Spectrum to break £100 as 128 looms in January

AS THE launch date of Sinclair's Spectrum 128 machine approaches – now believed to be planned for either January 30 or 31 – its predecessor, the Spectrum Plus, is available for the first time for under £100.

WH Smith has just cut the price of the Plus down to £99.95. WH Smith's price applies to the Spectrum Plus itself, rather than the package containing software, joystick and interface, which the store is continuing to sell at £139.95.

"We felt this was a good move as people might well want to buy the micro on its own," said a WH Smith spokesman. "It's a unilateral move and does not emanate from Sinclair, and I don't know how long this offer will last. We'll see how things go."

The spokesman said the move had nothing to do with any impending new machine from Sinclair. After the proposed January launch of the Spectrum 128, it is likely Sinclair will follow by launching its 128K Spectrum compatible portable in April and the 3½

inch disc-based version of the QL in May.

The portable will apparently include a built-in green screen and microdrive.

The new QL will be similar to the present model except the four Psion software packages are likely to be in Rom and the Digital Research Gem operating system is likely to be offered as an option for the machine.

EDITORIAL

All but one of the major micro companies is fielding a new micro this Christmas. And Sinclair, the odd one out, looks set to come into line at the end of January.

The interesting thing is that all the companies have adopted the same approach for 1986. All have 128K versions of their present top sellers - the Amstrad 6128, BBC 128, Commodore 128 and Spectrum 128. In fact it is the first time that all the top companies are selling models with the same memory capacity.

Unlike the QL none of these are 'true' 128K machines. They all use bank-switching techniques and use the extra 64K in (usually 16K) chunks to store data, called up by the core program running in the other 64K.

So what will 128K mean for software in 1986? Quite simply,

programs will look good. Most of the additional 64K will be used by software houses for storing graphics information, and in the case of the C128 also music notation. Take a program like *Way of the Exploding Fist* for example. The complexity of the core program - the animation and logic of the fighting figures - would have to remain largely the same. But the backgrounds could be greatly enhanced, both in quality and number.

It is very likely that programs will be written to run automatically on both the 64K and 128K machines. The program itself will check which machine it is running on and on the 128K version the only difference is likely to be the number of screens available in an arcade game, an increased number of illustrations in an adventure or an increased maximum document size for a word processor.

'Having worked a lot with the Amstrad, I have found the Enterprise's 256 colours and their versatile use to be a big advantage - Ed Hickman, Mastertronic programmer'

Amiga planned for June in UK

MORE DETAILS are emerging of the availability of the Amiga micro in this country. Commodore plans to have machines in the shops next June, although NTSC (the American TV standard) machines will be here from March, and PAL (the British standard) prototypes in May.

The Amiga gets its first public display at January's Which Computer? show for business micro users (see *Popular Computing Weekly*, November 28).

The company has also an-

nounced that the Amiga will not be sold through high street stores, but through specialist dealers only. Commodore feels that the technology of the machine will be better understood and supported by the specialist centres.

Two software packages are to be bundled with the Amiga - *Kickstart*, which includes AmigaDos the operating system written by Bristol firm Metacomco, and *Extras*, a disc containing a tutorial program, Microsoft's ABASIC,

and demonstration programs.

Commodore will market three more entry-level titles under its own name in the UK - *Textcraft*, *Graphicraft* and *Musicraft*. All other software titles will be written and published by third-party companies. Commodore claims that already around 80 British software companies have Amiga development systems to work on. About 100 British firms attended a recent two-day software developers' conference held by Commodore last week.

Commodore is also pressing ahead with plans to launch a second up-market Amiga model - the Amiga 2 - before the end of 1986. It will be fully software compatible with the present Amiga machine.

MSDOS board for 6128

IBM PC compatibility for the Amstrad 6128 will be possible by April with the launch of an 16-bit processor MSDOS add-on board for the machine from Screen Micro.

The board will be launched around the same time that Amstrad plans to announce its own PC compatible business system (see *Popular Computing Weekly*, December 5).

"The MSDOS board will run in conjunction with our own memory expansion board, which will also be launched early next year," said Nigel Sinclair of Screen Micro. "It will mean that anyone with an IBM in the office can run programs on their Amstrad at home."

"So far, all the software we've tested run perfectly on the board, with the exception of *Flight Simulator*. But it will run *Lotus 1-2-3*, *Dbase II*, and *Symphony*."

The MSDOS board, memory expansion board and 6128 combination will compete with Amstrad's own PC compatible. Screen Micro hopes to be able to price the MSDOS processor board at around £299. Its expansion board (which also runs on the CPC 464 and 664) will be offered in configurations of 64K from 64K up to 512K, and includes a resident machine-code monitor, a 32K printer buffer, and an extra 22 Basic sub-set instructions. Prices for the expansion range from £99 (64K expansion) up to £159.95 (512K).

The company also plans a hard disc and controller for the 6128, and a disc drive for £399.

Further details from Screen Micro, 6 Main Avenue, Moor Park, Northwood, Middx (09274 20681).

Apricot drops F1 and F1e

APRICOT has announced it is to cease manufacture of its low-end F1 and F1e machines, and also its portable business micro.

These machines, with 256K and a built-in disc drive, were intended to give Apricot software compatibility for under £1000. The F1e was particularly targetted at schools and colleges at £685.

Instead the company is to continue with an enhanced version of the F1 with 512K Ram and a Gem interface at £999.

"We still have some stocks of the F1 and F1e, which will sell into 1986, but we're not manufacturing any more," said John Leftwich, Apricot's group marketing director.

"We felt that end of the market has become very competitive with ferocious pricing. We have made very little money with these products - the dealer margins were insufficient, and we were getting inadequately supported users as a result."

While he agreed that the decision reflected a shift in product profile to Apricot's top-end professional machines, John Leftwich said the dropping of the F1e did not signify any pull out from the educational market.

"We are still very much in higher education and have agreements with 35 universities and education authorities. But we felt that these bodies were just as interested in our Xi series, and the F2 and F10 micros."

New deal on Commodore 128

COMMODORE has announced new deal on the Commodore 128 machine.

Buyers of the C128 can trade in their old Commodore 64 when they buy the 128, and get £50 off the new machine.

For those without a C64 to trade in, Commodore has decided to bundle the 1530 C64 cassette recorder free with the C128.

The offer runs until January 31st, 1986, and is available, according to Commodore, from all major retail stores and many independent dealers.

"The offer is designed to appeal firstly to Commodore 64 owners who want to upgrade to a more powerful machine," said Commodore UK's marketing manager Chris Kaday.

The company also hopes to attract users of other micros. The free data recorder immediately gives the C128 running in C64 Mode access to the vast majority of Commodore 64 programs.

On the cards from Electric

CREDIT CARD software is now available for the first time in the UK from Electric Software.

The company has signed a distribution deal with NDSL to supply Astron Softcards for nine of its MSX titles, including *The Wreck* and *Shark Hunter*.

The software is carried on a Rom cartridge the same size and shape as a credit card.

Electric Software also markets an adaptor to fit on the MSX machine to slot the card into.

The company's marketing manager, Mike Hall, claims, "The industry has for years been totally reliant on the audio cassette for data storage. Mechanically unreliable and the target for mass piracy, it needs replacing."

The MSX adaptor costs £7.95. Prices for the cards range from £14.95 to £19.95 for *The Wreck*.

Tandy cut

TANDY has cut the cost of its 'Co-Co' colour computer for Christmas.

The 16K standard Basic version is now available for £49.95, the 16K extended Basic version for £69.95, and the 64K extended Basic version at £129.95.

File eraser

Issue No 48 contained an interesting routine from Mr R Abrahams concerning the ability to erase a file from within the *Tasword* program itself. I found the program very useful as it is pedestrian to have to break into Basic every time a file must be deleted.

However, while typing the program into my Spectrum I discovered a number of what I am sure are "typos" together with a line which unless altered will not allow the program to run. I have listed these below, line by line, so that your readers can benefit from this routine.

Line 22 (a) Colon should be a semi-colon (b) Insert 16 spaces between the words "File" and "e" so that it is printed correctly on screen. Line 180 The program will not execute correctly if left unchanged. Alter IF i >= 0. Line 8000 Insert a semi-colon between "Erased" and FLASH 0. Line 9010 Should read 8010 not 9010. Line 8020 (a) Insert a colon between INPUT a\$ and IF a\$ = (b) Alter IF a\$ = "

Spectrum defence

Thank goodness for Geoffrey Wearmouth's support of the Spectrum (Letters, 5-11 Dec 1985). Spectrum knocking seems to have become the great blood sport of the time, and it is good to read someone leaping to the defence of this endangered species. For the Spectrum is indeed a good computer.

When I 'upgraded' to a CPC 464 I expected my poor old Spectrum (a 16K, too) to be relegated to oblivion, or at least to the performing of secondary tasks. Not a bit of it. Its string handling is in many ways superior to the Amstrad's. (A\$(3), for example, is a good deal easier than MID\$(A\$,3,1), especially as the latter keyword needs to be typed letter by letter.) Assigning values to the Amstrad's MID\$ can sometimes be a problem, especially to a beginner.

I do a great deal of applied mathematics, and for this the Spectrum leaves the CPC464

standing. (Significantly, most people seem to have forgotten that the verb 'to compute' used to be synonymous with 'to calculate'.) The Val function on the Spectrum seems to be almost unique; it evaluates the whole string, and not just the value at the start of the string. This enables equations to be Input during execution of a program - a facility which I have found to be very powerful.

I have often read such phrases as "that abominable (or atrocious, or terrible) single keyword entry". What is the fuss about? Just because most computers have a QWERTY keyboard, it doesn't mean that they are designed exclusively for the use of trained typists, who may indeed find single keyword entry takes some getting used. Most micro users are not trained typists, and thus can be expected to find it easier to press one key rather than five, as in *Print*. (Six actually, since the Spectrum adds its own space after the keyword.)

I purchased my CPC 464 with *Tasword* and a Brother Mi009, so it is used for word processing almost exclusively. (I am the Hon Sec of a society, and edit 16 publications a year. Word processing is thus a major task for me.) When I want to compute, however, (sorry, I mean 'calculate') I reach for my beloved old Spectrum.

Useless box

If you are having trouble with the Currah Microspeech and Wafadrive, try this: *Poke 23734,0*.

This initialises the Wafadrive and makes it believe that it is a useless plastic box. At the end of your program use *Poke 23734,167* and the Wafadrive is one again activated. Some strange effects may be noted during the use of CAT*, but your program will function properly.

I also discovered that the Cambridge joystick would not work behind the Wafadrive, but that it fine between the Spectrum and Wafadrive.

Paul Gera

New toys

I would like to comment on some of the Ziggurat articles even if I am a mere tyro at the computer game.

One of the most interesting articles to me related to the change from eight to 16 bit micro design. Regardless of the benefits, it might just come as a shock to Mr Sinclair or Mr Tramiel that just because they happen to design an all-singing, all-dancing 16 bit doo-hickey, the market for such purely on price has to be more limited, and the development costs can never be really recouped.

The increase in Ram per chip is another area where there will undoubtedly be a revolution... When? If the development of the QL or the latest Commodore machines are to be the yardstick by which such development is to be measured then I will stick to my lowly eight bit, 64K machine for quite a while yet.

Just where in the great scheme of things do all of these new toys fit? We have to ask ourselves just where is the market for the new machines, because as a home micro user I cannot see myself being able to spend the kind of money involved.

I would say that these new developments have either a wrong marketing target or, worst of all, no target at all. If the home buyer doesn't like the price and the small business user doesn't like the facilities offered, then you are

indeed sunk.

Don't misunderstand me, I think the revolution in technology is very exciting; however, I don't think that it will all happen tomorrow or the next day for that matter.

Dave Race
Droitwich Spa
Worcestershire

No research?

I read with interest your article titled *Hardware Spectacular* (issue 21-27 November) and wish to comment on the apparent lack of research.

Although it is true that MSX is a standard (and therefore all software/peripherals are intercompatible) and most machines have high quality keys, etc, to say that the software is generally of poor quality is ridiculous. To go on to say that machines are 'supported by few companies' and 'most software comes from Japan' proves my point that little research was done. *MSX Computing* has reviewed over 300 titles to date (mostly UK titles) and has no fear of the glut of MSX software coming to an end. There are over 400 different MSX games currently available; the small majority from Japan are excellent and make most of the Amstrad offerings look very poor.

You can now buy an MSX 64K computer for as little as £69, and that must be one of the best deals around.

Fortunately, magazines such as yours, which misrepresent MSX, (although damaging sales at the moment) will do little damage to its long term success. MSX will succeed despite the current bad press and will be around long after the likes of Sinclair, Acorn et al have gone!

Neil Alldritt
Advertising Manager
MSX Computing
Haymarket Publishing

I cannot agree as far as software is concerned. Programs for MSX are fewer in number and often of less originality than for either the Spectrum or C64.

That said, at £69 MSX looks more interesting than it did a few months ago at £300.

Most home computers.

As you can see, the Amstrad CPC 464 is no ordinary home computer.

For a start, it comes complete with an integral cassette datacorder.

And in addition, you get the choice of either a superb quality green screen or a full colour monitor.

With £100 of free software to get you going all you have to do is plug in and start computing.

The 64k of RAM means you'll have plenty of memory to play with. And there are over 200 Amsoft games, that you

can play, many exclusive to Amstrad.

But games are only half the fun on the Amstrad CPC 464. In fact using it can also be quite an education.

The kids can learn spelling and arithmetic with software like Wordhang and Happy Numbers.

Whilst adults will love the way it helps around the house with budgeting and accounts.

Put the 464 to work and it will take care of a number of business-like functions, such as wordprocessing and spreadsheet.

The complete home computer.

To help you get the most from your CPC 464, there's the Amstrad User Club as well as a number of books and user magazines devoted to this most versatile home computer.

And your 464 will be made even more complete with the simple connection of joysticks, printers, disc drives, speech synthesisers and light pens.

But perhaps the most extraordinary thing about the Amstrad CPC 464 is the price.

Just £199 with green screen, or £299 with full colour monitor.

For more information about the complete home computer, all you have to do is complete the coupon.

Amstrad CPC 464
The complete home computer.

Amstrad, P.O. Box 462, Brentwood, Essex CM14 4EF.

"What's that picture supposed to be?"

"Er, eye-catching, that's what it's supposed to be."

"But it doesn't tell you anything about the great new icon-driven Battle of Britain strategy game, **THEIR FINEST HOUR**, from Century Communications, publishers of **THE FOURTH PROTOCOL**. I mean, what's it got to do with using your skill and judgement to stem the almost inexorable advance of Goering's Luftwaffe? Does it tell you anything about the deployment of Spitfire squadrons and ack-ack batteries, the allocation of fresh pilots, or keeping in touch with the weather forecast? How about the daily reports you have to make to Winston Churchill, and the pulse rate feature where you control the speed of the game?"

"Well, er ..."

"Right, we'd better hurry up and design a new ad before the game hits the streets on 9 December, and people start writing to and phoning Century Communications at 62-65 Chandos Place, London WC2N 4NW, Tel: 01-240 3411 and asking for copies."

THEIR FINEST HOUR

Their Finest Hour — a great strategy game simulating The Battle of Britain, by Nicholas Palmer and John Wilson. Published by Century.

48K Spectrum

Tyneside specialist

Newcastle is not the first place you'd go looking for one of Britain's best known computer games whizz kids – nor, in these days of 14-year-old genius, would you necessarily expect that whizz kid to be pushing 30.

But Rob Hubbard is a man who's made a career out of the unexpected. After all, nobody expects their Commodore's hard pressed 3-voice Sid chip suddenly to issue forth expensive-sounding, complex multi-part arrangements of real, original music either: but if you've got *Zoids*, *Monty On The Run*, *Crazy Comets*, or any one of a growing number of a slightly-special Mastertronic games sitting on your shelf, then you've had a taste of what it can do in the hands of an expert.

If, as has often been observed, the software industry is a re-run of the pop business, then Rob Hubbard must surely be its Phil Spector, a great original, extending the bounds of the possible, and masterminding hits for others. (How many so-so games have benefited from reviewers passing comment: 'another great soundtrack from Rob'?) The analogy goes further: Rob Hubbard writes *just* the music for other people's games, making him the only 'name' music specialist in an industry increasingly dominated by anonymous programming teams.

We're sitting in a decidedly low-tech living room in his Newcastle flat. On a desk in the corner stands a 64, disc drive, and (covered) printer. A perfectly ordinary black and white portable TV serves for a monitor, whilst a bit further along sits a brand-new Amstrad 8286. Unplugged. Next to that, the only visible musical instrument, a virtually prehistoric Casio portable mini keyboard. Discs and music manuscript papers are everywhere.

"I started playing music when I was seven," he begins, his native Yorkshire burr overlaid with a Geordie twang of nine years standing. A relative latecomer to computing, Rob was, until four years ago, plying his trade as a professional musician, and turning the skills gained from three years of music college to a variety of jobs.

"I've arranged for string quartets and pub-rock groups, worked as a musical copyist, and even pushed a knackered transit full of band gear through waist high snow at four o'clock on a January morning!"

Tyne Tees TV is currently filming a 'concept musical' he wrote a couple of years ago, *Work*, 'About life, society, and the whole bit, y'know?', but now computing affords the most satisfying –

and lucrative – creative outlet. Ironic really, since Rob bought his first machine simply to keep abreast of the impact computers were making in music. He was considering the ill fated Memotech (How history would have changed if he'd bought it...) but when the price of the C64 dropped to the £230 mark, Rob, intrigued by its musical facilities, took the plunge.

"I was completely self-taught, starting off like everyone else with Basic graphics routines, but the great thing about the 64 is how it encourages you to get into

machine coding. I think I wrote my first code routine after about two months."

Early forays into educational programming having elicited little response, Rob chanced upon the idea that was to change his life.

"There were already specialist graphics programmers – why shouldn't there be specialist music programmers too? I went for it... I guess my breakthrough games were *Confuzion* and *Monty*. Since then, I haven't had to look so hard for work." He laughs. In fact, his biggest problem these days is keeping up with the sheer volume of commissions. What's the fastest so far?

"That'd be *Commando* for Elite. They called me on the Wednesday evening, dragged me down to Birmingham on the Thursday, plonked me in a hotel room with all the gear at about 10 that morning – and I finished at about 8 the following morning. I still haven't seen the version that's on sale!"

Usually Rob takes about two weeks to complete a 'soundtrack', but the earlier he becomes involved, the better he likes it – and the more 'integrated' the results tend to be, as his work on another forthcoming Mastertronic games, *Gerry The Germ*, demonstrates. Supplied with a 'cheat screens' version ("I'm useless at

games"), Rob has come up with some truly disgusting sound effects (watch out for the Bladder and Bowel) and effective audio/visual links (ie, a stunning train sequence complete with whistle, and the clack of wheels over track) for this 'journey through the body' game.

He usually has about 4K of memory space to hit the music code in "... Sometimes as little as 3, never more than 6", and this leads to some hard decisions.

"Basically," he explains, "You have to take your pick – either a 'soundtrack' running all through the game, with a few effects thrown in at the right moment, like the motorbike in *Commando*, or sound effects for *everything* that happens, and no music. It depends on the game: in *Commando* there's so much happening on screen that if you had

sound effects for all of them, there wouldn't be any point in having music... Generally, I do both music and sound effects on a game, though people seem more interested in the music now...

"I think the key for me as far as programming goes was understanding interrupts – 98 per cent of games work on Rasta interrupts. I just make sure my music routines are run from them... As time's going on, I've built up a set of routines which let me do everything a lot more efficiently... For instance, I like Pitchband, and use it a lot – a routine I developed while working on *Monty On The Run*. I also like things to sound rich, not wimpy. I think my experience of sync programming has been of help there: I've got two Pulse width routines, a short one and a long one, and a vibrato routine – between them you can get some great sounds. Ring Mod and Sync are the most versatile things to use on the Sid chip though – they are hard to use, because they take two of the voices, but are your best chance of getting distinctive sounds.

"I soon worked out that as long as you keep *something* going – the bassline, or percussion – you can 'steal' the other two voices for a quick effect or impressive

noise. On *Commando* I've taken it to ridiculous extremes - voice 1 carries the tune, with the second and third voices flitting all over the shop doing different things. In comparison with someone like the American kid who did *Master Of The Lamps* for Activision, my routines are very efficient. Although I admire his work, it's very wasteful of memory, at least, from what I could tell from his coding."

He laughs: "You can break into any Turbo with a machine code monitor and a bit of patience... it's very educational!"

"Anyway, the impression of so many voices playing at once is most helped by proper musical arranging, as much as being a programming whiz."

Results are monitored over the 'typical punter system' used for all his work.

"It's like a recording studio, listening to the final cut over tiny monitors - if a track sounds good then, you know it will when people play it at home." The spartan approach extends to programming aids.

"I've got a couple of Turbo loaders for the disc drive, and Andrew Trott's Assembler Package, but that's about it. I was impressed with the Orpheus *Electrosound* music utility - with that, someone who knows what they're doing should be able to put me in the dustbin - but the manual's about half an inch thick

and it's not very user friendly... I wouldn't write one myself, for the same reason. I don't think I could make it friendly enough."

Does his own taste in music influence his writing?

"I make a point of listening to the Top 40 every week. After all, most of these games sell to kids, so what's the point of putting in an obscure classical piece? They need to hear something they can relate to... One of my own favourite tunes, *Crazy Comets*, was a compromise between New Order, who I like, and a funk 'slap-bass' sound... it all depends. Sometimes the tunes are totally original, sometimes I adapt things, and make them my own. *Monty* was like that - it started out as the theme from the old radio detective show, *Dick Barton*!"

Rob now feels that he has got the best he can out of the 64:

"I'm probably going to carry on working with Mastertronic: they now pay me over five times what I started out getting! But I'm also keen to do other things. I can push the Sid chip to its limits but I don't think there's much more soundwise I can get out of it. Of course, as a programmer and a musician, I'm very keen to get my hands on an Amiga - built-in Midi, Fairlight compatible, 4-channel stereo (pennable, I hope) - I've even heard that the sounds are produced digitally like the DX7 [Rob's got one, and plays it in a

local club band, whenever he gets the time]. Obviously, I hope it sells - because if it does, there'll be a lot more work for me! Though I do wonder if it's the right machine at the right time.

"I bought the Amstrad simply because there's so much work around for it. Frankly, though, it's like going from a Rolls to a Morris Minor. The monitor leads are too short, the speaker's pathetic, and the sound chip! OK, the graphics are good, and the disc drive is unbelievably fast against the Commodore - though not as reliable. I've lost stuff on it already, and that's never happened on the 1541, despite a lot of hard use. But as a programmer, I find the Amstrad unfathomable. Maybe I'm impatient, coming from a machine I know inside out, and immediately wanting to jump in the deep end. I'm transcribing some of my Commodore work for other people to code, but I think it'll be a long while before I do anything commercial myself on it."

Rob smiles.

"Do you know what I'd really like to do? If I had the choice now - I'd be playing in a straight-down-the-line, honest-to-God blues band!"

Fortunately for music lovers everywhere, the man who made the 64 sing looks like staying with keyboards of the Qwerty variety for a little while longer.

Tony Reed

Bulletin Board Survey

A beginner's guide to treading the bulletin boards

To most micro enthusiasts, networking is probably the most confusing and least understood area of home computing.

Most people think of networking as services like Prestel and Micronet 800. While these 'professional' services are interesting enough there are also now several hundred 'bulletin boards' around the country with which you can talk.

Most are set up and run by fellow computer enthusiasts and finding your way around the 'boards' is tremendously exciting.

To access a bulletin board you will need a computer, preferably colour (the BBC is ideal because of its teletext mode - this is the mode which many boards run on), and a modem with a communication speed of either 300/300 baud or 1200/75 baud or ideally both (a second-hand one should be about £50). You will also need a phone extension in your computer room and have to be prepared to see a sharp increase in your phone bills.

Bulletin boards offer a number of services, some of which may include technical help, sales and wants, telesoftware, lists of other bulletin boards and what's new in the computing and modem world. The fun in 'walking the bauds' is finding out what each one offers and talking to new people. Every bulletin board is different so 'phone around to find the ones you like most.

My favourite is 'The Micrognome' which is running on 1200/75 and can be contacted on 01-888 8894.

Any home computer should be suitable although if - like the Spectrum - it doesn't have a serial interface, such as an RS232, you will have to make or buy one for between £30 and £40 depending on the micro. On the Spectrum the most popular modems are designed to plug directly into the user port.

The modem is probably the most unfamiliar part for the newcomer. Modem stands for modulator demodulator. It takes an instruction or some data and converts it from a line of text on a screen to noises similar to those made by a computer program on a tape, only at a different tone. This alteration of tone is necessary to help prevent loss of corruption of data as it travels down the phone line. The receiving modem at the other end then converts the noises it receives to the correct data or set of instructions.

When you buy a modem it will have transmission/receiving speed of either 1200/1200, 1200/75 or 300/300 or a combination of these written on the box or in the accompanying blurb.

300/300 baud was the first speed used on a large scale and it is still very popular, especially in the USA. Many

boards in this country are 300/300 and it is still the most popular speed but 1200/75 is quickly catching up in popularity. About 59% of the bulletin boards in this country are 300/300, 30% are 1200/75 and 10% are both 1200/75 and 300/300. The other 1% are run at wierd speeds such as 600/600, 1200/1200 and 2400/2400.

Many modems which run at 1200/75 also run at 1200/1200, this is because the two speeds are easy to mix on one modem at a low cost. Speeds like 1200/1200 tend to be used for user-to-user communications rather than for connection to a bulletin board.

There is one more thing I should mention. This is full- or half-duplex. Full-duplex allows communication in both directions at once while half-duplex allows communication in only one direction at a time. An example of full duplex is when you are talking on the phone, you can hear the other person at the same time as you are talking to them. A walkie-talkie is an example of half-duplex, it you wish to talk to the other person then you cannot hear them while you are doing it.

Please be polite when on a bulletin board as it is more than likely being run by a person just like yourself. If people are rude they may decide to close down and this would spoil it for them and others.

Most bulletin boards are colour and use a 40-column display but some 300/300 boards use an 80-column screen.

How good your modem is really depends on the quality of the communications software. With most popular

you. The VTX 5000 modem for the Spectrum is an example of a modem with its software built-in.

If you have a modem but no software and you don't feel that you are an expert at programming then I would advise purchasing some rather than writing your own.

The procedure now will vary from modem to modem and from software to software.

How do you log on? If your modem has an auto-dial facility then you will not have to even touch the phone, it will all be automatic. If you have a non-autodial modem then follow the procedure below which shows how to log on or dial up a bulletin board.

If you have a VTX 5000 then this is the correct procedure for you to use.

Before dialing always check that the bulletin board is operating at that time of day.

Also check that it runs at the correct speed for your modem - if it doesn't then the board will not work with you and your modem so look down the list of boards for one that does run at a speed compatible with your modem.

The logging on procedure is as follows:

- 1) Turning on the computer, with the modem plugged in.
- 2) Work your way through the software until a message similar to 'Phone computer' is displayed on your screen.
- 3) Pick up the receiver.
- 4) Dial the number of the bulletin board, eg, 01-888 8894 (The Micrognome).

modems the software is contained in Rom, in other words it doesn't have to be loaded from a tape or from a disc. The software may be a cartridge, a sideways Rom or it may be built into the modem. The BBC and Amstrad computers both have sideways Rom sockets so the software is likely to be on a sideways Rom. On a BBC to plug a Rom in you have to first take the top off of your computer, next you must unscrew the keyboard. You will then see on the right-hand side a number of Rom sockets and typing in the correct command, having put the top back on the computer, will cause the software held in the Rom to be executed, and work as if it had just been Chained from a tape. If you don't feel happy about this then your local dealer will do it for

- 5) If the number is engaged hang up and either try again in a few minutes or try a different board. Very early morning two - five am is often the best time as most people are asleep and don't bother trying to log on at that time.
- 6) If a person answers the phone it is likely that you dialed a wrong number. If so apologise and hang up.
- 7) When you hear the carrier tone (a low pitched hum or whistle) go on-line. To do this you will either have to switch a switch or press a button, marked on-line.
- 8) Replace the receiver.
- 9) Follow the on screen instructions.

Having logged on, the bulletin board is likely to display a title page.

Bulletin Board Survey

Type in your name and for some boards a password or your phone number. Next you will get a menu giving you the basic options. Below is the menu for the Micrognome.

Press the number corresponding to the option that you require. On the Micrognome for example one of my favourite options is the Babble Board. Option No 9 The Babble Board is a series

```
The Gnome at Home      HALLOa
Hello There!           Please enter...
David Wallin          #+ YOUR NAME here!
This screen is         3+ chars please
for PCW                #+ And anything else
                        ** to clear noise
                        #+ you can fit in..
```

```
Please enter your name or pseudonym
as you log on, it's good to know who
calls and when you send us a message
we'll all know where it came from..
```

Home of the Gnome
MicroGnome

of pages which logger-oners can leave messages to all other modem users. These can be anything from adverts for pirate radio stations or other bulletin boards to recipes for stewed Spectrums to lots of jokes. a similar feature to a babble board (not offered on the Micrognome) is electronic mail. This is similar to a babble board except only the person for who the message is intended can read it.

The opposite to logging on is logging

```
The Gnome at Home      0a
Home of the Gnome
MicroGnome
DA
Help! New Readers - please key 0
131 Have fun! Please leave by 16:45
```

off. Surprise, surprise! Different boards have different commands for logging off but it is likely to be one of the following commands; *90, *91, *900, *901, *BYE, *bye, *log off or *01

The one to use will depend on the software that the bulletin board itself uses. When you type the correct one (*90 on Micrognome) a farewell message is displayed.

Never just hang up on a bulletin board as it can't tell that you have and will assume that you are still on-line to it. If this happens the board will be engaged for other users.

And that's all you have to do to get on to the boards. Just don't go and break into the bank of England central computer without telling me how to do it. Anyway the bulletin board list below includes as many boards as I know. Read the list, phone them up and have fun.

David Wallin

When it comes to computer games you can't beat an Amstrad.

We've enlisted the help of some particularly wicked program designers to put our entertainment software range together.

They've come up with over 200 Arcade and Adventure games.

Many of them exclusive to Amstrad (like those shown above). All of them mindbenders you'll find hard to beat.

And all at prices that are as competitive as the games, from £12.95 on disc and £8.95 on tape.

But the software is only one of many good reasons for buying an Amstrad computer.

The 64k CPC 464 computer comes complete with built-in datacorder and a choice of green screen or full colour monitor.

The CPC 6128 is a big memory 128k computer with built-in, fast-loading disc

drive and again, it's own colour monitor or green screen.

Both are available at an all-inclusive price you'll find hard to match.

In fact, with Amstrad's unbeatable software, unbeatable hardware and unbeatable prices, how can you lose?

PCWY/S/2
Tell me more about the Amstrad range of software.

Amstrad Loads more fun.

Amstrad, P.O. Box 462, Brentwood, Essex CM14 4EE

YOUR PLANET
NEEDS YOU!

STRANGELOOP

The massive, desolate factory that services the EARTH orbits silently in the vast DARK WASTES of space.

STRANGE THINGS have been observed from EARTH, very strange indeed as there are NO HUMANS on the factory, it is maintained and controlled by a clever series of ROBOTS, programmed only to serve.

How could the ROBOTS possibly be SABOTAGING happenings on EARTH unless they are somehow being REPROGRAMMED? Intrepid investigation is the only way to find out exactly what is going on...and it must be YOU!

250 rooms of EXPLORATION, PUZZLES to resolve and CURIOUS ROBOTS to meet. GRAPHICALLY STUNNING, full of ACTION and AMUSING encounters, this is arcade adventuring at its absolute peak.

This what they were saying about STRANGELOOP before they even saw this version

"Strangeloop is unique, graphically impressive, vast, and devious; in short, brill..." *Personal Computing Weekly*

"...you've got to use your brain as well as your joystick...Strangeloop graphics are superb...a real Screen Star if ever I saw one" *Commodore User*

"This is a very big and superior arcade adventure...an elegantly designed game" *Your Commodore*.

and for only
£8.95

Remember "SORCERY" this year's most ACCLAIMED title for the AMSTRAD? Well VIRGIN GAMES' unrivalled reputation for AMSTRAD software is upheld again with the Gang of Five's latest MASTERPIECE.

Weak jokes

Program *Three Weeks in Paradise* **Micro** Spectrum **Price** £9.95 **Supplier** Mikro—Gen, Unit 15, Western Centre, Bracknell, Berks

How fitting that Mikro-Gen, home of Wally, are based in Berks. The fat little fool made his fortune doing odd jobs and now, reunited with his son, has decided to take the family on holiday. No surprise then that with Wally at the helm they ended up on an island inhabited by the Can Nibbles tribe who immediately appropriated Herbert and Wilma for their next meal.

Fans of this series will already have an idea of what to expect as they move the desert island dimbo round the jungle and through a lot of unlikely locations in the

search for solutions to his family's fate. It'll come as no surprise that the clues are cryptic as ever and once, after much effort, you find the connection between objects

you'll kick yourself for not seeing the visual pun before.

New to this game is the ability to pick up, drop and use objects in various places, which leads to added subtlety in play. It's probably the most difficult Wally game yet. It's also the funniest.

There's still a certain amount to dodge though less than in the previous games, but the screens are full of amusing animation and poor Wally's loss of life routine is great fun.

I actually enjoyed this more than the previous games in the series. It marks a giant step forward for the morons of this world.

John Minson

Brave speech

Program *Speech ROM* **Micro** BBC **Price** £28.00 **Supplier** Computer Concepts, Gaddesden Place, Hemel Hempstead, Herts HP2 6EX.

For most Beeb owners the upgrade to speech processing comes a long way down their list of add-on priorities it may sound like fun but what does it actually do? But Acorn's speech system is rather off-putting to fit – a couple of chips (fine), more internal wires (okay) and the left of the keyboard cluttered up with sockets for plug-in cartridges (forget it).

Now, thanks to Computer Concepts, there is an easier, cheaper and more versatile option that leaves the BBC looking much as before: and, thankfully, you can fit it yourself in a matter of moments rather than having to have the Acorn system fitted by a dealer. The package couldn't be simpler: a chip and a manual.

However, you will also need the Texas Instruments TMS Speech Synthesis Processor chip – as used by the Acorn system. These are not hard to track down and Computer Concepts will supply you with one for an extra £10.

The TMS 5220 takes speech data from a serial Rom in the Acorn system – this gives good reproduction, fixed intonation and a limited vocab-

ulary. The Speech Rom takes a different route: it drives the processor directly, allowing you to construct any English word with a wide range of intonation through stress and rhythm control. It can even sing!

The Rom takes two pages of memory unfortunately, but cunningly does not require this permanently. You must enable it before use with the command **Spon Return* followed by *Break*. Although the OS won't allow memory pages to be allocated except through a *Break*.

However, after initialisation it is reasonably easy to use –

the command structure makes sense and practice soon pays dividends. Using **Utter*, you first need to decide on an intonation pattern – there's a choice of up to 24 tone patterns ranging from neutral through tentative to resignation and even grudging agreement. Great pleasure can be had changing the intonation of standard phrases.

The tone pattern and the rhythm of the word (marked by + in front of each vowel with a beat) together with word emphasis (* in front of the most prominent vowel of the emphasised word) pro-

duce wide range of possible intonation patterns.

Once you have a pattern, the next step is obviously to work out the pronunciation. The Speech Rom gives you a choice of 54 individual sounds to generate the entire English dialect – 'computer' for example, would be spelt with eight separate sounds: K UH M P Y OO T UH. Although the comprehensive manual does slip some way into the science of linguistics, most of what is discussed is vital to an understanding of speech.

Dave Reeder

Maze

Program *Chimera* **Micro** Commodore 64 **Price** £3.95 **Supplier** Firebird Software, Wellington House, Upper St Martin's Lane, London WC2H 9DL.

With a scream akin to one who is trained in the martial arts, the word *Chimera* comes tearing out of my TV speaker to herald the start of this new arcade puzzle from Firebird's Super Silver range.

The price may be budget but the game certainly isn't.

The first thing you notice apart from the speech is the great music complete with some excellent drum effects. The second thing you notice

is that although the game is yet another in the *Alien 8* look-a-like contest, it's immensely playable and leaves you every time you get killed off with the feeling of "well, just one more go."

The plot is a familiar one; you are transported aboard a strange silent spaceships which while orbiting the earth has its weapon systems primed and targetted on us poor humans. The task is to find the obligatory self-destruct mechanism on the ship, initiate it and get out as quickly as possible. Fortunately, those caring aliens left heaps of food and water lying around to keep you going, so it's shut the airlock time and lets be on our way.

Graphically, it is very reminiscent of the now familiar *Alien 8* type maze. It's very

nicely drawn, allowing you to wander around the ship until you find objects which make up other objects which will ultimately be of use in the final stages. Messages scroll across the screen giving out relevant information and help, along with your current food and drink supplies.

Great value and very

entertaining.

Andy Moss

Headbangers

Program *Fighting Warrior*
Micro Amstrad **Price** £7.95
Supplier Melbourne House,
Castle Yard House, Castle
Yard, Richmond, Surrey.

Though *Fighting Warrior* suffers by comparison with *Way of Exploding Fist* (also by Melbourne House) the game has much to recommend it.

The animated fights have all the detail of *Fist* with the addition of some vicious club swinging and hand banging.

The Amstrad version has been deftly converted with the monitor graphics adding even more detail to the violence. The plot remains the same, you look like some sort

of Sanhedrin labourer and as you trudge across the desert landscape get embroiled in a series of fights with mythological creatures, many of which play dirty and try to club you with wings and tails - parts of the body you lack.

There are other bits and bobs to the plot - scattered around are what look like vases, take a swipe at one and you get extra energy or a similar bonus.

The actual fighting mechanism is not as complicated as *Fist* and the game is not as satisfying to play. Nevertheless, some skill is required, it is very bloody and vicious and destined to be a success just like the Spectrum version.

Graham Taylor

Program aid

Program *Master Tool Kit*
Micro Spectrum **Price** £8.95
Supplier Oxford Computer
Publishing.

Master Tool Kit is a machine-code tool kit for Spectrum Basic programmers.

The kit occupies 7.5K of Ram, leaving about 31K on the 48K Spectrum free which is enough for most programs. (It also works on ye ol' 16K Spectrum but you would be very pushed for space.)

It offers over 40 commands from the simple *free memory* command to some quite involved ones which would seem to do everything except write your program for you.

All the commands are well documented in a thin but compact handbook.

There are many compressing and memory saving commands: the usual purging down of Rem statements command, and some more sophisticated ones which concentrate program lines, and do some magical compression on the hidden binary forms of Sinclair Basic. Also included are *Find* and *Substitute* commands which save a lot of drudging though endless programs.

Debugging is well catered for, there is a *Trace* command and a command to display a table of all the variables and their values. Even error trapping commands are provided, though unfortunately any error trapping will not work when the tool kit is removed.

Your choice

Program *Seas of Blood*
Micro Spectrum **Price** £9.95
Supplier Adventure International, 85 New Summer Street, Birmingham B19 3TE.

Which came first, the adventure game or the *Fighting Fantasy* book? If you thought Steve Jackson and Ian Livingstone's highly successful range of multiple choice narratives were merely low tech computer adventures, think again, because now one of them has made it to the micro.

The plot for this one has you as a clot. . . sorry, pirate in the Sea of Blood, searching for 20 treasures to deposit on the top of a mountain, which is probably as good a place for them as any. Being a seafarer you'll spend much of the time on your ship, the *Banshee*, using the command *Sail* followed by a directional, which, it took me an age to realise, cannot be abbreviated.

The format is standard Adventure International, which is to say three part screen, the

top part taken up by some pleasing illustrations. What's new here is the combat system, based on the book so closely that you even get as rolling dice graphic! On land you can run away to live another day, but at sea you stand and fight like a sailor. Actually there's a chance to stop the dice at their optimum score if your finger's fast enough.

The freedom of the ocean certainly gives this a slight role playing feel, but one thing I remember about these books is their lavish descriptions. The micro reduces atmospheric prose to a few lines. There are too many sudden deaths for my liking, which seems unfair when you can apply skill in combat and there's no memory Save. I also found the vocabulary unfriendly at times.

If you like Adventure International products you may like this, though the price seems rather steep, and the addition of *Fighting Fantasy* features is less than wholly successful. In this case I'd rather read the book.

John Minson

Toolbox

Program *Oddjob*
Micro Any Amstrad CPC **Price** £9.95
Supplier Pride Utilities, 7
Chalton Heights, Chalton, Luton, Beds, LU4 9UF.

Pride's latest release is an extremely powerful and quite original disc users toolbox. Some are invaluable tools and some are just curiosities but overall it is well worth the money.

The program offers, amongst other things, a directory editor to restore files, hide files from the directory (as used in games like *Sorcery Plus*), set files to Read Only or vice versa etc. The

restore feature has already saved me from disaster.

There is a very useful *FastFormat* program that not only whizzes along at twice normal speed but also lets you format in IBM mode (normally the CPCs can read/write IBM format files but cannot create or copy the discs).

Another original touch is a program that speeds disc access up by 20%, until the machine is completely reset. I was surprised by how noticeable the effect is on long files but it is really a bit of a luxury.

There is a *Discclone* utility that will handle damaged or illegal disc sectors and a sector editor.

Tony Kendle

Most of the new commands are only one or two characters but just in case you find this too strenuous a user-defined function key feature has been provided. A save-to-microdrive option is included which is very welcome, and

another nice finishing touch; an on-screen clock.

I was impressed and would recommend it for the serious Spectrum user.

Jon Prestidge

Words worth

Program *Tasword 6128 Micro* Amstrad 6128 - **Price** £24.95 **Supplier** Tasman Software, Springfield House, Hyde Terrace, Leeds LS2 9LN.

This is the very latest version of Tasman's word processor for home micros, and is certainly the most interesting.

I started using Tasman's program some years ago, on the Spectrum. Several dozen articles and a couple of books later, I have to admit to a sneaking fondness for it, even though a more streamlined disc-based American word processor has taken precedence in the last year or so.

This then is the disc version of *Tasman* for the Amstrad

6128. As well as using the disc it sets up a Ram disc for handling files while moving between the text and the main menu.

Much has been written of the various examples of this program, so I won't go into all the tiniest details of text handling possible with this utility. Requirements such as block moving and erasing, search and replace, tab and margin commands, headers and footers, word-wrap and paragraph justification, and very quick file-handling are all supported, as well as a unique on-screen notepad facility. Compared with more expensive systems, some of the commands are ultimately lacking and it is a little slow but, balancing this is the extensive and well-written manual, the comprehensive printer tutorial and very useful customising procedures,

which enables the user to re-define much of the operating environment.

Professional users may want to use something a little more powerful, like Arnor's Rom-based *Protext* (£40-plus), *Pocket Wordstar* (£120) and Newstar's fabulous *NewWord* (about £70, I believe), all out-performing *Tasword* in certain departments, and Amstrad's own PCW 8625 word processing system, which is an almost irresistible alternative.

But for the home user who just wants to produce neat letters, and the small businessperson or club secretary who wants to use the powerful mail-merge facility in conjunction with Campbell System's *Masterfile*, then *Tasword 6128* is a very worthwhile program.

The only doubt I have is about the program's robust-

ness - the Spectrum version was always a little nervous when getting full (about 300 meagre lines in that case), and this present version appears occasionally to lose the first few characters of a file when being saved. While text appeared to be otherwise safe (the last thing a writer wants is several thousand words disappearing up his computer's Ram), nevertheless, full files (65,000-odd characters on the 6128) did cause the program to lock up, requiring the user to erase a few words in order to regain control.

At the price, though, and with the companion *Tas-Spell*, Amstrad owners are lucky indeed to have such a sophisticated word processor to use.

Tony Bridge

Head to come

Program *Fat Man Sam Micro* BBC **Price** £3.95 **Supplier** Firebird, Wellington House, St Martin's Lane, London

Oh no, this has got to be the worst platform game I've seen on the BBC. Not only is it a Miner Willy copy even down to the little dancing men doing a sad version of the Conga, but the instructions are awful and

also incomplete. The box inlay states keyboard only - I played it using a joystick and it worked perfectly well. You can select any screen from the first ten to start from - this is not mentioned in the in-

structions and the platforms in the game are so difficult it's almost impossible to play. OK, I accept that if games are easily completed they prove no challenge, but *Fat Man Sam* is just the opposite - it's too difficult and fussy! I cannot understand why Firebird have released this under their Super Silver range, because apart from being two years out of date it's not up to the standard of their other releases.

True, there are 40 screens to play though and the graph-

ics are quite pretty but it's boring in the extreme and there's really no music to speak of. Practically every thing on screen is deadly apart from the objects that have to be picked up and unless you are a platform expert you won't get past screen one.

Sorry, Firebird this is a very poor release and even if it was priced at £1.99 it would not be value for money.

Andy Moss

Tally Ho

Program *Their Finest Hour Micro* Spectrum 48K **Price** £0.00 **Supplier** Century, 12-13 Greek St, London W1V 5LE

It was midnight when Winston summoned me to his bunker. The hun had swarmed over the channel in huge formations of planes to blast airfields, bomb ports and wipe out radar installation.

"The cabinet," Winston growled, "has decided to ask for your resignation... cataclysmic losses... war in the air lost..."

Winston's bombshell at the end of several hours struggling to stem the Luftwaffe

tide was one of the most emotionally upsetting experiences I have had in computer gaming. In part, no doubt, it's due to the power of that familiar face staring out of the screen but it's also a result of the cleverness of that old fox Nicky Palmer and the absorbing nature of the game he and John Wilson have designed.

It's an excellent adaptation of the Battle of Britain in which the player controls the RAF and attempts to protect Britain from German bombs while shooting down as many German bombers as possible and losing as few Hurricanes and Spitfires as possible. As the little crosses which represent Luftwaffe raids swarm over the south coast the player is stretched to the limit, keeping track of them, planning inter-

ceptions and generally taking charge of 10 RAF squadrons.

The game looks good and feels good and uses some excellent and innovative windowing techniques. Although it would be improved with some readily available chart that would instantly present the stamina of each force (they vary from rested to 'end of tether') and the alert status of each. There is no way of checking the latter so a player can often forget which forces are sitting in their cockpits waiting for the call to arms and getting exhausted.

My major problem with the game is that it totally fails to tell you how it assesses victory conditions. Presumably Winston and the cabinet consider strategical objectives

before they fire you, so why can't the player know them too.

There are also some programming bugs. The game crashed on me once ("It's in the drink, Sir, off Dover") and I won one game with an absurd kamikaze blitz after a huge Luftwaffe attack had resulted in all my aircraft being shot down. The computer promptly boosted the strength of the non-squadron to '655' planes (it had been 27) and I merrily destroyed the main German strikeforce with it.

Also there are the mysterious Heinkel squadrons which hover above Hampshire all day and can't be attacked.

Peter Berlin

Spinning top

Program *Gyroscopic Micro*
Commodore 64 Price £7.95
Supplier Melbourne House,
Castle Yard House, Castle
Yard, Richmond, Surrey.

This is an incredibly simple yet deviously addictive program from Melbourne House, based loosely on the arcade hit *Marble Madness*.

All you have to do is guide your spinning gyroscope down a superbly created 3D course full of craters, slides, and narrow paths, till you reach the bottom and then process to the next. Sounds simple doesn't it - not so, for I spent hour after maddening hour trying to negotiate the humps and hollows only to come to grief each and every time. There are 30 different courses to complete with a

promise of a real surprise at the end.

As if just guiding the gyro is not enough, there are numerous other obstacles standing in your way like slipping glass, magnets and little aliens which always appear in the most annoying places.

Time is important, too. The quicker you finish each course the more points you will accumulate and for every 1,000 points gained you get another 'life'. If the timer drops to zero the gyro stops spinning and its curtains.

One niggle is in the instruction leaflet, we are told we start with seven lives, in fact, you only get five, an unusual oversight for the normally meticulous Melbourne House. This aside, it's a glorious game for those with the patience of a saint - and nice music too.

Andy Moss

Rom at the top

Program *Inter-Chart Rom*
Micro BBC B Price £36.80
Supplier Computer Concepts,
Geddesden Place,
Hemel Hempstead, Herts HP2
6EX.

Most people don't like figures but can grasp pictures quickly and easily.

If you have to present the club's accounts, explain to your partner where you find the cash to buy a disc-drive, show to the uninitiated the results of a scientific experiment - then graphs are the answer.

Drawing graphs can be a pain - or you can use *Inter-*

Chart, the zippy chip that makes drawing graphs as easy as pie.

Computer Concepts has produced a chip which makes it a positive pleasure to prepare graphs, bar-charts and pie-charts. Plug it into your BBC and by typing *IC. You find a familiar menu deliberately designed to be similar to that used by *Wordwise*.

It is extremely simple, yet if you want to specify your graph in minute detail you can have a highly sophisticated one in a very short time indeed.

You start with a bar-chart. The BBC's function and edit keys are used to manipulate your figures and labels.

You simply type in your figures and the graph auto-

Desk job

Program *Ice Desk-top manager for the QL Micro QL*
Price £49.95 **Supplier**
Eidersoft, The Office, Hall
Farm North Ockenden,
Upminster, Essex RM14 3QH

Most day-to-day users of computers in the commercial world are not experts, so if you want to market a successful business package - you have to make it as user-friendly as possible. Up to now, the QL has been more a device for enthusiasts, but Eidersoft has released a desk-top manager package aimed at giving even computer illiterates an integrated and versatile program aimed at unleashing the machine's real capabilities.

ICE (icon controlled environment) consists of an Eprom cartridge which plugs into the QL's Rom port in the rear and a microdrive containing multi-tasking software enabling the user to load and switch between up to five programs depending upon the amount of the system's extended Ram. But, even at the basic 128K of the unextended QL, the software allows a diverse number of multi-tasking, file editing copy operations.

The package also contains a mailmerge function for Quill/Archive and a name/address database. At the moment, the mailmerge program is missing from the software being shipped, but

buyers will be able to obtain an upgraded microdrive shortly (along with a full manual to replace the provisional one now being issued) at no added cost. Some 'JS' versions of the QL will apparently not work with ICE, but the company will replace the Eprom cartridge with an adapted version which the computer will accept.

Loading ICE gives a screen filled with little pictures representing the devices/functions you wish to access - a microdrive, a disc drive or Ram-disc, for example. Control is via the cursor keys/space bar or a joystick which moves a targeting arrow around the screen with - depending upon your dexterity - a mouse-like movement. ICE is fully mouse-compatible for those who want to spend a little extra cash on the real thing.

Some of the graphics are quite good (a calculator option for simple maths) but others leave something to be desired - for example, an old boot for the 'boot' function. ICE's strength lies in the number of complex tasks that it simplifies and anybody wanting to use a QL for heavy duty, but who feels uncomfortable with a lot of involved Superbasic commands and inter-peripheral operations, should definitely consider buying it. I do recommend using a mouse or perhaps a joystick, however, as manipulating the keys can be a bit annoying.

Brian Beckett

matically builds up and rescales itself. Then you go to the display option and choose whether to have a line graph, bar-chart or pie-chart.

You add notes exactly where you want them, can shade sections, highlight a section (on a pie-chart the highlighted part looks like a segment of pizza being removed from your plate!) You can display in colour.

You can also overlay other charts - to compare last year's figures for example. Finally the whole display can be dumped to a printer. The chip is configured for Epson types but it is easy to adapt for other printers.

Inter-Chart is superb. The package is full of neat touches (eg, on pie-charts you can display the actual numbers or percentages at the touch of a key.)

The documentation is clear and detailed. And it is part of Computer Concept's link range which means you can import figures from for example the spreadsheet instantaneously.

It makes it feasible to produce those visual aids your non-numerate audiences need!

Dave Watterson

Robin of Sherlock

As you may know *Robin of Sherlock* is an adventure game unlike any other. It has almost nothing to do with the historical details of Robin Hood. Nor are the works of Conan Doyle dealt with in any real depth.

In this, the latest in a series of epic competitions held in this magazine, we ask: What does Robin Hood mean to you? In this diary extract printed below you can see how Silver Soft view Robin. Study it carefully. Well, quite carefully.

I leant back against the lamp-post, surveying the busy rush of traffic along Sherwood Boulevard. It had been a hard day at the forest. First there was the Dorothy Kid, bush-whacked on her way to the Wizard of Huddersfield, her dog held to ransom. Then there was the anonymous tip-off about the convent's link with Godfather Smurph. When his name crawled out of the files it always meant some sort of racket. I smelled a rat, and one using Brut 33!

Jerking myself away from the cold security of the streetlight, I trudged down a dim alley to where I knew I could get a cab and it wasn't long before Al pulled up. Al had always been a good cabbie but that night I couldn't help noticing something odd about him, or rather his cab. It had been stolen!

Yet another mystery in one day! Something had to be going down. I figured I'd better go and check out Marion and see if she was okay. It looked like being a tough week!

What you have to do

After reading the diary extract we want you to come up with something along the same lines - another page from the Diary of Sherlock.

Don't write more than 200 words or it will be totally ignored. Do remember that there are no prizes for consistency, but legibility would be useful and is, in any event, something to be cherished.

Prizes

You don't just enter the competition for fun. The best diary page will win a first prize of two tickets for a special Robin Hood weekend (your choice of dates between March 21st and October 24th) featuring mediaeval banqueting, jaunts

into Sherwood Forest to see the key Robin Hood sights and two nights in a four star hotel.

(Entrants must be 12 or over unless accompanied by an adult.)

Thirty runners up will win a copy of the computer game *Robin of Sherlock* for the Spectrum.

Where to send your entry

Send your page of Robin's Diary to *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2H 7PP and clearly mark your envelope 'Robin of Sherlock Competition'.

The closing date for the competition is December 30th. The best of luck to everyone.

CHRISTMAS MICROFAIR

Looking forward to a high-tech Christmas?

Then come along to the CHRISTMAS MICROFAIR at the Horticultural Hall, London SW1 on the 14th December.

It's enough to make even Santa Claus's eyes light up.

Everything you ever wanted for the ZX Spectrum, Spectrum + and the QL under one roof, in one day of non-stop computer entertainment.

Software, hardware, books, add-ons, printers, monitors, user clubs, magazines, computers, and a fantastic range of gizmos that are not generally available in the shops.

There's all those 'just released' programs for the Spectrum and QL, and more than one opportunity of getting something at special 'show' prices.

Send for reduced-price advance tickets now.

POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available - 22000 matches over 10 years. The database updates automatically as results come in.
- **PREDICTS** Not just SCOREDRAWS, but ALWAYS, HOMES and NO SCORES.
- **SUCCESSFUL** SELEC guarantee that Poolswinner performs significantly better than chance.
- **ADAPTABLE** Probabilities are given on every fixture - choose as many selections as you need for your bet. The precise prediction formula can be set by the user - you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- **DISC/MICRODRIVE COMPATIBLE** Tapes supplied with conversion instructions.
- **PRINTER SUPPORT** Full hard copy printout of data if you have a printer.

AVAILABLE FOR Spectrum (48K), Commodore 64, VIC 20 (+16K), AMSTRAD, BBC B, Atari (48K), ZX81 (16K), Dragon, Apple II, ELECTRON

PRICE £15.00 (all inclusive)

NOW AVAILABLE

FIXGEN 85/6

AT LAST! No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish fixtures for 1985/6. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner.

POOLSWINNER with FIXGEN £16.50 (all inclusive)

COURSEWINNER V3 THE PUNTERS COMPUTER PROGRAM

You can develop and test your own unique winning system by adjusting the analysis formula, or use the program in simple mode. Coursewinner V3 uses statistical analysis of major factors including past form, speed ratings, course statistics, prize money, weight, going, trainer and jockey form etc, etc. It outputs most likely winners, good long odds bets, forecasts, tricast etc. The database includes vital course statistics for all British courses. You can update the database - never goes out of date.

AVAILABLE FOR Spectrum (48K), Commodore 64, BBC (B), AMSTRAD, Atari (48K), Apple II

PRICE £15.00 (all inclusive) includes Flat AND National Hunt versions.

WILBUR

by T A Bartley

This week... yet more code. But not to worry, as the halfway mark has just about been passed now. As before use the loader to plug in the

data, and save after the previous week's efforts using Save "" Code 44778,5802.

Meanwhile, if you are getting spots before the eyes syndrome, tape copies

can be obtained from the author at a cost of £2.00, including p&p. Write to T A Bartley at 81 Beverley Crescent, Grimsby, S Humberside.

CONNECT 4

by Colin Ashworth

This is a game for two players, based on the popular Connect 4 game. After the title screen you have the opportunity to print the players' names. The computer decides who goes first. On winning there is an option to play again, if so, the winner always starts first. If there is a stalemate situation, then there is a choice to try again.

NB. Don't attempt to run the program before it is completely typed in as the CALL &BBO3 command, which flushes the keyboard buffer, also partially disables the Escape key.

Program Notes

Line Nos

10-150	Defines characters.
160-200	Sets up variables, sound and tone envelopes.
220-250	Draws grid.
270-320	Introduction screen.
330-360	Printing of blocks onto screen routines.
370-420	Name of player routine.
470-580	Main loop.
590	Column 'full-up' routine.
600-790	Checking for winning routine.
800-890	Winning routines.
900	Stalemate routines.

PRINTER OFFERS

Look at these deals on centronics printers we believe that these prices offer the best value in the country. All prices include receipted delivery, despatch is within 48hrs of receipt of order provided goods are in stock. A printer lead is supplied to suit your micro free of charge, (please specify Amstrad, BBC, Oric, Dragon, Einstein, CBM64 or Memotech) for Spectrum or QL owners we will supply with an appropriate interface for an additional £20.00.

SMITH CORONA FASTEXT 80

Bulk purchase allows us to offer this high quality, 80 column dot matrix printer for an unheard of price. Buy a proper printer for the price of a thermal. Friction feed is standard and an optional tractor unit is available.

ONLY £129.95

Price includes lead to suit your micro.
 Or to suit Spectrum with Kempston centronics "E" interface £149.95

SHINWA/MICRO P. CPA 80+

NOW WITH NEAR LETTER QUALITY MODE

Improved specification makes this, the latest version of this popular model, the outstanding printer buy in its class. As well as its normal superb print quality at 100cps (better than the NLQ on many rival models) it now has an NLQ mode which offers even better print quality. This can be switched in either from a front panel NLQ switch or from software. Other features are friction and tractor feed, external dipswitches, graphics mode, square needle print head (gives less dotted look to print) and Epson compatibility. Take a look at these unretouched actual size print samples.

New NLQ PICA print style
 Standard PICA text (100cps)
 True descenders on jpg etc.
 ELITE mode gives 96 columns

CONDENSED mode gives 142 columns

ENLARGED mode
 SUBSCRIPTS and SUPERSUBSCRIPTS

underlines nicely

Good italic character set

We are convinced that this printer offers the best performance and value in its class and at our unheard of price is a BARGAIN.

ONLY £189.95

Price includes Centronics lead to suit your micro.
 Or to suit Spectrum with Kempston "E" interface £209.95.

MICRO P MP165

This printer is a very high specification at an unbelievable price. It boasts 165 cps in draft mode and 70 cps in near letter quality mode, which is switch or software selectable. It is friction and tractor feed as standard has a 2K buffer and is EPSON compatible (it even uses an EPSON ribbon). It can print in standard PICA 80 column mode or a variety of others from enlarged 40 column mode to condensed at 132 column. Italics are available in all modes. Normally this printer would be expected to sell at £300 plus we are offering it at our ultra keen price inclusive of printer lead to suit BBC, Amstrad, CBM 64, Oric, Dragon, Einstein or Memotech.

ONLY £249.00

Price includes Centronics lead to suit your micro.
 Or to suit Spectrum with Kempston "E" interface £269.00

Incentive Software Ltd,
 54 London Street, Reading RG1 4SQ.

CALENDAR

by John Beckett

If you are like myself and cannot remember the date or how many days there are in the month, then this is the program for you.

It is a once a year calendar program, which will give you a hard copy of the calendar from any year between 1753 and 8500!

The program is suitable for a printer which has Epson compatible control codes. If you have a printer which does

not use the same codes, using the following list should make conversion easy.

VDU1,27,1,64 - Resets printer.

VDU1,27,1,65,1,9 - Sets line spacing to 9/12".

VDU1,15 - Turns on condensed print.

VDU1,27,1,108,1,28 - Sets right margin to 28 characters.

VDU1,27,1,87,1,1 - Turns on enlarged print.

Program Notes

DEF PROCread: Reads months into array.

DEF PROCdoub (A\$,x%,y%): Prints a string of text at x% and y% in double height.

DEF PROCintro: Provides program introduction.

DEF PROCmon: Prints out each month.

DEF PROCu(F%): Turns on/off underline. 1 - on, 0 - off.

CBM 64 UTILITIES

Quickdisc+

FAST LOAD
PLUS
UTILITY CARTRIDGE

Get a QUICKDISC+ cartridge plugged into your 64 and your 1541 will really start to perform. So many features per pound (storing) that you will hardly believe it, includes the following:

- Fast LOAD and SAVE** (four to five times normal speed). Works with most protected software. Can be switched in and out from the keyboard.
- Fast Format** takes just 10 seconds.
- Fast Backup** copies an entire disc in four minutes. (Not heavily protected software.)
- Fast File Copier** for selective fast copying.
- Improved DOS commands** (DOS 5.1) makes for easy use of the disc drive. e.g. **RETURN** will LOAD and display a directory without converting BASIC. **SHIFT RUNSTOP** will LOAD "0" etc. Very, very useful.
- Incorporates Centronics printer software** (user port) with **CBM graphics** capability. See "Commodore Connection" for suitable lead.
- A RESET switch** is fitted. (We have found this to be "unstoppable", it also preserves the tape buffer.)
- NO MEMORY IS USED** by this cartridge, it is totally "transparent" and uses special switching techniques.
- Now the price.** No, not £49.95, it's not even half that much. Can you afford to be without QUICKDISC+?

ONLY £19.95

No extra connections are necessary with QUICKDISC+ and unlike most similar products it is compatible with printers and second drives.

DISC DISECTOR V3.0

Now the ultimate disc copying and utility program for the CBM 64 with 1541 disc drive has been improved even further. As well as giving it improvements plus the addition of further utilities two important new programs have been added.

The Everham Ribbler
This is the first copy of its kind to appear on the UK market. It is a true ribbler (style for byte copiers) that will copy ALL DOS errors automatically. This includes DOS errors 20, 21 etc. plus non standard errors like half tracks, extra tracks, non-standard tracks, non-standard tracks, etc. They are all treated in normal work. No knowledge is required at all. It is just "ribbler away" and produces a perfect copy. It is only takes eight minutes. Has copied all discs tested (except 1541). A class above anything else available.

Fast File Copier
An incredibly handy selective file copier that LOADS and SAVES at five times normal speed. Search useful? You won't know how much until you have used it.

As well as these programs, "Disc Director" incorporates a whole host of other utilities including the following: **Fast Format**, **Selective Memo Maker**, **Disk Editor** (new), **Formatted machine code version**, **Scratch/Unscratch**, **Fastcopy**, **Renamer**, **Fastload** (four times faster) etc. etc. This program is an essential purchase for the 1541 user.

ONLY £29.95

Customers with earlier versions may return them along with £9.95 for "V3.0".

ALIGNMENT PROBLEMS?

1541 PHYSICAL EXAM

£39.95

IS YOUR 1541 HEADSTOCK
OR MOTOR'S PHYSICAL EXAM
LOOK LIKE THIS ONE?

The program includes a digital alignment disc and software which allows you to accurately check and correct disc drive alignment. The instruction booklet is very detailed. Also includes quiet drive stops to stop that "hammering" thus preventing further problems.

ONLY £39.95

SELECTED UTILITIES

DISCO

Use the best tape to disc utility for normal speed loading.

Spin, Single or Double (but only single) ONLY £9.95

FASTTRACK

Consists of two tape loading utilities to "handle" "Load" single and multi part. Very easy to use.

ONLY £9.95

ENG MOUTH

A handy tool to search systems program that is great fun to use.

ONLY £7.95

ROCKET

A useful modern replacement utility for the 64. Handy for the programmer who has a disc drive.

ONLY £7.95

TAPER

Use copiers for normal speed loading software. Easy to use and very handy.

ONLY £5.95

COMMODORE CONNECTION

Software and cable for connecting any Commodore type printer to the 64. Or use with Quickdisc+.

ONLY £17.95

QUICKDISC

Speed up disc loading by four to five times. Includes menu screen and other utilities.

ONLY £31.95

AZIMUTH 3000

Allows you to check and realign your disc recorder head alignment. (Standard procedure).

ONLY £8.95

THE ANATOMY OF THE 1541

Get to grips with your 1541 with this very detailed book. Includes a full ROM disassembly.

ONLY £6.95

THE ANATOMY OF THE 64

The best insight into the 64. Lots of "secret" information.

ONLY £6.95

DISC ASSEMBLER

Reformats tape to disc consistently. Considered the best copy tape assembler.

ONLY £9.95

FIRST PUBLISHING ASSEMBLER MONITOR

The software in this book assembles. From tape to tape or the "assembly" lines.

ONLY £19.95

DTL JETPACK (cartridge)

QUICK, compact and handy programs up to 128 long. Easy to use. Handles all BASIC.

ONLY £11.95

DTL JETPACK disc

The same program will handle any program length. This is the one for the professional user.

ONLY £25.95

SPECTRUM UTILITIES

MAKE THE MOST OF YOUR MICRODRIVE
WITH

INTERFACE III

THE IMPOSSIBLE HAS BEEN DONE

That's true this fantastic new peripheral will transfer every program available on to microdrive. Yes, every one. Not better, it's not, it's so easy to use that we are starting our own car if we could. Any one capable of loading and using a BASIC program can transfer really awkward programs to microdrive.

Just look at these features...

- Consists of hardware and software.

- Transfers all programs available on to microdrive.

- Very, very, easy to use. (If Cibo can do it we can too.)

- Makes a "snapshot" of any stage of a program. (Saved as a screen.)
- Transfer can be executed at any stage following "customised" versions.
- All programs reLOAD and RUN once transferred.

WARNING: Unlike competitive products, transferred programs run independently of the utility and occupy the correct amount of cartridge space for the program. (This means you can fit more large programs on one cartridge.)

IF YOU HAVE A MICRODRIVE YOU MUST HAVE INTERFACE III

ONLY £39.95 inc. P&P

SIMPLY AMAZING

Trade and discount enquiries invited UK and overseas.

The software can be supplied on cassette for tape users.

This product is a class of its own. Designed by DANCOS.

All prices include P&P and VAT. Send cheque, Postal Order or Credit Card No. Credit Card order accepted by phone. Callers welcome. Wide range of goods stocked. Trade enquiries welcome. European orders send price as advertised. Outside Europe £2.00 for airmail. Mail order to Evesham Shop please.

NEW FUNCTION

by Dr R K Lowry

This article describes the function **NBSET(x)** which returns the number of bits set on in the least significant byte of x. On its own, this is a singularly useless piece of information to derive. However, the function is designed to be used in conjunction with the Super Basic **KEYROW** function. The value returned by **NBSET(KEYROW(0))** is the number of keys which are being pressed in row 0 of the keyboard. The main use I make of the function is in the unambiguous reading of the function

keys. The function keys are read using **NBSET(KEYROW(0)&&59)** which returns 'one' when a single function key is pressed, zero when no function keys are pressed or 'two' when two function keys are depressed simultaneously.

The assembler source code consists of four subroutines. Subroutine **INIT** is the standard code which links additional functions and procedures into Super Basic. Subroutine **Lil** is a general purpose routine which returns a single long integer parameter in the register **D1**. If a

string is passed or more than one parameter is supplied, then a bad parameter error code is returned in **D0**. Yet a third general purpose routine, **IFSTK**, is used to store the result held in **D1** on the **RI** stack in the appropriate manner for an integer function.

The final routine is the guts of the **NBSET** function which simply **ANDS** the low byte of the argument with a set of single-bit masks and counts the number of times that the result is non-zero.

TICK TITLES REQUIRED

PAUSE MODE

by David Shaw

This is a short but effective machine code routine which can be used by programmers of any experience on the 64; a colourful pause routine.

Using interrupts, it will allow the user to freeze Basic and machine code programs by simply pressing F1. While the pause mode is operative, a very colourful screen display is generated, giving a constant reminder that the computer is in pause mode. Pressing F1

again returns control to the original program, leaving all registers, etc., untouched, and most importantly, the screen display intact.

Either use the Basic loader (it's short and has a checksum) or the assembly listing to install the routine.

I'm sure that everyone will appreciate the program next time the doorbell rings - and you are just about to get that high score!

THE SECRET DIARY OF ADRIAN MOLE AGED 13³/₄

Friday October 11th

I learned today that I have become the subject of a computer game. It has been written by somebody called Level 9 (perhaps they live in a multi-storey car park) and apparently it contains more than 200 kilos of text which Brainbox Henderson says is a lot. The object of the game is to make me popular with everyone, so I expect Gran will get me one for Christmas even though it does cost £9.95. But I don't suppose anyone will get me a Commodore, Spectrum, Amstrad, BBC, MSX or Atari to play it on.

Wednesday December 25th
CHRISTMAS DAY

Mosaic who have published my diary as a computer game have sent me some reviews. They're dead brilliant!! Pandora says I should keep notes of the best bits so I can use them on the back cover of my next best-seller. I thought I'd note them down today while we're still waiting for the stupid turkey to defrost.

My reviews

'A Crash Smash' 'Mole is brilliant and so is this game' Crash

'Ten out of ten' Commodore User

'Pete Austin - The man's a genius! ... I reckon this is an important program' Zzap 64

'Destined to appeal to all ages is this one' CTW

'This is a game you should get-right now' Amix

Line Scroll on Spectrum by Ray Heslop

These routines will scroll just one line of the display either to the left or right. Listing one scrolls from right to left, and listing two from left to right.

The address 60000 can be changed to any spare memory location as it is only used as a variable.

To test the routines, simply print two lines of anything at the top of the screen and type:

Randomise Usr 50000: Randomise Usr 55000

To alter the line you wish to scroll, you must (in listing one) load DE with the address at the first byte of the first character in the line you wish to scroll, and load HL with one above DE.

In listing two, load DE with the address of the bottom byte of the last character in the line you wish to scroll, and load HL with one below DE.

Both routines are relocatable.

Big Screen on Vic 20 by L W Betteridge

When this program is 'Run' a much larger screen will be seen. The normal area of the screen is the lower half of this new screen. Conventional printing will only work in this lower half, to access the upper half we have to use the *Poke* command. Taking the screen as a whole, the bottom left is *Poke* location 8185, as is usual, but the top right of the screen is 7165.

This enlarged screen can be switched in and out by using SYS 828 and by pressing *Run/Stop* and *Restore* together.

```
10 FOR I=828 TO 856
20 READ A
30 POKE I,A
40 NEXT I
50 DATA 169,28,141,52,0,141,56,0,169,6,141
60 DATA 0,144,169,21,141,1,144,169,30,141,2,144
70 DATA 169,68,141,3,144,96
```

Line Count on Commodore 64 by Peter Graves

This program counts the number of program lines in a Basic program, irrespective of how they are numbered.

When a program line is stored in the memory it has a link address stored with it, holding the address of the start of the next line. This program begins at the start of the normal line storage area (address 2049) and jumps from line to line using the link addresses, counting one each time, until it reaches the end of the lines in memory - detected by the zeros in the link address following the last line.

```
63000 PRINT CHR$(147):AD=2049:N=-4:REM THESE 4 LINES ARE  
NOT INCLUDED IN COUNT!
```

```
63010 IF PEEK(AD)=0 AND PEEK(AD+1)=0 THEN END
```

```
63020 AD=PEEK(AD)+256*PEEK(AD+1):N=N+1
```

```
63030 PRINT CHR$(19);"NUMBER OF LINES = ";N:GOTO 63010
```

* * SPECIAL OFFER * *

from SUNSHINE BOOKS and PICTURESQUE

The CODE MACHINE consists of an Assembler and a separate Monitor (both relocatable) and provides all the requirements for rapid assembly language development, including many features not found elsewhere.

A 72 page manual, with plenty of examples, and a flexible command structure make it ideal for beginners, yet it offers all the sophistication and fine detail required by professionals.

Single Stepping your machine code is an essential aid to both learning and debugging and the CODE MACHINE's excellent Front Panel display gives you the most complete picture of what's happening at every step. You can really see what's going on.

Everything about the CODE MACHINE is designed for speed, simplicity, and information. It's received much praise from the industry and is the No. 1 choice of many leading games authors.

Supplied on cassette with a back-up option to disk, it is fully compatible with disks and with the 464/664/6128 machines.

Amstrad Machine Code

THE EASY WAY

* SAVE £4 *

"Master Machine Code on your Amstrad" shows you how to make better use of your Amstrad by programming in machine code. This makes programs run much faster and opens the door to a host of new applications.

The book gives an overview of the hardware, and explains how the Firmware (ROM) routines are arranged, and how to access them. Details are given of the most useful of these and how you can use them in your own programs.

Many machine code listings are given, starting with a simple sorting routine which is developed to a full database program.

There are graphics routines to extend Basic with Circle and Fill commands, and a section explaining how easily you can write your own extensions to Basic using the 'BAR' commands.

Written with the beginner in mind, this book is the best introduction to machine code on the 464/664/6128 machines.

How to order

The normal combined retail price of these two products is £26.90. You can save £4 (mail order ONLY) by sending your cheque/P.O. for £22.90, made payable to SUNSHINE BOOKS to: Theresa Lacy, Sunshine Books, 12-13 Little Newport Street, London, WC2H 7PP.

Micro Magic

Popular cassette labels

Popular Computing Weekly

Micro Magic

The Amstrad CPC6128

We are giving away an Amstrad CPC6128 128K micro – worth £399 – every seven days until Christmas. Not only that, but every Micro Magic card is a winner – every card wins a runner-up prize of free Special Popular Computing Weekly cassette labels

How to find out if you win this week

To find out if you are a prize winner this week this is what you must do:

- 1) Key in the computer program listing printed here into your micro and Run the program.
- 2) Input your special Micro Magic number as data in the program when requested and press Enter.
- 3) The program will tell you if you have won a prize this week and what it is.
- 4) If you have won a prize you can claim it by filling in the coupon on the back of your special Micro Magic card. Then send

```

5 PRINT "Input your personal Micro
  Magic number"
10 INPUT A
15 FOR A=1 TO 3
20 LET A=2 * (A+27)
30 LET A=A + 27
40 LET A=2 * A + 1050
45 NEXT A
50 IF A=1480440 THEN GOTO 60
55 IF A=1129752 THEN GOTO 70
60 PRINT "Your matching Micro Magi
  c number is"
65 GOTO 60
66 STOP
70 PRINT "Your matching Micro Magi
  c number is"
71 PRINT "You have won an Amstrad
  CPC6128"
75 GOTO 70
76 STOP
80 PRINT "Your matching Micro Magi
  c number is"
81 PRINT "You have won cassette la
  bels"
82 GOTO 80
83 STOP
  
```

Micro Magic: Week 11 Program listing

the completed card off to: Micro Magic, Popular Computing Weekly, 12-13 Little Newport Street, London WC2H 7PP.

Don't forget to fill in both your name and address, and also both your winning Micro Magic answer from this week and your special Micro Magic number.

5) If you haven't won this week, don't give up hope. Keep your Micro Magic card and use it to find out if you win with next week's Micro Magic computer program. The same card will last you right through to Christmas, so don't throw it away – you could miss the opportunity to win.

This week's winning Micro Magic Numbers: 1480440 and 1129752

If you think you've won complete the form on the back of your Micro Magic card and send it to: Micro Magic, Popular Computing Weekly, 12-13 Little Newport Street, London WC2H 7PP.

Micro Magic cards can only be obtained in line with the criteria outlined by Scot Press. Participants are entitled to only one card each. Cards and accompanying documentation can be obtained free of charge by writing to Scot Press, 12-13 Little Newport Street, London WC2H 7PP.

Breaking into the BIG time!

Do not confuse this product with other inferior products offering less value for money.

At last it's here, the product that lets you do what BBC, C64 and Spectrum owners have been doing for ages. Access to the whole world over the telephone.

SKYWAVE MULTI-PORT

Multiport is supplied with "SKYCOM", a menu-driven, window-based communications ROM package which will drive any standard modem, and lots more!! Other ROMs are scheduled for release soon!!

SKYCOM is a full "Foreground" ROM communications package, and runs without the use of BASIC, thereby releasing large amounts of RAM for the user. One benefit is a 32k+ Spooler.

Just see what the specialists have to say about Multiport...

"A product that should appeal to a large number of Amstrad Users." *Computing Age*, Oct '85.

"Includes the most sophisticated communications software available for the Amstrad." "Multiports sophistication makes it a very attractive product." "An excellent piece of kit." *Amstrad Action*, Nov 85.

Have you heard about "AMSNET", the NEW section on PRESTEL*25864 # run by Viewfax just for Amstrad owners? Multiport

is the only interface which is Viewfax/Micronet approved, (granted 18/7/85) and you can download software using the telesoftware format developed by us in conjunction with Viewfax 258. This means that you can access the many free Amstrad programs currently on the system and all the other programs about to be put up.

If you have a PROTEK or AMSTRAD interface, or similar make of interface which will not download telesoftware, we are prepared to offer a generous trade-in deal against our Multiport and/or Modem Package. Do not miss out... Call our office for details!!

Multiport will also access Bulletin Boards, and Telecom Gold. An upgrade is available to permit access to the Open University System for use with O.U. Comms courses.

Multiport has many features, too numerous to mention in one ad., please call our office for an Information Pack to be sent to you.

Multiport is really 3 interfaces in 1... Its... A full RS232 Serial Port, a 24-bit parallel port, & a "Sideways" ROM card (takes 2 ROMs).

Modem Package deals are available for all popular modems and include Modem, Multiport, Manual and Connecting lead. From £129.95 all inc.

**Skywave
SOFTWARE**

A Nightingale or WS2000 Package is currently £169.95. If you already have a modem, Multiport is available for **£99.95** including Manual.

Our policy is of continuous development and support, and to this end, we have set up SKYCLUB on PRESTEL*25886 # to support our customers with Multiport/SKYCOM. This is the first of a complimentary range of products based around the Multiport. Trade Enquiries: Modem House 0392 213355.

We normally operate a world wide return of post service for our mail order customers with credit cards, Access or Barclaycard. Cheques expect 7 days delivery. Please telephone our sales office for details (0202) 302385 or post the coupon today.

Memory expansion

Hardware Memory Expansion Board Price 64K £49.95, 256K £99.95
Micro Any Amstrad CPC **Supplier** DKTronics, Longs Industrial Estate, Englands Lane, Gorleston, Great Yarmouth, Norfolk NR31 6BE.

The potential for memory expansion has always been promoted as integral to the CPC machines. It's peculiar therefore that Amstrad has shown no interest in selling expansions itself. Spurred on by the release of the 6128, DKTronics has leapt where Amsoft fears to tread and I'm sure that it will reap its own reward.

Two boards are available, 64K and 256K. Like the 6128 the extra memory is only usable from Basic via software, RSX Basic keywords or using the *Out* command.

Commands for loading and saving 16K screens into any of the new memory blocks are complemented by the ability to switch the screen Ram between two addresses in turn. Together these features allow some impressive animation techniques.

Data, in the form of variables, strings or arrays can be stored in, and retrieved from specified areas in the new memory. Information in the expansion can also be used one byte at a time via *IPeek* and *IPoke*. Some of the most useful com-

only be useful in your own programs, unless it sells in large enough numbers to attract software, or to persuade software writers to at least allow you the option of using it. On the other hand it is much cheaper per K compared to the 64K. Both boards will be sold to fit the 6128 as well. You can add up to 512K of banked memory in total.

DKTronics has made every effort to make the expansions compatible with 6128 software, but realistically admits that a small percentage of programs will probably need adaption. Any sensible software house will widen its market by making sure that all releases work with the 464/664 and board.

The memory is fully compatible with CP/Mplus but DK does not supply you with a system disc to use. However, since CP/Mplus with a large program area was regarded by many as the primary vindication of the 6128, some important business programs recently released run under this system only. DKTronics should be pestered to bring out an optional CP/Mplus disc as soon as possible.

To date, there are only two 6128 specific programs to test the board on. *Tasword 6128* is the best of the *Taswords* to date - and as long as the DKTronics installation software is run first it works smoothly on the 464.

The second, *Masterfile 128* is an expanded version of the successful database with 64K free for data. It incorporates features from the *Masterfile Extension Pack*, ie, User Basic that lets you customise your database and perform almost any new function you need, file merging, and data export, the ability to save data in a variety of file formats.

Both of these programs represent better value than the equivalent 64K releases. There will doubtless soon be more 128K business software, and per-

haps some games as well. The boards work well and therefore offer salvation for those that feel obscurely cheated by the release of the 6128. With the proviso that something needs to be sorted out about CP/Mplus, I can't recommend them strongly enough.

Tasword 6128 - £24.95 from Tasman Software, Springfield House, Hyde Terrace, Leeds LS2 9LN.

Masterfile 128 - £34.90 from Computer Software Design, 57 Trap's Hill, Loughton, Essex, IG10 1TD. Available from Amsoft next year.

Tony Kendle

Casio CM-100

Hardware Casio CM-100 Price £17.95 **Micro** Any **Supplier** Casio Electronics, Unit 6, 1000 North Circular Road, London NW2 7JD.

The first Casio calculator I ever had - eeee... it were back in 1975 - weighed about two pounds, you had to wheel the batteries around in a trolley and the illuminated display

jammed most electrical appliances within a radius of 100 yards.

Things have changed a bit since then; nowadays Casio make more models of calculator than there are brands of cat food. Far from being yet another gimmick, Casio's new CM-100 may well prove to be a useful tool for many programmers.

It has all the normal arithmetic functions of course, but what makes it interesting for any programmer is that it can calculate and perform logical operations, shifts and rotations, not only in decimal, but in binary, hex, and Octal. You can switch freely between each mode, with automatic conversion. A nice trick - in fact the whole thing appears to be well thought out, with the machine-code programmer in mind.

Although the liquid crystal display is limited to the normal 10 digits, octal and binary numbers overflowing this area can be displayed as consecutive blocks of eight figures, up to 32 digits in the case of binary. Various bit sizes can be set (one, four, eight, 16, 32) and flags indicate when a carry has occurred; the most significant bits being deleted.

Perfect for machine-code programmers then, but what about general use? No room on the board for any normal scientific functions - you've got a percentage button, square root, square, reciprocal, and that's about it.

If you're an ardent machine-code programmer, then this little device will be of great interest... possibly even of great use. For the Basic hacker, though, not really worth the investment.

John Cook

mands are for the rapid storage and retrieval of the contents of screen windows.

Finally *IAskram* allows you to test the memory for capacity and errors, *IBank* will switch an entire 16K block without worrying about the contents and *IEmulate* lets you fool any program that performs a Romtest to check that it is actually running on a CPC 6128.

It now costs the same to buy 256K as it did to get an early 16K rampack for the ZX81, but it is perhaps more important that the advance of technology should have put an end to 'Rampack wobble'.

The extra Ram of the 256K board will

Altered layout

An interesting package has arrived in the form of *The Hacker*, no relation to the Activision game, from a new company called Utopia Software. This is designed to help people poke around in computer games, to make changes and learn how they work. The program is compact and resides in a choice of two little used areas of the Spectrum's memory. Once there you Load in your computer game in top, which may be difficult if the software is protected. Usually, however, you should be able to load at least some of the game into memory. *The Hacker* will then provide the following options, you can view and delete sprites, study and alter high score tables and text, dump text to a printer (useful for adventure games), search for infinite lives pokes, find pointers to areas of graphics or text, and study and perhaps alter the layout of

be able to make full use of this program. You will also find that it can't be used on all of your software, notably those that are protected by speed loaders or which have headerless blocks. It also won't possibly be able to recognise and display all screen formats used in different games. Having said that, I'm sure that a lot of readers of this column, who seem to find the process of digging around in the insides of games more fun than the games themselves, should find it invaluable. It costs £4.95 from Utopia Software, 38 Ridley Avenue, Acklam, Middlesbrough, Cleveland TS5 7AN.

Extra energy

Amstrad owners may be interested in another program I was sent called *RSX Basic*. This gives you no less than 17 new Basic keywords including an option to deprotect Amstrad Basic programs. It will be of particular use in entering Pokes into the headers of commercial games. *RSX Basic*, with instructions, is available from Kevin Young, 50 Ronelean Road, Tolworth, Surbiton, Surrey KT6 7LL, at the extremely reasonable price of £3.00.

Now then, on with the tips, John Powell and Chris Butcher of Brecon have

phatically. The rocket fuel can be found at Q27. A teleport at L7 takes you to D39. The key opens the doorway at the top of the main passage, you need the rocket, fueled, to get there. Make sure you have a bomb with you or you can't get past the

Underwurld

laser.

"To cheat and gain extra energy just keep going between two rooms on the ground (any level) and your energy goes up five points each time. The last screen is at A42. When you finish a ZX81 appears and you get the message "CONGRATULATIONS YOU HAVE FOUND THE EVIL ZX81 WITH RAM PACK LAIR. WELL DONE."

"The game is hard to map because if you go through certain exits you end up in a wall and the game crashes." Well, that doesn't sound right! Has anyone else had this trouble with the game, and has anyone told Mastertronic?

On the subject of Mastertronic no one has managed to solve the challenge posed by David Jones, the author of *Finders Keepers*, so here to put you out of your misery are the special pokes to enable a transport function (Spectrum version).

The Pokes are 28802,194: Poke 28803,145: Poke 28804,113. To insert them Merge the basic loader and enter them before the *Rand Usr* statement. You can then go to different rooms by pressing the down key and any letter from A to W. Pressing O will return you to Basic. If you read this David, thanks.

Peter Page and Andrew Woods have written about the Odin game *Nodes of Yesod* (sic), which they recommend as "a great game that steals all the good parts of *Underwurld* and disposes of the rubbish". Pressure of space stops us printing your map, but here are the tips and thanks for writing.

"The first task is to catch a mole. The easiest way to do this is to walk along the surface until you see one and wait by the crater until he pops up again. You must then make friends with the mole which is done by leaping on him (funny way to make friends!).

"Once this is done make your way to the lunar caverns by falling down a pot hole. There are six pot hole screens, two with two holes each.

"The map is a 16 x 16 grid. If you number this 1-16 down the left and A-P across then you will find the following:

"Object rooms contain either a helmet (extra lives) or an alchium. You need to collect eight alchiums to finish (we think). The location of the objects differ rather like in Ultimate games but we have found things in P2 L3 B4 F4 J4 M4 B5 D5 J5 E6 J6 K6 P6 O7 A8 E8 G8 M8 O8 E9 M9 O9 A10 C10 D10 M10 G11 P11 K12 L12 D13 A14 K14 M14 D15 G15 K15 D16 M16 P16.

"Edible walls can be removed by pushing the mole into the bottom of them. These are found on the right of rooms A2 O2 D3 E3 P3 F4 L4 B5 D5 F5 J5 N5 M7 O7 A8 D8 I8 I9 N10 P10 B11 C11 I11 B12 F12 F12 H12 N12 P12 D14 F14 N14 P14 D16 E16 F16 M16.

Fusty tunnel

"Transport rooms are found at G7/H7 A16/17 K16/17. Tornadoes here will deposit you into the transport room adjacent to it.

"You get some gravity sticks when you find a helmet. Dropping one will drag the nasties to the ground and kill them.

"One way floors, hidden areas in the following rooms, drop you into the room below: N5 P7.

"The rooms from A2 to A7 from a 'gusty tunnel' mentioned in the booklet. Falling from the top will float you safely to the bottom. Jumping from the bottom will float you to the top (make sure that you are facing an open door or you will hit the ceiling and die).

"There are certain inaccessible rooms at B14 G13 G6 O13. Perhaps they will open up once eight alchiums have been found."

Tony Kendle

Finders Keepers

screens on multi-level games. From my experience of the problems people have with pokes, absolute beginners and those who don't understand the way the Spectrum loads files, will probably not

finished Mastertronic's *Nonterraqueous*, which is no mean feat, and offer these hints for those still struggling.

"Make a map of squares numbered from 1-42 upwards, 24 across labelled al-

Our first show was an outstanding success...

This time we've got many more surprises and lots more room to wander around!

- ★ Amstrad goes striding into 1986 as the most innovative and profitable computer company in Britain. Come and see for yourself the ever-growing range of products that puts it head and shoulders above the rest.
- ★ So many people turned up for the first-ever Amstrad Show in October that entry had to be restricted and lengthy queues formed outside. Not this time! We've almost doubled the floor area - so you'll be able to move around with ease.
- ★ Every stand was taken at the October show, and many potential exhibitors had to be turned away. This time they've booked well in advance! Well over a hundred exhibitors will be there.

★ On display will be just about every piece of hardware and software that has yet been produced for the Amstrad range. And that means lots more products - and lots more bargains! A big feature of the October show was the way exhibitors entered into the spirit of excitement that pervaded the show and slashed their prices. This time many thousand more visitors will be going home with some really worthwhile bargains!

★ One thing you'll get for nothing - and lots of it - is advice! Waiting to talk to you, and answer any problems you may have about Amstrad computing, are some of Britain's top Amstrad experts. They'll all be there!

Tony Bridge's Adventure Corner

Still stuck?

Some time ago, and I'm sorry I haven't mentioned this before, two adventurers rang the offices of Popular to tell us of their achievements - Ralph Bruckshem and Andreas Gamsen or Moers of West Germany managed to solve *Fourth Protocol* in just three weeks.

The *Fourth Protocol* is one of those programs that interested me a great deal, being released with much publicity and many screen-shots; unfortunately, the reality is that I have never got around to seeing it, so any advice you may read here is received (but of the highest standard, I'm sure).

James Cesaro, for example, wrote to me after seeing a plea for help in the Adventureline, concerning in part the questions asked by Sir Anthony Plumb: 'where happened' and 'how recruited' can be answered 'Gaza' and 'False Flag' respectively (the latter is mentioned only in the handbook included with the packaging).

Giving a bit more away, James recommends flying to Stockholm and searching the overseas area - he says that you must be very quick otherwise risk being posted to the Falklands. The actual order of events, says James, is:

Go to Stockholm, Look at Civil Record, Go to Umea and then Go to Anna who will provide you with proof of Nilson's real identity. Sam Johnson must also be followed as a friend of his has important information pertaining to the final part of the adventure.

James is happy to give help to anyone currently stuck in *Fourth Protocol*, and he can be found at: 69 Tollgate Drive, Grasslands, Colchester, Essex CO3 5PR. From Norway, Alf-Ivar Holm sends his plea concerning *Fourth Protocol*: I don't know what to do with the Abbs - and Thorp affair.

In *Lords of Time*, Alf, the Snow Queen in the ice cube will give you the Sword (though you should beware of

switch off the gas main lever in the gate house - then to use the lamp, just type On/Off as required, ensuring that you don't waste it when not needed.

Back to *Fourth Protocol* now, where Scott MacFarlane of Edinburgh has solved Apps as well as Willis, Warburton, Allen, Bracton and possibly Johnston - possibly, says Scott, because Pasternak, his contact, muttered just before he died: 'SVETOFOR'. What does it all mean, Scott wants to know? Another problem lies in how to listen in to Faulkner's conversation: and finally, Scott needs help in decoding the NATO papers. Write to Scott for mutual help and consolation at 2 Broomside Terrace,

medical security, put 25 watchers on Bracton not Thorp. His address is 60 Druce Way, Blackbird Leys, Oxford.

A few weeks ago, I mentioned CRL's adventure creator, *Genesis*: the Elf's little helpers slipped up a bit and attributed the program to Silversoft. While it's true that *Bored of the Rings* will be written for the Amstrad using *Genesis*, the utility was actually written by Camel Micros for CRL, and I apologise to all parties. At around the same time, I offered some help to a reader stuck in *Smuggler's Cove*, and I confused everyone by referring instead to *Pirate's Cove*, obviously a completely different adventure!

Camel's is not an adventure I'm familiar with, so anyone requiring help would do well to write to Camel at: Wellpark, Willeys Avenue, Exeter, Devon EX2 8BE.

Do you listen to music while you are adventuring? A whole article could be written about the different sorts of scene-setting music that players like to listen to while working out how to unlock the door. But a newly-released double album provides the *Dungeon-and-Dragoner* as well as adventurers with ready-made mood music. Not only do you get for your money a beautifully-painted gatefold cover and music with evocative titles like *The Sorcerer's Apprentice*, *The River of Souls*, *The Dragon Passages*, *Hobgoblins* and *The Bloodguard* (beats *Careless Whisper* and *Young Guns* go for it), but also two dungeons for the D&D'er. The whole project has the active participation of TSR, the original producers of D&D.

The music's pretty good in its own right, and the narration, by the late Valentine Dyal (whose tonsils seem to have been dipped in treacle), goes even further in transporting you into a world of fantasy.

Not only would this make an ideal Christmas present for your favourite adventurer, but if your computer finally gives up the ghost, then you can lower the lights and play *First Quest* from Filmtrax Records, catalogue number DRAGON 1.

Screen dump from *The Fourth Protocol*

killing the Knight) and you should leave the man in the stocks alone (let justice take its course). In the Roman scenario of *Eureka!*, you must wait on the road outside the army camp for a night before attempting to go in (and incidentally, 'Cave Equis' translates as 'Beware to the horses' - 'Cave Equi' is the correct way of saying 'Beware of the horse').

Finally, to get the lamp in *Golden Apple*, you must first

Corstorphine (it's a fine town!), Edinburgh EH12 7LZ.

From Cardiff, Steven Edwards writes asking for help in the Abbs affair ('how do I stop Stanistar defecting?') and how to stop Bracton phoning him all the time. He's always running out of time in Stockholm - see James' recommendations, Steven, or write to Scott.

Daren Green, meanwhile, is also having trouble with those NATO documents and can't get any more than 78%. 'Also, how do I solve Building 17 security?' He is at 85 Stamford Road, Dagenham, Essex RM9 4EX and would love to hear from you.

Mr J Jennings wants to use the lift, but can't until he finds the code - the portable computer tells him that $x=3$, and this is as far as he can get. Tips he passes on to other readers are - the correct order of importance of the security list is 534612 and to ring

Adventure Helpline

Going bananas? If you are stuck in an Adventure with nowhere to turn do not despair - help is at hand.

Fill in the coupon, explaining your problem, send it to us, and a fellow adventurer may be able to help.

Remember - the system only works if those adventurers who have solved the puzzles get in touch. Every week is Save An Adventurer Today (SAAT) week!

Oric adventure

K Robinson of Newcastle under Lyme, writes:

Q I am writing a graphics adventure for the Oric-1 and I need to know the position of the cursor when in ordinary and in hi-res mode. How can I do this please?

A Address 616 holds the Y cursor (ordinary mode) 617 holds the X cursor (ordinary mode) 537 holds the X cursor (Hires) 538 holds the Y cursor (Hires) I am pleased to see that someone is still producing programs on the Oric; don't forget to let Tony Bridge have a look at your finished product!

Peculiar program

Anthony Lenaghan of Sharjah Soccer Club, United Arab Emirates, writes:

Q Here is a small listing for the Spectrum.

5 Border O
10 Border 2: Border 5
15 GO TO 10

The program uses the following keys: *Space* to reverse quickly; *Symbol Shift* to pause; any other key to reverse slowly.

Could you please explain why the machine reacts this way, when there are no keyboard input statements in the program?

Also do you know of any books which teach Forth as used in the White Lightning language from Oasis Software, as I find the Forth section in the manual very confusing.

A Although there are no statements in your program that does not mean that the keyboard is not being read by the Rom software, does it?

In fact this is one of the causes of the effect you describe, the other is the way that the Spectrum produces the *Border* colour. You will have noticed that on loading you get a striped border and a lot of noise! This is produced by the equivalent of the *Out* statement which can be affected by a key depression, as this affects the contents of certain system variables. The actual effect produced varies from model to model on the Spectrum. On the Plus for instance only *Space* produces any real effect and that is only to slow down the display.

As far as Forth is concerned I particularly like *Exploring Forth* by Owen Bishop (published by Granada). Although all the examples are produced via a BBC, Forth is such a portable language (unlike Basic) that it makes no real difference.

Keyboard training

C Puncher of Barry, South Glamorgan, writes:

Q I have recently been considering a Spectrum Plus up-grade, but suddenly my keyboard has stopped working. The fault turned out to be a tear in the eight-line, connecting ribbon and, as my Spectrum is two and a half years old it is not covered by the guarantee. Does the new Spectrum keyboard still require a new membrane?

A The Spectrum must have a new membrane fitted when it is up-graded to a Plus, as keyboard layouts are somewhat different.

BBC emulator

Alan Bute, of Cemberley, Surrey, writes:

Q I wondered if there is a device for the BBC B which allows it to play Commodore games - or

any other games. If there is such a device, where can I get hold of it, and how much would it cost?

A I'm afraid I don't know of any emulators for the BBC... however, if anyone out there knows of one, please write to *Popular* and tell us!

One-time file

R McHugh, of Manchester, writes:

Q I wish to set up a file of one-line entries, but in such a way that when I wish to search one out, I also want to see the six lines preceding and following the line selected. How can I program for this on my Spectrum.

A One way would be to write record numbers as well as the data that you wish to store (these would simply be the sequential number of the record on the file, starting at one).

Then it would be a simple matter to search the file for the correct start record number required (after having found the desired record of course!) and read the 13 records required.

One other method would be to use arrays to store data (up to six records at a time being stored in this way), then when the desired record is read, the preceding records will already be available in the array, and it will only be necessary to read the following six.

Printer repair

David Mills of Biggin Hill, Kent, writes:

Q I own a Sinclair printer that was given to me after the guarantee had expired. The main problem seems to be the lack of power it is receiving. When the automatic feed button is pressed nothing happens. Neither *Llist* or *Lprint* work. Are there any companies that repair these printers?

A As with computers there are a number of companies that will repair your printer that regularly advertise in *Popular*. I have mentioned many names in the past. At the moment I do not know how many of these companies still quote for repairs to ZX printers, except one, Interservice Electronics Ltd, 85-95 Park Street, Southend on sea, Essex SS0 7PX.

A load off your mind

Frank Nyatt of Manchester, writes:

Q I am having problems loading programs into my Spectrum. When I first bought it 2½ years ago it loaded programs as stated in the manual, but now it will only load with the tape recorder at full volume.

A The problem is most likely to be the input/output sockets on the machine into which the Ear and Mic leads are connected. Any reputable repairer will carry out any necessary repairs.

Up-grade uncertainty

J M Aziz of London, writes:

Q Having owned a Spectrum for several years, I want to up-grade it to a better future games machine. Anyway what I wanted was a Commodore 64, but along came the Plus/4 and the Amstrad. Could you tell me if 64 software is compatible with the Plus/4 as the Plus/4 is cheaper at the moment. Also what about the Amstrad?

A First things first... Commodore 64 software is not compatible with the Plus/4. Remember too, that the compatible C128 is now available. However, to run CP/M to its best advantage, you will also need Commodore's 80-column monitor (£299) and its new fast disc drive, the 1570 (£199).

The Amstrad has some good software, though not as much yet as the C64, but runs CP/M more easily than the C128.

GLADIATOR

IT'S NOT MUCH FUN
BEING A SLAVE...

...SO I TRAINED LIKE MAD
TO BE A GLADIATOR

I WAS SHAKING LIKE
A LEAF IN MY FIRST FIGHT...

... BUT I SOON GOT
THE KNACK

THE THUMBS UP MEANT
I WAS THE EMPEROR'S
CHAMPION!

MY FREEDOM AT LAST!
BUT CAN YOU BEAT ME?

SOFTWARE

WDSoftware

FOR THE QL

WD Utilities (3rd ed)

PRINT 60-file Directory or view it on one screen, one-key LOAD, COPY or PRINT 80 files with one key (allows for namesakes). Multiple FORMATTING to prevent corruption by stretching of tape. TOOLKIT to give dated, numbered modules in program development. PRUNE old files to release space (one key DELETes a file). Full instructions in QUILT file. Use up to 6 EXTRA MICRODRIVES (add on your Spectrum ones!)

WD Utilities for CST Q-Discs (2nd ed)

As above, with extra utilities: 100-file capacity, for CST/CompuMate disc systems AND up to 4 extra microdrives. User-friendly timesavers. Update 1st ed for 25p (£1.25 outside Europe).

RefQL (5th ed)

900 useful QL references in an ARCHIVE file (too long to share cartridge with other software). Also ARCHIVE 2 search program.

FOR SPECTRUM/QL/BBC/ELECTRON

WD Morse Tutor

From absolute beginner to beyond RYA and Amateur Radio receiving. Adjust pitch. Set speed to your test level (4-18 wpm). Learn from single characters, via groups with wide spaces to random sentences, decrease spacing to normal. Write down what you hear, then CHECK on Screen or Printer (or speech for Spectrum with Curral Microspeech). Also own message, random figures, letters or mixed.

FOR SPECTRUM 48K

Wordfinder (microdrive/disc only)

For CHEATING at crosswords. Finds M-ss-g letters, solves anagrams of shingle words. 13,000 word vocabulary. 10-letter word ending in ATE? No problem! Too long to share a cartridge with anything else.

Tradewind

Sailing/trading strategy game with graphic surprises.

Jersey Quest

Text adventure with Bergerac and the Dragon. Based on genuine folklore of the island of Jersey. (Not on SPDOS).

Prices (incl Europe postage — elsewhere add £1). Cassettes — base price only. QL or Spectrum Microdrives — £2/cartridge plus base price; 5.25" floppies £2, 3.5" floppies £4 plus base (SPDOS/Beta/OPUS discs for Spectrum). State required format when ordering. ACCESS/MasterCard welcome (over £4).

Two or more programs on one medium — pay medium + base. E.g. WD Utilities and Morse on microdrive for £11.50, but IMPOSSIBLE to mix QL/BBC/Spectrum programmes on one medium. Send YOUR cartridge and base price, but FORMAT it FIRST 6 times like us for reliability.

WDSoftware, Hilltop, St Mary, Jersey.

Tel: 0534 81392

PL480

ANALOGUE ELECTRONICS

Let John Yobec help you to learn this fascinating and rewarding subject. The unique program with its mobile graphics and interactive sessions will introduce you step by step to the components and calculations used to design and construct transistor circuits. You will enter your own values of components and your Spectrum will show you the results.

QL SOFTWARE

Q CALC

Full feature on screen calculator. Use direct data entry from the QL's keyboard or use the icon keyboard with the cursor keys and mouse/joystick. Will run along with all your software (including QUILT and ARCHIVE) to give a calculator whenever required. Screen background is replaced after use. Calculations can even be done when QUILT is printing!

KEYDEFINE

Uses ALT as a shift key to give 41 user definable keys. Up to 2k of text, basic, or control codes can be placed on each key. 3 pre-defined versions supplied to run with QUILT, Basic and an Editor/Assembler. Includes get back last line command and routine for defining your own keys. Type out a complete letter in QUILT with a single keypress!

R WINDOWS

Creates real windows which refresh the screen after use. Any Basic command can be used with the new windows to give a professional touch to your programs.

All programs **£9.95 each including postage, cartridge and manual.**

GAMES SOFTWARE

Merry Christmas

Group For Research Into Paranormal Experiences
Present:

CHALLENGE 'MANDY' TO THE No. 1 SMASH HIT GAME

★ ★ STRIP PONTOON ★ ★

For BBC 'B', Electron, Spectrum 48K and Spectrum +
(State which version you require when ordering)

If you win enough she strips off item by item in superb hi-res. graphics with her favourite tune playing in the background. Now in its 10th month this cult game is still selling well.

"Excellent!" Mr P. Kieser
Each version still costs only:
£2.99

HIGH VOLTAGE AND P&M SOFTWARE PRESENT

★ ★ THE DESIGNERS COLLECTION ★ ★

For 16K or 48K Spectrum and Spectrum +

Now with this amazing program you can completely redesign Knight Lore, Jet Set Willy, Manic Miner, Chuckle egg and Hungry Horace so that you can create your own unique games not recognisable with the original game. No programming skill necessary.

"Very useful utility... Very easy to Use." P.C.W.

"Excellent!" N. J. Shelley.

"Each one is worth the price paid for all eight!" C. Bedford.

The Designers Collection is supplied on a C30 tape and costs only:
£4.95

★ ★ WITCHCRAFT REVEALED ★ ★

For BBC 'B', Electron, 16K or 48K Spectrum, Spectrum +
(State which version you require when ordering)

Now you can practice this ancient craft in your own home and become your own budding warlock/witch. Perform many different rituals and spells which have been collected together after much research from authentic witches and warlocks. This program includes the binding sex spell, the romany love spell, the spell for extremely good luck and fortune and the ultimate ritual for Astral projection. Over twenty five spells and rituals are in this great package.
An incredible investment at only:

£4.95

★ ★ KNIGHT LORE 2 ★ ★

(The Conquest of Fairlight)

For 48K Spectrum & Spectrum +

Join Sabre man in his latest quest as he battles against all odds to save the castle of Fairlight. Knight Lore 2 Features 3D Graphics, Amazing Animation, Filmmation and all the favourite features of the original game.
(Note this software needs a copy of Knight Lore for protection of copyright reasons).

"More playable than the original Knight Lore" M. Whittington

All this for only:

SERVICES

The 1st choice EXPRESS SPECTRUM, BBC and COMMODORE REPAIRS!

**2 GAMES
(WORTH £10) WITH
EVERY REPAIR***

**WHY PAY HIGH
'FIXED'
PRICES**

Spectrum
repairs between
£9 and £20.

BBC repairs
between
£14 and £45.

Commodore
repairs between
£14 and £35.

*Spectrum only

(We do not charge you for our
fancy premises by charging
high 'fixed' prices!)

Reputations take time to build,
we have been repairing ZX81's,
Spectrum, QL's, Apples and
BBC's professionally, for 2½
years - who is coming second?

in all U.K. with White-u-Wait repairs!
with INTERNATIONAL repair service!

to charge LOW PRICES for the smaller
repairs! (e.g. £9 for keyboard faults)

FOR LOW PRICES - "My computer
blew recently, I took it to MANCOMP,
who fixed it in 8 minutes! and for less
than £10! They are local, 'clued up',
and blindingly efficient!" 4 HEATONS
DIGEST.

FOR PROFESSIONALISM - "Of all the
repair companies 'Sinclair User' spoke
to, MANCOMP seemed the MOST
PROFESSIONAL when it came to advice
and a helpful attitude" AUG 85.

FOR HONESTY - We let you watch
your computer being repaired and if
there is nothing wrong with it, we will
tell you!!

FOR REPUTATION & HELPFULNESS -
"I have come across a firm that will be
more than willing to advise you as to
how to remedy your problems. They
are called MANCOMP and as well as
repairing faulty computers, they are also
quite willing to discuss your problems
with you and offer reasonably cheap
and more importantly CORRECT
CURES" Phil Rogers POPULAR
COMPUTING WEEKLY JAN 85.

FOR SPEED - "One firm at least can
effect any necessary repairs over the
counter in 45 minutes. Based in
Manchester, MANCOMP can offer
what is arguably the FASTEST
turnaround in the business to personal
callers" CRASH Magazine JUNE 1985.

THIS IS WHY Spectrum users from
London, Cornwall, Scotland,
Birmingham, Liverpool, Coventry,
Leicester, Glossop, I.O.M., etc.
AUSTRALIA, AUSTRIA, BELGIUM,
EGYPT, EIRE, GERMANY, HOLLAND,
KUWAIT, NORWAY, PAKISTAN, PAPUA

NEW GUINEA, SAUDI ARABIA,
SWEDEN, SWITZERLAND and
ZIMBABWE - send their Spectrums to
MANCOMP for repair!
24 HR. TURNAROUND NO-QUIBBLE
GUARANTEE NO HIDDEN COSTS.

Because we repair hundreds of
computers every week, we are
able to pass on our 'component-
buying discount' to YOU in
lower prices... Z80A cpu
£1.50, 4116 50p, Upgrade
fitted £18.95

- we bring down the prices for
repairs and components!
(We may refuse to revive
computers suffering from
attempted D.I.Y. repairs!)

Every parcel sent by
Royal Mail Registered Post and insured
for return journey!
(For next day delivery include £1.50
extra).

(Securicor by prior arrangement).
On-site maintenance for Apples,
IBM's and most makes of printers
also available.

Guaranteed 4hr response!
WHY DELAY - OUR ESTIMATES ARE
FREE AND WITHOUT OBLIGATION. IF

YOU DO NOT LIKE OUR ESTIMATE
WE WILL RETURN THE COMPUTER
AND REFUND THE POSTAGE INCURRED

Winning Phrase No 54: "Snow threat destroys pig flight hope" from Graham Smith of Leeds who receives £25. Honourable mention to "Hypersports - self explanatory" from R Robertson, of Mossend, Lanarkshire.

Now voting on week 56 - £25 to win

Each week *Popular* is compiling its own special software top ten chart - compiled by YOU.

And each week we will send £25 to the person who sends in, with their chart votes, the most original (witty, neat or clever - but never rude) phrase or sentence made up from the letters (you don't have to use them all) in the titles of the top three programs in this week's Readers' Chart, published above.

You can still vote in the chart without making up a slogan - but you won't be in with a chance of winning the prize.

All you have to do is fill in the form below (or copy it out if you don't want to damage your magazine) and send it off to: Top 10, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2H 7PP.

Voting for Week 56 closes at 2pm on Wednesday December 18 1985. Entries received after that time will not be eligible for inclusion in that week's voting. The judges decision is final. Only one entry per individual per week will be allowed.

New Releases

UNLUCKY 13

Friday the 13th the computer game is, as you can hardly fail to have noticed, the latest release from Domark. Domark seem to be trying to claim that the game is, simultaneously, gory and fun for all the family.

It's fair to say that the game is no bloodier than many other games and won't offend most people. It's also fair to suggest that Domark would quite like to imply that it's very gory to the kids who will buy it (goryness is a very attractive concept to little kids), but are keen to suggest that it's not at all nasty in any way to the paranoid owners of the retail chains who are worried what Mr and Mrs Ordinary might think.

Anyway, away with all this silliness, *Friday the 13th* is not really a very good game and if it were not called *Friday the 13th* but instead titled *Crazy Christoph* it would sell around three copies. It features moderately wacky, rather small and undistinguished graphics, depicting the various characters who get killed for no particular reason, and sort of 3D graphics showing the area around the Crystal Lake holiday camp complete with forests and old churchyards.

The idea is that you have to

find the various members of the teenage party and lead them to safety. This involves finding a cross which represents safety and placing it in a location where the group can gather. Once touched, they make their jerky way to the safe place. However, in the time it takes to collect everybody, those who have already made it to the sanctuary may get bored and wander off. There is also the problem of discovering which character is Jason, a fact that doesn't become obvious until he (or she) actually tops someone (complete with blood curdling digitised scream). It is not a good idea to tell Jason where the sanctuary is.

You also get to attack Jason yourself, or at least defend

yourself, by picking up one of ten weapons which are lying around. This can lead to amazing low res fights in which it's almost impossible to see what's going on.

I found it all fairly dull, although the chasing about might entertain some people. If it wasn't called *Friday the 13th* it would be a budget game and if its gory bad taste and jokes you're after, try Creative Computing's *Mad Doctor* instead.

Program *Friday the 13th*

ENTERTAINING

Bruce Everiss, industry, er, figure has a new software house called Everiss Software and has just released a zap zap game for the BBC B called *Wet Zone*.

Now I had grave doubts about a game called *Wet Zone*, but in fact it proves to be, more or less, *Arcadia*, in its time about the best plain pow-pow-pow game on the Spectrum. No prizes for innovation or inventiveness then. On the other hand, it's still a fairly entertaining game and there are some pretty nifty,

largish sprites to represent the bizarre hoards of aliens.

You have a mega spaceship and armed only with twin photon laser blasters must clear the skies of an assortment of umbrellas, little squiggly objects and other household items that form the aforementioned hoards. It's quite fun actually and is colourful and fast, it's also (relatively) cheap.

The Rogue Program

New Releases

ACCEPTABLE

QL Adventure is a home grown, low budget release for the Spectrum. It combines two almost totally incompatible concepts, 1) a Spectrum adventure from a small independent company, 2) not being written with the Quill. This means that it does, at least, not look like every other adventure but is written mostly in Basic instead.

To be fair the game moves along quite quickly, the graphics are drawn well and within the limits of standard Basic shapes are quite effective. It also has a good deal of wit and irreverence which can redeem almost anything.

On balance I'd say I found it a bit slow but the wacky plot, strange locations and in-jokes make this a reasonable, acceptable effort in the style of Fergus McNeill and the Bored of the Rings crowd.

IT WORKS

What the CX5 needed, everyone said, was a real time sequencer, so that it could be used as a live performance instrument and as a controller of other instruments. The Music Composer cartridge, though powerful, was hardly flexible enough to implement instant changes and anyway required a fairly sound knowledge of notation.

The first Real Time Sequence/Recorder is now available and comes not from Yamaha but Digital Music Systems - that may explain the fact that it costs £86. For those of us already enamoured of the machine it's obviously a welcome release which represents quite a feat of technical information wheedling out of the obsessively secret Yamaha.

The good news about the package is that it does everything it's supposed to and is relatively easy to use (thankfully, since the manual is minimalist to say the least).

The bad news is that's all that can be said of it; the actual design and presentation of the package is pretty poor.

You can think of the program as analogous to the Composing program except that you don't notate the music you wish to enter, you simply play it on the Yamaha keyboard. The actual sounds

PEERLESS ADVENTURE

OK, pixie hats on, mighty axes of Tharg wielded, ancient quest mode set to 'accept' and obscure bugs discovered. Lord of the Rings (part one) is here! In a package almost as mighty as the very quest itself you get two tapes, an instruction manual and the first volume of Mr T's very, very long book.

Frisolous good news is that absolutely nobody sits down and sings about anything (at least not in the first section that I've been able to play through). Real good news is that Lord of the Rings is everything every Hobbit addict hoped for.

Though there are graphics about as frequently as in The Hobbit, they are quite plain and are clearly not intended to be of equal importance to the text, but merely icing on the cake. The cake, on the other hand is one of the most advanced, original and involving text adventures you'll ever play.

Lord of the Rings Part 1 is divided into two tapes, one of the sides containing a special beginners' version of the game which reduces the problems and provides hints where they are wanted. The main adventure would seem to be as hard if not harder than The Hobbit.

You can say things in a variety of ways and mostly it

will understand you; phrases can be linked by and, giving you plenty of scope for time-saving multi-instruction. An exciting new feature found in Lord of the Rings is a multi-player option where up to four people can choose to be different members of the company of the ring (I'd like to meet someone who chooses to be that loyal rustic and all-round sycophant Sam, though). The situation is presented from the viewpoint of each of the characters, giving extra insight into the environment.

A lone player may also choose to take the part of several different characters - it can be useful in keeping the ring safe if someone is

to be used to play each phrase may be the Yamaha presets, sounds constructed using the FM cartridge, or one of 100 presets contained

within the Real Time Sequencer (mostly these are not terrifically exciting it must be said - perhaps 10 are really useful).

killed or captured.

There are reams and reams of descriptive text in every location, it's nicely presented with a redesigned character set, and it also echoes the book closely. On the question of faithfulness of the game to the book, there are obviously some variations. There would be little point to the game if all you had to do was re-enact the book.

Lord of the Rings fans will find all the characters they know and love/hate, including the dubious Tom Bombadil whose interest in mushrooms always seemed to me to smack of chemical experimentation of a most illegal sort.

Adventure addicts will find a sophisticated text adventure without peer in terms of scope, imagination (even if it's someone else's), and involvement. Here at last is the definitive Christmas present to buy anyone with a Spectrum this year, even if they usually use it for stock-taking.

It should be out on a lot of other machines as well.

You work with 'phrases' - this represents a section of music, which may be mono or polyphonic, which is assigned to a part in the music.

The part represents one of the up to eight musical voices you may play simultaneously. Creating music works like this: pick a phrase number and assign it a number of bars, then specify how many notes polyphonic it needs to be.

Select a time signature, play your phrase along with a metronome beat that counts out the beats in the bar. The complete phrase is then inserted in one or more parts, using a simple up and down cursor mechanism and a long line of phrase numbers. So for example, Part One might begin 001, 004 where 001 is a twelve bar theme and 004 is a twelve bar theme.

Any phrase may be inserted anywhere as may be rests of different lengths. You may also use Midi channels in the parts, sending the note information out to a separate musical instrument.

The faults with the system are these: you have to work out very closely how the music will work in advance and remembering what phrase number is what and having to specify the number of bars in advance are both irksome. The presentation is really 'bare bones'; more could have been done with the MSX graphics facilities than this essentially plain, graphic design lacking, presentation.

Good points: a Quantisation feature that corrects your mistiming, playing to the nearest specified note value, eg, one eighth of a beat. It works and despite the drawbacks is easy to use provided you plan the music carefully in advance. With nothing else

on the horizon, to my knowledge, I'd recommend the package, albeit with plenty of reservations.

SOME VIRTUES

God knows there are any number of motor racing games around at the moment for the Commodore 64, yet there are still some virtues to the latest one, *Scalextric* from Leisure Genius.

It's based, obviously, on the famous car racing game which filled and probably still fills the bedroom floors of teenagers everywhere.

Scalextric the computer game is basically *Pole Position II* with a nicely designed option to construct your own tracks using track pieces rather like those which form the usual *Scalextric* sets (alas no bridges though).

The track design section used a simple icon system to pick out a track piece from a 'box' and place it in position, thus building a complete layout.

The track includes such nasty sections as Chicanes, so it's possible to create utterly fiendish circuits.

Actually playing the game presents two views - from behind each of the two competing cars, shown on the top and bottom of the screen. The screens move independently and the other car is shown in appropriate perspective according to how far away it is. There is a reasonable amount of scenic detail, though nothing astounding, but the sense of speed is well done.

In fact this is really a car racing game for those who don't usually like them; it isn't hard to play, and is difficult to crash. You don't need to worry all that much about lines of approach and correct cornering - there are no gears to worry about either. *Revs* fans will find it simplistic, but for those who want a simple car race game, this has plenty of speed and excitement and is well presented.

A dead language

There are a number of analogies which can be drawn between the ancient and dead language of Latin and more recently developed computer languages.

Some of the parallels are complimentary, others are darkly portentous

Latin is a precise language with strict rules of grammar. To render a sentence in good Latin is to know the feeling of absolute success. The final product is either correct and its own reward or it is wrong and its own chastener. The satisfaction obtained from getting something perfect in every detail is rarely found in the arts where a search for perfection may actually inhibit expression and where value judgements are imposed in measuring success. Computer languages, with their demanding syntax and finite vocabulary, are seen as modern versions of Latin and intrinsically valuable for the discipline they impose upon the mind. This positive analogy is often quote in support of computer studies in school. The analogy I prefer is the one which questions the present supremacy of BBC Basic in schools.

In the Middle Ages, when the European educated class was so small that no one country's literati could survive in isolation, an international language was essential for the dissemination of ideas. Latin was eminently suitable as it was already the language of the Church, and thus known to all who were educated by the Church. It was a classical language much revered for its antiquity and origins as the language of Imperial Rome and, as a dead language, it was free of political innuendo. That is not to say that

it did not develop. Many 'new' Latin words were coined in medieval Europe; in the main they were words from newer, more dynamic, languages amended to conform with Latin syntax. However, progress in science and the humanities eventually stretched the essentially inflexible of Latin to breaking point. At the same time the spread of literacy and knowledge, freed from the monopoly of the Church, encouraged people to write about the weightier matters of the day in their own, more accommodating, languages. Although never replaced in status or in universality by a single language, Latin lingered on as an increasingly irrelevant school subject and has now just about disappeared from the mainstream of education.

Today, the computer literate of Europe far outnumber the intelligentsia of the Middle Ages and represent a greater proportion of the total population. Basic, the language of the school computer room, is supreme but the increasing demands for complex data constructs, fully structured programs and rapid execution of computing tasks cannot forever be met by merely tinkering with the language. Basic is inherently slow and has very few worthwhile applications. Mainframe manufacturers have their own languages and the microcomputer software houses work mainly in C or assembler code.

And so the Latin trap is this. We teach our children a computer language and call them compute literate. The dialect, BBC Basic, is old and unchanged for many years but it is revered due to its antiquity and its origins as the language of what was once a very advanced desktop computer. However, the up-start languages such as Locomotive Basic far behind in terms of power and in terms of sales to the home user, but not so far in terms of status. Beyond the Basic dialects, the high-powered compiled languages, led by C, are the future for small business micros.

Like Latin, BBC Basic is likely to endure only as an increasingly irrelevant school language.

Mike Lloyd

Puzzle No 187

Here is an account of my visit to the shops last Saturday:

My first call was at the grocers where I spent exactly one third of the money I had on me. On leaving the grocers I bumped into Tom (to whom I owed a pound). As I was not certain how much money I would need for the rest of my shopping I gave Tom 50 pence and promised him the rest later.

I then visited the butchers where I spent half of the money I had left. After this I went straight to the newsagent where I spent half of what I had spent at the grocers, before making my final call at the chemists where I spent one third of what I had paid the butcher.

Just outside the chemist's shop I saw Tom again, and as I had just 50 pence left I handed it over to him to clear my debt.

Can you say how much I started out with?

Solution to Puzzle 182

A = 79 B = 13 C = 43

```
10 FOR B=10 TO 31
20 B=B*B
30 B=STR$(B)
40 B=STR$(B)
50 IF MID$(B,1,1)<MID$(B,1,1) THEN GOTO 200
60 FOR A=32 TO 99
70 T=A*A
80 T=STR$(T)
90 C=B*B*B
100 C=STR$(C)
110 IF MID$(T,1,1)<MID$(B,2,1)OR MID$(T,4,1)
    <MID$(C,2,1) THEN GOTO 190
120 U=A*B
130 U=U*B
140 U=STR$(U)
150 U=STR$(U)
160 IF MID$(U,1,1)<MID$(B,3) THEN GOTO 190
170 IF MID$(U,4,1)<MID$(C,4,1) THEN GOTO 190
180 PRINT A:B
190 NEXT A
200 NEXT B
```

Using the program we can test for the values of A and B. We know that B is in the range 10 to 31 as it has a three-digit square, and A is in the range 32 to 99 as it has a four-digit square. By checking the relevant digits where the various numbers interlock, the values of A and B can be easily identified. The remaining value of C is then readily calculated by inspection as only its 'tens' digit is still unknown.

Winner of Puzzle No 182

Despite a misprint in the clues, Dr D. F. Kinane of Dundee can be congratulated for finding the correct solution, and will be receiving £10.

Rules

The closing date for Puzzle 187 is January 8.
