitably-programmed PIA.

However, the interface card also contains 2K of firmware which make the process much simpler, so an Apple is essential. This doesn't limit the uses of the device to burning ROMs for Apples, though, since any piece of data can be written, read, copied or verified. You could write a new language for the Spectrum with WordStar, assemble it with the MAC80 assembler and burn that.

It will program any EPROM in the 27XX series from the 2K 2716 to the 27265, holding 32K, but the documentation rather grudgingly notes that it won't currently handle the 25XX series.

Presentation

The accompanying notes are best described as thinly adequate. For some reason smaller companies seem very unwilling to spend anything on proper packing or printing.

Decent documentation is seldom written by engineers or programmers, largely because they're much too close to the product to explain it well, but it is absolutely essential if the product is to become popular.

The documentation assumes you have a good idea what's going on. It tells you about LEDs and EPROM types then tells you what the power-supply looks like and how to take the cover off the Apple!

What it doesn't tell you is how the PIA is arranged, and what signals go down which line, or much about memory-usage. In particular, it doesn't explain why there's an extra set of connector-pins on the interface card as well as an empty 20-pin socket. It may not be useful, but such unexplained features are profoundly unsettling.

Construction

The Cirtech EPROM programmer consists of two small green-lacquered PCBs. The track-design appears neat and tidy. The programmer itself is a small board about 3.5 by 2.25 inches, and because it is meant to be kept outside the machine, Cirtech have backed it with a half-inch foam cushion. This eliminates the risks of short-circuiting from the back.

It might be an idea to substitute Velcro so that some semi-permanent mounting-place can be arranged. The top of the board is unprotected. An errant paper-clip or staple could cause a short, and with +25v programming pulses hanging about, this wouldn't be wonderful.

This device is intended for several kinds of EPROM, almost every one of which uses a different programming-voltage, despite being in the same family, so some arrangement has to be made. Cirtech's solution is to have five different sockets made up of several sets of Single In Line (SIL) sockets, into which a Zero Insertion Force (ZIF) socket is plugged.

I don't like the idea. It may save space and perhaps make the card smaller, but it leaves the system wide open to some horribly expensive mistakes. Programming some common-or-garden 2716 chips and then forgetting to move the ZIF socket before burning a 27256 will put 25v into your large, hard-to-get chip which prefers a more gentle 12.5v! Be warned.

Moving the ZIF socket isn't all that smart, either. It tends to come loose with a jerk causing the pins on the bottom to bend. These things are precision engineered, nearly impossible to get, and aren't cheap when you do.

The interface card, which plugs into one of the Apple's expansion connectors is

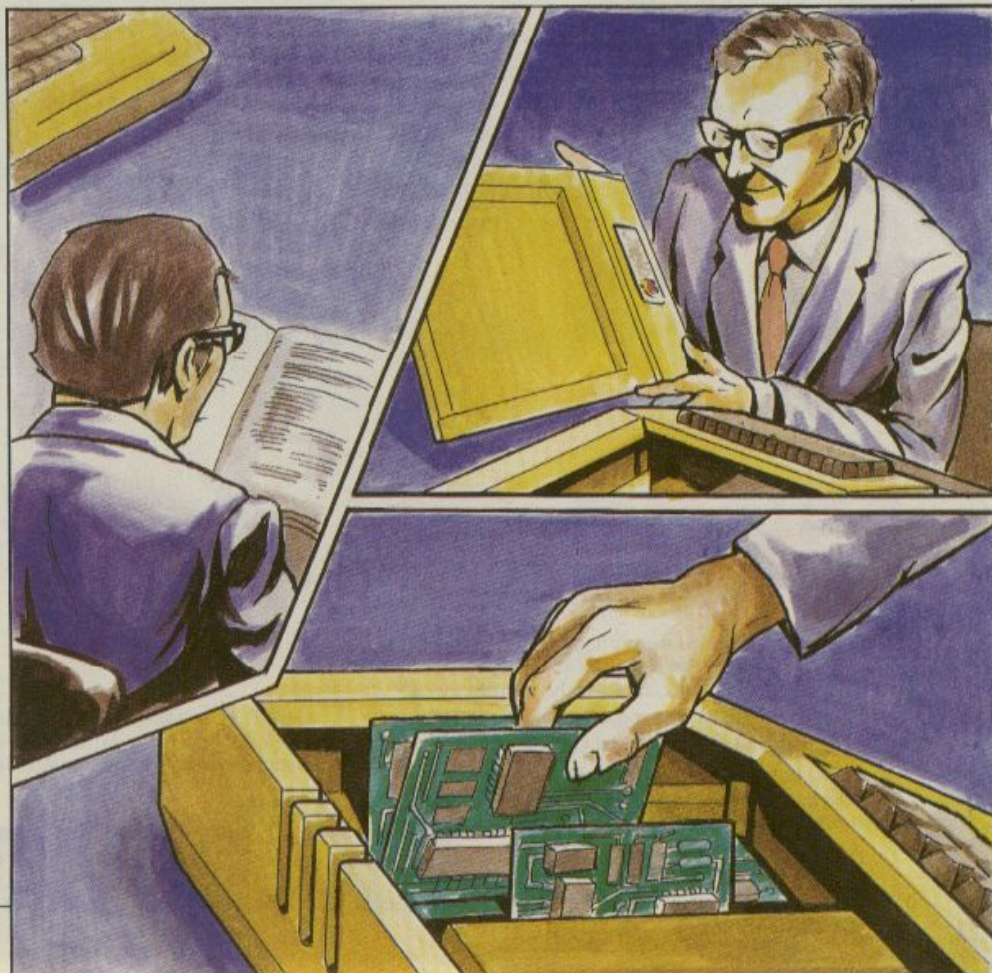

One of the most convenient methods of storing programs is in a chip, mostly because it can be immediately available for use, without the inconvenience of a loading-procedure.

The chips most often used for small jobs are Electrically Programmable Read Only Memories (EPROMs). These work exactly like any other ROM, but due to a difference in the semi-conducting junctions which make up each bit, are able to store an electric charge which can be changed with special currents.

This is done by sending the value desired down the data-lines, then putting a much higher voltage than normal (12.5 to 25v) onto the programming pin for a set time. After several repetitions the cells become fixed with the value applied. When all the cells have been correctly set, the EPROM has been programmed.

about as small as it could be, and apart from an empty socket and an unused connector (of which more later), carries only five chips, a 2716 EPROM containing the driver-firmware, a 6821 PIA and three 74LS chips. As it's rectangular, with no obvious front or back, it could be plugged in the wrong way round, even though the documentation does take a certain amount of time to give a description of the

Ivan Allen

orientation. This is let down by being potentially ambiguous, it might have been better to make the card apple-shaped like most others.

The PIA is connected to a 20-way DIP connector, providing the datapath to the actual programmer by way of a 24 inch ribbon cable. This is a much better way of arranging things than on many EPROM-burners for the Apple. As the documentation points out, you won't have to dismantle the Apple to write a ROM, and no more dropping EPROMs into it, either.

The cable is actually (and unnecessarily) polarised, and if the wrong end is put on the interface card, the plug on the programmer-end interferes with the fitting of the ZIF-socket.

There's also an unfilled 20-pin DIL socket which is connected to the lower of the two 20-way DIP-connectors. Nothing is mentioned in the documentation about what this will do, but looking at it leads one to the assumption that this card is a dual-function device, and that putting something (buffer, latch, shift register) into it would add additional features.

It's simple to use, once you have prepared a suitable data-block and loaded it into the machine, or alternatively, have an EPROM you want to copy.

Writing an EPROM is a pretty hairy business, since you are aware that what you're doing is permanent. To erase an EPROM you need an ultra-violet lamp powerful enough to give you a very serious burn. It comes in a special unit with safety devices to prevent just this, but most people haven't got one.

When you are burning ROMs, you have

to be very careful, neat, conscientious and precise. However, assuming you can master this, using the programmer is delightfully simple.

Unlike many EPROM-blowers which require that a driver-program be loaded from disk before you can get to work, the Cirtech unit has all the necessary firmware on the interface card, so it's activated by a normal PR# <slot number>. This brings up a five-option menu, allowing you to select the kind of EPROM you propose to program. A single-key reply then takes you to the main operating menu, which gives you the option of programming an EPROM, reading one from the socket into RAM, or of copying a ROM. This latter is just a read/write pair.

'You have to be very careful, neat and precise'

The fourth option turns off the interface and drops you into the monitor. This is the most inelegant exit possible, with the suggested method of returning to Basic being RESET. Not even an attempt to return to the system active at the time, which in almost every case would be a perfectly ordinary JSR \$3D0 to warmstart DOS, or a JSR \$3D3, to coldstart it.

There's a rather neat trick used in the actual programming firmware which cuts down on the time needed to correctly burn the EPROM. It works by only giving a cell enough of a programming-pulse to set it.

This is often much less than the times listed on the data-sheet, which is a 'worst-case' value.

Even though this technique is supported by the manufacturers of the EPROMs, I can't really see much point in all this work. This isn't a device that would be used for bulk production, so the odd few minutes saved isn't going to be scrutinised by a cost/benefit analyst.

Admittedly, at the top end the savings in programming time are dramatic, with a 27256 taking about 2 minutes 30 seconds at best, as against 30 minutes. But since you can't even get them yet and nothing you can put in an Apple could use 32K of ROM anyway, it's all pretty academic. You can't do it on the 2716 or 2732, which are the chips most often used.

More time is saved by skipping the cell if the value to be put there is \$FF, the same as an empty cell, but unless you're proposing to waste most of the space it's not going to make much difference.

These are nice touches, but it might have been better utilised, perhaps to provide relocation and thus permitting offset burning, or some other utilities. For example, they could have made it possible to copy from the lower four pages of RAM.

The soft switches are up the other end of RAM in the \$C000 — \$CFFF region, and anyway, what on earth is the program doing if it's liable to alter anything in any source-area? Granted, the \$00 — \$3FF region contains a lot of very important stuff on any 6502 machine, but no read operation, even there, should fail to save and restore all scratch locations. Even better would be an attempt to use locations which are not in the areas involved.

Of course, copying into the bottom end of RAM will destroy page zero and the stack, which will immediately crash the machine, but much worse, there really is an area on the Apple which you mustn't read or write as a block, and that's the aforementioned \$C000 — \$CFFF. The reason is that this is exactly where the interface card sits in memory, so messing with this area will quite definitely cause problems. In the worst case this could actually destroy the EPROM in the programmer.

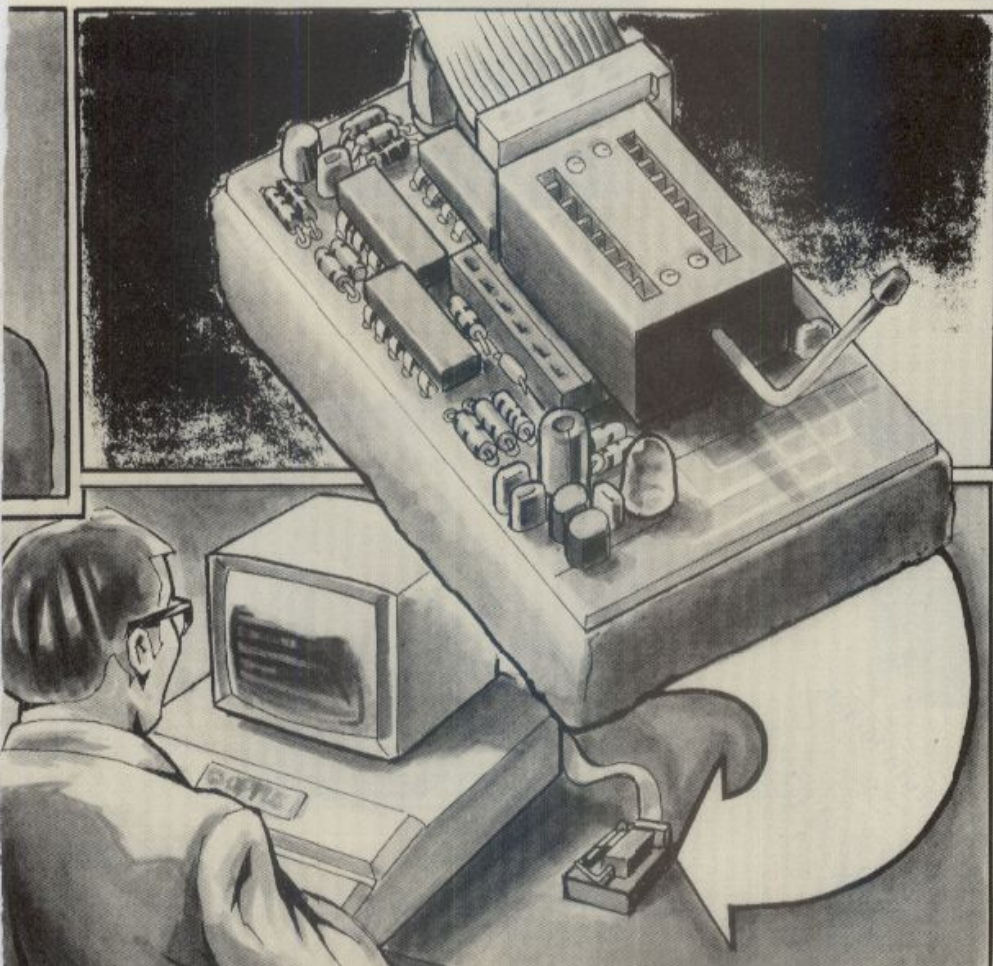

Verdict

Despite the criticisms I have made, the unit is quite attractive, you just have to be very careful when you're using it. It seems to work well, but that isn't unexpected since EPROM programmers aren't the most complicated devices in the world.

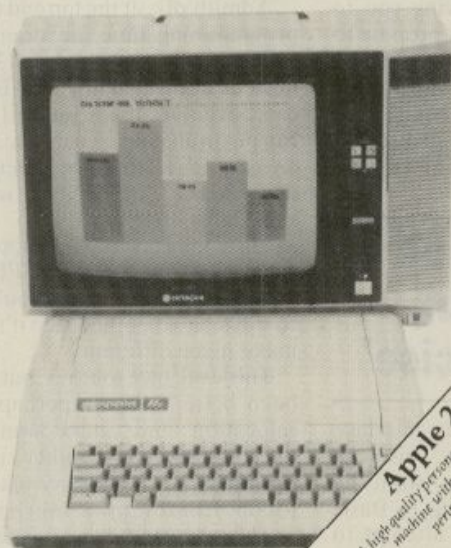

The documentation needs a lot of work, I feel, and the overall presentation could be improved. As it stands, it's too unassuming to make much of a splash.

As value for money, it's about average and it scores well in ease of use, due to the two-unit design.

Micropoint

It's surprising where you can buy a micro these days. The chemist, the newsagent, department stores – it won't be long before your local greengrocer is selling Apples as well as apples!

But who do you really trust? Do you honestly believe that the 'Johnny come latelys' can offer you the expertise and in depth knowledge of a specialist?

Do you honestly believe that they have the influence and status in the market, to offer you a full choice of the latest technology and all at probably the best prices around.

In all branches of Laskys, you'll find Micropoint, our specialist micro computer department. And at Micropoint you'll find everything you're looking for. Computers, Peripherals, Software, Programs, expert advice, test play and comparison facilities. It's the complete micro service, plus Laskys free 2 year parts and labour guarantee. **

Unfortunately we can't guarantee that you'll find the same standards anywhere else.

Catch your breath while Ian Scales analyses the state of the art of data transfer on micros.

Telesoft options

The past few months have witnessed the triumphant arrival of a variety of separate communications devices for low-cost microcomputers. Now seems to be a good time to take an overview of what's actually going on and which, if any, technology is worthy of your considerable investment. Among those devices to consider are the recently released BBC telesoftware service and Acorn's teletext adaptor for the BBC micro.

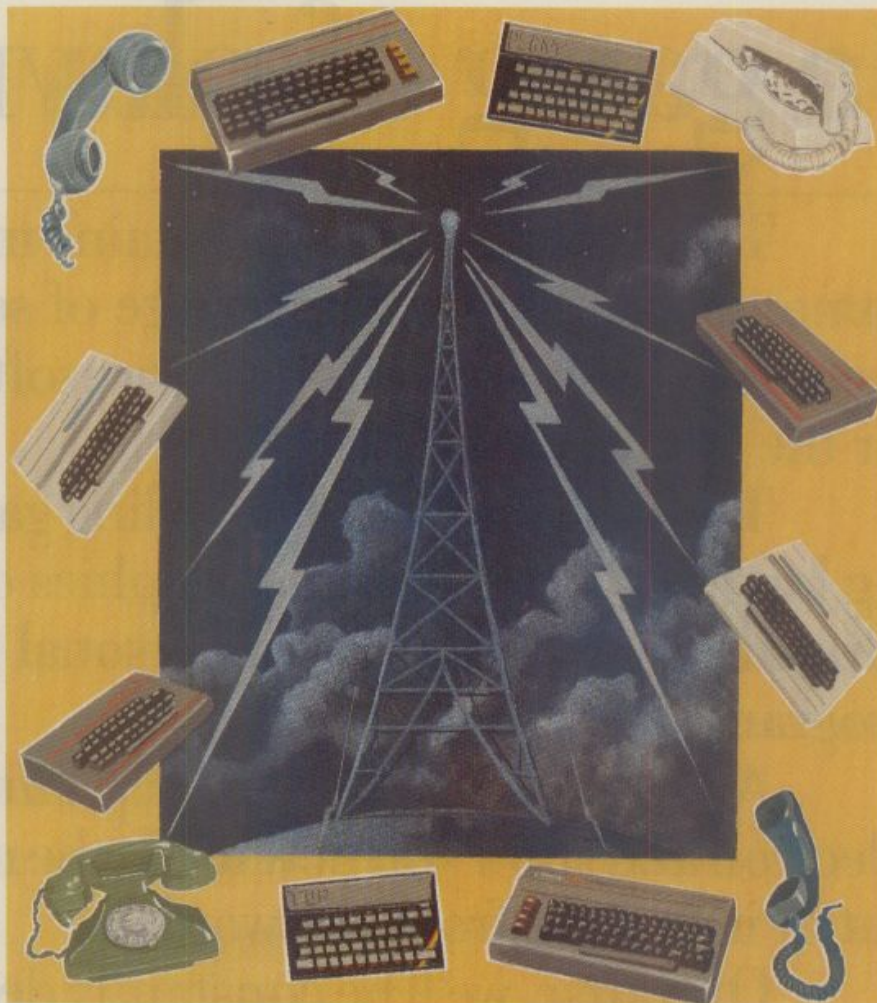

At the moment the term 'communications' covers three broad concepts. First there is simple computer-to-computer communication, sometimes called networking. The notable recent release in this field is the Interface 1 for the Sinclair Spectrum.

The interface 1 also features a standard RS232 serial interface, which brings us to the next level of communication, the use of the telephone system. Once you have a serial interface (one that sends the data out one bit at a time) it's a short step to configure a modem to convert these digital signals into analogue pulses and send them down the telephone system to another modem which converts them back to computer-speak again. This technology is the basis of Micronet, Britain's public access database and information service. The arrival of Micronet has spurred activity in the modem market. It is now possible to buy a complete RS232 and directly connected modem for the Spectrum for £100 (*PCN Peripherals* issue 30).

Here enters the first complication. Spectrum owners now have two routes. You can buy the Interface 1 and configure your own modem or you can get the all-in-one package from Prism. Prism also sells an RS232-driven, directly coupled modem for £90, so if your computer has an RS232 interface and you have some communications software you're in business.

The advantage of the telephone-based approach includes having a virtually unlimited amount of information theoretically accessible. Using a modem on the telephone system allows you to interact with the computer dispensing the information on the other end of the line. In other words you have access to as much information as the computer can hold and you can tell it what to send you.

The same cannot be said for the third way of sending electronic information. This involves broadcasting days over the air. This is the way Ceefax and Oracle work. Until recently the hardware needed to access these systems was a special teletext adaptor which you hooked up to your TV set. In this guise the systems were essentially non-enthusiast consumer or business items of only passing interest to the micro hobbyist. But the BBC and

Acorn (*PCN Monitor*, issues 29 and 30) have teamed up to enhance the BBC Computer Literacy Project by introducing a telesoftware service on Ceefax. With the purchase of Acorn's long-awaited teletext adaptor for the BBC Micro the user has free access to any software beamed over the airwaves by the BBC and access to all the Ceefax information — the usual news, weather, travel services and so on. The Teletext adaptor, when it eventually arrives in volume, will cost £225 (inc VAT).

The essential difference is that this system is non-interactive. The computer that dishes the stuff out is receiving no indications from your computer as to what you want. Because it's possible to safely send data on a spare TV channel much faster than over a telephone line, there is a way of coping with this non-interactive problem.

You send the entire database over the airwaves in a sort of loop. After about 30 seconds the whole lot has been broadcast and you're back at the beginning again. The computer simply selects the data required by the user as it comes flooding

into the system, and displays it on the screen. Obviously there is a limit to the amount of data that can be sent out without long waiting periods at the keyboard.

Under the Ceefax system you have the ability to chain the pages together. The system saves a consecutive series of pages so you can read them at your leisure. This facility is also vital for downloading medium to long programs.

At the moment BBC owners are faced with two competing technologies and it probably won't be long before other micro owners are being lured in similar directions.

The BBC owner can select Ceefax, where there is a much more limited quantity of information — though, the BBC claims, there will be a concerted effort on quality. The Ceefax route also has the advantage of being a free service, though the initial outlay of £225 for the adaptor is pretty steep.

On the other hand there is the modem investment to take advantage of the telephone-based information services and databases. Here you get a lower entry cost, but ongoing charges for the service.

The new boy from Acorn already has a gang of playmates.

The Acorn Electron, Britain's most exciting new home micro, already has a range of software programs specially designed for it by Acornsoft, makers of software for the BBC Micro.

There are six mind-boggling games, two programming languages, two exciting graphics cassettes, a home educational program and a personal money management program.

All of which will soon help familiarize you with the Electron and show you how to get the maximum enjoyment out of it straight from the word go.

Of course, we'll be constantly designing new software to help you fully realise the Electron's limitless potential.

You'll find all the programs featured here, plus the full

DRAGON GAMES

DRAGON 32

Dragons might fly

Name Space Shuttle **System** Dragon 32, plus one joystick **Price** £8 **Publisher** Microdeal, 41 Truro Road, St Austell, Cornwall (0726-3456) **Format** Cassette **Language** Machine code **Other versions** Some in preparation **Outlets** Mail order, most dealers.

To describe this as a flight simulation is rather an understatement. Instead of a quick trip round an airfield you're expected to take a space shuttle up into orbit, rescue a damaged satellite, and then bring it back down to earth. The simulation ought to be authentic, as the program is apparently written by an ex-NASA pilot.

First impressions

The packaging is disappointing. Although the tape comes with an informative 16-page manual to guide you, it is all contained in a styrofoam box with a flimsy wrap-around cover which gets bent and creased as soon as the cellophane is removed.

In play

A careful reading of the manual is essential, although in contrast to other simulation programs this is one where you can't help but get off the ground. You're given points according to how well you perform each part of the operation rather than being dumped unceremoniously back to earth for failing to take up your undercarriage at the right moment.

The first stage is the launch. You have to look at the landing site weather. To guide you there's a display of the shuttle's progress in the bottom left corner, while the view from the windscreen occupies a quarter of the screen, with the instrument read-outs scattered around. A joystick is essential.

The rescue mission comes after the launch into orbit. This is the only easy part as you retract the satellite into the shuttle with the remotely controlled arms. The final re-entry and landing is the only place where disaster can strike. It's also the only part where you see the shuttle itself instead of the view through the windscreen. The graphics are impressive as the craft sweeps down the runway to land... or not.

This program makes use of the high-speed poke, though this can be deleted at the start if yours is one of the Dragons that can't cope. Even at the slower speed the response to the joystick and the occasional keyboard input is instantaneous. While there's hardly any sound that doesn't really matter as it would only slow up the speed of operation anyway.

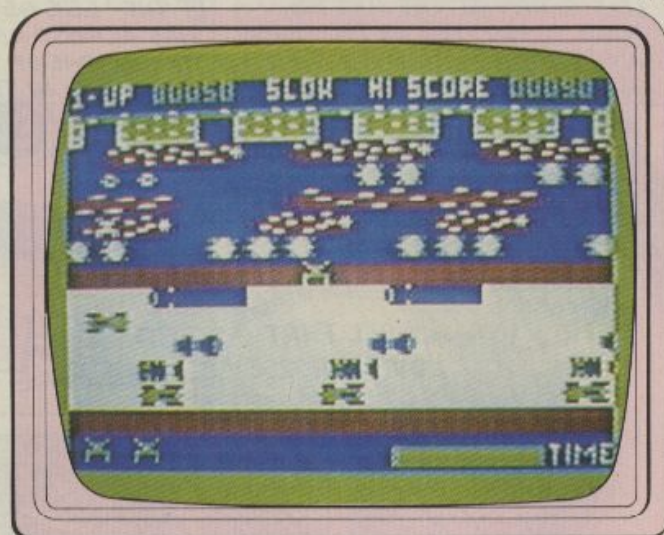

Verdict

This is the first decent flight simulator I've seen for the Dragon, and if you're thinking of getting one you needn't consider the others. This is

DRAGON 32

Dogged frog

Name Frogger **System** Dragon 32 **Price** £8 **Publisher** Microdeal, 41 Truro Road, St Austell, Cornwall (0726-3456) **Format** Cassette **Language** Machine code **Other versions** None **Outlets** Mail order, most dealers.

Frogger maniacs who bought a Dragon have so far had to make do with some poor substitutes, like Dragon Data's Rail Runner, but at last Microdeal have brought over the official Sega arcade version from America.

Objectives

For the one or two PCN readers who maybe don't know, the idea is to manoeuvre your frog across a busy five-lane highway to the river bank, then across the river to one of the five caves representing home. Then you do it again, and again, for as long as you can make your four lives last.

First impressions

The cassette sleeve includes a screen-shot suggesting that this could indeed be very close to the arcade original in both graphics and colour. On loading it does prove to be the case, the only thing missing being the slot for your money.

In play

Choose between the fast version with snakes or the slow version without. Finally you indicate whether it's a one or two player game. The top of the screen keeps a note of everything going on, including the

high-score record, while at the bottom there's a timer to warn you when you're about to become an ex-frog.

The five streams of traffic move at various speeds and in alternating directions, and the river contains the usual mix of floating logs and turtles who may turn at any time, along with the occasional lady frog who can be pounced on for extra points. The caves may contain tasty flies for even more bonus points, or alternatively snapping heads in which case you become the meal should you be foolish enough to hop in. Later stages of the game see alligators and snakes in the river, with snakes also patrolling the bank, and naturally everything's at a faster pace with more traffic on the road. When you do eventually lose a life a skull and crossbones is displayed.

The sound shows what the Dragon can do given a bit of encouragement, and control of the little creature is quick and accurate whether by keyboard or joystick. You can also freeze the frame should you feel the need to hop to the bathroom, or stop the game altogether if you want a fresh start.

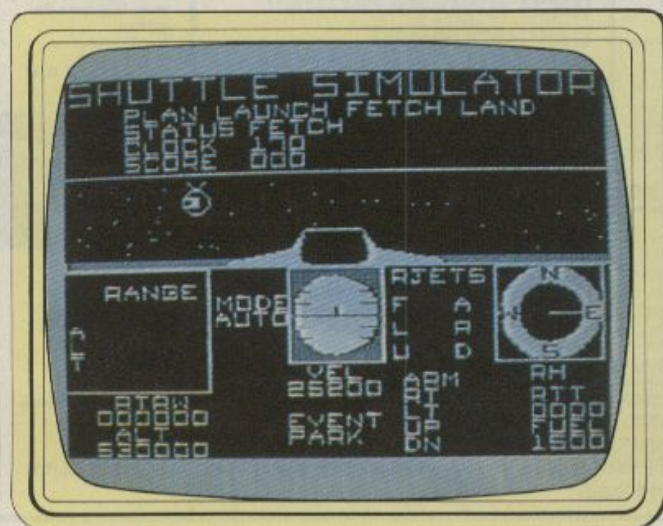

Verdict

I've always found Frogger rather a boring game, but for those who do like it this is a first class implementation and is as close to the original as Microdeal's The King is to Donkey Kong.

The ADVENTURES of MONTY The Mountaineer

De Apibus Sempiternum Dubitandum Est.

"AVALANCHE!"

MONTAGUE MONTAGUE III, DUKE OF BOLTON, HAS ORGANIZED AN EXPEDITION TO CLIMB MOUNT EVEREST, BUT MONTY AND THE TWO OTHER BRITISH CLIMBERS, IAN AND TOM, DID NOT RETURN TO CAMP THE PREVIOUS NIGHT. THE AMERICAN, HANK, TAKES CHARGE OF THE SEARCH PARTY.

"LEE, YOU GO WITH FRED BACK TO BASE CAMP AND GET MORE SUPPLIES. CARL AND I WILL SEARCH FOR THE OTHERS."

"SURE THING, HANK! WE'LL SEE Y'ALL BACK HERE LATER."

"GUT, DIS MAY VELL BE MY CHANCE TO DISPOSE OF ZIE SCHWEINHUND AMERIKANER!"

NOT FAR AWAY, MONTY, TOM AND IAN ARE TRAPPED AT THE BOTTOM OF A CREVASS.

"DASHED LUCKY REALLY, THAT THIS FISSURE HAS SHELTERED US FROM THE WEATHER. YOU SHARE THE LAST GINGER NUT, CHAPS. I AM SURE THAT AID IS IMMINENT."

"HAVE THE GINGER, TOM, I'LL TAKE THE NUT"

MEANWHILE, AT THE TOP ...

"LOOKY HERE WHAT I'VE FOUND, CARL. MONTY'S HAT. THEY MUST BE TRAPPED BELOW."

"AND IN A MINUTE, SCHWEIN, YOU WILL JOIN ZEM IN OBLIVION."

SUDDENLY, THE TWO CLIMBERS HEAR A NOISE ABOVE THEM...

RUMBLE

"GOTT IM HIMMEL!"

"WATCH OUT, AVALANCHE!"

WILL HANK AND CARL SURVIVE THE AVALANCHE? WILL MONTY BE RESCUED? WILL CARL'S EVIL PLANS COME TO FRUITION? WILL THE AARDVARKS REACH THE SUMMIT OF MOUNT PALOMAR BEFORE PETERKINS THE FERRET-STRANGLER? DON'T MISS NEXT WEEK'S EXCITING EPISODE!

CAN YOU ORGANISE AN EXPEDITION BETTER THAN MONTAGUE MONTAGUE III? **EVEREST** (FOR THE DRAGON 32) BRINGS YOU ALL THE EXCITEMENT OF HIMALAYAN MOUNTAINEERING. YOU CAN CHOOSE ANY ONE OF THREE PEAKS IN SPRING OR AUTUMN, BUT ONLY THE BEST AND THE BRAVEST WILL LOOK DOWN ON THE ROOF OF THE WORLD.

THIS, AND OTHER FINE GAMES, ARE AVAILABLE AT SELECTED BRANCHES OF BOOTS, JOHN MENZIES, AND OTHER COMPUTER DEALERS NATIONWIDE, OR DIRECT FROM:

SALAMANDER SOFTWARE, 17 NORFOLK ROAD, BRIGHTON, BN1 3AA.

EVEREST £7.95, PLEASE ADD 50p P&P TO ALL ORDERS. SEND S.A.E FOR FULL CATALOGUE.

"THEY'RE REALLY JOLLY SPIFFING, CHAPS!"

SOFTWARE

QUALITY SOFTWARE FOR THE DRAGON 32, ORIC-1 AND BBC MODEL B MICROCOMPUTERS.

GAMEPLAY

A vertiginous Bob Chappell survives the best that Centresoft can throw at him.

Atari stunners

This selection of games, with not a dud among the bunch, explains why the Atari is such a popular games machine. When its graphics and sound potential are exploited to the full, the resulting games rank with the finest.

NECROMANCER

Heading the lineup is Necromancer, one of the strangest and most imaginative games to come my way. You control a wizard who has a magical wand that hurls out a ball of energy. Having sown a handful of tree seeds by means of the wand, the wizard's task is to defend the sprouting trees against the ravages of marauding trolls, not to mention infestation by spiders. It is vital to preserve as many trees as possible since they are needed in the next stage of the game.

The club-carrying trolls lope back and forth across the screen at irregular intervals and speeds, and can be driven back only by a blast from the magic wand.

Occasionally, an odd rubber-necked creature with a single blinking eye wanders in; touching it with a flash from the wand produces bonus seeds. Malevolent spiders attack both trees and wizard, inflicting damage on contact.

The longer the wizard lasts, the faster run the trolls and spiders until, with a great eruption of sound and movement, his strength gives out and it's on to the next stage.

The wizard is at the top of a parapet, at the other end of which is one of the trees. Hurling a magical bolt at it brings forth a delightful animated tree creature. Disembodied clutching arms descend from on high without warning to drag the hapless victim wriggling into the heavens. Below are several walled compartments, each containing a shapeless blob that looks as if it's going to hatch out into something unpleasant before long.

A tree creature has to be guided over a compartment

then transformed back into a tree, whereupon its roots will gradually crack the floor beneath and down it will fall, with a mighty crash, on to the blob below.

Further tree creatures summoned forth leap over the newly created pits. If the wizard lands in a pit, he can fly upwards to escape. Passing over a question mark, seductively placed on the parapet by one of the arms, causes ladders to materialise which may be used to reach other levels.

The game has stunning graphics, a completely original and fascinating concept and excellent sound effects. In a word, magnificent.

DONKEY KONG

INVALID
MOVE!
SOUTH--
CMD

Atari's own Donkey Kong is undoubtedly the best version for this machine; in fact, it is considerably better than any other micro's Kong. Everything is there — superb animation, colour and sound, with all the challenges of the original arcade game. There are barrels, firefoxes, hammers, rivets, elevators, sand piles, prizes, conveyor belts and mad bouncing springs.

There are four screens to conquer and five selectable levels of difficulty.

While Kong demonstrates his strength by thumping his chest and leaping up and down, Mario shows that he, too, is capable of mighty feats — he can jump two or three barrels at a time, providing he gets a long enough run-up. This is one all Atari owners should have in their collection.

CAVERNS OF MARS

Caverns of Mars has been out for a while but remains one of the better versions of Scramble. In this, you travel down through the caves as opposed to the usual horizontal route. There are transmitters, pyxias rockets, fuel tanks, creon rockets, space mines and laser gates to be tackled (though not all at

once.

The twisting, claustrophobic caverns keep you on your toes. The final challenge is to reach and arm a fusion bomber deep within enemy territory — if you manage this, you've still got to escape back to the surface before it explodes.

There are four difficulty levels, each with extra caverns.

The graphics are crisp, smooth-scrolling and colourful. The game is never less than totally challenging.

JUMBO JET PILOT

This one gives you the chance to fly your very own jumbo jet without the worry of picking up the bill when you crash it.

A detailed instrument panel covers the lower half of the screen, its readings covering altitude, airspeed, elevator setting, heading, brake and stall lights, etc. To the right of the panel is a map showing your current position relative to two airports. A window on the panel supplies a picture of the artificial horizon. Above is the view through the cockpit's window.

You are given some useful tips in getting your jumbo into the air and flying it but you can't expect a 14-page booklet to turn you into an airline pilot overnight.

I soon managed to get the craft airborne but, unfortunately, heading in the wrong direction. Despite flying with one wing pointing at the ground for most of the trip then nosediving to Mother Earth at several hundred miles an hour, I thoroughly enjoyed the ride.

Easy it is not, but if you want an even tougher challenge there's always the night-flight option.

MOON SHUTTLE

No, you don't have to fly the US shuttle to the moon — this is another variation of the traditional shoot-em-up genre. But this one has a little extra to offer.

The action alternates be-

tween manoeuvring your shuttle through a thick asteroid belt and doing battle with a variety of aliens. First come the Bomb Launchers, large double-wheeled craft which zoom overhead, executing occasional cartwheels. Next, the Expandos, pneumatic drill clones which puff up just before they let fly with a bomb. Joining the parade are the bulbous Man-O-Wars, rather like the jellyfish of the same name. Finally, the Blob Men, large sunbursts which mutate into two smaller, meaner Blob Men on being hit.

You start round again with everything a shade more vicious. Chunky graphics and effective sound put this a cut above the usual run of alien showdowns.

DEFENDER

The classic arcade game and probably the most difficult — a player needs two pairs of eyes and three hands.

There they all are, — the pods, baiters, landers, swarms, mutants and bombers. On your side, you have the good ship Defender, fully equipped with forward and reverse thrust, lasers, smart bombs and hyperspace panic button.

The humanoids are in trouble again and you must defend them, with the help of your scanner. Joystick response is excellent and sound and graphics spectacular.

For Defender lovers (and, like the landers, there are a lot of them about), this is a must. If you don't like Defender, have a look anyway — it's a feast of movement, colour and sound.

All the above run in 16K and are available from CentreSoft stockists. CentreSoft are at CentreSoft House, Unit 16, Tipton Trading Estate, Bloomfield Road, Tipton, West Midlands DY4 9AH, tel: 021-520 7591. **Necromancer** (disk £29.95) — Synapse **Donkey Kong**, **Caverns of Mars** and **Defender** (cartridge £29.95) — Atari **Jumbo Jet Pilot** (cartridge £29.95) — Thorn EMI **Moon Shuttle** (disk & cassette £27.50) — Datasoft.

TWO FOR THE DRAGON 32

FROG-HOP: More idiot frogs! This version of the popular arcade game uses hi-res graphics and machine code for a fast moving game.

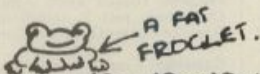

PRICE: £7.75

GALACTIC SLUGS: These sneaky, slimy, squamulous creatures will slime all over you if you don't shoot 'em down quick. Another m/c hi-res game.

PRICE: £7.75

TWO FOR THE SPECTRUM 48K

FREE-ZONE: Reversi — with a twist! Will you save England, or will you blow it up? As in the original, you will have to think ahead to win.

PRICE: £6.50.

CHARACTER GENERATOR: Create your own characters with this very useful program. Full instructions are included.

PRICE: £8.45

ORIC 48: T-COMP

At last a compiler for the Oric: converts your BASIC program to run at speeds approaching that of an equivalent machine code program. This is a very useful introduction to compilers and m/c language.

PRICE £12.95.

AND FOR THE T.1.99/4A

MUSIC-MACHINE: Play around with Texas sound. This program uses the chords, and shows you which ones you're using. Finished pieces can be stored on tape, and used in your own programs.

KAT-TRAXX: See how many bugs, and fruit you can eat, and avoid your cast off skins. Then disappear down the hole in the middle to the next screen! ~~30s~~ — ABUG.

CRYSTAL SWEEP: A game of strategy for up to five players. Collect the crystals, but stop your opponents from collecting. A game for the all the family together.

STEEPLECHASE: Guide your horse round the racecourse, without falling off. 4 skill levels make this an intriguing game.

ALL THE ABOVE RUN UNEXTENDED, AND COST £7.75 EACH.

Issue 12, May 27-June 2.

Pro-Tests: Spectrum word processor, PFS:Report on IBM, File Handling for Colour Genie; CTI CP80 type 1 printer, TG Trackball; Sord M5.

Features: Epson Basic, Oric sound part 1, Tandy Colour graphics, Gameplay: Mad Martha (Spectrum), Frenzy (Spectrum), Head banger (Spectrum), Oric roundup.

ProgramCards: Election Barchar (Commodore 64), Memory Utility (BBC B), Munch (Spectrum).

Databases: Hardware.

Clubnet: clubs (Cambridge Micro-computer Club special).

Micropaedia: Disk Drives, part 1.

Issue 13, June 3-9.

Pro-Tests: Telewriter for Dragon 32, Ahersoft Forth for Spectrum, GPS graphics processing system for Apple II+; joysticks, rulers; Ajile.

Features: Dragon meets Tandy, Oric music part 2, transferring Basic for Colour Genie and Genie 1.

Gameplay: Everest Ascent (Spectrum), Colour Genie roundup, Micro Maze (Jupiter Ace), Oix (Atari).

ProgramCards: Cupid (Oric), Alien (Dragon 32), Time Bomb (Atari).

Databases: peripherals.

Issue 14, June 10-June 15.

Pro-Tests: Apple Accelerator II board, Modula-2 (Apple II), Oric-Basic, Joystick Control Unit J6, Kempston Centronics Interface, BBC Speech Synthesiser.

Features: Newbrain Basic part 1, Sirius designing.

Gameplay: Ah Diddums (Spectrum), Monopole (Commodore 64), Automonopoli (Spectrum), Dragon dramatics.

ProgramCards: Time Bomb (Atari, cont), Sheep Drive (BBC B).

Databases: Software.

Micropaedia: Spectrum, part 1.

Issue 15, June 16-June 22.

Pro-Test: Comix 35, Address Manager (Spectrum), Sysres (Commodore 64), MST Database (Epson HX20), Voice Input Module (Apple II).

Features: Newbrain Basic part 2, Genie scene.

Gameplay: Cleared for Landing, Playing the Ace (Apple II), Vultures, Star Jammer (Dragon 32).

ProgramCards: Mover (BBC B), Sprite Clock (Commodore 64), Pirate Island (Atari, 3 of 9), Micro-mind (Colour Genie), Brickbat (Dragon 32).

Databases: Hardware.

Micropaedia: Spectrum, part 2.

Issue 16, June 23-June 29.

Pro-Tests: Atari v Acorn, word processing for the Commodore 64, Simplifile (CP/M), MPF-II printer, Z80 Pack for BBC.

Features: ZX81 Maths, US mail order, Atari graphics.

Gameplay: Computer Scrabble (Spectrum), Education (BBC), Horace and Spiders (Spectrum), Catcha Snatcha (Vic 20).

ProgramCards: Video Titrer (TI99/4A 3 of 6), Bowling (Spectrum), Pirate Island (Atari cont).

Micropaedia: Spectrum, part 3.

Issue 17, June 30-July 6.

Pro-Tests: Duet-16, The Organizer (CP/M), Trace and ZX Text (Spectrum), Juki 6100 daisywheel, Videx Ultra Term (Apple II).

Features: Leasing part 1, Atari screen action.

Gameplay: Oric chess, Grand Master (Commodore 64), Escape from Orion (BBC), Jet Pac (Spectrum), The Ring of Darkness (Dragon 32), Spectrum spectacle.

ProgramCards: Video Titrer (TI99/4A cont), Pirate Island (Atari cont) Word processor (BBC).

Micropaedia: Sound, part 1.

Issue 18, July 7-July 13.

Pro-Tests: Tandy 100, RS232 interface (ZX81), ROM pager (Commodore), Interface printer buffer, IBM Personal Basic, Spectrum assembler, Newbrain WP.

Features: Leasing Part 2, Lynx music.

Gameplay: Spectrum Backgammon, BBC Snooker, Commodore 64 round-up, Serpentine (Vic 20), 2st (Spectrum), Spectrum Salari.

ProgramCards: Word Processor (BBC), Fruit Machine (Spectrum).

Micropaedia: Sound part 2.

Issue 19, July 14-July 20.

Pro-Tests: 16-bit chips, Stock control (Epson HX20), Mailplus (Torch), Smith-Corona daisywheel, ZX81 word processing.

Features: Insurance, buying second-hand.

Gameplay: Escape MCP (C64), Escape from Perilous (Atari), Apple round-up, Temple of Apsai (C64), Airline (Spectrum), Heathrow (Spectrum).

ProgramCards: Colour Code (Atari), Wreck (Dragon).

Micropaedia: Sound, part 3.

Issue 20, July 21-July 27.

Pro-Tests: Rade bareboard, Vic digital tape drive, Seikosha colour printer, Toolkit (Spectrum), Bonus (Pet payroll), Newbrain monitor.

Features: Computer art, Dragon scrolling.

Gameplay: Rabbit Trail (TI99/4A), Aztec Challenge (Atari, Vic 20, TI99/4A), BBC round-up, Joust (Spectrum), Molar Maul (Spectrum), Print Shop (Spectrum), Time-Lords (BBC).

ProgramCards: Tumbler (Oric), Wreck (Dragon), Atari Errors, Speed Race (Vic 20).

Micropaedia: Sound, part 4.

Issue 21, July 28-August 3.

Pro-Tests: BBC graphics, Newbrain assembler, BBC turtle, Oric printer, Triumph printer.

Gameplay: Franklin's Tomb (Dragon), Hummer House of Horror (Spectrum), Jumpman (64), Jumping Jack (Spectrum), Fourth Encounter (Vic), Cyclois (64).

ProgramCards: Collection (Vic), Bomber (64), Definer (BBC).

Micropaedia: Sound, part 5.

Issue 22, August 4-August 10.

Pro-Tests: Spectrum Forth, BBC graphics, Music synthesisers, IBM plotter, Brother daisywheel, Maltron keyboard, Mupid.

Features: Genie assembler, Dragon machine code.

Gameplay: River Rescue, Oric Attack (Atari), Zork (64), Knot in 3D, 3D Combat Zone (Spectrum), Moria (Oric), Velnor's Lair (Spectrum).

Micropaedia: CP/M part 1.

Issue 23, August 11-August 17.

Pro-Tests: Sord Basic-G, Tasword, BBC microfloppies, Microdrive, Tandy Model 4.

Features: Dragon machine code, Atari controllers.

Gameplay: Bridge Master, Styx, Manic Miner (Spectrum), Atari roundup, Candy Floss/Hangman (Oric) Everest (Dragon).

Micropaedia: CP/M part 2.

Issue 24, August 18-August 24.

Pro-Tests: T-Maker III, Spectrum Fifth, daisywheels surveyed, Spectrum digital tracer, Laser.

Features: Videotex, Dragon machine code.

Gameplay: Oric roundup, Cookie, Egg Farm, Xadom (Spectrum), Sea Lord (BBC), Lusitanic (Dragon), The Island (64).

Micropaedia: Commodore 64, part 1.

Issue 25, August 25-August 31.

Pro-Tests: Electron, Simons Basic, Oric monitors, Microdrive.

Features: Newbrain map, Acorn Atom, Dragon machine code.

Gameplay: Suspended (64), Terror Daktis, Tranz AM (Spectrum), Dragon roundup, Jogger (Oric), Frogger (IBM).

Micropaedia: Commodore 64.

Issue 26, September 1-September 7.

Pro-Tests: Microtan 65, BCPL, BBC tracer, 80 column Pet, Oric interfaces.

Gameplay: Magic Mountain, Smuggers Cove (Spectrum), Spectrum roundup, Matrix (64), Ninja Warrior (Dragon), Dallas, (Oric), Call to Arms (IBM).

Micropaedia: Commodore 64.

Issue 27, September 8-September 14.

Pro-Tests: Sharp MZ700, BBC Lisp, Apple editor, IBM mice, ZX81 surgery.

Gameplay: Zip-Zap, Zzoom (Spectrum), Spectrum roundup, Hover Bover, Benji-Space Rescue (64).

Micropaedia: Dragon, part 1.

Issue 28, September 15-September 21.

Pro-Tests: Zenith Z100, Snail Logo, Atari Supergraphics, Newbrain CP/M, IBM mice.

Gameplay: The Witness, Super Scramble, Stix (64), Harrier Attack (Oric), Morocco Grand Prix (Dragon), Pharaoh's Tomb (Spectrum).

Micropaedia: Dragon, part 2.

Issue 29, September 22-September 28.

Pro-Tests: Portico Miracle, Dragon editor, BBC toolkit, Dragon drives, Apple light pen.

Features: HX20 disassembles, TI transformations.

Gameplay: Griddler, Gloopert, California Gold Rush (64), Oric roundup, Bomb Alley (BBC), Splat, General Election (Spectrum).

Micropaedia: Dragon, part 3.

Name Football Pools Program **Application** Pools prediction program **System** Spectrum 48K **Price** £5.95 **Publisher** Hartland Software, 8 Penzance Place, London W11 4PA **Format** Cassette **Language** Basic

In a few months time, as you sit by the villa pool sipping your sundowner, wondering what you're not going to bother doing tomorrow, you'll thank me. You'll realise that you owe the house, the sun, fast women and loose cars to PCN and its review of two football pools forecasting programs — or will you?

On the other hand, as you crouch in the corner of the padded cell, numbers swimming in front of your eyes, jabbering 'home draw, away win, upper quartile, lower quartile,' you might think something different. If you can still think.

Objectives

Spectadraw 2, from B S McAlley, and Football Pools Program, from Hartland Software, are two programs with the aim of forecasting the performance in the top four English divisions and the top three Scottish. They

should theoretically help you to see when like is meeting like, and therefore should increase your chance of predicting draws.

In the case of Spectadraw 2, we are told 'the wins are likely to be fairly small — a scientific approach has no chance of producing a really big win — but should leave you in pocket at the end of the season.' We can probably take it as read this goes for all such programs.

In the case of both programs, the scientific approach involves keeping a database of sorts up to date, and this is your first nightmare.

Features

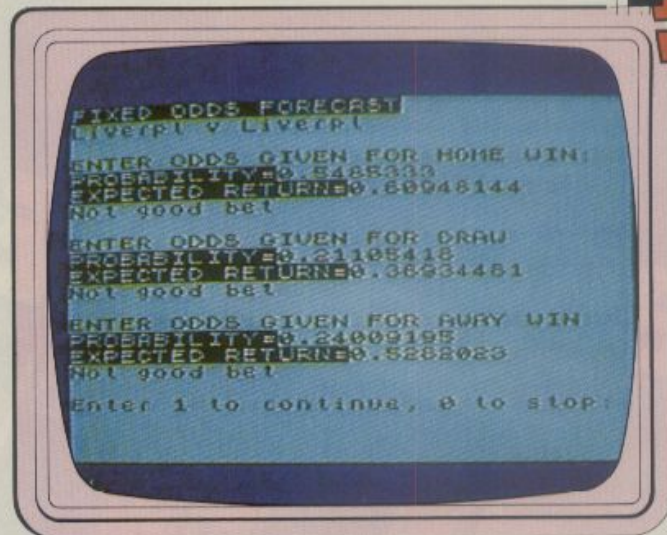

Both programs are broadly similar in results, if not in use. Spectadraw 2 will predict likely draws from the matches that are taking place that week, provided you've told it which matches are taking place. It will also print out a list of the 30 most likely draws based on its current database.

Football Pools Program gives you a little more information. It lists draws in order of preference, but will also pick out games with over-generous odds on fixed-odds coupons.

In use

In both cases you are provided with a database. Spectadraw 2's database was up to date for the start of the current season, while the review copy of Football Pools Program's database didn't include results for the latter part of last season.

I took on board Spectadraw's point that it takes about a month for form to settle down at the beginning of the season,

and began inputting feverishly.

This speedily became tiresome in both cases. Football Pools Program is not particularly stylish or user-friendly in appearance, but in the end I found it marginally easier to use. Its main drawback seemed to be that you have to type in the team's names one letter at a time when you update the league tables.

When you type in the week's fixtures it takes a considerable amount of time comparing form and making its prediction, with no sign on-screen that this is what it is doing.

Spectadraw 2, on the other hand, seems particularly user-friendly at first. Arranging your fixture list involves seeing a list of the teams in each division on screen, inputting the team numbers for each match, then moving on division by division. The teams already typed in are blacked out, so it's relatively easy to see where you are.

You're advised to deal with the match list towards the beginning of the week, and update your records when the results come in on Saturday. It's a staggering amount of typing, as indeed are all such prediction programs, and you'd need to be quite a football fiend to raise the energy to do this every week.

Of course, between arranging the fixtures and putting in the results, you'll want a prediction, won't you? This is where I ran into problems with Spectadraw. The first time I used it, it threw an error message, but I was unable to reproduce it, so couldn't nail it down.

After reloading, I managed to get a fair slice of results typed in, then tried a prediction. It threw up a different error message, and I spent quite some time puzzling before I

worked out that it just doesn't work unless you've typed in results for *all* the teams covered.

In general, both programs tend to be difficult to use if you've been approaching them half-heartedly, and have failed to keep your database up to date.

Verdict

Both Spectadraw and Football Pools Program are effective in assessing form, but considerably less so when it comes to predicting draws.

Spectadraw assesses its own effectiveness as about 20-30 per cent more successful than sticking a pin in the coupon, and this would seem about right to me in the cases of both programs. If you know your football, you could probably equal their success with your own guesstimates, but if you used them in an advisory capacity, rather than filling in their prediction religiously, it could well improve your chances.

The major drawback with both programs is the amount of typing you have to do.

John Lettice

Clubnet keeps you in touch with enthusiasts throughout the country. It is divided into clubs and user groups and a list of each is published on alternate weeks.

This week it is the turn of clubs, which are listed alphabetically by county and town.

If your association has something special on the agenda or if you've just started a new one, contact us at *Clubnet, Personal Computer News*, VNU, 62 Oxford Street, London W1A 2HG.

Our Clubnet report this week focuses on the Computer User's Club.

Trans-globe users

At the back of a micro shop in Welling, Kent, the Computer Users Club is thriving.

With an international membership of 600, most of whom are academics, sub-groups operate from countries including Singapore, USA, Belgium, Italy, Africa and Australia. 'We send programs all over the world, and assist people in writing them,' said organiser Tony Latham, who stocks micros, peripherals and software in his shop.

'The club was started by a group of engineers designing equipment in garages and attics,' said Mr Latham.

Members work primarily on the BBC Micro and the club acts as a referral centre for this machine. 'It's done by word of mouth — we'd be swamped if we advertised,' he said.

Members write software for the BBC and Mr Latham is assisting in marketing private products for it. Some products are sold direct through the club.

Set up in 1981, the club also features a 10 megabyte Torch, Commodore PET and Video Genie, among other machines.

Mr Latham feels that micros have a part to play in world peace. 'We think nations will come together as a result of sharing computer language, and feel this is very important.'

The club has had two actual meetings which were well received, but they couldn't find local premises that were stable and so

Club member Mike Sein at work on a BBC program gets advice and encouragement from Tony Latham.

the open house arrangement will continue at the shop until they can build an extension in which to have meetings.

One of the club's claims to fame is journalist member Penny Junor, who is writing Margaret Thatcher's life story. The club has supplied her with a daisywheel printer, plus BBC and disk drives and word processing equipment to help her complete the task.

Wendie Pearson

Name Computer Users Club **Venue** 69 Hadlow Road, Welling, Kent **Meetings** Facilities open 9am-5pm Monday to Saturday **Contact** Tony Latham, 01-304 3910

CLUBS

AVON

Bristol Berkeley Nuclear Laboratories Club. Contact Neil Walker, 53 Wofridge Ride, Alveston, Bristol, 0454 414262.

Bristol Micro Computer Club. Meets at the Pavilion, Southend Road, Filton, Bristol, every other Tuesday. Darryl Collins, 60 Mackie Rd, Filton, Bristol BS12 7NA, 0272 792982.

Bristol Format 40/80 Disc Club, for BBC disk users. Contact Peter Hughes, Format 40/80 Disc Club, c/o The Lending Library, Five Marshal Street, Bristol BS1 4AA.

Multi-User Club Valerie Boyde-Shaw, Nailsea BS1337.

Worle Computer Club. Meets at Woodsprings Inn Functions Rooms on alternate Mondays at 7-10.30pm. H Bennett, 0934 514902 or F Feeney, 0934 833122.

BEDFORDSHIRE

Bedford Amateur Computer Club. Meets at Star Rowing Club, Bedford, on the first and third Tuesday of month 8pm. Rowan Bird, 74 High Street, Great Barford, MK44 3LB, 0234 870763.

Chiltern Computer Club. Meets at Five Bells, Eaton Bray, Near Dunstable, Leighton Buzzard on second and fourth Monday of each month. Contact Steve Betts, 42 Wallace Road, Eaton Bray, 046 2DF, 0525 220922.

Luton College Computer Club. John Rodger, 0582 3411.

Luton Computer Club. J P Fletcher, 1 Trowbridge Gardens, Luton, LU2 7JY, 0582 450687.

BERKSHIRE

Easthampstead Computer Club. Meets at Easthampstead Park School, Bracknell, on the first Wednesday in month at 8pm. Brian Poulton, 0344 84423.

BIRMINGHAM

Birmingham Amateur Computer Club. Meets at Free Church Hall, Land Lane, Marston Green, Birmingham on first and third Thursday of each month at 7.30pm. Contact Les Moore, Secretary, Wolverhampton 725340.

BUCKINGHAMSHIRE

Aylesbury Computer Club. Meets at Quarrendon Youth Club every Friday at 7.30pm and at Mandville County Secondary School the first Thursday of

each month at 7pm. Ken Knight, 22 Mount Street, Aylesbury, 0296 5181.

Chiltern Microcomputer Club. Meets at the Garden Centre, School Lane, Chalfont St Giles, on the first Wednesday of each month. Mrs W Tibbitts, Elwood, Deanway, Chalfont St Giles, 024 07 4906.

Iver Computer Club. P A Seal, 1 Ormonde Flats, Church Road, Iver Heath, 0753 652792.

Iver Computer Society meets at Huntsmoor room, Iver Village Hall on the second and fourth Thursday every month at 7.30. John Haigh, 141 Leas Drive, Iver, SL0 9RP.

CAMBRIDGESHIRE

Cambridge Microcomputer Club, meets on the third Wednesday of month. Derek

Tripp, 3 Spurgeons Avenue, Waterbeach, 0223 315662.

Peterborough Personal Computer Club meets at Crosfield Electronics Social Club, fortnightly on Mondays. Andrew Pike, 0733 44342 after 5pm.

CHESHIRE

Altrincham Computer Club. Meets at N. Cestrian Grammar School, Durham Road, Altrincham, fortnightly. Martin Hickling, 39 Barrington Road, Altrincham, WA14 1H2, 061 941 4547.

Brunel Computer Club. Meets at St Werburgh Community Centre on alternate Wednesdays at 7 to 10pm. Mr R Simpson, 4 The Coots, Stockwood, 0477 34238.

Chester Computer Club. Contact W Collins, 37 Garden Lane, Chester, Cheshire.

Crewe Computer Users Club meets at Buffaloes Club, Earl Street, Crewe, on the third Thursday of each month at 8pm. Bram Knight, 0270 623375.

Holmes Chapel Micro Club meets at Leisure Centre, Holmes Chapel at 7.30 to 9.30pm on the first and third Tuesday of month. Margaret Baker, 1 Helton Close, Crewe, 0477 34238.

Kinder Peek Computer Club meets at Bew Mills School every Monday. John Eary, New Mills 43870.

Kettleshulme National Computer Buyer's Club. Send SAE to Barry Edwards, Laneside House, Paddock Lane, Kettleshulme, nr Stockport, Cheshire.

New Mills & District PCC meets at New Mills School, fortnightly on Fridays at 7 to 9.30pm. Mr G M Flanagan, 11 Sundown Close, New Mills, Stockport, SK12 3DH, 0663 44051.

Northwest Computer Club meets fortnightly, John Lightfoot, 13 Aston Drive,

Once a month

Your eyes will not be deceiving you next week when you open PCN to find no Databasics. But before you write this off as gross carelessness on our part, let us assure you that it is deliberate. Databasics is merely deferred.

Every fourth week, starting with issue 33, you'll get a full list of clubs and user groups nationwide, as well as two reports.

In issue 34, there will be no clubs or user groups but Databasics will be back, starting with hardware. The next week will consist of peripherals and the week after that will feature software.

Frodsham, Warrington, WA6 7PU. 0728 31519.

Northwest Computer Club weekly meetings. Tom Wyatt, 29 Summer Lane, Halton, Runcorn Cheshire WA7 5PG. Runcorn 77545.

Mid-Cheshire Computer Club meets at Winsford Library on the second Friday every month at 7.30pm. Simon Sadler, Winsford 53339.

Stockport Software Exchange Club. Send SAE to P Redford, 53 Cavendish Road, Hazel Grove, Stockport, Cheshire.

CLEVELAND

Cleveland Micro Club meets on the second and third Tuesday of each month, under 18s on second of month, over 21s on third Tuesday of month. J Telford, 13 Weston Crescent, Norton.

Stockton Amateur Computer Club meets at YMCA, Stockton, each alternate week at 7-9pm. Peter Cheshire, 60 Croft Road, Eaglescliffe, Stockton-on-Tees. TS16 0DY.

CORNWALL

Cornish Radio Amateur Club — Computing Section. Bob Reason, 24 Mitchell Road, Camborne.

Cornwall Area PAICC meets at the Penzance Micro Centre every Friday. S Zenith, Hayle 754845.

St Austell Computer Club and Computer Town meets at ECIP Labs, Penpewar Road, fortnightly on Mondays at 7.30pm. N G Day, 2 Clifdale Close, St Austell.

CUMBRIA

Ambleside Computer Club. Contact Jeremy Westernman, 8 Hill Top Road, Ambleside, Cumbria. Tel: Ambleside 2452.

DERBYSHIRE

Derby Micro Society meets at Littleover Church Hall, Shepherd Street, first and third Thursday of each month at 7pm. Frank Taylor, 0332 559334.

Glossop Computer Club. John Dearn, 2 Spinney Close, Glossop.

DEVON

Brixham Computer Users Club. Meets at Computer Systems (Torbay), Pump Street, Brixham, Saturdays at 2.30pm. Ian Chipperfield, 22 Brookdale Court, Brixham, Devon (Brixham 59224).

Computers Against the Bomb. Contact Paul Couchman, 29 Clifton Place, North Hill, Plymouth, Devon.

Exeter & District Computer Club meets at Exeter School, Magdalene Road, Exeter, on the second and fourth Tuesday every month. T G Holden, 14 Greenville Avenue, Teignmouth, TQ14 9NT.

Exeter & District Amateur Computer Club meets second Tuesday every month. Doug Bates, Fortescue House, Stoke Cannon, Exeter. Specialist meetings on third and fourth Tuesday.

Okehampton Computer Club. Contact Cherri Graebe, Okehampton 3523, or Okehampton Community College, Okehampton 3800. Meets 7pm each Monday during term time.

South Molton Computer Club. Meets at South Molton Tool Hire, Dootson House, Cooks Cross Industrial Estate, South Molton, North Devon, each Thursday at 7pm. Contact Nick Hews on 07695 3446.

Torbay Users Computer Club meets at Devon Computers, 39 Totham Road, Paignton on Mondays fortnightly.

DORSET

Bournemouth Area Computer Club meets at Kinson Community Centre on the third Wednesday every month. Peter Hibbs, 54 Runnymede Avenue, Bournemouth, BH11 9SE. 0202 576547.

TOPIC meets at Canteen English Truck Centre on the second and fourth Wednesday every month at 7pm. David Washford, 1 Alexander Road, Bournemouth, BH6 5JA.

Purbeck Computer Club, contact 31 North Street, Wareham, Dorset BH20 1AD.

DURHAM

Darlington Computer Club, weekly meetings. L Boxell, 8 Vans Terrace, Darlington DL3 7AT. 0325 67766.

ESSEX

Genius Computer Club. 30 Webber House, North Street, Barking.

Great Dunmow Computer Club. Contact T Coombs, 4 Oakroyal House, Oakroyal Avenue, Great Dunmow, Essex CM6 1HQ.

Brentwood Amateur Computer Club, meets once a month. R Sadler, 18 Warescot Road, Brentwood, CM15 9HD. Brentwood 232463.

Springfield Computer Club meets on the

first Friday of every month. Stephen Cousins, 1 Aldeburgh Way, Springfield, Chelmsford, CM1 5PB. 0245 50155.

Canvey Computer Club. Contact Dean Williams, 17 Mornington Road, Canvey Island, Essex SS8 8AT.

Colchester Microprocessor Group meets at University of Essex on the second and fourth Wednesday of every month at 7.30pm. Information Centre, University of Essex, near Colchester.

Colchester Computer Society. Meets at Severalls Hospital Social Club, Colchester. Contact A Potten, 14 Foxmead, Rivenhall, Witham, Essex CM8 3HD, Witham 516335.

National Westminster Personal Computer Society. 412 Eastern Avenue, Gants Hill, Ilford. P J Moore, 01-554 9699.

Stanway School Computing Club, only school members at present. G Floyd, c/o Physics Department, Stanway School, Stanway, Colchester.

Modern 80 Computer Link Club, meets Wednesday evenings. Contact E Ferrant, 55 South Street, Barming, Kent, 0622 27885.

Nailsea Multi-User Club. Contact Valerie Boyde-Shaw, 0272 851337.

Romford Club, a new club. Mr D Norden, 138c Church Road, Romford.

Roundacre Micro Computer Users Club. Meets at the Roundacre Youth House, Laindon Link, Basildon every Wednesday at 7.30pm. Contact Mrs L Daden, Basildon 285119.

South East Essex Computer Society meets at Hockey Club at Roofs Hall, near Southend Football Stadium on Wednesday at 7.30pm. Robin Knight, 128 Little Wakering Road, Little Wakering, Southend-on-Sea. 0702 218456.

GLOUCESTERSHIRE

British Amateur Electronics Club. Mr J Margetts, 3 Bishopstone Close, Golden Valley, Cheltenham.

Cheltenham Amateur Computer Club meets on the third Tuesday of each month at 7.30pm. Mike Pullin 0242 25617.

GCHQ. D W Adam, 16 Court Road, Prestbury, Cheltenham.

Cheltenham Amateur Computer Club meets at Prestbury Scout Headquarters, on the third Tuesday of every month at 7.30pm. M Hughes, 36 Riversides Way, Cheltenham.

HAMPSHIRE

Commodore Computer Club. Meets on the first Friday of every month at Bury House, Bury Road, Gosport at 7.30pm. Brian Cox, Fareham 280530.

Fareham and Portsmouth Amateur Computer Club. Alan Smith, c/o Francis Close, Lee-on-the-Solent, Gosport, Hants PO13 8HB. 0705 550907.

RAF Odham Computer Club. Contact c/o Officer i/c, Royal Air Force, Odham, Nr Basingstoke, Hants.

Southampton Amateur Computer Club meets at Crestwood Centre, Shakespeare Road, Boyatt Wood, Eastleigh, Hants, on the second Wednesday of every month at 7.30pm. Paul Blitz, Chandlers Ford 69050.

HEREFORD

Hereford Amateur Computer Club, proposed new club. Stuart Edinborough, 2 Warwick Walk, Bobblestock, HR4 9TG. 0432 269700.

HERTS

Sawbridgeworth Computer Club, meets at Sawbridgeworth Parish Hall, 7pm, Fridays. M. Marwood, 38 Sayesbury Road, Sawbridgeworth, Herts, CM21 0EB.

Stevenage Proposed new club. Contact Robert Timmins, 204, Sefton Road, Martins Wood, Stevenage. Tel: Stevenage 722975 (after 6 and weekends).

HUMBERSIDE

Bridlington Microcomputer Club. Meets 7.30pm alternate Fridays at Old Star Inn, High Street, Bridlington. Contact D Compleman, 0262-60 859.

Grimsby Computer Club meets at Grimsby Central Library fortnightly on Mondays at 7.30pm. Jensen Lee, 29 Park View, Cleethorpes. 0472 42559.

Scunthorpe & District Microprocessor Society meets at Community Centre, Lindun Street, Scunthorpe, every Tuesday at 7.30pm. G Hinch, 21 Old Crosby, Scunthorpe, South Humberside DN15 8PU.

KENT

Canterbury ACC proposed new club. Contact L Fisher, 21 Manwood Avenue, St Stephens, Canterbury, CT2 7AH.

Gravesend Computer Club. Meets at School Room Extra Tuition Centre, 39 The Terrace, Gravesend. Contact c/o The Extra Tuition Centre, 0474 50677.

Medway Amateur Computer & Robotics Organisation. Meets at 7.30pm on first Tuesday and third Wednesday of every month. Annual subs £5. Contact Paul Cameron, Unit 3, Walderslade Centre, Walderslade Road, Chatham, Kent, 0634-63036.

North Kent Amateur Computer Club meets at Lecture Theatre Charles Darwin School, Jail Lane, Biggin Hill, on the first Thursday of every month at 7.30pm. Iain House, 28 Canadian Avenue, Catford SE6 3AS. 01-690 5441.

Orpington Computer Club meets at The Large Hall, Christ Church, Chaterhouse Road, Orpington, every Friday at 8pm-10.30pm. Mr R Pyatt, 23 Arundel Drive, Orpington, Kent BR6 9JF. Orpington 20281.

National Personal Computer User Association. Eric Keeley, 11 Spratling Street, Manston, Ramsgate, Kent.

Sevenoaks School Computer Club. G Sommerhoff, Technical Centre, Sevenoaks School, Sevenoaks, Kent. 0732 456340.

Tonbridge & Tunbridge Wells ACC. Ray Szatkowski, 1 Croser Street, Tonbridge. 0732 355960.

LANCASHIRE

Blackburn Micro Computer Club. Roger Longworth, 12 Sharp Close, Accrington.

Bolton Computer Club meets at E4/24 Bolton Institute of Higher Education, Deane Road, Bolton, on Thursdays. David Atherton, 16 Douglas Street, Asherton, Manchester M29 9FB. 0942 876210.

Burnley Computer Club. Meets at Burnley Technical College on Tuesdays, 7.30-11pm. Contact Clive Tallon, 27 Basnett Street, Burnley, Lancs.

Chorley Computer Club meets at Townley Arms, Chorley, every other Tuesday at 8pm. Tony Higson, 23 Brock Road, Chorley, Lancs. Chorley 68429.

Ribble Valley Computer Club meets at Staff Canteen, Pendle Carpets Ltd, West Bradford, on the second and fourth Monday of month at 7-9pm. Contact Ian Thornton-Bryar, 25 Southfield Drive, West Bradford, Clitheroe, BB7 4TU.

Lancaster & Morecambe Computer Club. Sarah Blackler, 0524 33553.

South Chadderton Computer Club meets at Turf Lane Centre, Turf Lane, Chadderton, on Thursdays at 7-9.30pm. David Sholes, 18 Beech Avenue, Oldham, Lancs.

LEICESTERSHIRE

East Leake Computer Club. Andrew Jones, 59 Bateman Road, East Leake, Loughborough, LE12 6NN.

Hawker Siddley Computer Club. Contact R Wrathall, 6 Naseby Drive, Loughborough LE11 0WU.

LINCOLNSHIRE

Lincoln Computer Club, meets at The Cardinal's Hat, 238 High Street, Lincoln (entrance on Grantham Street) on first and third Wednesday of each month, except August. Contact Jeffrey Joy, 23 Cross O' Cliff Hill, Lincoln, 0522 28252.

Skegness Computer Club, meets at County Hotel every other Monday, 7.30-9.30pm. Reg Potter, 118 Baresford Avenue, Skegness. 0754 3594.

LONDON

Association of Computer Clubs. Contact Rupert Steele, 17 Lawrie Park Crescent, London SE26. 01-778 6824. National Club.

Croydon Microcomputer Club. Meets at Croydon Central Reference Library. Contact Vernon Gifford, 01-653 3207.

East London Amateur Computer Club meets at Harrow Green Library, Cathall Road, E11, on the second and fourth Tuesday of month at 7-10pm. Fred Linger on 01-554 3288.

Forum-80 London. Leon Jay, 01-286 6207.

Forum-80 Wembley. Victor Saleh, 01-902 2546.

Harrow Computer Group meets at Harrow College of Higher Education, Room W24, Northwick Park, on alternate Wednesday at 7pm. Bazley Butcher, 01-950 7068.

Imperial College Microcomputer Club meets at room 145, level 1, on Tuesdays at 7.30pm. Tim Pantion, c/o I.C. Union Office, Prince Consort Road, London SW7 2BB.

London School Computer Club. Burlington Danes School, Dane Building, DuCane Road, Hammersmith.

Metropolitan Police Amateur Computing Club meets on the first Thursday of month at 7pm. S Farley, 01-725 2428.

68 Microgroup meets at Regents Park Library, Robert Street, NW1, on the third Tuesday of month at 7.30pm. Jim

Anderson, 41 Pebworth Road, Harrow, Middlesex.

North London Computer Club meets at the Polytechnic of North London, Holloway, N7 8DB, on Monday, Tuesday, Wednesday and Thursday during term time and one evening a week during holidays. Robin Bradbeer, 01-607 2789.

Paddington Computer Club meets at Paddington College, 25 Paddington Green, W2 1NB. Peter Hill, 01-723 5762.

Post Office HQ Microcomputer Club meets at room B145, River Plate House, 12-13 South Place, c/o Moorgate, on the second Thursday of month. Vernon Quaintance, British Telecom Enterprises, Chapside House, 138 Cheapside EC2U 6JH. 01-726 4716.

Queens Crescent Computer Club. Meets at Queens Crescent Library, 165 Queens Crescent, London NW5. 01-485 4551.

The SOBAT Computer Club meets once a fortnight. Mr T Kayani, 12 Calderon Road, London E11.

South East London Microcomputer Club meets at Thames Polytechnic, Greens Ends, Woolwich SE18, on alternate Wednesdays at 7pm. Peter Phillips, 61 Grainger Road, SE3. 01-853 5829.

Southgate Microcomputer Club meets at Room B106 Southgate Tech, fortnightly on Thursdays at 7.30pm. Kevin Pretorius 01-882 2282. See Prestel page 25820645.

West London Personal Computer Club meets at Back room, Fox & Goose pub, Hanger Lane, Alpertown, on the first Tuesday of month at 7.45pm. Graham Brain, 01-997 8986.

MANCHESTER

Manchester Computer Club meets at the Department of Computer Science, Manchester University, Oxford Road, on the first and third Thursday of month at 7.30pm. David Wade, 061-941 2406.

Small Business Computer Users Club. Proposed new club to meet the last Tuesday of month. K Wadsworth, 061-740 7232 after 5pm.

South Trafford Microcomputer Club. Meets fortnightly. Contact Ian White, 16 Leicester Avenue, Timperley, Altrincham WA15 6HR, 061-969 2080.

MERSEYSIDE

Merseyside Microcomputer Group meets at Merchant Taylor's School, Crosby, on second Thursday month. Mr F Shaw, 14 Albany Avenue, Eccleston Park, Prescot. 051-426 5536.

Southport Computer Club meets weekly. Ian Bristone, 28 Weld Road, Southport, Merseyside PR8 2DL. 0704 64524.

Wirral Microcomputer Users Group meets at Birkenhead Technical College every Monday. J Phillips, 14 Helton Close, Birkenhead, Merseyside L43 9HP.

Wirral Computer Club. Contact Gary Metcalfe, 24 Marlston Avenue, Irby, Merseyside.

MIDDLESEX

Brigadier Computer Club. Meets on the first and third Monday of every month at Brigadier Youth Centre, Brigadier Hill, Enfield at 7.30 pm. Subs: £2. Contact Steve Ward, 28 Brodie Road, Enfield, Middx EN2 0EU. 01-363 3786.

Micromodeller User Association. Meets three times a year. Contact Philip Matthews, Philip Morris House, 21 High Street, Feltham TW13 4AD. 01-751 6388.

Sunbury Computer Club meets at St Benedicts Hall, Napier Road, Ashford, on the last Tuesday of month at 8pm. Simon Taylor, 8 Priory Close, Sunbury-on-Thames, Middlesex. Simon Clark, 83 Watling Street, Towcester, Northants NN12 7AG.

ZX Micro Club. Contact Paul Hargreaves, 10 The Ride, Brentford, Middx.

NORTHAMPTONSHIRE

Corby Universal Micro Club. Meets at Lodge Park Sports Centre fortnightly on alternate Wednesdays and Thursdays. Contact Peter Wilson, 26 North Cape Walk, Corby, tel: Great Oakley 742622.

Kettering Microcomputer Club. Meets every Wednesday at 7pm. Details from Stephen Bickle on 0536 514381.

South Northants Computer Group meets at Anchor House, Moat Lane, Towcester, on Wednesdays at 7.30pm.

NOTTINGHAMSHIRE

Ashfield Computer Club meets at Carsic Junior School, St Mary's Road, Sutton in Ashfield on the first and third Thursday month. Derick Daines, c/o Cuttings Avenue, Sutton in Ashfield, Notts.

sinclair special

***Inside...
New Interface 2
and ROM cartridges!
New Software!***

TAKING NEW SOFTWARE IN NEW DIRECTIONS

You'll see that this issue of Sinclair Special devotes considerable space to software. Why, when we've so much to say about hardware and peripherals? Simply because at Sinclair we believe in supporting first-class hardware with first-class software.

This month sees the start of a new commitment to education in our catalogue, both for adults and children.

In the field of micro theory, we've programs like Beyond BASIC and Make-a-Chip, which take you from the creation of simple ZX[®] assembler subsets to simulated circuit design projects.

There's Musicmaster, to teach you music terminology, note values and composition.

And if you're keen to beat your Spectrum at chess (which can be hard), you'll certainly want to try Chess Tutor 1, the first program in a complete chess masterclass.

Coming soon...

In the pipeline are many new releases, some of which break completely new ground. LOGO and micro-PROLOG for instance. They're fifth generation languages which will take you and your Spectrum closer than ever before to the creation and application of artificial intelligence.

A formal agreement between Sinclair and Macmillan Education has been announced, the first results of which will be published this autumn. These consist of five programs in a complete early reading course plus the first four of a series of programs based on Macmillan's top selling Science Horizons Scheme. All programs are designed for use in schools or the home.

And with Blackboard software, we're publishing six more home education programs for primary school children. Covering alphabet, spelling and punctuation, each of these programs is a true gem, unlike any other education software, and fascinating to run. Even for adults!

I believe that these new titles represent a major advance in educational software for the home.

New ROM software too!

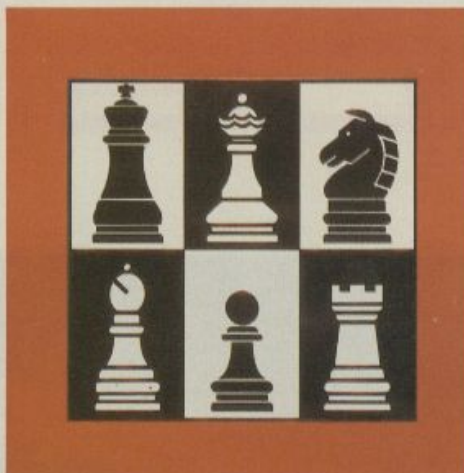

You may well have heard news of ZX Interface 2[®] and ROM cartridge programs. You'll find full details of the Interface and its software on the facing page (and there's an order form on the back page too!). These offer an instant games playing facility at unbeatable prices, and expand the possibilities of using your Spectrum in yet another direction.

Applications Software Manager

SOFTWARE UPDATE

The latest cassette software for ZX[®] Computers

Chess Tutor 1

For 48K RAM Spectrum. £9.95.

Chess Tutor is a new way of learning all about chess – using your ZX Spectrum.[®]

It starts from the beginning by teaching you about the chess pieces and the way they move – including castling, en passant, promotion, check, checkmate, stalemate and perpetual check.

Then it teaches you the basic tactics – pins, forks, double attacks and skewers.

There are over 120 exercises and over 200 questions for you to answer – with demonstrations and hints from your ZX Spectrum when you want them.

You can choose which parts of the course you want – and even experienced players may be surprised at what they can learn from Chess Tutor.

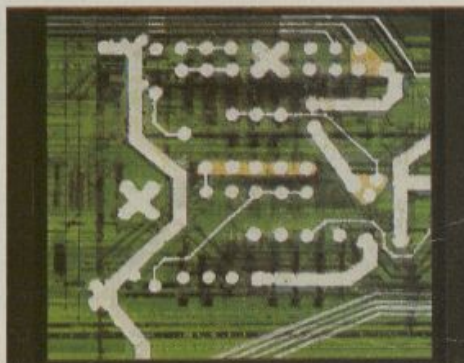

Musicmaster

For 48K RAM Spectrum. £9.95.

Musicmaster turns your ZX Spectrum into a musical instrument which will not only play tunes, but will also demonstrate key signatures, durations of notes, and scales.

You can write your own tunes – in any key – play them over and over again, save them on tape, modify them.

You can either write your music on a staff, or place a simple overlay on your Spectrum for a 17-note keyboard.

Make-a-Chip

For 48K RAM Spectrum. £9.95.

Make-a-Chip teaches you the basic elements of circuit design, shows you how they fit together, and then lets you design and test your own circuits.

When you have designed a circuit, you can give it inputs and outputs and your ZX Spectrum will check it for you. Then it will run it, or tell you what's wrong so that you can modify it.

Make-a-Chip is a fascinating way of finding out how computer logic works.

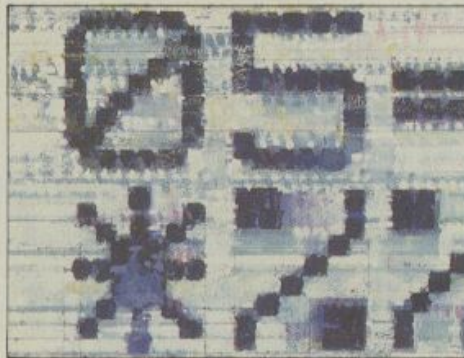

Print Utilities

For 16K and 48K RAM Spectrum. £9.95.

Increase the printing and display facilities of your ZX Spectrum with the Print Utilities program.

Print Utilities enables you to enhance your programs by generating characters of eight different sizes which you can place anywhere on your screen.

Beyond BASIC

For 48K RAM Spectrum. £9.95.

Takes the agony out of assembler. Takes the mystery out of machine code.

Beyond BASIC gives you a deeper insight into the workings of your ZX Spectrum. It explains what happens inside your micro when you run a program, and it teaches you simple Z80 machine code programming.

A major feature of Beyond BASIC is that it enables you to write your own Z80 assembler programs – then you can actually see on your screen how they affect the ZX Spectrum memory and registers.

ZX INTERFACE 2®

The New ROM Cartridge/Joystick Interface

**Loads programs instantly!
Takes two joysticks!
Just plug-in and play!**

The ZX Interface 2 is the latest new peripheral for the ZX Spectrum® system. It enables you to use new ZX® ROM cartridge software: plug-in programs that load instantly. It allows you to use two standard joysticks, without the need for separate, special interfaces.

To use new ZX ROM cartridge programs, just connect Interface 2 to the rear of your Spectrum or Interface 1 and plug in the cartridge of your choice. The program is then loaded, ready to run!

You can use any joystick that has a 9-way D plug. Use one or two of them for extra fun with ZX ROM cartridge or Sinclair cassette programs – or with dozens of other Spectrum-compatible programs!

£19.95

SEE BACK
PAGE FOR
ZX INTERFACE 2
AND
ROM CARTRIDGE
ORDER FORM!

...AND BRAND NEW ROM CARTRIDGE SOFTWARE!

There's already plenty of choice of ZX ROM cartridge programs for your Spectrum. Some are old favourites, in an exciting new form. Others are new.

And now, thanks to ROM cartridge technology, you can run them all on a 16K RAM Spectrum, even if they were originally written only for 48K machines!

Every ROM cartridge program loads fast and faultlessly. No wires, no waiting, no worries about loading errors! All of them are affordably priced too, at £14.95.

New! PSSST

Robbie the Robot sits in his garden. Help him fetch compost to cultivate his prize Thyrgodian Megga Chrysanthodil. Help

him make the right choice of pesticide, to ward off devilish insects. Stop the insects breeding to overwhelming numbers before Robbie's plant has bloomed. PSSST is horticulture with a horrendous twist!

One and two player option, with a host of features including sound effects.

Chess

This sophisticated program does everything you'd expect at board game level, and much more besides.

The high-resolution chess-board and pieces are arranged in a row and column system, so it's easy to key in your moves.

At any stage of the game you can request the computer to suggest a move, reverse roles or change the level of skill.

Full-colour high-resolution graphics.

Backgammon

Everything you need to play the famous and deceptively simple board game. Board, stones, rolling dice

and doubling dice are shown in full colour and high resolution. Choose from four levels of skill to suit experts and beginners alike – full rules are included.

Space Raiders

Your skill is all that's stopping successive waves of aliens from destroying Earth. Use your gun base

to attack. Shelter behind buildings... move out and blast the passing alien soaceship!

Full-colour high-resolution graphics with sound.

Planetoids

Dodge and swerve using your thrust button, turn on a planetoid... fire! But beware – the alien ship moves

fast to destroy you with cluster bombs. And when it comes to the crunch, use your hyperspace button!

Full-colour high-resolution graphics with sound.

Hungry Horace

Horace is forever being chased around the park by guards. He steals their

lunch, eats path-way flowers and creates chaos in the park by ringing the alarm!

You'll have to be quick to keep Horace out of trouble!

Full-colour high-resolution graphics with sound.

New! Tranz Am

Set in a future time ruled by cars and trophies, in a land where petrol replaces gold, and status is possession

of the 8 Great Cups of Ultimate.

Driving your Super Blown Red Racer, use your skill to outwit and crash the Deadly Black Turbos. Use your instruments to locate and collect the trophies – before you overheat or run out of fuel.

A program with outstanding multi-directional movement, graphic features, and a playing area equivalent to more than 600 times actual screen area.

Horace and the Spiders

Guide Horace on the hazardous journey to the cobwebbed house full of poisonous spiders.

Safely in the house, you must move along cobwebs, choose a spot... and jump or it! The spiders will be in a frenzy – scuttling to repair their precious web.

And when a spider is spinning a new section, you're safe to attack and destroy it!

Kill all the spiders, and a new web appears... with even more spiders to catch.

Full-colour high-resolution graphics.

New! Cookie

You're Charlie the Chef, who keeps his ingredients locked in the larder. But if the ingredients escape, they

bring the inedible Nasties with them!

You must daze the escaping ingredients with flour bombs, and knock them into the mixing bowl. Stop them getting into the dustbin, at all costs! And beware of Nasties that get into the mixing bowl!

Cookie is fast-moving panic in the pantry, with a cast of real characters. A program to make you smile – and sweat!

New! Jet Pac

As Chief Test Pilot of the Acme Interstellar Transport Company, your task is to deliver and assemble spaceship

kits. On your way round the galaxy, you're free to collect precious stones and gold.

The catch? Rocket fuel is precious and scarce. And the aliens don't take kindly to the theft of their valuables. You'll need your wits and your lasers!

With a host of features, including multi-directional movement, explosions, sound effects and one and two player option.

ZX MICRODRIVE

NOW ON RELEASE

The ZX Microdrive[®] System – as you'd expect from Sinclair – is unique to the world of computing. It's a compact, expandable add-on system which provides high-speed access to massive data storage. With just one Microdrive alone (and Interface 1), you'll have at least 85K bytes of storage, the ability to LOAD and SAVE in mere seconds, the beginnings of a local area network of up to 64 Spectrums, and a built-in RS232 interface! The cost? Less than £50 for each Microdrive.

How to get ZX Microdrive
Spectrum owners who bought direct from us, by mail order, have been

sent full details. Order forms are being mailed in strict rotation, so if you haven't yet received your order form please bear with us. We're making good progress in meeting the huge demand.

If you didn't buy your Spectrum by mail order, don't worry. Send us the form from the bottom of this page. We'll add your name to the mailing list, and send you details by return.

Each Microdrive costs £49.95. Interface 1 costs £49.95, but just £29.95 if purchased with a ZX Microdrive. Extra ZX Microdrive cartridges: £4.95.

How to order

Simply fill in the relevant sections on the order form below. Note that there is no postage or packing to pay on some purchases. Orders may be sent FREEPOST (no stamp needed). Credit card holders may order by phone, calling 01-200 0200, 24 hours a day. 14-day money-back option, of course. Please allow 28 days for delivery.

CVGC Video Games Club. Contact G Bond, 7 Swift Lane, Langley Green, Crawley Sussex.

Midhurst & District Computer User Group. Meets at the Grange Centre, Midhurst, at 7pm on the second and fourth Thursday of every month. Contact Val Weston, tel: Midhurst 3876.

Mid-Sussex Microcomputing Club. Contact Jeff Hayden, 2 Hillary Close, East Grinstead, RH19 3XQ.

West Sussex Microcomputer Club meets at Room R06, Robinson Road Annexe, Crawley, on the first and third Monday of month. J Clarke, 31 Hyde Heath Court, Pound Hill, Crawley, 0293-884207.

Worthing & District Microcomputer Club meets at Rose Wilmot Youth Centre, Littlehampton Road, Worthing, on alternate Sundays 11am-1pm. E. Thomas, 11 Gannon Road, Worthing, W. Sussex, BN11 2DT. 0903 36785.

TYNE & WEAR

Newcastle upon Tyne Personal Computer Society meets at Room D103, Newcastle Polytechnic on the first Tuesday of every month. Pete Scargill, 21 Percy Park, Tynewood, 0632 573905.

WEST MIDLANDS

Cannock Computer Society meets at Cannock Computer Systems, Old Penkridge Road, Cannock, fortnightly. Terry Sale, 20 Redwood Drive, Chase Terrace, Walsall WS7 3AS.

Coventry Computer Circle. Contact Chris Baugh, 9 Hillman House, Smithford Way, Coventry CV1 1FZ.

Coventry Micro Club meets on Wednesdays at 7.30pm at Walsgrave Junior School.

Jack Hewitt, 3a Bcsweil Drive, Walsgrave-on-Sowe, Coventry. Tel: 615543.

Walsall Computer Club meets at Park Hall Community School on the second and fourth Monday month 6.45-9.45pm. Alison Hunt, 58 Princes Avenue, Walsall, WS1 2DH, 0922 23875.

West Midlands Amateur Computer Club meets at Enfield School, Love Lane, Stourbridge, on the second and fourth Tuesday of month. John Tracey, 100 Booth Close, Brierley Hill, Kingswinford, 0384 70097.

WILTSHIRE

Chippenham and Calne, proposed new club. Matthew Jones, Pinhiils, Calne SN11 0LY.

WORCESTER

Worcester & District Computer Club meets at Old Pheasant Inn, New Street, Worcester, on the second Monday month at 8pm. D Stanton, 55 Vauxhall Street, Rainbow Hill, WR3 8PA.

YORKSHIRE

Barnsley Co-Operative Computer User Group meets at Co-Op Social Club, Pogmore, Barnsley, on the last Tuesday month at 7.30pm. James Bridson, c/o 39 Kereforth Hall Road, Barnsley, South Yorks S70 6NF, 0226 41753.

Greenhead Grammar School Computer Club. Brian Smith, Greenhead Road, Keighley, West Yorks BD20 6EB, 0535 62628.

Huddersfield Computer Club meets every Monday. Chris Townsend, 760/4 Manchester Road, Linthwaite, Huddersfield, 0484 657299.

Keighley Computer Club. Meets each Wednesday at 7.30pm at Methodist Church Hall, Market Street, Keighley, West Yorks. Contact Simon Mickleby on 0535 681463.

Leeds Microcomputer Users Group meets at 8 Regent Street, Chapel Allerton, fortnightly on Thursday at 6pm. David Parsons, 22 Victoria Walk, Horsforth LS18 4PL.

Program Power, R Simpson, 5 Wernsley Road, Leeds LS7 2BX, 0532 683186.

Shipley College Computer Group meets on Tuesdays. Paul Channell, tel: 0274 595731.

South Yorkshire Personal Computer Group meets at General Lecture Theatre, St Georges Building, Mappin Street, Sheffield, on second Wednesday month at 7.30pm. Paul Sanderson, 8 Vernon Road, Tetley, Sheffield S17 3QE.

Thurnscoe & District Micro Users' Club meets at Thurnscoe Comprehensive School, Physics Lab, Clayton Lane, Thurnscoe, Wednesday at 7.30pm during school term. Mr James Davis, 62 Tudor Street, Thurnscoe East, 0709 893880.

West Yorkshire Microcomputer Group meets on Tuesdays. Phillip Clark, c/o Suite 204, Crown House, Armley Road, Leeds LS12 2ES, 0532 632532.

York Computer Club meets at the Enterprise Club every Monday at 8pm. K Thomas, Green Lea, Ripon Road, Harrogate, HG1 2EY, 0904 38239.

SCOTLAND

Bishopthorpe Computer Club meets at 'Cwa Ben', Sachelcourt Avenue, Bishopthorpe, Renfrewshire, on Sunday once a month. Alasdair Law, 10 Dungle Road, Bishopthorpe, Renfrewshire PA7 5EF.

Edinburgh Home Computing Club meets at Claremont Hotel, Edinburgh, on the 2nd, 3rd and 4th Wednesday of month. I. Robertson, 031 441 2361.

Scottish Amateur Computer Society. Mike Anthony, 46 Moredun Park Gardens, Edinburgh EH17 7JR.

Central Scotland Computer Club meets at Falkirk College of Technology, Grangemouth Road, Falkirk, on the first

and third Thursday of month. James Lyon, 78 Slamannan Road, Falkirk FK1 5NF.

Fife Computer Users Club meets fortnightly. Murray Simpson, 31 Tom Steward Lane, St Andrews, Fife, KY16 8YB.

Grampian Amateur Computer Society meets at 35 Thistle Lane, Aberdeen, on the second and fourth Monday every month at 7.30pm. Alan Morrison, 21 Beech Road, Westhill, Skens, Aberdeenshire AB3 6WR.

Kennay Computer Club meets weekly. S Stubbs, 15 The Glebe, Kennay, Inverurie, Aberdeenshire.

Inverness Personal Computing Club meets every second Tuesday at 7.30pm. Gyl Mackenzie, 38 Ardencon Street, Inverness IV2 3EX, 0463 220922.

Perth & District Amateur Computer Society meets at Hunters Lodge Motel, Bankfoot, on the third Tuesday of month at 7.30pm. Alastair McPherson, 154 Oakbank Road, Perth PH1 1HA.

Skye and Lochalsh Computing Society. Contact C Manvell, Tigh na Pairc, 25 Lower Breakish, Isle of Skye IV42 8QA, 04712 317.

Strathclyde Computer Club meets at Wolfson Centre, 106 Rottenrow, Glasgow, on the third Wednesday of month. B Duffy, 24 Lomand Drive, Condorrat, Cumbernauld G4 8NW.

WALES

Abergele Computer Club meets at Abergele CI Offices every Thursday at 7.30-10pm. W Jones, 77 Millbank Road, Rhyl, Clwyd.

Beddau & District Computer Club. Meets at Beddau Community Centre, 7pm, Mondays. Nigel Butters, Newtown, Llantwit 206305.

Clwyd '80 Computer Club. Contact Allan Jones, The Island, 1 High Street, Connah's Quay, Deeside, Clwyd, 0244 816893.

Meets at Deeside Community Centre, Queensferry, Deeside on Thursday at 7pm. **Colwyn Computer Club** meets at the Greens Hotel, Colwyn Bay, at 7pm. Contact D Bevan, c/o Abergele Road, Colwyn Bay, Clwyd LL29 7PA.

Gwent Amateur Computer Club meets at St Mary's Institute, Stow Hill, Thursday at 7.30pm. Rothery Harris, 16 Alanbrook Avenue, Newport, Gwent, Wales NP1 6QJ.

Llantwit Major Computer Club. Meets at Adult Education Centre, Llantwit Major, every Tuesday. Contact Douglas Mountain, 16 Denbigh Drive, Llantwit Major, South Glamorgan CF6 9GQ.

Mold Computer Club. Meets 7.30pm on first and third Thursday of each month at the Daniel Owen Centre, Earl Street, Mold. Contact G Johnson, 18 Daytona Drive, Northop Hall, Mold, Clwyd, Wales. Tel Deeside 821945.

Milford Central Computer Club. Open to schoolchildren, meets every lunch hour and evening. Contact Harry Evans, Milford Central School, Prioryville, Milford Haven, Dyfed, 043 784 571.

Pencoed Amateur Computer Club meets fortnightly on Saturdays at Pencoed Welfare Hall. Philip Williams, 38 Bryn Rhedyn, Pencoed, Bridgend, Mid-Glamorgan CF35 6TL, 0656 860307.

Pontypool Computer Club meets at The Settlement, Roachhill Road, Pontypool, Gwent, on Friday. Graham Loveridge, on Pontypool 2827.

Swansea & South West Wales Amateur Computer Club meets on the last Friday every month. Paul Griffiths, 1 Prescelli Road, Penlan, Swansea SA5 8AF.

Swansea Computer Club. Meets at No 10 (pub), Union Street every Tuesday at 7.30pm. Contact Robert Palmer, 044 123 602.

Wrexham & District Computer Club. Meets each Thursday. Contact Mike Houghton, 1 Snerwell Avenue, Wrexham, Clwyd, Wales.

NORTHERN IRELAND

North Down Micro Users Club. Meets at Bangor Central Library, Hamilton Road, every fourth Monday. Contact A Robson, 0247 67060.

STOP PRESS

Texas Instruments Home Computer User's Club. membership £5 per year. Currently seeking regional organisers. Contact Katie Lomax PO Box 190, Maidenhead, Berks, tel 0628-71696.

Remember

Let us know about your micro club or user group so we can be sure the information printed here is up to date. Drop a card to Wendie Pearson, Listings Editor, at *Personal Computer News*, 62 Oxford Street, London W1A 2HG, or give her a call on 01-636 6890.

PCN ProgramCards

Program cards aim to provide you with an easily referenced collection of programs. Although the programs are generally written for one particular machine, they are usually easily converted to run on any machine. To this end each program, on one or more cards, contains a listing of the program and set of notes to help you understand what is going on inside the computer, while you follow the action on the screen.

For program collectors this week, we have the conclusion of the composer program for the Oric-1, and the beginning of the *PCN Game*, as used in the PCW show.

For those of you who were unable to get to the show, or who missed the last two issues of *PCN*, or who, for any other reason, are wondering what the *PCN Game* is, here are the details.

We ran a competition to win an Acorn Electron at the show. To win all you had to do was go to the show, play the game, and

get the highest score. It is too late to win the competition, for obvious reasons, but now you can play the game. You take control of a bee, which you fly around the screen. The objective of the game is to eat and thus pollinate, as many of the flowers as possible, before they reach the top of the screen. These flowers move and multiply as they grow. When the bee eats them, the seeds instantly drop back to the bottom of the screen to begin growing again.

There are two types of flower, one of which, the ordinary four petal type, gives you ten points when eaten, and the other, the super purple nastie, nets you 100 points. Unfortunately these purple nasties bloom only at certain times of the game so keep your eyes peeled. Bees have a very limited life span (well, they do in this game) and when the flowers reach the top of the screen, the bees' life ends. Shame. But by pressing a few keys on the keyboard, you can make the bee live again, to pollinate more flowers.

To give you something to beat, the winning score of the competition was 3260 points by Jonathan Acott aged nine. For all of you who wanted to know, the game was written by the programs editor (yours truly) with the help and comments from the rest of the *Personal Computer News* editorial team.

Finally, if you have any programs, games or utilities sitting on the shelf at home, or that you have just written, why not send them in to ProgramCards? The more interesting, clever, well programmed and original, the more we pay for the program. You, of course, retain the copyright on your program so just send them, with any instructions, comments, on either cassette or disk — with a 40-column listing, if possible — to:

*Programs Editor,
Personal Computer News,
Evelyn House,
62 Oxford Street,
London.*

PAN AND PERSONAL COMPUTER NEWS PRESENT

60 PROGRAMS - £4.95

(LESS THAN THE PRICE OF A SINGLE CASSETTE!)

A new force in computer publishing. You can be sure that these new books which introduce a new range of paperbacks are the best – they're published by Britain's bestselling paperback publisher and the country's most successful and authoritative computer magazine – Pan and Personal Computer News.

The most successful software writers have been commissioned to write a completely new collection of programs for each of the most popular and fast-selling microcomputers. **Robert Erskine** is a programmer whose software has topped bestseller lists. **Humphrey Walwyn** is a broadcaster, magazine

columnist and experienced software writer.

Not just the same old replays. You'll be amazed how much has been packed into these new books. The emphasis is on games, and versions of the standard arcade classics are included, such as Moonlander, Space Invaders and Pacman. Added to these are other innovative arcade-type games, while less war-like enthusiasts can try Postman, Tug of War or even play the commercial market with Asset-stripper. Other categories among the 60 program listings are board-style and tactical games with words and numbers, and educational and

kids games. Useful programs, too, like Holiday Expenses, how to learn about critical path analysis, work out paypackets – and much much more. With around 320 pages these large paperbacks are unbeatable value!

Where can you get them? From all good bookshops. Or fill in the coupon below and return it to

Pan Books Ltd.,
FREEPOST, P.O. Box 109,
14-26 Baker Street,
High Wycombe,
Bucks HP11 2TD.

Unlock Your Imagination

...with SCOPE Computer Graphics Language and write arcade-style game programs to compete with the professionals.

THIS sensational SCOPE utility and your Spectrum will unlock your imagination. It's amazingly simple and fast and enables you to write fast-moving games in MACHINE CODE:

SCOPE realises your potential and releases it. You'll amaze family and friends and surprise the professionals. *They said it couldn't be done.*

TECHNICAL DETAILS

SCOPE is a fully structured multitask compiled language, specifically for writing arcade-type games enabling you to program machine code without any knowledge of machine code.

SCOPE can be used as an assembler with SCOPE words as

plain language mnemonics, therefore no knowledge of machine code is required.

Each command word will write into the program memory the relevant machine code.

It is generated from BASIC and is fully compatible with BASIC.

The language from the user end is very easy to comprehend and is comprehensive, providing many features not available from BASIC. SCOPE has to be used to be believed.

- ☐ As fast as MACHINE CODE
- ☐ Simpler than BASIC
- ☐ Instruction Manual
- ☐ £11.95

NO LIMIT

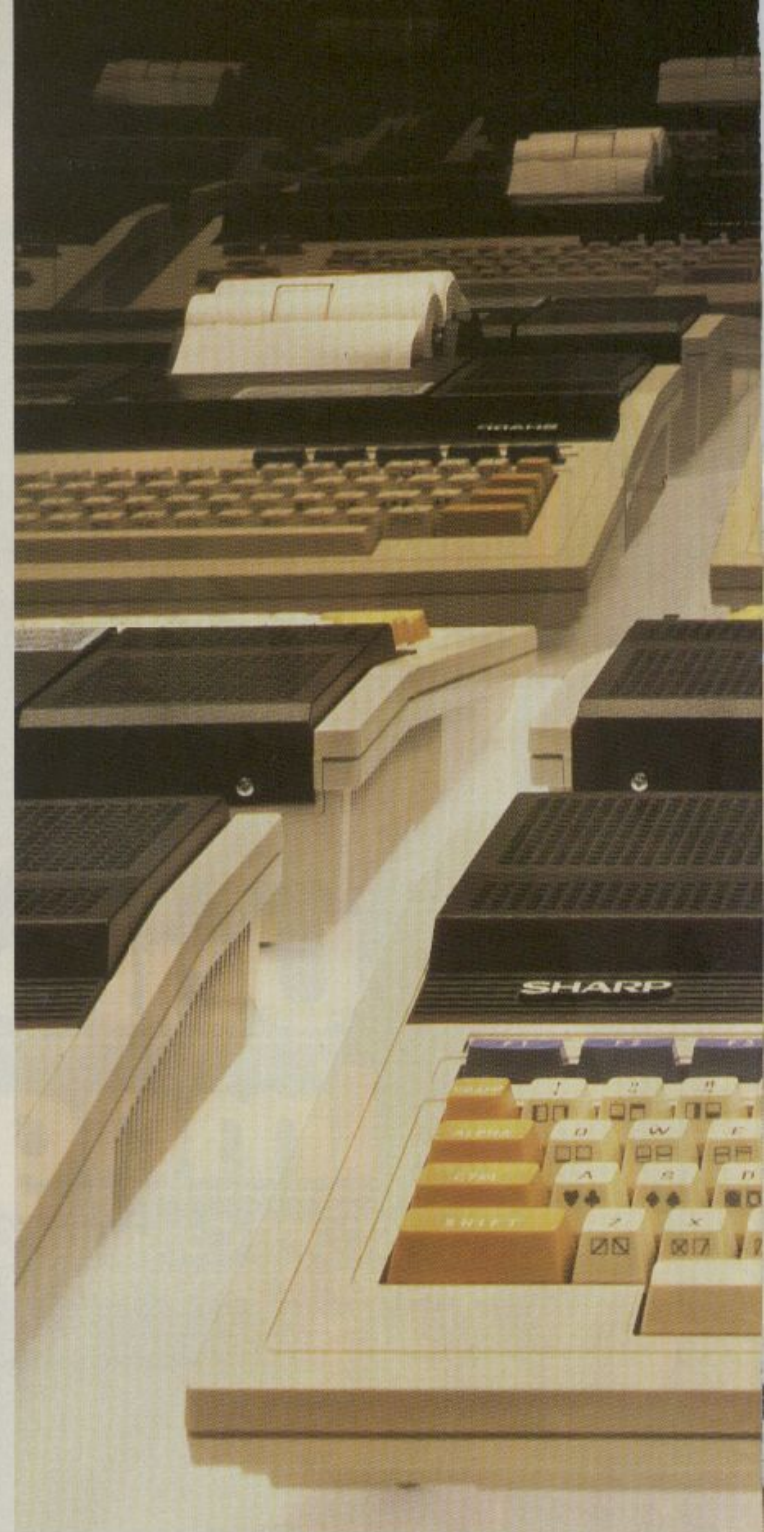

Now, a home computer with virtually no limit to its possibilities. The astonishing new Sharp MZ700. A machine with a dazzling array of talents.

First, it's a 'clean' machine. So you are not limited to any one computer language. You have the flexibility to run and write programs in BASIC, FORTRAN, MACHINE CODE, PASCAL, ASSEMBLER and many others. And the MZ700's 512 predefined characters mean you can build up detailed pictures on the screen, without spending time specifying and designing special characters for games and special effects.

Second, it has a memory of 64K. So as your technique improves and develops, you are able to move forward to more and more advanced programming.

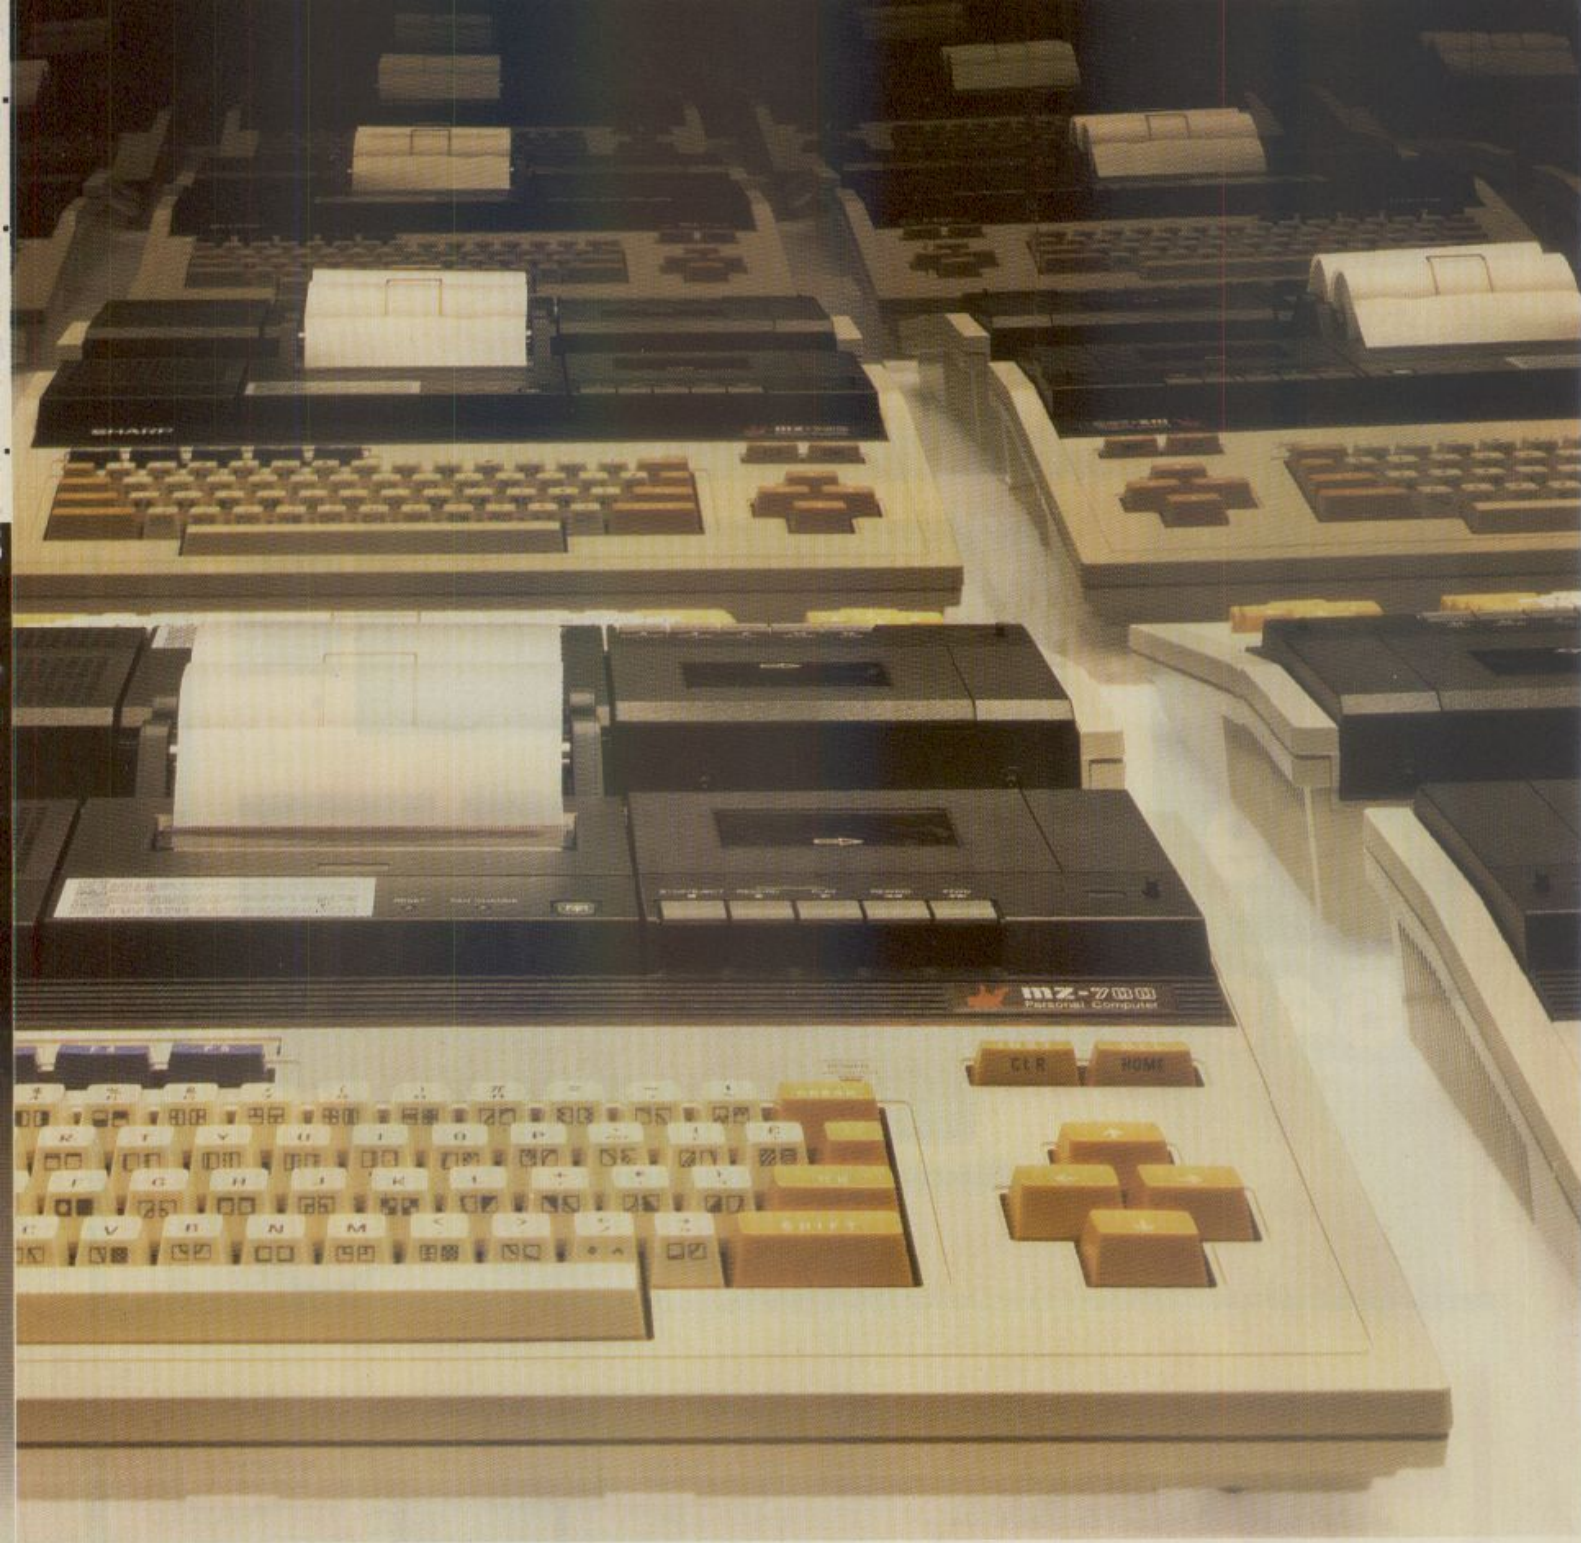

All of which makes this the perfect home computer for parents, as well as children.

The MZ700 gives you access to a wide

choice of new software, from only £3.95 per cassette. An additional plotter/printer, costing £129.95, can produce high resolution graphics in 4 colours. A data cassette recorder is an extra at £39.95. Both add-ons fit snugly into this easy to carry compact system with no trailing wires. And you get ten exciting games, free on purchase, including Super Puckman, Circus Star, Snake v. Snake, and Man-Hunt.

The brilliant new MZ700.
The no-limit computer. £249.95. From Sharp. Where great ideas come to life.

User Friendly Software Makes The TRS-80™ Model 100 Portable Compute Truly Revolutionary

Imagine a computer on your desk so small, it can fit in your in-tray. The second you turn it on, imagine seeing a menu of built-in executive management programs and your own files, ready for immediate use. All revealed on an eight-line by 40-character LCD display positioned just above a full-size keyboard. And when you leave the office, imagine a four-pound computer you can take along, because it works on mains or batteries.

Stop imagining! The new TRS-80 Model 100 is the computer you've been waiting for. As a desk organizer, it's a phone directory, address book and appointment calendar. It's a personal word processor, as well. There's even built-in communications software to access other computers by phone, using an acoustic coupler.

Come and see the most revolutionary computer since the TRS-80 Model I at over 340 Tandy stores and dealers, including over 25 Tandy Computer Centres nationwide.

SOFTWARE FOR SPECTRUM, BBC, ZX81, COMMODORE AND VIC 20

3D TANX Spectrum 16K. Don Priestley £4.95 ☐

Use your skill, judgement, nerve and a heavy artillery piece to knock out enemy tanks as they pour across the bridge. This is a full feature game with 3D ballistics, fantastic sound effects and is impossible to beat. Features consistently in the charts.

CENTIBUG Spectrum 16K. D. Heelas £4.95 ☐

Bring the arcade into your home with a faithful version of this old favourite. Popular Computing put this in the "Oh no, it's 3 o'clock in the morning and I have to get up tomorrow" class.

METEOROIDS Spectrum 16K. Don Priestley £4.95 ☐

The finest version of this superb arcade game. Packed with features.

SPAWN OF EVIL Spectrum 16K. Don Priestley £4.95 ☐

How the complexities of this astounding game have been squeezed into a 16K Spectrum is a miracle of programming. This is not just another "Space Zap game". Your skill and reflexes are tested to the utmost, but you will also need nerve and strategy in dealing with the complex multi-stage alien breeding cycle.

N.B. If you want to be an expert in 10 mins DON'T BUY THIS GAME.

SOUND FX Spectrum 48K. Don Priestley £4.95 ☐

Enables the beginner to produce an infinite range of sound effects for his own program that even an expert would envy. No machine code knowledge needed.

DISTRON Spectrum 16 or 48K. R. Eastwood £4.95 ☐

A fast flexible relocatable disassembler for the Spectrum.

ASTRON Spectrum 16 or 48K. M. Lewis & R. Eastwood £9.95 ☐

You need to read the program booklet to appreciate the vast range of features for this combined assembler and toolkit. Useful for beginners and experts alike. Buy our booklet and get a tape FREE!!

ZXED (toolkit) Spectrum 16 — 48K. R. Eastwood £6.95 ☐

ZXED is a powerful editor for use on the 16K or 48K Spectrum or the 16K ZX81 intended for use by the serious basic programmer, and offers several useful and time-saving features. Features: ALTER, BYTES, COPY, DELETE, FIND, HELP, LINE, MOVE, RENUMBER, AUTO LINES, RENUMBER and VERIFY.

DICTATOR

BBC 32K. A. French £6.95 ☐

Commodore 64A. A. French £5.95 ☐

Spectrum 48K. Don Priestley £4.95 ☐

Do you have the right blend of shrewd judgement, foresight, sheer ruthlessness and luck to survive as Dictator? Will you be able to manipulate the squabbling population, stay in favour with the powerful secret police and make the right decisions to keep control of your volatile subjects? Can you prevent, survive or even deliberately plan assassination attempts, war, and the inevitable revolution. A complex and entertaining simulation adventure featuring easy operation and excellent use of graphics, colour and sound effects. "And excellent game not exhausted by even dozens of plays. I would rate Dictator as being among the best Spectrum games I have played" — Popular Computing Weekly.

FRUIT MACHINE Spectrum 48K. G. Pointer £4.95 ☐

An excellent new program from DK Tronics with such features as nudge, hold, gamble. Superb use of graphics and colour. Just like the real thing and just as addictive!

WOODWORM WHACKER VIC 20. C. Douglas £4.95 ☐

Take 1 Pac man — remove pills and fruit. Replace ghosts with fast moving nasties and add bouncing bombs to taste. The recipe for a tasty game for VIC 20 arcade addicts.

TROM Spectrum 16K. B. Williams £5.95 ☐

Don't get bitten by the bytes or nibbled by the nibbles in your desperate bit-search. An original, simple, but highly frustrating and addictive newcomer to our range.

PERSONAL FINANCE Spectrum 48K. S. Mills £6.95 ☐

Take the Bank Manager out of your wardrobe and put him to use in your Spectrum. Need we say more!

2003 A SPACE ODDITY Spectrum 48K. C. Fayers £4.95 ☐

An intriguing graphics adventures with a scenario as novel as its sound effects.

DIET Spectrum 48K. R. Fleming £6.95 ☐

Not just for the XL but a genuine aid to healthy living. Extremely user-friendly and allows for human weakness!

SLICKER

Spectrum 16K. A. Dickens £6.95 ☐

Vic 20. G. Pointer £6.95 ☐

Commodore 64. G. Pointer £6.95 ☐

BBC 32K. D. Regan £6.95 ☐

Only in a month of Sunday's does a puzzle program come along which is so simply and brilliantly original as to merit translation to four of the most popular micros. Join the Slicker Champions Club by conquering Level 8 before Xmas.

EASY ZX81. M. Wright & P. Arundell £4.95 ☐

Three excellent but simple adventure games especially written for children of all ages.

SUPER FRUITS BBC 32K. D. Hoskins £6.95 ☐

No need to lose money on the real thing. This is the real thing!

MAZIACS Spectrum 48K. D. Priestley £6.95 ☐

Programming wizard Don Priestley has magically updated his original ZX81 best seller to exploit all the potential of the 48K Spectrum. This game must be seen to be believed. One of the best uses of Spectrum in all aspects that I have seen! Home Computing Weekly.

GOLD MINE Spectrum 16K. S. Goodwin £4.95 ☐

Use strategy and a strong vein of luck to dig your way into riches and out of disaster.

TRAMIX BBC 32K. A. French £6.95 ☐

Spectrum 16K. D. Heelas £4.95 ☐

If you can think fast, act faster and you're not colour blind this completely new games experience is for you.

SPEED DUEL Spectrum 48K. K. Larter £5.95 ☐

Many have tried, but most have failed to capture the visual excitement of a truly competitive 3D race game. This is the winner.

APPLE JAM Spectrum 48K. E. Hickman £5.95 ☐

The best original zany game of 1983 starring rat ambulance hornet lift sauna bait, a very greedy fellow and of course apple & jam! Hectic and hilarious and boggles the imagination.

3D GRAND PRIX ZX81 16K. M. Wright £4.95 ☐

A brand new fast game for the 16K ZX81. Have the drivers view as you battle your way into the lead. Watch out for hazards and stay on the track for lap after lap and the chequered flag can be yours. A unique feature of this game is automatic difficulty regulation.

ZXED TOOLKIT ZX81. R. Eastwood £6.95 ☐

The ZX81 version of this powerful programmer's utility.

METEOR STORM ZX81 D. Heelas £4.95 ☐

Fast mic arcade action. Defend your moonbase against swarms of destructive meteoroids. [Graphics Rom version also available].

WHO DARES WINS Commodore 64. K. Moughtin £5.95 ☐

Gain promotion through the ranks with your sharp quick reactions shooting skill to eliminate desperate terrorists. But beware shooting the hostages brings demotion, demoralisation and disgrace.

ALIEN RESCUE Commodore 64. K. Moughtin £5.95 ☐

Takes minutes to learn but a lifetime to master in a hazardous rescue mission. Timing, judgement and skill are tested to extremes.

PROTEANS BBC 32K. D. Hoskins £6.95 ☐

In our humble opinion the fastest zappiest most addictive original colourful superonic arcade game for the BBC.

SUBKILLER BBC 32K. D. Regan £6.95 ☐

1st class graphics and superonics bring the excitement of the submarine hunter killer drama to your screen. Best sub routine ever!

GOLF Spectrum 16K. D. Johnson £4.95 ☐

Sit back and enjoy a peaceful game of Golf without the trouble and expense. Guaranteed to give hours of enjoyment. All possible features including irate spectators.

GALACTIANS Spectrum 16K. D. Turner £5.95 ☐

No serious games player should be without this version of an old favourite. Excellent graphics and sound. 36 different permutations of game.

ROAD TOAD Spectrum 16K £4.95 ☐

Join Toady on his hectic journey to the Lily Pads. An excellent full feature version.

STAR TREK 3000 Spectrum 48K. M. Florey £4.95 ☐

Boldly go where everyone's been before. Then go further.

INVADERS Spectrum 16K. D. Heelas £4.95 ☐

An excellent version of the original and for many people still the best arcade game ever.

JAWZ Spectrum 16K £4.95 ☐

Get your teeth into the task of ridding the depths of hordes of marauding sharks and giant jellyfish.

MILLIE-BUG Commodore 64. K. Moughtin £5.95 ☐

A new and faithful version Commodore 64 owners have all been waiting for.

HARD CHEESE 16K Spectrum. P. Johnson & E. Farrell £4.95 ☐

Steer Farmer Giles around the field in his ferretator. With crop hoppers, giant cock's, cheese, beer and lethal aggrocide. A novel and witty full feature game for hopperoid maniacs.

MUNCHMAN Spectrum 16K. D. Brewster £4.95 ☐

A refreshingly fruity power pill packed popular program with as much spirit as the original. A simply superb Spectrum special.

JUMBLY Spectrum 48K. D. Priestley £6.95 ☐

A brand new original all singing all scrolling supercolour animated multipicture puzzle program. A masterpiece of ingenuity to keep the whole family amused absorbed and enthralled until the next blue moon. PLUS the chance to earn more than £150 with YOUR contribution to JUMBLY 1 due out in 1984. This game MUST be rated as the best value for money program of 1983.

Trade enquiries welcome.

Available BOOTS, W.H. SMITH, LASKY'S, SPECTRUM, JOHN MENZIES and good computer software stockists throughout the UK.

DATABASICS

PC/Databasics is presented in three-week cycles. This week it's the turn of software packages, next week hardware, and two weeks from now, peripherals... We can't fit all software packages in, so we've compiled a selection, giving best sellers from 100 publishers and distributors.

We confined coverage to five main types of applications: business, education, games, home and utility. All details published are the latest available.

Companies wanting to add their best-selling packages to Databasics, or wanting to update information already here, should send details to: Databasics, Personal/

Computer News, VNU, 62 Oxford Street, London W1A 2HG.

APPLICATION Each software package is listed alphabetically by its application.

PRICE includes VAT.

MACHINE/OPERATING SYSTEM on which the best selling packages runs.

OTHER VERSIONS indicates whether or not the package runs on a different machine or operating system.

MEDIA SUPPLIED indicates in what format the package comes — either cassette, disk, or cartridge.

MAIL ORDER AVAILABLE tells you whether or not the package is available by mail order.

HARDWARE REQUIRED shows the need for special hardware, such as disk drive, joystick or printer.

PUBLISHER/DISTRIBUTOR This code refers to the distributor code table at the end of the listings, which will give the name and telephone number of the publisher/distributor.

COMMENTS — any other points of interest.

Chemistry	£14.38	Research Machine 380Z	●	Symbols To Moles	31K	●	●	●	H4	Also on Apple II. Practise using chemical symbols, writing & mole concept.
	£37.89	Apple II	●	Bumble Plot	48K	●	●	●	P4	A set of five programs for developing graphics and maths skills. For children 8 to 13.
Children	£29.84	Apple II	●	Face Hanger	48K	●	●	●	P4	Also on IBMPC. Designed for children to learn computer keyboard by building up face.
	£37.89	Apple II	●	Gerrude's Secret	48K	●	●	●	P4	An educational game to teach logical thinking & planning. For children aged 6-9.
	£9.80	Atari 400	●	Jigsaw Puzzles	16K	●	●	●	T4	Also on Atari 800. Has 16 puzzles and optional difficulty.
	£9.95	BBC Model B	●	Letters	32K	●	●	●	C9	Designed for children aged 4-6 & for dyslexic & remedial children.
	£9.95	BBC Model B	●	Metrics	32K	●	●	●	C9	Also on Vic-20+ Spectrum. Structure of metric system, for children aged 10-15.
	£5.95	BBC Model B	●	Pascal	32K	●	●	●	C9	Also on Vic-20. Shows construction of Pascal Triangle and tests on it.
	£5.95	BBC Model B	●	Sequences	32K	●	●	●	C9	Also on Vic-20. Demonstrates number patterns.
	£6.50	BBC Model B	●	The Early Stages	32K	●	●	●	H3	Reading aid. Plays nursery rhymes. Available on disk.
Classroom Monitor	£4.50	BBC Model B	●	Super Hangman	32K	●	●	●	I4	Version of famous game. High resolution graphics. 800 words or enter own choice.
	£9.95	BBC Model B	●	Trees of Knowledge	32K	●	●	●	A9	Interactive program teaching categorisation. Simplified information retrieval.
Economics	£4.95	Sharp MZ80A	●	Giant Maths	32K	●	●	●	S8	Also on MZ80K. Big screen figures & humorous error messages. 5 to 11 years.
	£4.95	Sharp MZ80A	●	Rocket	3K	●	●	●	S8	Also on MZ80A. Four difficulty levels. For five to 11 year olds.
French	£9.20	Sharp MZ80A	●	Teach Tables	48K	●	●	●	K3	Also on MZ80K. Plays like game but motivates children to improve their ability.
	£4.95	Sharp MZ80K	●	Master Builder	48K	●	●	●	S8	Also on MZ80A. Repair a wall using random blocks. Teaches spacing.
	£5.25	Spectrum	●	Alphabet	48K	●	●	●	W2	'Picture for each letter of the alphabet. Option for lower case.' Aimed at ages 2-6.
	£5.25	Spectrum	●	Adding and Subtracting	16K	●	●	●	W2	For children aged 3-7. Three animated programs with full graphics.
Classroom Monitor	£322.00	UCSD-P	●	Classroom Monitor	64K	●	●	●	K4	Also on Apple II. Provides demonstration facilities & monitors student's progress.
	£28.75	Sharp MZ80K	●	Broadwater Economics Simulation	16K	●	●	●	W1	Also on Commodore Pet & BBC. Simulates micro & macro economics.
Economics	£14.38	Research Machine 380Z	●	Repondez	31K	●	●	●	H4	Also on Apple II. Practising French verb formation (present tense).
	£9.20	Sharp MZ80A	●	French Conjugate	48K	●	●	●	K1	Also on MZ80K. Automatically conjugates regular verbs into tenses.
Graphics	£9.20	Sharp MZ80A	●	French Verbs	48K	●	●	●	K1	Also on MZ80K. Allows user to impart up to 20 verbs & eight tenses at a time.
	£8.00	BBC Model B	●	Painter	32K	●	●	●	A5	Also on Spectrum (£5.75). Atom (£8.90) & on disk.
History	£9.95	BBC Model B	●	Creative Graphics	16K	●	●	●	A9	Book available (£7.50). Designed to illustrate BBC graphics.
	£20.13	Sharp MZ80A	●	Kings & Queens	48K	●	●	●	K1	Also on MZ80K. Facts & figures on English monarchs since 1066.
Languages	£7.95	Sharp MZ80A	●	Multilingual	3K	●	●	●	S8	Also on MZ80K. A language tutor to suit all European languages.
	£8.95	BBC Model B	●	Angle	32K	●	●	●	C9	Also on Spectrum. Includes four programs designed to teach simple geometry.
Mathematics	£9.95	BBC Model A	●	Algebraic Manipulations	16K	●	●	●	W1	Also on Model B. Includes four programs designed for use in maths teaching.
	£82.80	IBM PC	●	Fact Track	64K	●	●	●	I3	Learning basic arithmetic. Presents simple two-line sums in random order.
	£9.20	Sharp MZ80A	●	Directed Numbers	48K	●	●	●	K3	Also on MZ80K. Teaches difficult mathematical functions.
	£9.20	Sharp MZ80A	●	Divisor Advisor	48K	●	●	●	K3	Also on MZ80K. Teaches division at a variety of skill levels.
	£27.60	Sharp MZ80A	●	Numerical Integration	48K	●	●	●	K3	Also on MZ80K & B. Teaches Simpson's Rule.
	£5.25	Spectrum	●	Counting	16K	●	●	●	W2	Graded programs. Good as a first introduction to numbers. Aimed at ages 3-6.
Meteorology	£23.00	Research Machines 380Z	●	Weather	31K	●	●	●	H4	Also on Apple II. Gives synoptic charts. Teaches elementary meteorology.
	£9.20	Sharp MZ80A	●	Morse Tutor	48K	●	●	●	K3	Also on MZ80K. Used to teach morse code by sight and sound. At seven levels.
Physics	£14.38	Research Machines 380Z	●	Lenses	31K	●	●	●	H4	Also on Apple II. Illustrates formation of images by lenses using ray diagrams.
	£9.20	Sharp MZ80A	●	Casino Chips	48K	●	●	●	K3	Also on MZ80K. Uses radioactive chips to teach half-life concept.
	£3.00	Sharp MZ80A	●	Physics 1 and 2	20K	●	●	●	D6	Also MZ80K. O level electricity and motion.
	£28.75	CP/M	●	Touch n'Go	48K	●	●	●	C6	Also on MS-DOS. Typing tutor for mastering numeric pad & Qwerty keyboard.
Typing	£31.05	IBM PC	●	Typing Tutor	64K	●	●	●	I3	Presents exercises for learning touch typing or for improving existing skills.
GAMES										
Adventure	£17.95	Atari	●	Arrow of Death	16K	●	●	●	C8	Also runs on TRS-80, BBC, Vic-20. A 'classic text adventure'.

INTELLIGENT TERMINALS

INTRODUCTORY PROMOTION
£480.00
 + £72.00 VAT

This terminal exceeds TV 925 specification and has full ergonomic swivel and tilt housing, low profile detached keyboard, programmable function keys, intelligent printer port, anti-glare green phosphor 14" screen with full video attributes and business graphics. **Attributes do not use a character space.** 90 day warranty. Nationwide service through the largest third party maintenance group in the UK.

MONITORS

£75.00 + £11.25 VAT

12" Green 18 Mhz monitor in elegant plastic case.

APPLE ADD-ONS

80 COLUMN CARD CPA 4

£57.50 + £8.62 VAT

80 characters by 24 lines with true decoders. 7 x 9 character resolution compatible with BASIC, PASCAL and CP/M. Modem compatible.

Z80 CARD CPA 3

£47.99 + £7.19 VAT

Adds a Z80 processor to your Apple. Under CP/M, you can add COBOL, FORTRAN or BASIC compiler and assembly language to your II plus and run CP/M packages such as Wordstar and business software.

16K RAM LANGUAGE CARD CPA1

£57.50 + £8.62 VAT

Expands the internal memory of your II to 64K and memory capacity available to Z80 card users from 44K to 56K. Available to load integer BASIC under DOS 3.3.

PAL CARD CPA 7

£79.00 + £11.85 VAT

Display your II plus colour text and graphics on your home television

INTEGER CARD CPA 2A

£57.50 + £8.62 VAT

For access to a library of programs in integer BASIC. With any length variable names, strings to 255 characters, auto-line number mode, debug commands.

FORTH CARD CPA 2

£57.50 + £8.62 VAT

Runs the increasingly popular FORTH language on your Apple II or II plus.

RS 232 CARD CPA 12

£57.50 + £8.62 VAT

Permits basic control of high speed printers and plotters. Programs easily with switch selectable preset for speed, line length, auto line feed and carriage return delay. Handles half duplex communications from 75 to 19200 baud. EIA RS 232 C or 20 mA current loop.

PRINTER INTERFACE CARD CPA 9

£38.32 + £5.75 VAT

Parallel printer interface.

APPLE DRIVE ADD-ONS

DISK INTERFACE CPA 6

£47.90 + £7.19 VAT

To connect Apple or compatible drive

DISK DRIVE CPA 14

£176.00 + £26.25 VAT

Top quality Japanese slimline drive with cable.

BASE UNITS

£349.00
 + £52.35 VAT

BASE 64A compatible with Apple cards and software. RAM based system control program. 64K on board memory, expandable to 192K. MINI-WRITER on board in RAM. 24K system memory. Tiny assembler with assembly and disassembly function. Upper and lower case characters. Function commands on keyboard. Numerical and cursor keypad. Can load 140K diskette program to 192K user RAM. Staggering value!

MICROCARE

1 OAKWOOD ROAD, RODE HEATH, STOKE-ON-TRENT. Telephone: (09363) 5695

Extensive range of computer and business consumable supplies

JOYSTICKS

Dragon and BBC 'B'

Microcare Joysticks have been a popular choice by the trade for bulk supplies and are now available by return post direct to the user.

Analogue Type. Smooth proportional control from twin potentiometers for instant, accurate response with rapid fire button ideally suited to graphic design and games.

Switching Type. Incorporating a ruggedly designed self-centering, 8-direction controller with reliable micro-switchers under rapid fire button. Recommended for games of the frogger type.

Dragon Analogue £7.00 each + 50pp&p
 Dragon Switching £8.50 each + 50pp&p
 BBC Analogue £17.00 a pair + 50pp&p
 BBC Switching £20.00 a pair + 50pp&p

64K UPGRADE

Microcare offer an upgrade service to give 64K user ram for the Dragon 32. This is an internal modification carried out at our technical service laboratories. We are geared up to give a rapid service with rigid quality control. The price includes a quote "basis relocater program" to move basic from rom into ram where it is fully accessible. Also included is a 64K fourth program written by M & J Software — accepted as being the most powerful fig-forth implementation available for the Dragon.

Total cost included insured return carriage = £60.

Forth user manual available for £5.

PERIPHERALS

ZX Spectrum PRO-48 MEMORY EXTENSION

Turn your 16K machine to the powerful 48K Spectrum. Using the identical components Sinclair uses, to upgrade a 16K Spectrum issue 2 (blue keys) just plug in the chip set (takes minutes) and you have a completely standard 48K Spectrum compatible with all Sinclair add-ons.

Complete with comprehensive instructions and carries our complete Warranty.

£23 inclusive of V.A.T. & p.p.

HISOFT PASCAL DEVPAC

Hisoft Pascal 4 is a very fast and powerful microcomputer Pascal compiler that is the result of three years' development work. The compiler conforms very closely to Standard Pascal as described in the Pascal User Manual and Report (Jensen/Wirth) and produces Z80 object code directly in one pass; no P-codes to be subsequently interpreted. HP4 is also small (not more than 19k including runtime routines and tables) but this does not imply any lack of power — the compiler and runtimes were written in Z80 assembler language and a great deal of time was spent on increasing the speed and decreasing the size of the critical routines.

We have designed HP4 to be simple to use, very fast, close to Standard Pascal (with extensions) and inexpensive. Thus we see it as being an attractive package in the educational field (from teaching yourself at home to teaching students at university level) and in the area of systems development. To this end Hisoft Pascal 4 is available in both cassette tape and diskette versions for a wide range of Z80 machines. The tape and disk versions are virtually identical except that the cassette version does not support FILES, instead the user is given the ability to store and retrieve any variable to and from tape. The tape version (HP4T) is organised in a manner that makes it very easy to adapt to most Z80 systems and we supply details on how to do this in our HP4T Alteration Guide available separately.

In addition to our Pascal we also have available DEVPAC — a Z80 development package which includes a fast and powerful conditional assembler, a labelling disassembler, a debugger with single-step facility (even in ROM) and (on diskette) an extended screen editor. DEVPAC is a highly professional suite of programs which will greatly facilitate your software development.

****STOP PRESS****

Hisoft Pascal now available for the SHARP MZ700!
Pascal for the ZX SPECTRUM now includes FREE Logo-style Turtle Graphics!
DEVPAC 3 is now available with all the features you will ever need from an assembler/disassembler — see review in Which Micro (September).

Prices:

WANTED GAMES & PROGRAMS

If you have any ideas for computer games which we can develop and market - chat with our creative director.

■ FREELANCE M/C PROGRAMMERS REQUIRED
■ HIGH ROYALTIES PAID

We are looking for original games and educational programs for:

COMMODORE 64 • VIC 20 • BBC

SPECTRUM • ORIC I

Please contact: IMS Software

143-145 Uxbridge Road, London W13 9AV
Telephone: 01-567 6288

MICROSHOP ACCESSORIES

DELTA 14 HANDSETS FOR THE BBC

Used for years by DATABASE owners these high specification handsets have 14 pushbuttons to take the strain off of your keyboard. The DELTA 14 comes in two parts. One handset will plug into the A/d to give analogue spring return joystick plus three button functions. The second part is the DELTA 14B/1 adaptor box which connects the 15 way "D" to the user port. This gives 12 buttons on a 4x3 matrix. The eighth line selects a second joystick which can be plugged into the adaptor box.

New, available now — Program to convert keyboard-played games to run on the joystick and handset buttons.
DELTA 14B JOYSTICK HANDSET FOR BBC £12.95
DELTA 14B/1 ADAPTOR BOX AND CABLE £13.95

DIRECT FROM OUR FACTORY

MICROTALKER

Speech synthesiser for the ORIC and BBC

Now you can make your ORIC or BBC speak any word, phrase or sentence using the NEW MICROTALKER.

CHECK THESE FEATURES

- ★ Unlimited vocabulary: By using allophones, (the basic sounds of speech, 64 of which are available) any English word can be constructed and spoken and you don't have to be a linguist to use it.
- ★ Simple to program in BASIC. Spoken output can easily be built into all sorts of programs from games to control and educational programs.
- ★ Realistic speech: By using allophones with added inflection highly comprehensive speech can be produced.
- ★ Plugs into USER port on the BBC and printer port on the ORIC-1 thus leaving the main output buses free for other peripherals eg. disc drives etc. Uses standard BASIC printer commands on the ORIC-1 thus no special machine code is required to drive the printer port.
- ★ Uses very little memory, most words only require 4-10 bytes each.
- ★ No hidden extras to buy, i.e. NO extra ROMs, dealer upgrades or special interfaces required.
- ★ Built in amp, volume control and speaker.
- ★ Output to HI-FI through 5 pin DIN skt.
- ★ Comprehensive 17 page instruction manual including over 170 example words plus 2 demonstration and development programs on cassette FREE!
- ★ Applications include: Games, Education, Warning systems, aids for the blind or disabled, General Communications, Robotics, VDU assistance. In fact, wherever a spoken output is preferred or required.

All this for the amazing price of only

£49.95 + £1.50 p&p + VAT

DEALER ENQUIRIES WELCOME

ASTROLOGY

USER PROMPTING PROGRAMS: merely key in birth information as requested by the computer — READ OUT (and/or PRINT OUT) what is normally the result of many hours of painstakingly tedious and complex mathematical calculations using tables, ephemeris, etc.

THE ASCENDANT AND MIDHEAVEN; THE SIGNS AND POSITIONS OF THE HOUSE CUSPS IN THE EQUAL OR PLACIDUS HOUSE SYSTEMS.

THE SUN AND MOON POSITIONS — THE LUNAR NODE — THE PART OF FORTUNE — THE VERTEX — THE SIDEREAL TIME OF BIRTH, ALL IMMEDIATELY AVAILABLE AT THE TOUCH OF A KEY IN LESS THAN TWO MINUTES AFTER KEYING IN THE RADIX INFORMATION.

For the ZX SPECTRUM (48K) ZODIAC-FGP only £15.00

For the DRAGON 32 ZODIAC-D only £15.00

BOTH THE ABOVE PROGRAMS ALLOW FOR USER SELECTION OF EITHER NATAL OR PROGRESSED MODE AT THE TOUCH OF A KEY.

The ZX SPECTRUM program displays and prints out all the astrological signs for the sun, moon and planets, as well as house cusps and aspect indicators in the conventional GRAPHICS normally used by astrologers. It also allows for user choice of degrees of orb for aspects.

IN ALL, THESE TWO PROGRAMS PROVIDE A POWERFUL TOOL FOR THE KEEN ASTROLOGICAL STUDENT AS WELL AS THE WORKING PROFESSIONAL ASTROLOGER.

For the ZX81 (16K) ZODIAC-I only £10.00
Giving all the information needed to erect a natal chart.

ZODIAC-II only £8.00
for planetary aspects, midpoints and orbital strengths

MICROSHOP CLASSIFIED

DRAGON/ATOM/ORIC-1 ADD LOW-COST I/O POWER WITH A VIA BOARD

Drive extra I/O devices, from LEDs & switches to extra peripherals. Link 2 micros for data/program transfer, spool listings to a second micro to print/save etc. (see TEV-LINK below).

HARDWARE: 6522 VIA provides 16 I/O lines + control, serial port 2 timers, interrupt register, I/O voltage & interrupt lines taken to 26-way IDC plug for easy connection to peripherals etc. Connectors available for Dragon, Atom. The Board may be interfaced to most other 6502/6809 micros, and may be shared between m/c's by changing the plug-in connector.

SOFTWARE: TEV-LINK package provides 2-machine parallel link (2 Boards needed) overall speed about 6K DATA bytes/second with error checking.

A PRINT SPOOLER is included (only 1 Board needed) connect printer port to VIA board on receiving micro and use normal LIST/PRINT etc.

Assembled board - Atom connector £16.50
Assembled board - Dragon connector £14.00
Assembled board only - for your interface £14.00
Atom connector £4.00, Dragon connector £6.00

OTHER SOFTWARE:
CAVE QUEST. Underground quest for the ring of power, Dragon/Atom/Oric cassette £2.30
TEVROG'S KINGDOM. A real-time quest for magic powers (and survival). Oric £5.75

Other software and hardware available soon.

This new game program for CRICKET is so realistic!

SINTAX ERRORS

Hunters defeated

Tandy PC1 hunters may have noticed that the phone number we printed in a Billboard ad did not connect you with a Tandy PC1 seller. The number fell foul of a printing error; it should have been Bristol (0272) 735419.

Come in Kaminiski

Anyone calling the number given for Tony Kaminiski at Couchmead Communications (last week's Datelines) may be wondering why the number is that of a school. Apparently the old number of 01-788 1102 has been changed to 01-633 1102.

Oric attains ovality

Did you hear the one about Oric's disks?

—They're oval. Oric used an Oric to design them.

NEXT WEEK

Face to Interface — Sinclair's slot-in Interface 2 Pro-Tested.

Conquistador Cortex — A close-up on CW/P's micro.

Good Friday? — d Base II tamed for easy office use.

Gameplay — PCN gives a perspective on the new-look 3D games.

Micropaedia — Part Four of the pull-out programming course.

If you were sharpening your wit for the last laughline contest don't put it away or let it go rusty — have ago at this one. The gentleman framed by the printer silencer is Dick Sheppard, sales director of Action Computer Supplies. If you could hear him, what would he be saying? Send us your suggestions and we'll send £20 for the funniest. Entries by October 27 to PCN, laughline, 62 Oxford Street, London W1A 2HG. The result will be published in issue 35.

PCN DATELINES

PCN Datelines keeps you in touch with up-coming events. Make sure you enter them in your diary.

Organisers who would like details of coming events included in

PCN Datelines should send the information at least one month before the event. Write to PCN Datelines, Personal Computer News, 62 Oxford Street, London W1A 2HG.
