Sinclair seeks £15m finance and may sell C5

SINCLAIR RESEARCH has run into financial trouble for the first time in its six year history. It confirmed last week that it hopes to raise between £10 million and £15 million from industrial or other sources to rescue the company. This followed the announcement that manufacturers Thorn-Emi and Timex have extended their credit terms with Sinclair Research for two months (see separate news item on p6).

Sir Clive Sinclair plans to step down as chief executive and the company is now looking for someone to take his place. Sir Clive wishes to return to more technical work within Sinclair, but there is no possibility of his giving up the chairmanship. He has been reported to be considering selling Sinclair Vehicles, which produces the C5, to help raise money.

The value of stocks held by Sinclair, which was as high as

Sir Clive - a troubled week

£34 million a month ago (see *Popular Computing Weekly*, 2 May), is now said to be around £30 million, but Sinclair continued on page 4 ►

Dixons to bundle Sinclair TV and Spectrum

THE HIGH street chain store Dixons is to sell an unusual bundling package featuring the Sinclair Spectrum Plus.

For £199, the customer can buy a Spectrum Plus, flat-screen TV, a ZX printer and six software titles, *Vu3D*, *Chess*, *Hungry Horace*, *Deathstar Battle-Return of the Jedi*, *Space Raiders* and *Embassy Assault*. These are all well-established titles that have been available for some time.

Sinclair stopped production of the ZX printer about a year ago. The package is seen as a clearance of old stocks still held by Sinclair.

The TV is currently viewed

as potentially Sinclair's most successful product as Sinclair has recently won major orders with American Express and retail group Sears to sell the TV in the US.

"This package has a number of interesting features, especially for people interested in innovation," said Dixons' David Gilbert. He confirmed that the package will be sold in all Dixons stores, while stocks last.

Amstrad vies with Atari at Chicago

THE computer exhibition at the summer Consumer Electronics Show in Chicago from June 2-5, was the smallest for five years.

Of the major hardware manufacturers in the home market, Commodore, Atari and also Amstrad took stands.

Amstrad was the only British hardware manufacturer there - Sinclair, despite the impending American launch of the QL, did not take a stand.

Amstrad was sharing its CPC 664 with built-in 3 inch disc drive and colour monitor

for the first time in the US. The CPC 664 priced at \$799 (around £620) for the American market, which means it will clash directly with Atari's 520ST.

Atari itself only agreed to exhibit at CES at the last minute. "Originally we were not going to be at Chicago," said Atari's UK marketing manager Rob Harding. "We felt the summer show was not as important as the winter show in Las Vegas. However, the organisers requested we take a stand."

Atari has one new product which has not been shown in Europe - a prototype of a CD Rom system for the 520ST. This compact disc based storage system can store up to 1/2 gigabyte of information. Atari hopes to make the CD Rom available at the end of this year. No price has yet been finalised.

Commodore showed a variety of software for the C128 machine, mainly 'home management' utility packages. It also had a mouse-controlled continued on page 4 ►

View

That Sinclair is looking for as much as £15 million to 'restructure' should not be a surprise. With around £30 million tied up in stocks, and no major new product immediately on the horizon, in a market at its flattest, it is a wonder the amount needed isn't higher.

Will Sinclair get its money? The City institutions are notoriously wary of any computer companies at the moment – and even more so of the home sector. Whoever might stump up would expect a fair-sized stake in Sinclair and control over its policies. Not a pleasant prospect for an individual like Sir Clive. Even more unpleasant for him is the possibility that Sinclair Vehicles may have to be sold to help finance Sinclair Research.

One can lay much of the blame on the QL. It was intended to be the populist machine reflecting current technology – powerful enough for use in a small business, versatile enough for games. Instead, its reliability problems at launch and subsequent failure to capture the public's imagination have been painful to watch.

But Sinclair deserves to survive as a strong independent force. With his company, Sir Clive Sinclair created the home computer market in Britain. Sinclair has led the industry through the days of soaring profits and the current squeeze, offering consumers original technology at an affordable price.

What Sinclair needs now is a machine aimed directly at the existing market. Additions to the QL range would be all very well, had the QL created a market. It hasn't. The portable Pandora, or a straight 128K Spectrum would seem the best bet purely on grounds of Spectrum compatibility.

Computer Trade Association Magazine of the Year

CBM announces more 'bundles'

COMMODORE has announced further bundling deals on its products, following the decision to package the Commodore 64 as a 'starter' pack with C2N and *International Soccer* (see *Popular Computing Weekly*, 30 May).

The Plus/4 is to be bundled with the 1541 disc drive, MPS 801 printer, and a suite of business software including word processor and spreadsheet by Impex, thus aiming the Plus/4 directly at the small business market. This Business Pack will cost £449, and become available

in June.

"The Impex software is similar in style to *Lotus 1-2-3*, though not as sophisticated," said a Commodore spokesman. "It makes better use of the Plus/4 than the machine's in-built software, which has caused some problems."

For £349.99, Commodore is offering a peripherals package comprising the 1541 disc drive, MPS 801 and software. Commodore is considering offering this package by direct mail order only.

● The 6th Commodore Computer Show is on between June 7 and June 9, when the C128 will be shown for the first time in the UK.

While the C128 will be the major hardware attraction, packages are also being launched.

Audiogenic will be showing its version of *Micro Swift Spreadsheet* for the C128 ma-

chine, which makes use of the new model's extra memory and 80 column display.

The company will also be launching a new program, *Graham Gooch's Test Cricket*, a graphic simulation due for release in mid-June, at £9.95.

Domark's follow-up to *Eureka!*, the game licensed from the new James Bond movie *A View to a Kill*, and bearing the same title, will also be shown to the public for the first time, as will Commodore's own new title *International Tennis*. This continues the series comprising *International Soccer* and *International Basketball*. Commodore will also be launching the latest program in its *Music Maker* series.

The show opens at 10 am on June 7, at Novotel, Hammer-smith, London. Admission costs £2 for adults and £1.50 for children.

Release date for Cauldron from Palace

PALACE SOFTWARE has, after some delay, named a release date for *Cauldron* on the Spectrum. The Spectrum version will now be available from June 14, at £7.99.

Buyers will find a conversion of Palace's first program *The Evil Dead* on the reverse side of the tape. *The Evil Dead* was originally released only for the Commodore 64.

Chicago Show

◀ continued from page 1

word processor on display, using Apple Macintosh-like menus, icons and windows. The Amiga machine was not on show, but industry sources at CES suggested the Amiga may be launched next month in the US, and may now cost as much as \$2000 (around £1500).

Relatively few software houses exhibited in the main hall - many giving private showings in hotels instead.

Of those that did exhibit, Epyx launched *Summer Games 2* and previewed *Winter Games*, which is due out in the states in October. Access showed *Beachhead 2*, and Activision had a range of titles on display for the first time.

Hacker is a simulation/adventure centred around hacking. The player is presented with the scenario of having broken into an unknown computer system and must discover who system it is, and what it does. Activision also previewed *Boxer*, a boxing simulation, and *Slot Car Construction Kit*, where the player designs a race course on screen, and then must take part on it.

It seems likely, though not certain, that these titles will be exported to this country.

Sinclair seeks £15m

◀ continued from page 1

clair is forecasting a 20% drop in sales this year. "Our cashflow has been slow from the start of the year in terms of new orders, although the number of units sold has been high," said a Sinclair spokesman.

Thorn Emi, STC, GEC and Philips have all been reported as being approached by Sinclair for part or all of the £10-£15 million in return for a stake in the company, which

could mean Sir Clive, who currently owns 85% of Sinclair Research, losing overall control. It is extremely unlikely that the institutions who bought 10% of Sinclair in a private placement two years ago, would inject any more money into the company. The signs are that it would be a British company which would provide the finance. "Sir Clive's patriotism and support of British firms means he would prefer it to be a British company," the spokesman continued.

For the new chief executive, Sinclair is looking to appoint someone currently outside the company.

Plans for the £50 million semi-conductor plant for which Sinclair was hoping to find finance this year have now been put on ice until the present problems are resolved. Work on new machines, including the portable 128K Spectrum compatible Pandora, is continuing. When asked about

"I believe the software and the ZX printer are nostalgia items."

From Hampstead to terror at the seaside

THE PROGRAMMING duo responsible for *Hampstead*, Peter Jones and Trevor Lever are now developing *Hampstead's* follow-up, *Terrormolinos*.

Terrormolinos will be a text and graphics adventure centring around the pitfalls of package holidays. Like *Hampstead*, the program will be published by Melbourne House.

"It will be released at the end of August," said Melbourne House's managing director Geoffrey Heath. "While *Hampstead* was very satirical, this will have a lot of saucy postcard humour." Prices and other details are yet to be finalised.

development on a second 128K Spectrum machine (see *Popular Computing Weekly*, 16 May) the spokesman commented, "The research and development team are working on a range of developments - obviously I cannot comment on specific details."

WIN A COPY OF ASSASSIN!

Assassin is a complex text adventure for the BBC B by Robico Software. Using machine code compression techniques, *Assassin* features dozens of locations and detailed atmospheric descriptions. Your task is to assassinate a military leader, but you have to find him and the enemy are already on your trail...

The Competition

Popular is giving away 30 copies of *Assassin* to the first 30 people to send in the correct answers to the questions below. Not only will you win the game, but you will also receive a useful notebook specially designed for adventurer's notes - useful for making maps and remembering codewords.

How To Enter

Look at the questions below. If you think you know the answers fill in the coupon and send it to *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2H 7TP, by 20 June, 1985. Mark your envelope 'Assassin Competition'.

Questions

- 1) Who wrote *The Spy Who Came In From The Cold*?
- 2) Who was the Jackal trying to kill?
- 3) Which three actors have played the part of James Bond (excluding David Niven in *Casino Royal*)?

All Entries

Anybody who enters the competition, winner or not, who encloses a stamped address envelope will receive free membership of the Robico Software Club normally costing £1.00. This entitles you to special offers and discounts of 15% on specified software. Robico also offers a help service for people hopelessly stuck - *Assassin* isn't easy!

COMMODORE 64 (JOYSTICK ONLY)
CASSETTE £3.95

Instead of computers catching up, technology now has to catch up.

The way we see it, technology has quite a race on its hands. There's no other home computer in the world that's so expandable or so updatable as the new Enterprise 64.

And if you're wondering quite how we've managed that, kindly take a closer look at all the outputs on our remarkable new machine.

You'll notice that amongst the usual sockets and terminals we've incorporated a special 66-way expansion port.

This will accept a whole range of new peripherals that are now in the pipeline.

Including those that are a mere twinkle in the eyes of our hardware designers.

We thought this expandability principle was such a good idea, we applied it to the Enterprise's memory, too.

Even in its most basic 64K form, this puts more user RAM at your disposal than almost any other competitor.

atching up with technology, atching up with a computer.

But plug in our special Rampacks to the base unit, and you can increase that figure to a truly extraordinary 3,900K.

Not that that's the only challenge we present to today's ambitious programmers.

With a screen resolution of up to 672 x 512 pixels, 256 colours and a high speed video processor, the Enterprise will outgun all but the highest quality TV monitors.

And the sophisticated sound chip generates no fewer than 4 voices across 8 octaves in full stereo.

Combine the two and you can create effects that leave today's games looking like pub video tennis of the mid-70's.

For anyone with literary aspirations, the Enterprise also comes complete with an integrated word processor.

Whilst the really serious user will be delighted to discover

analogue RGB and TV outputs, as well as parallel, RS423 serial and network ports.

Both Cobol and 'C' will be available with CP/M running, and you can even use Lisp, Forth and Z80 assembly language on cartridge without encroaching on user RAM.

The new Enterprise 64.

It hasn't just overtaken technology. It's left every other home computer straggling in the distance.

Man of letters

John Cook talks to Robin Thompson of Tasman Software

My guess is that until recently, you could split home computer owners into two main groups: Buffs and Game Players.

Games Players are the class of kids (age has nothing to do with this definition) who moved up to computers from a Binatone Mk XVII home domestic games console or the pub 'Tank Pong' games of the late seventies.

Buffs are a different kettle of fish completely. Having moved on from building things such as infra-red burglar alarms, they pounced on the ZX80 (in kit form) and have never looked back since. They all program in code, and are puzzled as to why anyone should ever want to use anything as cumbersome and slow as a high-level language. For them, the computer is a unique combination of cryptic crossword and Holy Grail.

I qualify this with 'until recently' because it seems there is a growing number of people who, after going through one of the above phases, want to do something practical with their computer.

This includes a great number of first-time buyers or upgraders – a bandwagon that has not gone unnoticed amongst the trade; hence the built in software or bundled software packages that come with so many machines at present. However, one firm has been plugging the idea of the 'usefulness' of the home computer for quite some time – and that is Tasman Software, the originator of the universally acclaimed *Tasword II* wordprocessor. I asked Robin Thompson – co-director of Tasman and author of *Tasword II* – about his company's approach towards home computers.

"We specialise in the user applications end of the market, including small businesses – even large companies." What? Spectrums being used for 'serious' purposes? "The Spectrum can be a very viable business machine," he maintained. "Of course, there is the difficulty of long loading time, but with micro-drives this is less of a problem."

Indeed, Tasman practices what it preaches – all word processing in the company is done using *Tasword* on one machine or another – although an Apricot with a 10 MByte hard disc is used for accounting and mail-order work, "simply because of the memory".

That much of the business is still mail order is a mark of the humble origins of the company, and the fact it is still relatively small makes the size of its contribution to the home computer industry even more remarkable. When you think that *Tasword* is probably the most owned piece of Spectrum software after the *Horizons* cassette, the scale of that

contribution cannot fail to impress.

Robin started programming long before Tasman became a gleam in his eye – using Fortran to produce computer models of Gas Lasers at Leeds University. Later, he taught Z80 code at a college of Further Education, when he started programming on a ZX81. It was at that time that he decided to write a word processor for the ZX81 (with 16K Ram expansion) purely as a personal project. He was so pleased with the result (which he called *Tasword*), selling it seemed to be a good idea.

"I just thought I'd have a go," he told me. "I put an advert in the classified section of *Sinclair User*, but it was just before the Spectrum was announced, I didn't sell many; just enough to encourage."

Then came the first *Tasword* conversion – for the new, revolutionary Spectrum! "This was released about three to four months after the launch of the Spectrum – and most of that time was spent waiting for it to arrive!" Then came what has become the standard configuration of the program, *Tasword II*. "This was for people who wanted to use the Spectrum with full column printers. *Tasword II* has a 64 column display. It also included instructions such as *Find* and *Replace* and block commands."

It was at this point that it was decided to form the Tasman company, together with his co-director Simon Howarth, designer of their Tasman printer interface.

Since then *Tasword II* has sold steadily and well, some comparing it favourably to such legendary business titles as *Wordstar*. "It has all the main features 95

percent of the users will want 95 percent of the time," says Robin. Another advantage of *Tasword* over conventional business software is the fact it is completely unprotected, so that users can alter the program to suit their own needs, even though it makes it easy for software pirates to duplicate.

"It's essential for the user to configure our program," he explained. "It's difficult to say how much we suffer because of the lack of protection."

Tasword II now has an accompanying suite of programs, *Tasprint*, *Tascopy* and *Tasmerge* – and recently a plethora of conversions, both mechanic and linguistic! Not only can MSX, Amstrad and Einstein users revel in the joys of word processing Tasman style, but they can also do it in French, German, Spanish, Dutch, Norwegian and Swedish! Why conversions?

Robin shrugged. "Largely because they're there. They are all Z80 based machines, so you can use the same logic; even so it is no minor task."

The linguistic conversions – mainly involving redesigning the character sets – are well worth the effort; the appeal of "word processing for the price of a home computer", it seems, is universal.

So how does Robin see Tasman in relation to the games market – the one that could be said to have been the catalyst for his success. He smiled with the air of a man on well trod ground. "Games? Why not?"

However, Tasman has no plans yet to enter the tumultuous arena of the games market. "We'll continue branching out with products that both support word processing and are free standing. Word processing is the major computer application for most people – and we're sticking with that."

Which only goes to show – for some at least – the pen is mightier than the sword ... and the wand ... and maybe even the joystick.

the screen flashes to remind you that you are in Extended Mode. To get back into normal mode press both the shift keys together again.

When *Tasword* is in Extended Mode press EDIT to see the Extended Mode help page. See this for yourself now by entering Extended Mode, looking at the Extended Mode help page, and then returning to this text and getting back into normal mode again so that you can scroll on down.

You have to enter Extended Mode to type one of the following special characters: " ' \ \ ' [] { } . To type one of these characters put *Tasword* into Extended Mode, hold Symbol Shift down and press the relevant key.

You can move the cursor while *Tasword* is in Extended Mode by using the arrow keys in the same way as when in normal mode.

All the remaining Extended Mode control key actions are obtained by pressing a single key and we'll see now what these keys do.

101 2. Insert on 070 or Insert off EDIT on 071

Software Reviews

Heads up

Program *International Basketball* **Price** £5.99 **Micro** Commodore 64 **Supplier** Commodore Business Machines (UK) Ltd, 1 Hunters Road, Weldon North Ind. Estate, Corby, Northants.

Time for some more sporting action with Commodore's much-awaited sequel to their best-selling game *International Soccer*. And *International Basketball* was worth waiting for. It retains all the features which made its predecessor so popular – great graphics, realistic game-play and gripping action.

You can either choose to play the computer or take on a human opponent. There are nine levels of computer play ranging from utterly pathetic to the skills as displayed by the Harlem Globetrotters. It's also possible to set the team colours and to select *International*, NBA or NCAA rules.

There are only three players in each team instead of the usual five. The game starts with a tip-off in the centre.

You control only one player at a time, usually the man closest to the ball, and he can be recognised by being a lighter colour than his teammates. The other players in your team run around independently, waiting for you to pass or throw the ball. The player automatically bounces the ball and can pass or shoot in the direction that he is facing by simply pressing the fire button. You can even jump, block and steal just like normal basketball. It's particularly good fun jumping, turning in mid-air and then slamming the ball into the basket before landing again.

The graphics are probably even better than *International Soccer* – perhaps because everything is enlarged. I particularly like the scoreboards which were very well done (a great improvement on the *Soccer*). I felt the sound could have been improved, though. It might have been a good idea to add some rules in the instructions. Still, *International Basketball* is a brilliant game with excellent graphics and outstanding action.

Tom Hussey

Day for night

Program *Knight Lore* **Micro** Amstrad CPC 464 **Price** £9.95 **Supplier** Ultimate, The Green, Ashby de la Zouch, Leics. LE6 5JU.

Iam not going to insult Amstrad owners' intelligence by assuming that you don't know who Ultimate are, or that you haven't been waiting weeks for the release

of their games for the CPC. Similarly, everything that could have been said about *Knight Lore* has already been said many times – very original, brilliant graphics, etc, etc.

There are, however, one or two points that have to be made. First off the game is not as good as you expected, it is far better than expected. The use of the CPC's medium graphics mode, which is rare but almost always highly successful in games releases, to-

Nuts and bolts

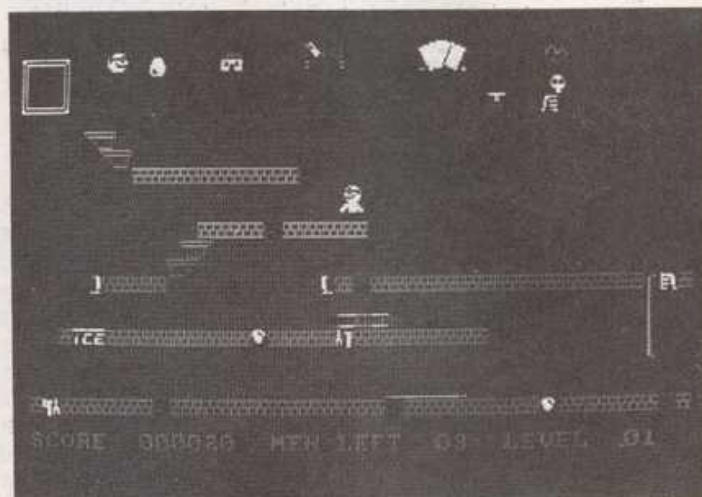

Program *Frank N Stein* **Micro** CPC 464 **Price** £8.95 **Supplier** Amsoft, Brentwood House, 169 Kings Road, Brentwood, Essex, CM14 4EF.

Frank was one of my very favourite platform games for the Spectrum. Despite the overplayed genre the game stood out by dint of its great sense of humour. The graphics had some marvellously detailed touches, and there was enough originality about the gameplay to make it fun.

The conversion to the CPC is competent, but completely

to think about it. The biggest loss of all is that when Frank gets electric shocks, instead of his little eyes bugging in and out there is not even the slightest change of expression.

Still, the game is very playable. It differs from the normal platform games in that Frank can only drop downwards, using ledges, stairs or fireman's poles. To get back up he has to bounce using springs. There are 50 screens, which alternate in type. In the first the objective is to collect all the body parts to make a monster. You have to avoid the mandatory nastier nasties to do so, and the screens get more complex and harder to play as the

humourless. Whilst the gameplay has been faithfully reproduced, and the graphics are just as attractive the little details have been forgotten. Frank still skids on patches of ice, but the horrified expression on his face has gone. The sound effects are also not as good as the original, which is an incredible achievement when you come

game progresses. The second screen, following the plot of various Hammer movies, is where you destroy the monster again. This is reminiscent of a *Kong* game – you start at the bottom and make your way to the top avoiding barrels, creatures etc.

Tony Kendle

gether with the monitor produces a game with not only more colours than the Spectrum version, but also a sparkling clarity and resolution of detail that brings the 3D effect truly to life. There is no doubt that this is the closest you can get to 'playing a cartoon'.

But *Knight Lore* is not only the most important game for the Amstrad, it is one of the top five most important software releases. Conversions of programs from other machines are being produced at an alarming rate and must go a long way to ensuring future

sales for Amstrad, but very few attempt to exploit the machine's particular strengths. Drab, pedestrian, unimaginative, colourful but low res games dominate. They do an injustice to the machine and look poor against the originals.

Knight Lore avoids all these traps. It looks like it was written with the CPC in mind – heaven knows what Ultimate are capable of if they really try to get the best from it.

Tony Kendle

More wallies

Program *Everybody's a Wally* **Micro** Commodore 64
Price £9.95 **Supplier** Mikro-Gen, 44 The Broadway, Berks.

Not only does Mikro-Gen's latest release feature their famous

(rather like *Lords of Midnight*). Thoughtful as ever, the computer provides uncontrolled game members with wills of their own. Baby Herbert (Wally and Wilma's pride and joy) also makes an appearance, but he only gets in the way. (Incidentally, the infant now stars in Herbert's *Dummy Run*.)

The basic idea behind the game is for the gang to com-

doing separate things, so the right person must be used in the right place. You also have to work out which objects need to be used for each task. For example, what can you do with a pile of sand or a can of baked beans? Some objects can only be reached by going through an arcade-style screen.

The locations around the town are very well done, - nice, big, colourful objects and buildings. *Everyone's a Wally* is one of those games

that you either love or hate. This is mainly due to the amount of time that it takes to really get into the game and make progress. The problems are very tricky - perhaps too hard. I'm afraid I can't really say I personally liked the game. However, first-class graphics and the massive challenge of the problems will certainly appeal to some people.

Tom Hussey

micro-star Wally, but also most of his family. Wally's gang consists of four other weird characters - Wilma, his wife, Tom the Punk, Harry the Hippie and Dick the Rasta. Each of these characters can be controlled separately

plete various tasks around the city - like mending the fountain or building a wall. For doing this, they are paid, and get the chance to do more jobs. This is where the skill factor comes in. Each of the characters are good at

Sunken sub

Program *Subsunk* **Price** £2.50 **Micro** Spectrum 48K
Supplier Firebird Software, Wellington House, Upper St Martin's Lane, London WC2

The world of an adventure game is inevitably an enclosed one. *Subsunk* exploits this apparent limitation by trapping you, ace reporter Ed Line (ouch!) in the claustrophobic world of a sunken submarine, with escape your prime objective.

It's obviously a large sub going by the number of locations, which are filled with things to *Examine* (a vital command in this game) and secondary puzzles to solve before you tackle the big one. Some even have small illustrations and there's nice use of sound and spot attribute

effects, such as the flashing sonar. All in all the ubiquitous *Quill* has been well used.

While all this is very much in the traditional puzzle vein it's well enough conceived and written to create a credible atmosphere (if you're willing to accept that the enemy has removed the crew and scuttled the vessel while overlooking you) and there's a pleasant light humour; type in *Score* and you're irately informed, 'This isn't an arcade game'. The vocabulary claims 150 words which avoids long hours spent with the thesaurus.

An effective and fun little adventure which at this price should be an ideal introduction to the genre, while experienced adventurers looking for light relief and an absence of dragons won't be disappointed either.

John Minson

Code tools

Program *The Code Machine* **Price** £19.95 **Micro** Amstrad CPC 464/664 **Supplier** Picturisque, 6 Corkscrew Hill, West Wickham, Kent.

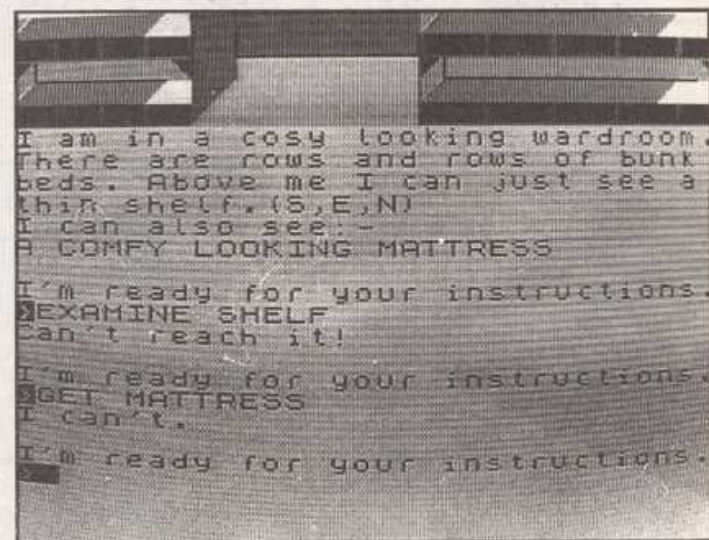

Picturisque is best known for its Spectrum machine code tools; these have proved popular with programmers, suitable for both beginners and experts. *The Code Machine* for the Amstrad comprises of both assembler and monitor programs, supplied on cassette with a disc backup option.

Entering mnemonics into the assembler is straightforward, with each line being divided into four fields; the space bar "tabs" you across line number (0 to 9999), label (up to six characters), operation and operand. The *Auto* command provides line num-

bers of any chosen increment. Once you have entered the source code, it can be restructured with the commands *Renummer*, *Copy* and *Delete*, and edited by one of two methods - *Edit* brings down the line for alteration, or you can use the *Copy Cursor* feature of the Amstrad.

The monitor provides many useful commands, including a full disassembler; most notable is the *Trace* option, which single steps through routines with a comprehensive "front panel" display of register contents. What's more, you can enable either Rom for disassembly, and even change the alternative register set.

In a straight comparison with the Amsoft *Devpac* program, *The Code Machine* is easier to use and has extra features. I can find only a few points on which *Devpac* scores: remark statements can be added to the end of a

line, rather than occupying their own, and its monitor is capable of disassembling code into a text file. This is a

first-class product.

Jeff Naylor

Readers' Survey

Popular Computing Weekly has never attempted a reader survey before, but after more than three years of the magazine, we felt it was high time we asked you what you feel **Popular** should be like

To help **Popular** become more the magazine you want we've set out the questionnaire below. We've tried to make it as short as possible, so please fill it in and send it off to: **Popular Computing Weekly**, 12-13 Little Newport Street, London WC2H 7PP.

Micro(s) owned (if more than one please list in order of purchase)

How often do you buy **Popular Computing Weekly**?

Every week ☐ Most weeks ☐
Once a month ☐ Very occasionally ☐

Do you subscribe to **Popular**?

Yes ☐ No ☐

Which other magazines do you regularly buy?

Your Computer ☐ Personal Computer World ☐ Computer and Video Games ☐
Home Computing Weekly ☐ Commodore User ☐ Commodore Horizons ☐
Sinclair User ☐ Amstrad User ☐ Acorn User ☐ The Micro User ☐ Crash ☐ Zzap 64 ☐
Others _____

List the three most important features you buy **Popular Computing Weekly** for (ie, New Releases, Letters, etc).

- 1) _____
- 2) _____
- 3) _____

How much money have you spent in the last three months on:

Software? £ _____ Hardware? £ _____

Which peripherals do you own?

Printer ☐ Joystick ☐ Disc drive ☐
Microdrive ☐ Modem ☐ Speech synth ☐
Monitor ☐ Printer/plotter ☐

Others (please specify) _____

Which additional peripherals are you thinking of buying in the next 12 months? (Please specify):

What do you mainly use your micro for? (tick more than one box if appropriate).

Games ☐ Wordprocessing ☐ Learning programming ☐ Home business ☐
Communications/networks ☐ Music ☐ Graphics ☐
Others (please specify) _____

Are you VERY interested, FAIRLY interested or NOT interested in each of the following:

Hardware Review

Extra cost

Hardware Enterprise 128 Price £249.95 **Manufacturer** Enterprise Computers Ltd. 31-37 Hoxton Street, London N1 6NJ.

The Enterprise 64 finally appeared just before last Christmas priced at £250 (reviewed Vol 4 No 1), and was received cautiously by all. In terms of specification the Enterprise is difficult to fault offering very good screen display capabilities, good sound and an advanced though very slow Basic. However, despite the specifications of the machine the price was too high to cause much of a stir. Now comes the Enterprise 128 for £250, along with a big price cut for the Enterprise 64.

Inside, the 128K version of the Enterprise turns out to be exactly the same as the 64K model, but with the addition of a small circuit board holding a second bank of Ram. This circuit board is connected to expansion points 1 and 2 on the main circuit board, next to the hardware expansion port on the right of the computer, and thus behaves just as an external Ram expansion. Eight 64K by 1-bit Ram chips are used, as on the main circuit board, although the Enterprise hardware addresses memory in 16K segments. The operating system will

only allow four of these segments to be active at any one time when using Basic and only one program may use each segment. One effect of this is that the maximum space available to a program is limited to around 44K for the first program and 32K for subsequent programs. The bottom two segments must always be present as these contain the display-screen Ram, system variables, the editor workspace, and an area for user-defined display channels.

Unfortunately the 128K version of the Enterprise, when compared with the much cheaper 64K model, offers very little advantage to the user in its current state as the operating system, EXOS 2.1, although designed to make use of up to four Megabytes of memory, does not give enhanced facilities to go with extra memory. Thus you do not get improved graphics, the Enterprise user-defined video-displays are no bigger, you cannot store paged display-screens from Basic, and the space available for a single Basic program plus data is no greater. What you do get is the ability to store up to eight Basic programs in memory at one time, which can be run independently or can be chained, al-

though you run up against limitations in the memory segmentation if you do try and use all eight and the programs are large. It was whilst investigating the multi-program capacity of the 128K machine that I encountered the only bug I could find in an otherwise very clean machine. There is a function, *Free*, which declares the space available to each program. When the number of programs in memory is large, *Free* displays a rather alarming zero. In fact you still have up to 16K available.

Perhaps the best thing about the launch of the Enterprise 128 is the price reduction on the existing 64K model. For £180 the Enterprise 64 offers better sound, display, and programming capa-

bilities than almost any other computer in a similar price range. Both Enterprise models suffer from lack of software at present and until such becomes available, it is difficult to justify the cost of the 128K model.

ZX Tickets

200 free tickets for the 16th ZX Microfair

Popular Computing Weekly is giving away 200 free tickets for the 16th ZX Microfair – to be held at New Horticultural Hall on Saturday July 22 – to the first 200 people who submit either programs for the ZX Spectrum or QL or letters for possible publication in the magazine **before June 17**.

All you have to do for your free ticket is to enclose a stamped addressed envelope with your program or letter submission.

Remember – the tickets go to the first 200 people to send in a program and the offer applies only to programs received by us **no later than midday on June 17**.

16th

Invasion

The fate of the Earth lies in your hands –
can you thwart the Zygontian Invasion? On Amstrad by D L Lau

There are three phases to this game. First you must shoot down the Aliens as they swoop towards your space craft. After this you must face the Command ship.

Finally, in Phase Three you dock with your Mothership – and then are transported to another part of the planet to blast the final wave.

Good luck!

BACK IN TOWN FOR A GREAT NEW SHOW!

MICROFAIR

NEW HORTICULTURAL HALL
 SATURDAY 22nd JUNE 1985 10am - 6pm
 Greycoat Street, Exeter, Devon EX1 1JH
 Admission: £1.50 (Adults)
 £1.00 (Kids under 14 yrs)

If you have a Sinclair Computer this is the show you can't afford to miss!

The great day is June 22nd.
 One day you won't forget if you own or use a Sinclair Computer.

The Microfair is back in town.
 See everything that's new and original for The Spectrum, Spectrum+ and the fantastic QL.

If it's just launched you'll find it at the MICROFAIR. If you want advice you can talk face to face with the manufacturers. If you can't find it in the shops you'll probably find it at the MICROFAIR.

Why not send today for cut-price advanced tickets.

HOW TO GET TO THE SHOW

Underground: Nearest stations are Victoria, and St James's Park.

British Rail: Victoria Station.

Bus Routes: 11, 24, 29, 70, 76 and Red Arrow 507.

Road: Signposted (RAC AA) Horticultural Halls.

POST TODAY

Send to Mike Johnston (Organiser), Dept PC, ZX Microfairs, 71 Park Lane, London N17 0HG.

Please send me Advance Tickets (Adult) @ £1.25

Please send me Advance Tickets (Child under 14) @ 80p.
 (Prices at the door are £1.50 and £1.00)

Name: _____

Address: _____

Please include a stamped self-addressed envelope and make cheques/POs payable to ZX Microfair.
 EXHIBITORS: CALL MIKE JOHNSTON ON 01-801 9172 FOR STAND AVAILABILITY.

AMSTRAD INTERFACES

THIS IS NOT JUST A MODEM, BUT A COMPLETE SYSTEM. NOTHING ELSE TO BUY

★★ MODEM ★★

★ £153.00 ★

Incorporating serial and parallel interfaces, to allow software control of all functions, each feature controlled from basic with the bar commands. Call from myc or on entering bar modem all controls are menu driven for ease of use. Bell/cit standards 300/300 600 1200 1200/75 75/1200 full and half duplex. Auto dial and auto answer contact bulletin boards, pretest compatible, software bulletin on its own sideways Rom. Unique panel display, it displays what the modem is doing, mode of operation, and digits when auto dialing, standard B.T. plug connector. Note this modem is not B.T. approved.

★★ SIDEWAYS ROM ★★

★ £26.05 ★

The unit holds 4 Roms. Each can be 2, 4, 8 or 16K in size incorporating a device to allow slower Roms to be used less than Amstrad suggested 200, that means cheaper Roms, free utility Rom with every unit.

RS232

Communicate with your modem
 Talk to other computers
 Use serial printers
 Split Baud rates
 Standard 25 way 'D' connector

★ £39.96 ★

PARALLEL PORT

Make that Robot move
 Control electrical appliances
 Twin 8 bit ports
 Operates direct from basic
 2 x 14 way speedblock connectors

★ £22.57 ★

8 BIT PRINTER PORT

Make use of that 8 bit printer
 Allows character codes
 Above 127 (ie 0 to 255)
 Plug in between electronics
 Port and printer cable

★ £17.35 ★

All units are cased and have through connectors
 ★ Please add VAT ★

Going for a song

Sing-along-a John De Rivaz with this music-making program for Spectrum 48K

Music notation is not particularly easy to master, and indeed evolved for instruments very different to the Spectrum's Beep. However, all the Beep need be told is the frequency of the note and its duration.

In this system, there are four commands: U, D, L, and Z. Using just U and D it is possible to write a tune, but all the notes are of equal length. For the purposes of this program, length 1 is 1/16 of a second, therefore if a note is defined by L16, it sounds for one second. The start is set up as Beep 1,0, ie, L16, and middle C.

There is also a facility in the program to have three sub-strings of notes, and in order to be able to start these at defined places, we have an additional command Z. This sets the note level to 0 and plays a note of the current length. ZLO, therefore, sets the note to zero and doesn't play it.

On running the program, you are in the edit mode. Enter in the tune you want, eg: UOD1U2L8D1D1. The start length is 1 second. Therefore UO plays note 0 (middle C) for 1 second. D1 plays note -1 for 1 second. U2L8 plays note 1 for 16/8 = 1/2 second, and the length is set to 1/2 second until changed. D1 plays note 0 and the final D1 note -1.

Press Enter and the screen will clear and a notice "Compiling..." will appear. Then a list of the notes you have chosen followed by the string you created will be printed, following which the dirge you have composed will be played. You will be offered a menu giving the choice of Editor, Save, Lprint, End, Re-start. The dirge goes on playing until one of these has been selected.

Press the * key for Editor, E, and you

will be back in the editor. You may feel that you would like the tune played quicker. Therefore, press Shift and 8 and see the string in the middle of the screen move to the right. The right half of the string is displaced down a character. Move it until you get the following:

UO
D1U2L8D1D1

Then press L followed by 8 and you will get them inserted after UO and before the rest of the string.

Now, just for fun, press Enter. All you will get is one note sounded for half a second. This shows that only the string to the left of the step is compiled into the array. Press E again to get back to the editor.

Using Shift/5, move the string along until you get:

UOL8D1U2L8

D1D1

Use Shift O to delete the 8, then press 4. Then move the string right along so that all the characters are to the left, and you should have UOL8D1U2L4D1D1. Press return, and hear the tune played at twice the speed.

Press E to get back to the editor, and then press I. A further menu gives you the option of filling one of three strings with the characters to the left of the step, or alternatively of adding to the leftmost characters one of three strings previously stored. In this instance, press I to store the characters already composed.

This puts you back in the main editor. Add ZLOU12. This re-sets the note and then raises it by 12, without sounding anything. Then press I, then A. You are back in the main editor, and the ZLOU12 appears to have gone. Move the string back using Shift/8, though and you will

find the ZLOU12 about half way along, and the original set of notes is repeated following it. Note that if the first note, UO in this case, isn't followed by an L command, it won't sound, as the length had previously been zeroed. It is good practice always to define the length of the first note.

Use Shift/5 to move the string to the left, and press return. You will get your tune played twice, the second time up 12.

Now use the editor to change the U12 to D12 and see how you like the result. Then add ZLOU24 to the end of the string, and press I followed by A again. Repeat twice more with the addition of ZLOD12 and ZLOD24 at the end followed by I, A each time.

You have now used all the functions of the editor. Arrays created by this program can be entered as Data statements in your own program for Beep tunes. I hope that readers with more artistic talent than myself will be able to create some good tunes with this program.

You are advised not to use a ZLO within a substring if you wish to play it at different keys. Instead, calculate the total displacement, say D1, and correct it with an U1LO. The Z command is not really necessary, but it is included to make the program easier and therefore more fun to use.

The Poke in Line 9000 prevents the "Start tape..." message appearing and the line saves the whole program three times without the need to press a key each time. Enter Goto 9000, start tape, and then press Enter.

To save typing, I will supply any reader the program on a cassette for £2. Send that remittance to RTL, Westown, Porthtowan, Cornwall TR4 8AX, with your name and address and ask for the Spectrum Music program cassette.

There are no program notes because I have used plenty of Rems in the program itself. Also the program is largely self-explanatory by text in the various menus.

New! TRANS-EXPRESS 85.2

The only fully automatic and professional utility for transferring Spectrum programs from:

- ① CARTRIDGE TO CARTRIDGE or DISC TO DISC or WAFER TO WAFER
- ② TAPE TO CARTRIDGE or DISC or WAFER
- ③ TAPE TO TAPE
- ④ CARTRIDGE TO TAPE

"An ingenious piece of software."
***** Features ***** Performance ***** PCN
"A valuable utility for microdrive users." Sinclair User
"HIGHLY RECOMMENDED." PCN

NEW! Part ② now fully automatic. You just START/STOP the tape transfers, modifies, relocates, re-structures & helps to RUN also hyper-tube headerless extra long (including 48K) parts, etc.
The first possible success ratio, the easiest & fastest in use.

Wiggler

A novelty maze arcade game. Superb graphics and action. An extensive map, over 250 locations, full of features and creatures unseen as yet. New, funny, addictive, compelling.

Plus a bonus on side B:

'A WINNER.' PCWeekly
'A Star Game.' PCN

THE BOOKS OF JEDITE

ROMANTIC ROBOT 77 Dyne Road London NW6 7DR Dept PCW 24 hrs orders 01-625 9463

1541 FLASH!

Do you get bored waiting for your disk drive to load your favourite programs?

Thinking of reverting to 'turbo' tape routines because they're quicker?

WAIT!!!

From SUPERSOFT comes a great NEW product which you can fit in minutes to upgrade your Commodore 64 and 1541 Disk Drive. All disk operations are speeded up as much as THREE times (for example, programs which normally take a minute to load will load in twenty seconds or less using FLASH!)

1541 FLASH! is 100% compatible with Commodore BASIC. However, if you really want to you can easily revert to the normal slow mode at any time - but we don't think you will!

If you take your programming seriously you can speed DATA transfers by up to 10 times normal speed (in your own programs), and can also make use of 11 screen editing functions, as well as 17 disk commands.

Pressing SHIFT and RUN/STOP becomes the same as LOAD "*"8,1 so you can start work about five seconds earlier each day!

Supersoft have 1541 FLASH! in stock NOW, so send your cheque for £89.95 or 'phone 01-861 1166 to order by Access.

P.S. Unlike some add-ons we could mention, 1541 FLASH! leaves you all your memory and the cartridge port available!

SUPERSOFT

Winchester House, Canning Road, Wealdstone,
Harrow, HA3 7SJ

TIPSTER
SPECTRUM + /48

AMSTRAD CPC464/COMMODORE 64

**The most accurate
horse race predictor on the market**

- ★ Tipster V2 took 18 months of trial and error before we arrived at the system that makes it the most accurate race predictor on the market.
- ★ Fully tested against other computer race predictors.
- ★ Tipster even performs better than the human tipsters from the top nine newspapers.
- ★ Many winners found at high prices.
- ★ For both flat and national racing.
- ★ The system will never go out of date.
- ★ We reveal the secrets of profitable betting.
- ★ Special tutor for the absolute beginner to racing.
- ★ Tipster also includes a program to calculate your returns for you.

If you can buy a more accurate race predictor we'll refund your money

*Don't be tempted to buy cheap or inferior products.
£14.95*

E. I. SYSTEMS
PO Box 171, Wolverhampton, West Midlands WV10 0PJ

*Leaves all other race predictors in the paddocks.
(Please state computer)*

PD133

HISOFT ULTRAKIT £9.45

The most powerful toolkit yet for ZX BASIC. All the features you will ever need; AUTO insert, full RENUMBER, block DELETE, CLOCK, ALARM, error trapping, break trapping. Full TRACE with single-step and much, much more. Makes ZX BASIC easy-to-use and powerful.

DEV PAC £14

An excellent assembler, an advanced line-editor, a comprehensive disassembler and a superb 'front panel' debugger all in one package. Used by many leading software houses to write their games. "Buy it!" Adam Denning 1984.

PASCAL £25

A powerful and almost full implementation of Pascal - not a Tiny Pascal. A valuable educational and development tool, programs typically run 40 times faster than a BASIC equivalent. Spectrum version includes Turtle Graphics package. "I haven't seen any other compiler that could match Hisoft's Pascal"

All prices, UK delivered, relate to 48K ZX Spectrum versions.

HISOFT

presents

FONT 464

for the

AMSTRAD CPC 464

FONT 464 is a font designer and character generator especially developed for the CPC 464 microcomputer.

Design your own character fonts and graphic symbols with this very friendly and powerful package.

FONT 464 allows you to create a new design or amend an existing one using set, reset, invert, reflect, rotate, inverse and even animation!

Load and save character sets to/from tape, use the new character(s) from BASIC, design your own animated graphics - all this and more with **FONT 464**.

FONT 464 is supplied with three interesting and amusing character sets for you to experiment with.

★ All this power for: £7.95 inclusive ★

We also have available for the Amstrad CPC 464:

Hisoft Devpac - our full Z80 assembler and disassembler/debugger with more features than you'll ever need.

Hisoft Pascal - a virtually full implementation of Standard Pascal. Compiles and executes incredibly quickly.

Please write to Hisoft for more details of Pascal and Devpac on the CPC 464 or contact Amsoft with your order.

Equitable solutions

This week a powerful equation solver for the Sinclair QL from the keyboard of **Jeff Tope**

If you have ever sat down and tried to solve an equation, or a set of simultaneous equations, then this program might be what you wanted. It is designed so that you can use either a formula defined in Line 110 or a polynomial which may be input within the program. The limitation of the QL string evaluation command prevents a formula being input during the program.

Contained within the program are brief summaries of each method which may be called up by hitting F1 (help)

whilst the menu is on the screen after selecting the appropriate method using the cursor line: to select the method just hit Enter.

The program is not totally error trapped but commonsense should show that it is easy to use.

The methods employed are standard methods used in many applications but for a full description you should see an advanced numerical analysis textbook. A brief note on the Newton Raphson method might answer a few questions - the method differentiates the polynomial

equation using the procedure 'newton' this being unable to differentiate anything other than a polynomial equation.

Notes

- 100-120 function definition.
- 130-840 screen definition, menu and help.
- 850-930 select method.
- 940-1180 get polynomial or tell to define in line 110.
- 1160-1260 evaluate relevant function.
- 1270-1340 get a yes or no answer to given message on a given channel.
- 1350-1880 get two values for Bisection and Regula Falsi having opposite function values.
- 1560-1890 solve by Bisection or Regula Falsi method.
- 1900-2330 solve by Newton Raphson method.
- 2340-2920 input: create and save then solve; load; alter array and solve simultaneous equations.

TAPE - Commodore 64 - DISK

SUPER-BREAKER

ALL THIS IS ONE GREAT DISK

1. **TURBO BREAKER II:** Now transfers many more turbo's to disk than before e.g., Novaloads, Pavloaders, Pavloaders with pictures, Flashload, Hyperload, CBS, Ariola, Burner, Micro Power, Adventure Inter, and lots more.
2. **TRANSFER II:** To transfer those slow load games to disk.
3. **SUPER DISKCOPY:** Now copy from Disk to Disk in only 3 MINS on one disk drive, copies protected commercial disk with error tracks.
4. **TURBO MENU MAKER:** This is a selective menu maker that also saves a disk turbo with the file, so now you only include the file names you wish and then turbo load them from the disk.

YOU GET ALL THIS ON ONE SUPER DISK FOR ONLY £22.00 INCLUDING P & P

SUPPLIED SEPERATELY:

TURBO BREAKER II ONLY £12.95 TURBO MENU MAKER ONLY £10.95
SUPER DISKCOPY ONLY £10.95 TRANSFER II ONLY £ 8.00

ARROW FILE: Now you can store all your software records in order. List them all or by letter, print them out in double column. This program can be used to make lists of books etc., Only £10.95 Disk.

DISK DOCTOR: A full disk editor, recover a scratched file, edit any block, amend any track, list any track. Only £8.00 Tape.

TURBO SAVER: Make easy back up copies at turbo speed from your slow load programs, multi parts etc., easy to use. £8.00 Tape.

DISKOPY: A selective disk copier to transfer only the files you wish from disk to disk, very easy to use. £7.00 Tape.

An unbroken run

A short assembly language routine to disable the Break key on the BBC B by Joe Pritchard

It is well known that the Break key can be partially disabled on the BBC computer by the *Key 10 command. In this short routine I present a possible solution to the problem of Control/Break being used to stop a running Basic program. The program was written under OS 1.20 and Basic II.

Once the below routine has been executed, pressing Break or Ctrl-Break will cause the program to be re-run. Escape is also disabled using the *FX229 command.

Description

The routine uses the *FX247,248 and 249

commands to set up a jump command for the BBC micro to execute whenever the Break key is pressed. The *FX138,0,n command is used repeatedly to put the commands Old (Return) Run (Return) into the keyboard buffer. Once this has been done, a JMP through vector &FFF4 is made to finish off.

Obviously, this routine should be one of the first things that gets executed in your program. It should be quite useful in places where you don't want Ctrl-Break to totally stop the program, such as educational programs and demonstration software.

```

Lost and found

Retreave those bad loads on the CBM 64 with this useful routine by **Geoff Hatto**

When using Basic, typing the word *New* doesn't actually erase the current text in memory, it just resets some system pointers. It would be nice to have an *Old* command which would recover this text. Many commands of this type have already been written, but most, however, would not cope when asked to recover Basic text from faulty tape loads or after some types of 'crash', etc. This is because the link addresses and Basic text pointers may have become corrupted.

This program completely rebuilds all of the link addresses in the Basic text and resets the relevant text pointers in the operating system. This means that even if several bytes of text are corrupted, the main part of the program will still be recovered and can be edited in the usual way to remove odd lines and characters. This is particularly useful for recovering Basic text from faulty tape loads. Sometimes, after a load error, parts of Basic

text can be seen if the program is listed, but if an attempt is made to run or edit the program the computer often crashes. After running this program, it is possible to treat the recovered text as normal.

Also, one or more Basic programs can be stored in memory at any one time (with care!). To do this, the start of Basic pointer (*TXTTAB*) is adjusted to the start of the new text, and then the program can recover text at that location, correctly setting the text pointers. For example to set the start of Basic to location 5000 (DEC) type: *Poke 43,136* (low byte of 5000), *Poke 44,19* (high byte of 5000), *Sys 679,NEW*.

Because the program automatically keeps track of the start of Basic, it will work with any memory configuration.

Note, this program can still be used even after a complete power reset, (ie *SYS(64738)*). This is often useful when the *Run/Stop* and *Restore* keys are no longer working.

To provide maximum flexibility, the program itself cannot be situated in memory which could be used for Basic programs. Therefore the program has been located in an area of memory unused for Basic text, starting at *\$02A7 (HEX)*.

To use the program, either:- (1) Load in before any program development, and type *Sys679* when required. (2) Load in after experiencing problems in Basic and immediately typing *Sys679*. (Note, the program itself will be lost after a power reset, so reload as described in (2) to recover the text.)

To get a copy of Relink on tape, type in Program 1 and save it. (Changing line 180 in program 1 if disc operation is required). Now place a blank tape in the tape deck (or disc in the disc drive) and run the program. This will save a copy of the program on tape (or disc).

To check for correct program operation, type *New* followed by *Sys679*. *Ready* should appear and the recovered program can be re-listed.

To test the recorded copy, Type *SYS64738* and then *LOAD"RELINK 64",1,1* for tape, or *LOAD"RELINK 64",8,1* for disk. Typing *SYS679* should now recover the original program.

```

Open Forum

We are always actively seeking programs for publication – either for Open Forum, the machine pages or Star Game. When sending in a program for consideration, a clear program listing should be sent, together with, wherever possible, a saved copy on cassette. Documentation – usually not more than 1000 words – should start with a general description of the program, what it does, and then some detail of how the program itself is constructed. We pay very competitive rates, according to the length and nature of the program and the quality of the accompanying documentation.

Distinct Rems on Commodore 64

This machine code routine takes all the

Rem statements in a program and inserts the Reverse code symbol before the statement of the text within the Rem statement – thus making it appear in reverse. In this way, listings can be made a lot clearer, because important

Rems that demarcate particular sections of the program are highlighted. It works in the CBM64 and the Vic – and with one byte difference, also on Pets!

Instructions for use are within the program.

Commodore 64
Price £7.95 Mi-
cro Commodore
64 Supplier First
Publishing, Unit
20B, Horseshoe
Road, Horse-
shoe Industrial
Estate, Pang-
bourne, Berks.

An odd book this. First-ly it's set directly from a computer printer, which gives it a less than smooth appearance. Secondly it's translated from German into English – or rather American English (spellings, dates, etc) – resulting in some stilted prose.

Thirdly its style is surpris-

ingly chatty, with some rather weak humour.

And fourthly it embraces ideas for home and hobby use of the C64, the use of commercial word processing and data handling packages and even a few listings.

I began by disliking it, but eventually adjusted to all but the cheapo layout. It's not free of minor factual errors and concentrates, not surprisingly, on First Publishing's own software, but should provide a spur for those who wonder if their Commodore can do more than play games without wanting anything too technical.

TW10 6TF.

This book for reason-ably experienced users, attempts to give an explanation of how the firmware of screen, sound, cassette drive, etc, are accessed and controlled by the CPU and how to exploit the OS in your own programs. It suffers by falling between

the stools of theory and practice and the author is not guilty of overexplaining things to beginners. Indeed he seems to be desperate to avoid working examples under the excuse of 'not wanting to limit the reader's imagination'. There is an extensive list of useful OS calls – cheaper than buying the firmware manual but less extensive – and also hints, no details, on how to implement extension Roms, build a full 8 bit printer port, etc. Still, it is a good buy for ambitious people and has improved my understanding of how to get the best from the 464.

NEW MD1b/WD1b for TAPE TO DRIVE TRANSFER

48K Spectrum owners with Micro/Wafa/Disc drives can NOW transfer the MAJORITY of their programs (inc headerless, long programs, + those with LOW addresses - say 16384) with our newly IMPROVED package (incl bytes chop/split in one go, VAL creator (reduced Tasword by 1000+ bytes in 2 secs) remkill, make visible, etc, etc).

To transfer from tape you must convert the program, and then transfer the converted bytes. MD1B (or WD1b) has the programs giving you the tools to do the modifications to get them running. MD1 also has extra erase + true CAT program. (See your Spect No. 9 for recommendation.)

MD1b (WD1b for disc or Wafadrive owners) costs a mere £6.99.

As an EXTRA option to conveniently transfer converted bytes, with integrated header reader, option to alter program names, STOPS programs, etc, we have MT6 at £3 (for M/drive), or Wafatape at £4 (for Wafadrive owners).

UPDATE SERVICE: old customers can get the latest version on any product with a £2 reduction by sending old TAPE only, + SAE (large).

ALL PRODUCTS CARRY OUR MONEY BACK GUARANTEE (not updates).

OVERSEAS: add £1 Europe, £2 others for each product. SAE for enquiries.

Endless lives

The big news that has come out, and I know that it will get most of you groaning with disbelief, is that Hewson Consultants have heard from the first person to have finished *Technician Ted*. As I have said before, I have never heard of a program that has had so many star games players struggling to get anywhere at all. It is remarkable that it has taken so long to be finished; after all, compare it to the speed with which the Ultimate games are completed.

The genius who has done it is Phillip Wainwright of Northampton and you will probably be pleased to hear that Hewson Consultants, with his help, have promised us a long article on how to play the game.

In the mean time Andrew Hewson has particularly asked me to reassure everyone that task 10, the slice abrasion surface, is extremely difficult, but it is possible. If you get that far you will see that, instead of platforms appearing to allow the task to be done, one of them has actually disappeared!

Now then, people still seem to be getting confused about the Games Wizard competition. Can I explain again that you don't have to enter a score for all three games, especially if you don't have access to them. On the subject, I'm afraid Commodore owners are being shown up again by Spectrum and even Amstrad games players who have sent in many more high scores. It has been suggested to me that the reason Commodore games pokes are so thin on the ground is because they normally load so slowly that almost every program has been protected by some sort of turbo loader.

I just don't believe that; this doesn't apply to ordinary games tips and scores and I am going back to my original

theory that many Commodore owners simply can't write.

Anyway to partly prove me wrong, and to try and gee you lot on here is a letter full of tips for one of our competition games, *Suicide Express*, from David Chandler of Enfield. "First of all, when the game has loaded press Restore. The game will begin to read out a high score. Press fire, and hold it down until the game begins. When you start, the level should be a zero instead of the usual one and by the time you do reach level one you should have a 4000 points head start. Now for some playing tips. The brown cars can only be destroyed by getting behind them.

"To avoid the planes dropping missiles on you, fire three shots when you see them start to dive. The saucers will not kill you unless you shoot them. The best way to get rid of them is to wait until they are close and then fire at them and stop dead. The saucer will go over your train and crash (make sure there are no cars behind you when you do this).

"Keep your ammo at about 35. At 40 you will get a warning sound and at 50 your train will explode. Don't fire unnecessarily if your ammo is low. Always fire about three shots in the tunnel to avoid being killed. Try to choose a route where you can change lane quickly to avoid hitting doubles of the white things that come towards you. I have reached level 26 and have a top score of 100,000. From level 14 onwards the backgrounds change colour.

"Concerning another Tony Crowther game, *Gryphon*; if you press 'n' on the title screen a test card appears and a tune is played. You can return to the game by pressing 'n' again. Finally, here are my other high scores - *Raid Over Moscow* 295,000 with 8 commandos remaining; *Monty Mole* completed with 14 points; *Boulder Dash* 5049; *Spy Hunter* 499,325; *Daley's Decathlon* 120,195; *Ancipital* 10, 203,195; *Impossible Mission* 18,184." Many thanks for those tips, David.

Sticking with the Commodore for a while, my very great thanks go out to all the people who have written in with solutions to *Staff of Karnath*. To date they include Paul Harris, Mark Francois, Stephen Kirby, Kenneth Devlin and Grant Williamson. So here at last are the tips for the remaining pieces of the pentacle.

To get to the library safely you must use the Stoly spell on the first and third suits of armour, both in and out, to stop them depleting your energy. Once there if you fire the Yerobas spell at the pentacle before you take it you will not have any trouble with the skeleton. The 'hidden compartments' mentioned on the cassette inlay appear to apply to the Dungeon room. Go between the second and third coffins to the wall and you should hear a low sound. Quickly go back to the Dungeons on the right and there should be a piece where the red skeleton was. In the Morning Room go to the left of the table avoiding the bat. Fire at the bowl with the Ibrahim spell until it

falls off the table.

Finally, the only other piece we haven't yet mentioned is in the store room. To get this use the Ibrahim spell to shoot the spider in the North Tower Lower. It will give off a high pitched ping. If you quickly go to the store room the pentacle piece should be easy to collect.

Now isn't that a weight off everyone's mind, and just in time to get cracking on *Entombed*. Tips for the latter gratefully received.

Let's finish this week with a cheat routine for a machine that we really don't hear much about in the Avenue. It is for endless lives on the Oric 1 and Atmos versions of *Manic Miner*. I have to confess that I haven't had a chance to test this particular routine, but here it is reproduced exactly as it was sent in by Adrian Woollaston.

"1) Disable Auto-run (I trust this is a straight forward thing to do). 2) Load first part of *Manic Miner* tape. 3) Oric 1 - DOKE £AOA4, £F430; Atmos - DOKE £AOA4, £F8B2. 4) Call £A000. 5) Play tape from start and load as normal (ignore any error message caused by loader program going in again). 6) When screen clears and 'Ready' appears POKE £683,169. 7) Call £6A00. 8) Play it!

"The Oric version is easier to play than the Spectrum one as there seems to be more tolerance in the timing and the clearances needed to avoid collisions."

Correction: Knight Lore routine in May 23 issue. Change Poke 62422,201 to Poke 62426,201

We are searching for the top UK computer games player - the best there is!

The very best of Britain's game players will get to fight it out on a number of top secret new games - scheduled for release in the autumn.

Here's how it works

Study the table below and look at the column for the machine you have - these are the games you'll need to master. Send your high scores in on the form below, making sure that your scores are authenticated by a responsible individual signing the form. Any score achieved using technical short-cuts - such as infinite lives Pokes - will not be accepted.

Between now and September Tony Kendle will be keeping you up to date on the *Arcade Avenue* page with just who has the scores to beat. Then, in September, the top three scorers on each machine will battle it out for a place in the final and the chance to be the first to play our 'top secret' games.

Invisible Wizard

The Grand Elf must really be feeling his age these past few weeks, having missed out quite a few important addresses (obviously, the stocks had no effect!), so many apologies and I will rectify the situation.

After the piece on *Bored Of The Rings*, several people wrote in, wanting to know more about this wonderful program, but mainly, of course, where to get it. Delta 4 reside at: The Shieling, New Road, Swanmore, Hants SO3 9PE. As an aside here, Fergus McNeill, the author of *Bored*, feels that more people should be subjected to the delights of the bonus program contained on one of the two cassettes, *Sceptical*. If you cracked the code of *Spectacle*, you'll remember that the phrase was the title of a Supertramp song (old boring hippies, my son) - so apply the same logic here. To save you further brainache, the password is the title of another, rather more recent hit, *RELAX DON'T DO IT* (exactly as I've printed it here). Now go and have some fun!

The other address which I have had trouble with is Mr I G Harling's. He has sent me a *Quill'd* adventure for the CBM 64, called *The Norkse Sagas*. What I've seen of the program so far is not too inspiring, but the reason for me mentioning it here is that he also sent the draft of a book, which has been written, presumably, to go along with the adventure. This is a very literate mix of *Hitchhiker's Guide* and *Monty Python* (about 60/40, I'd say), which pokes fun at most of the conventions used in Fantasy fiction. The story concerns the adventures and bad-

luck stories of Ulrich, son of Smork the Unfortunate (who spends his time being turned back and forth into various kinds of creature), and his attempts to gain entrance to Usgard, the home of the Norkse Gods, attempts which are foiled at every turn by his rank bad luck and thingy, you know ... the Sorcerer chappy ... Like the aforementioned *Bored of The Rings*, Harling hasn't, thankfully, fallen into the trap of using schoolboy humour to get cheap laughs, and the book sustains a polished humour.

Now, the only problem is in finding Mr Harling, as his covering letter has been lost in the depths of the Popular office. I hope that he is reading this week's column, and that he will contact me as soon as possible.

Now, on to some help. John Rundle, who had been seen in these columns several times before, is now currently working on *Erik the Viking*, from Level 9. He says; "I can do all the adventure, except remove the feather from the Dragon's nose. Can anyone help me do it? I am willing to give readers any help on this adventure if they send me a SAE. I see that people are still asking for help with *The Hobbit* and *Valhalla*. I can help with either." So write to John at: 26 Western Road, Aldershot, Hants GU11 3PL.

Thanks for the offer of help, John - I'm afraid that I don't have much to offer on *Erik*, but you could always write off to Mosaic who market the game.

This adventure has had a mixed reception, judging from the letters that I've had. Most experienced adventures seem to think that it is just a nice little romp, which they feel that Pete Austin must have dashed off while working up to *Emerald Isle*, but I believe that it still has some good moments in it and would anyway make a good introduction to adventuring - and it makes a change from the Tolkienesque fare, although I admit I do miss Level 9's Middle Earth period.

Steve Pickford of Stockport sent me a long and interesting letter some while ago, about *Erik*, including some helpful hints. "I haven't solved all the problem yet, far from it. I have scored 625 out of a possible 1000 - at the moment I am trying to get help from Al Kawasarmi, the great invisible wizard. To mend the boat, you

need the hammer and nails together with the Planks from the broken tables. The blue blade and the horn can be found by examining the bedding and the assorted rushes. The horn is needed to call the other villagers to help you pull the boat to the sea.

"To get the objects from the eagle, you need to feed it mutton and to get the silver amulet from the ledge, you must throw the polished stick (boomerang).

"When in the sly enchantresses room, you must pick up the chalice before killing her or she will send you back to the beach. The mirror can be used to reflect the magical fear that the dogfighters use on you at the farthest shore.

"To get the Tabby cat from the two Norse guards you must give them their two ounces of silver in the form of the bracelet. At first they don't believe you about its weight, so you will have to weigh it again in front of their eyes.

"To get in the cave on the hot rock, you should wear the helmet and to get through the granite slab to the cairn, you must hit it with the hammer. Once in these two locations you will need a source of light because you are attacked by a troll in the darkness. You are resurrected on your ship, where the Troll kills you again ... and again, thus using up all your lives. An irritating feature, possibly a bug, but serves to show that you must save your position before doing anything risky.

"I must congratulate Level 9 on fitting so many pictures into this game, though the colours go a little haywire on the Spectrum. Although the famous Level 9 compaction techniques are in evidence, the program responses are rather primitive in places - for example, when I tried to mend the boat with just hammer and nails, I was told: 'you have no planks' so no prizes for guessing what else I need to accomplish the task.

"I have just received a copy of *Adventure Quest* for the Amstrad, now all I need is for the Amstrad to arrive. The suspense is killing me!"

You must have the Amstrad by now, Steve, and I hope that you are enjoying the new adventure, one of Austin's best. Thanks for all the hints, I hope that they are of use to someone. If you want to help Steve in his quest for the Invisible Wizard, or want to ask for help in another situation, write to him (SAE, please) at: 11 Oldham Avenue, Offerton, Stockport, Cheshire SK1 4BG.

Adventure Helpline

Going bananas? If you are stuck in an Adventure with nowhere to turn do not despair - help is at hand.

Fill in the coupon, explaining your prob-

lem, send it to us, and a fellow adventurer may be able to help.

Remember - the system only works if those adventurers who have solved the puzzles get in touch. Every week is Save An Adventurer Today (SAAT) week!

Adventure..... on (Micro).....
Problem.....
Name.....
Address.....

This series of articles is designed for novice and experienced Adventurers alike. Each week Tony Bridge will be looking at different Adventures and advising you on some of the problems and pitfalls you can expect to encounter. So, if you have an Adventure you want reviewed, or if you are stuck in an Adventure you cannot progress any further write to: Tony Bridge, Adventure Corner, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

ACCESSORIES

NEW MD1b/WD1b for TAPE TO DRIVE TRANSFER

We have an improved version of MD1/WD1, renowned as the program to transfer more programs than any other - (see article in Your Spectrum No 14).

You now have a CHEAP but FLEXIBLE means of transferring the majority of your programs with our information sheets and software (not limited to a small list). Get much satisfaction and learn at the same time.

To transfer most programs to MICRO/WAF/DRG drive you MUST have this program. It gives you the tools to convert programs so that they will run on your drive. Includes ability to cope with x-ing programs, can split/zip bytes in one go. "VAL" creator, REMARK, make visible, etc. FULL manual with example transfers. For the latest programs you will need our TCT at £6.50 to convert to "normal" form first.

MD1b (WD1b for disc or Watative owners) costs a mere £5.99.

EXTRA program to CONVENIENTLY transfer converted bytes directly to drive with many other features (e.g. alter program names, stop programs, etc) buy M16 at £3. (Watative version is called WAFATAPE at £4).

NEW LERM INFORMATION SHEETS

Gives you INFORMATION required to transfer some of the latest more difficult POPULAR programs. Up to Sheet 2 now available at £2 each plus SAE (mask letter LIT).

UPDATE SERVICE: to latest version on your LERM product send old tape + large SAE to get a £2 REDUCTION. OVERSEAS: add £1 Europe, £2 others for each product. SAE for enquiries.

ALL PROGRAMS CARRY OUR MONEY BACK GUARANTEE (not applies)

8	(7)	Match Day (Spectrum)	Ocean
9	(-)	Starion (Spectrum)	Melbourne House
10	(-)	Finders Keepers (Spectrum)	Mastertronic

Winning phrase No 27: "Save Wales - Find a tenor" from Iain Gibson of Croftpark Road, Hardgate, Clydebank, who receives £25. Others who came close were "Ere, Alfie, Dallas is on TV - yawn" from Karen Rolph of Heaton, Tyne and Wear, and "8 wallies leave Dynasty" from S G Young of Garrowhill, Glasgow.

Now voting on week 29 - £25 to win

Each week *Popular* is compiling its own special software top ten chart - compiled by YOU.

And each week we will send £25 to the person who sends in, with their chart votes, the most original (witty, neat or clever - but never rude) phrase or sentence made up from the letters (you don't have to use them all) in the titles of the top three programs in this week's chart, published above.

You can still vote in the chart without making up a slogan - but you won't be in with a chance of winning the prize.

All you have to do is fill in the form below (or copy it out if you don't want to damage your magazine) and send it off to: Top 10, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2H 7PP.

Voting for Week 29 closes at 2pm on Wednesday June 12 1985. Entries received after that time will not be eligible for inclusion in that week's voting. The judges decision is final. Only one entry per individual per week will be allowed.

Name	My top 3: Voting Week 29

My phrase is:	

New Releases

LIGHT SHOW

Web Dimension is one of the more bizarre games Activision has released. It has overtones of psychedelia (both the game and the joss-stick ridden genre) in that the game is largely devoted to colour and music rather than plot.

The simple objective is to shunt around the strands of a web meeting up with various creatures which evolve up the ladder of evolution each time you are successful. Web strands flash different colours and music plays.

The actual game is so simple it becomes very boring very quickly, but since there are no 'lives' or scores, perhaps that's not the point. If you treat it as some sort of light show with music it's OK but not stunning - the music is not that marvellous and *Psychedelia* produces better effects.

The packaging is deeply irritating - it proclaims dramatically, "Over one hundred and fifty years ago Charles Darwin developed his theory of evolution... it's about time somebody made it hip". Hip? Reefers and John

Coltrane albums are hip. Charles Darwin deserves better. And as to blurb like that... gag me with a spoon, know what I mean?

Program *Web Dimension*

DESPERATE

A few more bits and pieces of independent QL software have been released recently. *Hungry Harry in Haunted House* is, unbelievably enough, *Pacman*.

Obviously the whole idea of a 68008 128k machine playing this most ancient arcade game of all ancient arcade games is pretty absurd and, to be fair, the company, Snowsoft, seems to realise this.

"It is not directed at the ardent games player but more as a form of light relief for the less technical players," it says.

In fact, the game is pretty bad - very slow with little attempt at character animation. It compares unfavourably with early Spectrum games.

On the other hand it's cheap for a QL program at £8.95 so I don't think anyone is being ripped off. If you're desperate for QL games I suppose it's a maybe.

AUTHENTIC

Quest, QL disc drive manufacturer, has started producing software for the machine. *Blackjack* is a (microdrive based) version of the old

gambling favourite and is a cut above most of the QL stuff we've seen recently.

Graphically, Quest has gone to great lengths to make what is essentially only a display of cards look interesting - when you bet you get a pile of chips (the casino variety) and you 'converse' with the dealer in little speech bubbles deciding what you'll bet and so on.

Blackjack on the QL also plays a more authentic game than most other computer versions of the game. You can double and split the cards, ie, try to win two separate 21s.

My only grouch is that there is an upper limit of £500 to the betting which tends to re-

strain my usually excessive betting style and can get a bit irritating. A QL game that actually looks like it's running on a powerful machine - but then it costs £18.95.

TEN YARD

To satisfy the blood-lust of us deprived American football fans (it happens to be the close season at the moment out there in the Land of the Free), Activision has released *On-Field Football* - an American football simulation. Such games to date have been very disappointing. This one, however, I like.

It is not a full blown simulation, with only four players per side, but at least it bears some semblance to the real thing, in that you can pass, run or kick, using the joystick to select from a number of quite complex, but easily learned plays.

The action is viewed roughly from above, scrolling up and down to accommodate, and the sound (cheering crowds) is good.

In all, it looks (and plays) quite like the arcade hit *Ten-Yard Dash* - and that's a compliment.

New Releases

CHARACTER

Short's Fuse is another one of the seemingly endless conveyor belt of games from Firebird. Because Firebird releases so many titles it's possible that some real goodies might get overlooked - that could have been the case here.

The reason why *Short's Fuse* is £2.50 is that it is unoriginal and doesn't use any new programming techniques. In every other respect it's great fun.

It's ladders and platforms with a rope thrown in, with you jumping around, grabbing moving platforms and all that. One new touch is that you have to collect detonators - get one and you have nine seconds to reach the next one. This means you have to plan your route carefully, since if your last detonator is too far away you've had it.

The graphics are surprisingly good, big and chunky with a lot of character and excellent value at £2.50. There are still a lot of companies around who'd put out this

for £5.95 or more. And the title doesn't alliterate!

ENIGMAS

Fantasia Adventure is a QL adventure of some merits, not the least of which is its price: £8.50. And it's not bad as an adventure either. SB Software has made some use of windowing for the different text sections, your input, items in sight, location description, etc.

At each location, possible directions are indicated but often you find that, in fact, a suggested direction is not available - you need the mystic key or something. You can type in strings of commands like *Take the Book then Read the Book then Drop the Book* whilst text is being printed - multi-tasking in action!

The plot of the adventure involves recapturing a hoard of stolen treasures and assassinating the evil emperor who is, like evil emperors everywhere, oppressing everybody in sight.

First impressions of the game were pretty good; lots of places to explore and lots of enigmas. My only bother was the speed - sometimes it seemed a while between text updates. On the whole, a commendably cheap and good quality release.

Program *Fantasia Adventure*

Pick of the week

WHEELER DEALER

Tir Na Nog was an extraordinarily inventive program. With it Gargoyle created some of the ground rules for the true assimilation of adventure and arcade. There were several ways Gargoyle got it right. Controls were reduced to around six essential keys, yet the game allowed for a wide range of actions and interactions, more in some ways than a conventional adventure - it could be solved in a number of ways. The graphics were detailed and, that elusive quality, stylish enough to give the game the atmosphere and involvement necessary if you're going to keep playing it for months. One last point - magic and myth, so often the stuff of adventures, usually mean clichés and silliness. By basing *Tir Na Nog* on authentic Celtic myth the plot had an authority and believability often lacking.

The problem with *Tir Na Nog* was one of scope - the playing area was just too large and disparate, the plot too difficult to unravel. Many people gave up impressed but exhausted. Now we have *Dun Darach*.

Dun Darach is *Tir Na Nog* tightened up with a more closely linked playing area,

and made more eventful with more characters, options to trade and gamble and technical improvements in character interaction, colours on screen and animation. You could say *Dun Darach* is a popularist version of *Tir Na Nog*. I think, maybe *Knight Lore* and *Alien 8* excepted, it is the most superb game I've ever seen on the Spectrum.

Dun Darach is a city with banks, ships, gambling houses, an old quarter and a castle, amongst other things. It looks, as graphically represented here, like a medieval town, with bottle glass windows, wooden doors and shops selling arrows,

tinctures, herbs and potions. The hero is again Cuchulainn who still stomps around like a grumpy skinhead but he is now joined by 11 other characters, a mixture of male and female, thieves, pickpockets, and burglars, a mystic, a courtesan and a sorceress. These are all presented in the same detail and level of animation as Cuchulainn himself - they all stomp around grumpily as well.

The task is to find and release Loeg, your trusted companion, imprisoned somewhere within the castle. This involves tasks and sub quests and a lot of wheeling and dealing - nobody gives you anything for nothing.

I'm just beginning to unravel the game. There are dozens of shops, rooms and other places to explore. Normally you buy goods in the local currency but if you get desperate you can always steal them, but this, as in the real world, carries a risk.

So it goes; compulsive, graphically excellent and taking some of the 'animated computer movie' ideas of *Valhalla* several stages further on. An essential purchase.

with a disc containing all the programs listed within it, so you don't have to type them in.

This is particularly useful since many of them are vast

and in machine code.

The book's stated aim is to 'set the BBC Microcomputer in its rightful place in the history of electronic sound development' - I think its rightful place is open to question actually; the Commodore 64 is proving far more important.

Nevertheless, it certainly is the most complete guide to using the BBC for sound you'll find. The authors are David Ellis, a well known computer music journalist, and Chris Jordan, who actually created the *Sound and Envelope* commands for the machine.

The book divides roughly into two big sections, synthesising sounds and composing. The first of these deals with some of the basic ideas behind sound, frequency, wave forms and the like. There are some excellent utility programs on the disc to help you use the sound chip resources more easily and make funny noises until the cows come home.

This section is also good on more general material about synthesisers and the history of electronic music. Similarly, the second section on com-

posing not only provides some excellent utilities but is good on the basics of music as well.

In short, an excellent book with some equally good utilities.

MAYDAY

Jump Jet is the latest release from Anirog and it's one of the most playable flight simulations I've seen in a long while.

Whilst the simulation of a harrier is fairly accurate, there are not so many controls that you can't get going with the game fairly quickly.

You begin with your harrier on the flight deck, the first task being to take off. This section is graphically very neat, with the screen showing two windows from a position alongside and in front of the carrier.

Get this section right and you get the fun stuff, which is of course blowing other aircraft out of the sky.

This involves some subtle cat-and-mouse flying and much use of radar and the range finder.

As you start to master flying the craft you can select higher skill levels where rough seas and cross-winds make life that bit more difficult.

Jump Jet also features some pretty impressive speech at various points, which is audible, understandable and

even sounds vaguely public schoolish. I'm getting very used to the cry of 'mayday, mayday, I'm bailing out'.

Jump Jet is a simulation which can demand a lot of skill at higher levels but which won't daunt the novice, which makes it a pretty rare thing.

Political leanings

Have you questioned the politics of your micro recently? No, not the Party Politics (capital 'P') of the true blue, Tory BBC; the Socialist Amstrad (a monitor for everyman); or the SDP Spectrum (a little of each political colour). I mean the more oblique political leanings of those innocuous little boxes and their sub-culture of paraphernalia and peripherals.

As a reviewer, seeing many games, I've been surprised by the number with work as their theme: *Technician Ted* in the chip factory, the night watchman in *Toy Bizzare* and a whole gang of labourers in *Everyone's a Wally* to name but three. This is, of course, in part a commercially determined trend. The heart of these games, the manipulation of sprite graphics around a screen, is not per se particularly tempting, so the writers develop scenarios. Work provides a handy rationale because it can be concerned with repetitive, structured routines just like those of the game.

But that's no reason for not asking why this particular trend in a country where unemployment, ignoring the disputed hard figures, has become a major political and hence social concern. Remember that the microchip is often seen as the prime enemy in the battle for jobs: computers equal redundancies is the popular view. Programmed robots will do the repetitive, stressful tasks, we are told, but here we are, glued to our keyboards, working against time and

impossible difficulty to mend gas mains, deliver parcels, etc.

It's an odd reversal; the computer destroys jobs yet caters for our leisure by providing games about doing jobs.

However, the computer games players are not, for the most part, redundant lab technicians, watchmen and manual workers but those who are faced most ominously with unemployment – those still at school. For some *Everyone's a Wally* could be the nearest they come to any task more challenging than signing on!

Set against this highly structured world in which everyone has set tasks and knows their place is the 'sudden death syndrome'. While the worker's aim is settled, around him/her chaos reigns. Toys run riot, Ted has no idea what to do and Wally's gang keep on hindering each other. The odds are against the individual and failure inevitably results in the sack (or the computer's metaphor for dismissal, 'Game Over').

It's a harsh world but instead of satirising it the games urge us to try again and work for the tyrant system. In life people with hard, mundane jobs grumble until those jobs are threatened, then they fight tooth and nail to keep them. This pattern is transformed into a pastime; pleasure is generated from banal, repetitive tasks (and if you don't believe me, play any one of them nine to five with three weeks' holiday per annum).

Still, there's always the chance that eventually we will win and the reality of redundancy is replaced by the presence of the 'Play Again' button. So the games tell us that really we have some mastery over this hostile environment of the workplace, lulling us with a false sense of well-being while re-affirming the virtues of the Protestant work ethic and obedience to the system, however unfair and insane it may be.

The ultimate conservatism of the genre is that the reward comes not from complaining but from total obedience to the rules, which sounds like a strangely Victorian value.

John Minson

Block building

Puzzle No 161.

My young nephew, Billy, discovered an interesting thing. While playing with his building blocks he found that three cubes of bricks, each respectively three, four and five units along the side, could all be transferred into a single larger cube with six bricks along each side.

Mathematically, this is expressed as $3^3 + 4^3 + 5^3 = 6^3$, although Billy, being only two years of age is much too young to care about such things. Had he been a bit older he might have appreciated the fact that bricks arranged in cubes of orders 11, 12, 13, and 14 could also be rebuilt into a single cube with 20 units along each side, and containing 8000 individual bricks.

If this same series (starting with a cube of order 11) is continued even further there will again occur a point at which the number of individual bricks could be combined to form just one giant cube. Can you say how many bricks would be needed to do this?

Solution to Puzzle No 156

The required digits are: 00727367190

```
10 LET A=7599
20 LET B=1
30 LET P=0
40 IF B<A THEN LET B=B*10:PRINT P,0:LET
  P=P+1:GOTO 40
50 LET D=INT(B/A)
60 PRINT P,D
70 LET R=B-(D*A)
80 LET B=R*10
90 LET P=P+1
100 IF P>7019 THEN END
110 GOTO 40
```

Obviously, the standard division function in the computer is not sufficiently accurate to calculate all 7698 places of decimals which are required to solve the problem. The program calculates the answer by a process of long division, performing the calculation in much the same way that it is worked out on paper. The results can be either printed out in full, or a tally can be included to just display the relevant figures.

Winner of Puzzle No 156

The winner is R W Spiers of Whitstable, Kent, who receives £10.

Rules

If the puzzle can be sensibly solved using a computer, the winner will have included a listing of the program used to find the correct answer.

The closing date of Puzzle No 161 is July 3.

Every pilot has the dream of flying one of these unique and complex fighting machines. Here is your chance to do what few pilots have the privilege to try.

Depending on your skill, confidence and courage, you have the choice of remaining near the landing pad, learning to hover and land, or venturing higher to practise your approaches. When you think you have mastered these, then accelerate the Jump Jet into an attack fighter. Use the radar and range finder to seek and destroy the enemy, by launching heat-seeking air-to-air missiles. Beware! His radar and missile systems are as good as yours. Reckless pursuit is ill-advised: you must maintain a fuel level that will enable you to relocate and return to the aircraft carrier, executing the skills you have learned to achieve a successful landing.

You are now ready to proceed to the next skill level to face additional hazards, such as unpredictable swell and treacherous cross-winds.

Be warned, this program is not a toy or game. You will need to co-ordinate your hands, eyes and mind to successfully complete each mission. Do not hope to achieve in a short time that which took the author three years to learn as a Jump Jet pilot, and over a year to record on this computer program.
