SPECTRUM
JOYSTICK ONLY
£24.99**

With the vast range of games now available for home computers each holds a different challenge. Now the Kempston Competition-Pro Joystick will come to your aid and improve your playing capabilities. Your movements will become quicker, your finger poised over the fire button at the ready, your scores will be out of this world. Playing will be easier.

If you're serious about the challenge your computer presents then you shouldn't be without the Kempston Competition-Pro Joystick.

Compatible with any Atari 400/800, Vic-20, Commodore 64,

Now Available separately the Kempston Joystick Interface for the ZX Spectrum **ONLY £14.99**

Allows the use of any Atari/Commodore type Joystick with the popular ZX Spectrum computer. A must for any Spectrum owner who wants the power of a joystick added to the power of the Spectrum. Simply plugs into the edge connector at the back of the Spectrum. No modifications necessary. Only £14.99

If you have the hardware you'll want the software ...

All games 16K unless otherwise stated

All the above games simply load and play with the Kempston range of Joysticks. However, some games available were produced before Joysticks were available for the ZX Spectrum. With the aid of Kempston Conversion Tapes these games can now be played with the Kempston Joysticks.

Conversion Tape I

— Converts: Horace Goes Skiing, Hungry Horace, Flight Simulation (Sinclair), Arcadia, Penetrator, Spectres.

Conversion Tape II

— Converts: Orbiter, Escape, Tanx, Centipede, Spectral Invaders, Cruising on Broadway, Frenzy.

ALL \$4.95 each

Conversion Tape III

— Converts: Ah Diddums, Jumping Jack, Molar Maul, Androids, Horace And The Spiders, Space Raiders, Winged Avenger, Muncher.

Most items are available from W H Smith, Boots, Spectrum Computer Centres and good computing shops or direct from:

5 SINCLAIRVOYANCE Will the business machine from Sinclair Research revolutionise the market?

11 SINCLAIR USER CLUB Machine code books are among the special offers for members.

18 NEWS Robots and the new QL computer steal the show.

26 LETTERS We publish the best from our bulging postbag.

28 SINCLAIR SIMON In which our hero is puzzled by the latest computer.

34 HARDWARE WORLD A disc interface, a tape controller and a sound generator are featured among add-on reviews.

41 ROBOT COMPETITION Enter the second part of our competition to win a robot and other fabulous prizes.

44 SOFTWARE SCENE Our writers review the latest ZX-81 and Spectrum games.

54 CARTRIDGE SOFTWARE John Gilbert assesses the programs available for the Interface Two.

57 SINCLAIR BUSINESS USER Mike Wright looks at the new Sinclair business machine.

62 HIT SQUAD Our top programmer this month is Adrian Sherwin, author of the Birds and the Bees.

67 PROGRAM PRINTOUT Sixteen pages of the best programs sent by readers.

86 MACHINE CODE More about machine code graphics in John Kerrigan's continuing series.

96 USER OF THE MONTH Nicole Segre finds out how the Spectrum helps a probation officer in Cheshire.

99 BOOKS John Gilbert investigates the latest computer publications.

101 STARTER PACK A regular feature for the benefit of beginners.

107 FORTH The last in John Gilbert's series considers the human factor.

114 EDUCATION Theodora Wood examines programs which help children with their arithmetic.

116 COMPETITION Your chance to win £25 worth of educational software.

122 HELPLINE Andrew Hewson provides more expert answers to your queries.

129 SPECIAL OFFER Half-price Sinclair Software.

131 MIND GAMES Quentin Heath uncovers the mysteries of the Big Top.

137 SOFTWARE DIRECTORY A comprehensive list of software available for the ZX-81 and Spectrum.

PLUS: SOFT CENTRE A mammoth free pull-out-and-keep software review section.

NEXT MONTH

We challenge you to pit your wits against Sherlock Holmes in our great competition, and Quentin Heath does battle with the Lords of Time.

Unlock Your Imagination

SCOPE

Computer Graphics Language

- ★ A VERY POWERFUL, TRUE MULTITASK LANGUAGE
- ★ AS FAST AS MACHINE CODE
- ★ SIMPLER THAN BASIC

Write Machine Code in a fraction of the time currently required

SCOPE is available from most good quality dealers and selected branches of

WHSMITH

For details of how to get your games published commercially contact ISP Marketing

PRICE

£11.95

TECHNICAL DETAILS

SCOPE is a fully structured multitask language specifically for writing *graphics, animation and sound*. Being fully compatible with BASIC it is ideal for writing both arcade and adventure style games. Additionally, with SCOPE present in high memory it can be used as an assembler with SCOPE words as plain language mnemonics. Therefore no knowledge of machine code is required. The language is extremely easy to comprehend and is very powerful indeed providing many features not available from BASIC.

SCOPE HAS TO BE USED TO BE BELIEVED

Quantum Leap in the dark

THE LAUNCH of the QL business machine has shown not only that Sinclair Research can produce machines for the upper end of the computer market but that it can produce a machine which, it claims, is well in advance of anything available for less than £2,000.

The launch of the Spectrum two years ago left the computer industry stunned at the ability of Sinclair to predict what would work in the market. The journalists at the launch even gave a standing ovation to Sir Clive.

The introduction of the QL, or Quantum Leap, has been slightly different. There was no applause at the launching of the machine and it still remains to be seen whether the silence was in awe or not, but nobody can dispute that Sinclair has effected the rest of the industry in such a way that it will have to think carefully before making its reply.

It must be said that Sinclair marketing strategy, which seems poor or non-existent to some people, has played a role in the company's success. So far, Sinclair has launched and advertised computers and peripherals well in advance of stocks being available. Some sceptics are already saying that it will not be until late this year that the QL will arrive in the stores.

Sinclair has been so consistent with its method of mail order selling that there may be something behind the technique. In the world of marketing, scarcity creates demand, rather like the scarcity of diamonds or gold. The more difficult it is to obtain a computer, the more eager potential users become to

possess one. That was true of the Spectrum to some extent and it was certainly true of Interface One and the Microdrive, which appeared more than one year after they were first announced and are still not available generally.

It might also be asked why Sinclair launched the QL in such a hurry and at a time when there is a dip in the market after Christmas. There were no initial stocks of the machine and the manual was half completed. The answer seems to be that the company wanted to attack the BBC Micro and Commodore 64 in the serious sector, as well as pre-empting the new Commodore and IBM business machines which were launched a week later.

When the QL was launched Nigel Searle, managing director of Sinclair Research, stressed that the company did not know in which direction the QL would go. It might attract more of the business market, go towards educational markets, or become a glorified games machine.

Sinclair also said that about the Spectrum but immediately countermanded the idea by producing a range of games programs. The company has done the same thing with the QL. It has a range of software packages on Microdrive which are more applicable to the business sector of the market.

There is no doubt that the QL can be compared favourably to machines which touch the £1,000 mark at least. The 32-bit processor chip helps provide a computer far in advance of most machines on the market. It is a multi-tasking computer, so it can run several programs or routines at the same time.

The QDOS operating system in the QL also marks it apart

from other machines costing less than £1,000. It runs the Microdrives and includes many graphics utilities to help the user produce programs which are simple to write but powerful when run.

The machine has certain deficiencies which Sinclair Research says will be remedied later. Compared to the BBC, it is not equipped to take disc. Even when an interface has been added, Sinclair Research says that it will support Winchester discs which are very expensive and, in most cases, bulky.

The printer interface for the standard QL is the serial RS232C. Most other computers, such as the BBC, support the Centronics parallel interface which has a faster data transfer rate. Again, Sinclair says that a parallel interface will be made available in the near future but the question is when? The business user is unlikely to want to wait a year.

Some good news from Sinclair Research is that every user who joins QLUB, a club for QL owners, will receive notification of new products through a newsletter and compensate for the communications problems which occurred between users of the ZX-81 and Spectrum and the company. That may mean that users will have their technical questions answered, which is not happening at the moment. Club members will also be able to take advantage of any offers available.

No matter what happens to Sinclair, the market as a whole will change dramatically in the next year. Many software companies will not be able to approach the quality software which the QL will demand. It will be the bigger companies, already geared with development systems, which will make the all-important and risky first attack on the QL customer.

That is not to say that everybody else should pack up and go home. The lower end of the market, consisting of machines like the Electron and Spectrum for less than £200, will continue to provide value for money. Those machines will be bought by people who do not want to spend £400 to learn about computers or to play games.

Magazines, such as *Sinclair User*, will also have to make changes to accommodate the QL. Not only will features covering the new machine need to be written but they will have to follow a new style to which the more serious computer user will be accustomed.

Whatever happens in the next year, those who are willing to take advantage of events will create a computer boom the like of which has never been seen previously.

Investors' complaint

RUMBLES of discontent about profit by investors in Sinclair Research have been penetrating the company's joy bubble. According to Sinclair, such comments as have been made have been distorted out of proportion.

Many investors have complained that they are not getting what they expected — and the operative word is expected. Sinclair Research is a company which is always ploughing into new areas. To do so it needs money and Sir Clive made it clear when shares were sold that some of the profit would be applicable to research. Sinclair is not, after all, just a marketing company. It is from the research that investors will eventually receive their profit.

New-Sinclair QL

There's no comparison chart, b

The Sinclair QL is a new computer.

Not just a new Sinclair computer, but a totally new sort of computer – nothing like it exists anywhere.

It's not just a bit better than this, or a bit cheaper than that – it's a computer that's very hard to compare with anything. Just check the features below – and if you don't agree, take up the challenge at the end of the advertisement.

If you do agree, there's only one course of action you can take... get yourself a Sinclair QL at the earliest possible moment.

The Sinclair QL has 128K RAM. Big deal?

Several micros offer 128K RAM, or more, as standard. The 'What Micro?' table for December 1983 lists over 50 of them – but 40 of the 50 micros listed cost over £2,500!

The Sinclair QL offers you 128K RAM for under £400, and an option to expand to 640K. That's a lot of bytes to the pound!

The Sinclair QL has a 32-bit processor. Who else?

Under £2,700, nobody. Even the new generation of business computers, such as the IBM PC, are only now beginning to use 16-bit processors.

At prices like this, the Motorola 68000 family – widely regarded as the most powerful microprocessors available – will remain a luxury.

Yet with the Sinclair QL, the 32-bit Motorola 68008 is available for less than £400.

You can also be sure that the QL will not become outdated. 32-bit architecture is future-proof.

32-bit processor architecture, 128K RAM, and QDOS combine to give the QL the performance of a mini-computer for the price of a micro.

Exclusive: new QDOS operating system

No competition! QDOS sets a new standard in operating systems for the 68000 family of processors, and may well become the industry standard.

QDOS is a single-user, multi-tasking, time-sliced system using Sinclair's new SuperBASIC as a command language.

One of its most significant features is its very powerful multi-tasking capability – the ability to run several programs individually and simultaneously. It can also display the results simultaneously in different portions of the screen. These are features not normally available on computers costing less than £7,000.

Eleven input/output ports

QL ROM Cartridge slot

2x Joystick ports 2x RS-232C

Expansion slot

New professional keyboard

The QL keyboard is designed for fast input of data and programs.

It is a full-size QWERTY keyboard, with 65 keys, including a space bar; left and right-hand shift keys; five function keys; and four separate cursor-control keys – key action is positive and precise.

A membrane beneath the keyboard protects the machine from dust (and coffee!), and for users who find an angled keyboard more comfortable, the computer can be raised slightly at the back by small detachable feet.

£399

because there's no comparison!

Advanced new friendly language – Sinclair SuperBASIC

The new Sinclair SuperBASIC combines the familiarity of BASIC with a number of major developments which allow the QL's full power to be exploited.

Unlike conventional BASIC, its procedure facility allows code to be written in clearly-defined blocks; extendability allows new procedures to be added which will work in exactly the same way as the command procedures built into the ROM; and its constant execution speed means that SuperBASIC does not get slower as programs get larger.

Two 100K microdrives built in

The Microdrives for the Sinclair QL are identical in principle to the popular and proven ZX Microdrives, but give increased capacity (at least 100K bytes each) and a faster data-transfer rate. Typical access speed is 3.5 seconds, and loading is at up to 15K bytes per second. The Sinclair QL has two built-in Microdrives. If required, a further six units can be connected.

Four blank cartridges are supplied with the machine.

Included – superb professional software

The suite of four programs is written by Psion specially for the QL and incorporates many major developments. All programs use full colour, and data is transportable from one to another. (For example, figures can be transferred from spreadsheet to graphics for an instant visual presentation.)

Word-processing

Certain to set a new standard of excellence, QL Quill uses the power of the QL to show on the screen exactly what you key in, and to print out exactly what you see on the screen.

A beginner can be using QL Quill for word-processing within minutes.

QL Quill brings you all the facilities of a very advanced word-processing package.

Spreadsheet

QL Abacus makes simultaneous calculations and 'what if' model-construction easier than they've ever been. Sample applications are provided, including budget-planning and cash-flow analysis. QL Abacus allows you to refer to rows, columns and cells by names, not just letters and numbers. Function keys can be assigned to change a variable and carry out a complete 'what if' calculation with a single key-stroke.

Business graphics

QL Easel is a high-resolution colour program so easy to use you probably won't refer to the manual! It handles anything from lines, shaded curves or histograms to overlapping or stacked bars or pie charts. QL Easel does not require you to format your display before entering data; it handles design and scaling automatically or under your control. Text can be added and altered as simply as data.

Database management

QL Archive is a very powerful filing system which sets new standards, using a language even simpler than BASIC. It combines ease of use for simple applications – such as card indices – with huge power as a multi-file data processor.

An easy-to-use labelling facility means that you don't have to ask for your file by its full name – a few letters are enough.

New – the Sinclair QLUB

The QLUB is the QL Users Bureau. Membership is open to all QL owners. For an annual subscription of £35, QLUB members receive one free update to each of the four programs supplied with the QL, and six bi-monthly newsletters. Sinclair has also made exclusive arrangements for QLUB members to obtain software assistance on QL Quill, Abacus, Archive or Easel by writing to Psion.

The Sinclair QL challenge

If you're seriously considering any other computer, post the coupon for a blow-by-blow comparison. We'll take a published comparison chart for the machine you're considering (not one we've created ourselves) and give you the Sinclair QL figures, detail by detail.

Take action today!

To order by mail

– complete the coupon and send it to the FREEPOST address below. For credit card holders it may be possible to extend your credit limit. Full details will be sent when we acknowledge your order.

To order by telephone

– phone Camberley (0276) 685311; – have your credit card (Access, Barclaycard, Trustcard) number ready. It may be possible to extend your existing credit limit. Please ask our telephone staff for more details. **Please do not use this number for other enquiries.**

For more information

Phone Camberley (0276) 686100, or use the coupon to get a QL brochure.

Please allow 28 days from receipt of order. Remember that Sinclair offers a 14-day money-back undertaking.

TM Sinclair, QL, QDOS, QLUB and ZX Microdrive are trade marks of Sinclair Research Ltd.

Send to: Sinclair Research Ltd, Computer Division, FREEPOST, Camberley, Surrey, GU15 3BR.

PLANE SAILING

AIRLINE A wing and a prayer will not be enough to turn your £3 million to £30 million in the time allowed, but your financial wizardry will enable you to take over British Airways, or will it? Runs on ZX81 16K — £5 and Spectrum 16K/48K — £6.

SMUGGLER As master of a 19th century vessel you plough between England and the continent visiting ports to buy and sell your cargo, but beware the customs men, pirates and gale force winds can all run you aground. Runs on Spectrum 48K — £6.

PLUNDER Can you singe the King of Spain's beard. Engage the Spanish ships on the high seas survive their broadsides and plunder the gold destined for the Armada and you might get your Knighthood before Francis Drake. Runs on Spectrum 48K — £6.

ABYSS Can you journey across the long-forgotten Abyss and outwit the evil monsters that lurk in the shadows awaiting the foolhardy and careless adventurer. There are many bridges and many monsters. Will you be the one to make the Abyss safe to cross again. Runs on Spectrum 48K — £5.

CORN CROPPER Limited cash and droughts are two of the problems facing the farmer. Planting fertilizing and harvesting must all be done economically if you are to reap the rewards offered in corn cropper. Runs on ZX81 16K — £5 and Spectrum 16K/48K — £6.

DALLAS Can you amass enough petro dollars to take over the Euing empire. Cut throat business and an eye for the main chance may get you there but you'll need nerves of steel to become the oil king of Dallas. Runs on ZX81 16K — £5 and Spectrum 16K/48K — £6.

GANGSTER Are you cold hearted and callous enough to warrant the title of Don. You need to be if you are to rise to the top of the pile. A quick trigger finger and an even quicker brain are needed to control the mobs and their rackets. Runs on Spectrum 48K — £6.

BYTE Complete the ten circuits you need to build your computer system then return home. Easy. Byte has sent its electronic monsters to harry you through this three dimensional maze of circuitry, if any of them catch you... Runs on Spectrum 48K — £5.

AUTO CHEF You have a million in capital and need to increase this to £25 million in the shortest time possible. Inflation, strikes, sluggish markets are only some of the hazards to overcome. Runs on ZX81 16K — £5 and Spectrum 16K/48K — £6.

PRINT SHOP In print shop are scheduling, staffing, purchasing and quoting within this time limit will test your business acumen to the full and weekly balance sheets will prove the quality of your decision making. Runs on ZX81 16K — £5 and Spectrum 16K/48K — £6.

BRITISH LOWLAND You are given a racing start for your small sports car company but you have an overdraft to repay and a workforce to be kept happy. Steer your way to success with careful management and industrial relations. Runs on Spectrum 48K — £6.

CAMELOT As the banished Arthur Pendragon you must find seven treasures without falling prey to the Brigands, Dragons and Evil Magicians that stand in your way and make a triumphant return to Camelot to be crowned King. Runs on ZX81 16K — £5 and Spectrum 48K — £5.

Available from W H Smith, Boots, Rumbelows and all good computer shops or Cases Computer Simulations Ltd., 14 Langton Way, London SE3 7TL.

Strategy Games. They're no pushover

"AMAZINGLY FAST SERVICE - YOU'VE KEPT IT UP EACH TIME"

(R.M. DELAHAY, CHELTENHAM)

SOFTWARE SUPERMARKET

At Software Supermarket, we play all the programs we can find for the Spectrum and the BBC micro and put just the best of each type into our ads and catalogues. We do not have the biggest list of Spectrum programs - just the best: from many different program companies, large and small, famous and just-about-to-be-famous. We produce no programs ourselves, so our choice is completely impartial.

We quote reviews from all the magazines to help you decide (and to save you money) and we tell you if your joystick will work! ALL GAMES WORK WITH KEYBOARD CONTROL, TOO. We choose the best and we send them fast - which saves you time hunting round the shops. From over 40 countries you write praising our same-day despatch. Mail order or phone credit card orders only please. You can now phone VISA or ACCESS credit card orders to us at any time, from any country where your own regulations allow it.

48K SPECTRUM ONLY

WHEELIE One of the great games of 1984! Sensational graphics and sound: original and 100% playable. Take off on your SuperDream bike, jump buses and cars, watch out for hedgehogs as you search for the ghost rider. Will you find him? Will you beat him? Keyboard or any joystick. And the most realistic graphics and sound you've met. If only all games were as involving as this! (Microsphere) £5.95

THE BIRDS & THE BEES The best Bug-Byte game since Manic Miner - which is high praise. You are Boris Bee collecting nectar, but The Birds are out to get you. The birds, the plants, the centipede, the bear, the wasps - they're all after you. Of course, it plays the 'Bumble Bee' music and there are more screens than we have managed to get through. The graphics are excellent. Keyboard or Kempston/Protek/AGF joysticks. (Bug-Byte) £5.95

KRAKATOA ESCAPE FROM KRAKATOA is a completely amazing piece of programming. Fantastic full-screen graphics and great music. Your helicopter is huge, with a giant rotor. The explosions from the volcano are very convincing indeed. It really has the biggest graphics and the most detailed scenery we've ever seen - and it's very playable. A year ago, it would not have been possible! No joysticks. (Abbex) £5.95

DOOMSDAY CASTLE ZIGGY'S SECOND ARCADE/ADVENTURE. (Though if you missed 'The Pyramid' you can buy that, too! Same price) Ziggy has to explore 99 rooms of the castle to find and rescue the 6 elven stones. All in full-screen and wonderful graphics as you fight the URKS, GARTHROGS, GOOGLY BIRDS, NEUCLOUDS and ORPHACS - all with different weapons and personalities. It is quite irresistible - and don't forget to send Fantasy your coded hi-scores! Joysticks: Kempston/AGF/Fuller/Mikrogen/Protek (Fantasy) £5.50

BUGABOO "One of the most interesting and enjoyable games to appear" (YrComp) Rave reviews all round for this highly original game. As a very well animated flea all you do is try to jump up through a series of extremely beautifully drawn caverns while avoiding a pterodactyl. Realtime clock, beautiful full-screen animation and amazing colours. No joysticks. (Quicksilver) £6.95

VALHALLA "100 different locations and 36 characters, all of whom have different personalities. Valhalla isn't like anything else." (PopCompWkly) Valhalla is the only adventure where you can watch the animated characters play out the story. Join in if you wish! 6 adventures in one: print out graphics and text: it can even cope with your spelling. Spellbinding state-of-the-art adventure. No joysticks. (Legend) £14.95

GROUCHO "Full of the great jokes and ideas that made Pimania such a winner" (PopCompWkly) Find the Hidden Star - and win a trip to Hollywood! A mad adventure with lots of good tunes and some very good cartoon-type animation. Follow Groucho and the Piman around the USA. Discover the 22 clues - and name the hidden star - and you win the trip! (Entries close 1/6/84) A brilliant follow-up to Pimania, using every bit of the 48K. FREE 'hit single' on flipside may contain clues, too. No joysticks. (Automata) £10.00

ANT ATTACK The ants are horrifyingly lifelike - hi-res graphics which are among the best I've seen" (Comp&VidGames) The most amazing 3D animation we've seen lately, with rave reviews all round. The 3D is so involving it's being patented. 12 command keys and a game to impress your friends as you defeat the City of the Ants. No joysticks. (Quicksilver) £6.95

MANIC MINER "The best-selling computer game in the country, and deservedly so, superb" (PersCompGames) "One of the best games I've seen" (PersCompToday) Based on the USA arcade chart-topper Miner 2049er. Superb graphics and sound as you search thro 20 screens - each one a different arcade game. 20-screen demo. Kempston joysticks. The best Spectrum game in the world! (Software Concepts) £5.95

HALLS OF THE THINGS "The most exciting and innovative game I have seen for the Spectrum" (ZXComp) Explore an 8-storey maze, find treasures, avoid nasties. BUT, this time, you can SEE exactly where you are and what you're doing as the maze scrolls as fast as you can move. Brilliant graphics (try waving your sword about!) and 19 command keys. No joysticks. (Crystal) £7.50

GO TO JAIL "Excellent graphics are used to make a very impressive display indeed, highly recommended" (ZXComp) The best computer version of the famous game we've ever seen. From 2 to 5 players (including the Spectrum at last! It's ruthless, but honest.) Every original feature is faithfully reproduced and the screen display is miraculous. No joysticks. (Automata) £6.00

16/48K SPECTRUM

THE TRAIN GAME "An excellent game... original, well thought-out and full of action, absorbing and amusing" (S User) Run your own railway! Change the points to avoid crashes, watch out for hijackings by irate passengers. Full-screen graphics. 30 command keys. 2 track layouts. 7 skill levels. 14 sub-levels! Demo mode and Pause while you go on strike. Very catting hobby! No joysticks. Microsphere) £5.95

PHEENIX "This program has everything... superb presentation, graphics and sound. Highly recommended" (HomeCompWkly) The full arcade-action 5 screens in the best-ever Spectrum 'Phoenix' 5 skill levels: choice of character sets: demo mode: crams 48K quality into 16K. Kempston/AGF joysticks. (Megadodo) £5.50

TRANZ AM "An original idea makes a challenging game" (PersComp News) Take your Red Racer (full-screen graphics) all over the USA: avoid the deadly Black turbos and collect the Gold Cups. Playing area is 600 TIMES YOUR SCREEN SIZE! Realtime clock: accurate speeds: controlled acceleration: amazing Night-Drive phase. Kempston/Quickshot/Tiga joysticks. (Ultimate) £5.50

FROGGY "The game is superb" (ZXComp) "Unreservedly recommended a stunning display" (ComeCompWkly) This Frogger is leaps ahead of the rest! Loads in 2 parts: instructions and keyboard demo first: then the game - which uses so much memory you have to unplug your printer. The classic game in its very best form. Kempston/Quickshot joysticks. (DJL) £5.95

TASWORD TWO

THE WORD PROCESSOR

64 CHARACTERS PER LINE ON THE SCREEN AND TO PRINTERS!
MICRODRIVE COMPATIBLE — instructions supplied

"The number of on-screen prompts, together with the excellent manual, make it ideal — even for an absolute beginner."

PERSONAL COMPUTER WORLD September 1983

"What makes a word processor more or less versatile is its control features. Tasword Two offers an impressive selection and the tutor program succeeds in demonstrating them admirably."

ELECTRONICS AND COMPUTING November 1983

"Tasword is showing a degree of sophistication that business computers took many years to develop."

WHAT MICRO? October 1983

TASWORD TWO The Word Processor*

Your Spectrum becomes a **professional** word processor with TASWORD TWO. TASWORD TWO gives you an amazing **64 characters per line** on your screen. This is ideal for standard A4 paper and TASWORD TWO prints your text just as it appears on your screen.

Tasword Two drives the following interfaces:

Cobra RS232 I/O Port	Kempston Interface
Euroelectronics Interface	Morex Interface
Hilderbay Interface	Tasman Interface
Sinclair ZX Interface 1	ADS Interface

The same program drives these interfaces. A short easy to follow set of instructions takes you through setting up your Tasword Two to drive the interface you have or choose to buy. Tasword Two also drives the ZX printer.

Tasword Two is readily adapted for the microdrives to give super-fast saving and loading of both program and text. The microdrive instructions are supplied with the Tasword Two manual.

£13.90 fully inclusive mail order price.

TASWORD TWO TUTOR

TASWORD TWO comes complete with a manual and a cassette. The cassette contains your TASWORD TWO and TASWORD TWO TUTOR. This teaches you word processing using TASWORD TWO. Whether you have serious applications or simply want to learn about word processing, TASWORD TWO and TASWORD TWO TUTOR make it easy and enjoyable.

TASWORD TWO £2 Demonstration Cassette

See for yourself the powerful features of TASWORD TWO. Send just £2 for the Tasword Two demonstration cassette. A voucher is included which gives you £1 off the price of TASWORD TWO.

All prices include VAT and post and packaging

* Available from larger branches of Boots

For further information on all these products send an s.a.e. with "Tasman Brochure" written on the flap.

Send cheque P.O. or Access number with order.
 Telephone Access orders: Leeds (0532) 438301

TASWIDE — 64 characters per line!

A machine code utility program, TASWIDE **doubles** the information that your own programs can display. Make a simple change to your print statements and your output appears on the screen at 64 characters per line instead of the normal 32. Both print sizes can be mixed on the screen. 16K and 48K versions supplied on the same cassette.

£5.50 fully inclusive mail order price

TASMATH 1

Mathematics education. Three programs on one cassette:
 TASIMEQ — simultaneous equations
 TASQUAD — quadratic equations
 TAS-TRIG — trigonometry of right angled triangles.
 Available for the 16K and 48K Spectrum and for the BBC model B.

£5.95 fully inclusive mail order price

TASPRINT

A must for dot matrix printer owners! Print your program output and listings in a choice of five impressive print styles. Drives all the printer interfaces listed under Tasword Two and all dot matrix printers with bit image graphics capabilities. You can also use TASPRINT to print Tasword Two text files. TASPRINT gives your output originality and style! Send s.a.e. for brochure which includes TASPRINT output.

£9.90 fully inclusive mail order price

TASMAN PARALLEL PRINTER INTERFACE

Plug into your Spectrum and drive any printer fitted with the Centronics standard parallel interface. Supplied complete with ribbon cable and driving software. The cassette includes LLIST, LPRINT, and **text** screen copy software for all centronics printers. The user changeable interface software makes it easy to send control codes to your printer using the method so successfully pioneered with Tasword Two. The cassette **also** contains fast machine code high resolution screen copy software for Epson, Star, Seikosha, Shinwa, and Tandy Colour Graphic (in colour!) printers. Send s.a.e. for brochure which includes sample print-outs and a full list of printers supported by screen software. Compatible with microdrives/ZX Interface 1.

£45 fully inclusive mail order price

TASMAN RS232 PRINTER INTERFACE

Specification and software as above but drives printers fitted with the RS232 standard interface. A low cost route to printing — especially suitable for use with the Tandy Colour Graphic printer and the Brother portable typewriter/printers. Supplied complete with cable — please specify whether 4 pin DIN or 25 way D plug required.

£38 fully inclusive mail order price

CLUB BENEFITS

Bi-monthly club cassette available to all club members.
Special discounts on hardware, software and books.
Members recover their membership fee many times over.
Free Club software. Telephone Helpline.
Machine code teach-in. Technical advice.

Book and software offers

THIS MONTH the Club can offer, at the usual knock-down reductions, a host of Spectrum software from Imagine.

Imagine has created some new and original games concepts, such as stopping tooth decay in **Molar Maul**, getting out of a toy box in **Ah Diddums**, and zapping through the time lanes in **Zip Zap**.

Just as Imagine has revolutionised Spectrum gaming, so CRL has brought a touch of class to the ZX-81 with its **Hi-res Graphics Toolkit**. If you want Spectrum-like graphics on your ZX-81, this package will help you achieve

the aim. Last but not means least of our software offerings is **ZX Chess Two** for the ZX-81, possibly the best version of chess on the machine.

For the first time we are including books in the offer. They consist of a complete set of books for the machine code beginner and expert alike, published by Melbourne House.

As usual, the offers are open only to Club members and they will be available until the end of March. To help new members take advantage of the offers they should include orders with membership applications.

	List price	Offer price
Spectrum (16K)		
Zzoom	£5.50	£4.50
Zip Zap	£5.50	£4.50
Arcadia	£5.50	£4.50
Jumping Jack	£5.50	£4.50
Ah Diddums	£5.50	£4.50
Molar Maul	£5.50	£4.50
ZX-81 (16K)		
Hi-res Graphics Toolkit	£5.95	£4.80
ZX Chess II	£9.95	£8.70
Spectrum Machine Language for the Absolute Beginner	£5.95	£4.95
The Complete Spectrum ROM Disassembly	£9.95	£8.70
Supercharge Your Spectrum	£5.95	£4.95
Prism DTX 5000	£99.95	£89.95

Great Prestel add-on offer

THIS MONTH the Club offers one of the most exciting add-ons ever. Members are offered a full £10 off the Prism VTX 5000 modem, usually priced at £99.95. That will mean, in addition to the tremendous features listed, Club members will be able to correspond with each other directly via modems. A full list of Club members who have modems will be sent to other club members.

The VTX 5000 allows you to connect a Spectrum to the telephone and access the Prestel and Micronet 800 databases from your home.

Prestel data takes the form of an enormous number of linked pages. The main advantages compared to the broadcast viewdata services, like Ceefax and Oracle, are that the database is very much bigger, there is no delay involved in sending the information you require and, very important, the system allows you to talk back.

That last feature is particularly significant, as it allows you not only to look at the information but order goods and services such as TVs, cameras, insurance, travel, car hire, records, books, computers, wines and subscriptions directly if you wish.

One building society already allows you to pay bills and order statements from your home and it is to be expected that banks will follow the example.

You can load programs down the telephone line — many of them are free — look at time-tables, play games against the computer or against other subscribers and do numerous other things. Each subscriber has a Mailbox in which messages from other users can be left. Each time he connects to the system, he will be told if there are any messages for him.

Micronet 800 is what is called a closed user group within the Prestel database. It is effectively a great big computer club. There are many free programs, help and advice, reviews, all the latest information about computers, games, charts, benchmarks, small advertisements and forthcoming events.

In addition, you may be interested to learn that the Sinclair User Club Helpline is now connected to Micronet. If you have any technical queries you can send a Mailbox message to the Helpline direct — the number to contact will be sent to all members.

The No.1 Football Game

ZX81 16K,
ZX Spectrum 48K
BBC and Cric versions coming soon!

Football Manager

Designed by Kevin Toms

This outstanding game of skill and strategy is now widely available and you can join the many thousands of satisfied customers who have purchased the game. This is no five minute wonder – you will be playing this game for hours over many weeks (we know – our customers tell us!).

Kevin Toms

Some of the features of the game:—

- ★ Matches in 3D graphics ★ Transfer market
- ★ Promotion and relegation ★ F.A. Cup matches
- ★ Injury problems ★ Full league tables
- ★ Four Divisions ★ Pick your own team for each match
- ★ As many seasons as you like
- ★ Managerial rating
- ★ 7 skill levels
- ★ Save game facility

Addictive

*ZX81 Chart,
Home Computing Weekly 16.8.83

Comments about the game from press
and our customers

"FOOTBALL MANAGER is the best game I have yet seen on the Spectrum and my personal favourite of all the games on any micro ... To the ordinary person it is an excellent view of what can be done in the field of computer games ... The crowning glory of this game is the short set pieces of match highlights which show little stick men running around a pitch, shooting, defending and scoring ... It is a compulsive game but people who cannot take game sessions of 9 hours or so, which happened on one happy Sunday, will be grateful to know that there is a 'save to tape' option. FOOTBALL MANAGER has everything it could ... The

originator, Addictive Games, certainly deserve the name." Rating: 19/20 (Practical Computing – August 1983).

"When I first received this game I spent the best part of the weekend playing it. Since then I have returned to it more often than any other. The truly addictive quality of this game is the remarkable way it mirrors the real football manager's problems ... "(Personal Computer Games – Summer 1983)

"It's my own fault you *did* warn me – I am totally and completely hooked on FOOTBALL MANAGER." (Mr. A. Wright – Lancashire.)

"It is by far the best software game that I have seen for the Spectrum." (Mr. N. Lincoln – Surrey.)

"I congratulate you for a marvellous game which keeps the player enthralled." (Mr. N. Creasey – Gerrard's Cross.)

"I am writing to say what a great game it is. I have spent over 45 hours on it." (Mr. D. Fearn – Gloucestershire.)

"Your FOOTBALL MANAGER game is terrific." (Mr. N. Cumming – West Bromwich.)

NEW!
For ZX Spectrum 48K

Computertutor can give your child a head start with games that really make fun out of learning

Children of today are fascinated by computers. With micros already used in schools throughout the country their involvement in education and in our daily lives is increasing all the time.

To give young children a head start we've created, with parents, teachers and, of course, children, the Clever Clogs series, designed to appeal to children in the 3-7+ year old age group. Help them develop basic skills, stimulate imagination and increase their self-confidence. Unlike similar products, each Clever Clogs program offers a wider choice of games to play. And each game can be made more 'difficult' by simple editing of the tape and resetting new questions. In this way you can keep up with your child's progress - even link the questions into work they're doing at school.

The Clever Clogs series can be used by your whizzkid on their own with initial help from you.

Price of each program £6.50
(incl. Vat, P & P). Overseas orders
£1 extra per tape for airmail delivery.
Money back guarantee.

Trade enquiries invited.

**AVAILABLE
AT
W H SMITH**

PARTY TIME for Age 3 yrs +

With parent's help even tiny tots will love to play these party games. They can 'blow out' the candles on a cake, sing along with nursery rhymes, even draw on the screen. If you have a printer you can record your Clever Clogs artistic efforts and watch their progress as they develop new skills. Because each Clever Clogs program offers a choice of games to play and has the facility to increase the 'difficulty' factor your children won't grow out of them so quickly.

JUNGLE JUMBLE for Age 5 yrs +

At this age less parental help and guidance are necessary. Your child will continually be seeking new experiences and will enjoy his/her mind being challenged. Clever Clogs satisfies both criteria.

Correct answers to questions build up a picture of an animal - is it a real one? That's up to the player. Take your choice and create your own unique zoo. Then enter the great Safari Park chase... the possibilities are endless!

WHIZZ QUIZ for Age 7 yrs +

A game of skill and chance for 1-4 players that will get your whizzkids thinking hard. But Clever Clogs of this age like a challenge. You can proceed from the general knowledge questions already programmed and you can enter up to 100 questions of your own - there's tremendous scope here for the really clever, Clever Clogs! Watch them develop their three 'R's' and in a way that will fascinate you as much as them.

Turbo Charge your ZX81 with our ZX81 - FORTH ROM with multi-tasking

Replaces your basic ROM to give you a totally new system. The unique screen editor allows you to edit programs while other programs are executing. Runs more than 10 tasks at once. Schedule tasks to run from 50 times per second to once a year. Ideal for control purposes. Uses all ASCII characters and restores the keyboard to normal operation. It contains a real-time clock and a large number of 32-bit words. Supports the ZX Printer. Allows machine code definition and needs at least 2K of memory. Supports 16K, 32K and 64K RAM-packs. Three times faster than fig-FORTH, but fig compatible. Available as a 'fit-it-yourself' EPROM, with an extensive manual for £25 plus VAT. Some ready-converted ZX81's available.

Floating-point extension ROM - out soon!

NEW GAMES WANTED:

And if YOU'RE game, this could be just the opportunity you've been looking for!

Following the success of our initial launch into the computer software market with the K-tel DOUBLESIDER range, we're now looking for exciting new games to continue the series. And this is where you come in.

If you've got a great games program for either the Commodore 64, Vic 20 or Sinclair Spectrum, let's hear all about it. What we want is high quality, nifty graphics, original ideas and good, old fashioned fun.

So you think that your game might fit the bill? Then send a cassette copy with details to Mike Dixon, K-tel International, 620 Western Avenue, London W3 0TU straightaway. Or telephone him on 01 992 8055.

And remember programmers... use your computer for fun. And profit.

Profits shock for Sinclair investors

CITY SHAREHOLDERS received a nasty shock at the beginning of the year when Sinclair Research announced the disappointing results for the half year to the end of October, 1983. Despite Sir Clive Sinclair's past optimism about the current financial year, the figures confirmed that the previous year's growth was unlikely to be repeated.

In the first half of the year Sinclair sales rose by £14 million — an increase of 60 percent — but costs rose by 85 percent. Pre-tax profit was up by only £600,000, to £4.4 million. Those figures reflect both the supply problems at Timex in Dundee, and the computer price war which caused Sinclair to drop the price of the Spectrum.

A year ago City investors were only too happy to put up £13.6 million for 10 percent of Sinclair Research, expecting profit to hit £30 million or more. It is doubtful now that by the end of March, 1984 last year's total of £14 million will be surpassed and the Sinclair Stock Market launch, expected to take place this year, could be delayed.

Micro repairs covered

PRISM Microproducts has introduced a new scheme to cover the cost of repairs to microcomputers after the manufacturer's guarantee has expired.

The 12-month contract covers the cost of all parts and labour for repairs following any mechanical or electrical breakdown. The Prism Micro Care scheme costs £14.99 per year for computers retailing at up to £250, and £24.99 for those retailing at up to £500.

Launch of the Quantum Leap

THE QL, the new Sinclair Research £399 machine for the serious user, is set to take the upper end of the computer market by storm. The 32-bit machine uses a 68008 processor and has 128K RAM as standard. It also has a typewriter-style keyboard, something the Spectrum lacked.

The customer will also receive four software packages, which include a database, word processor, graphics

package and spreadsheet. All the software is on Microdrive. A startling feature of the new computer is its lack of an ordinary cassette recorder port. Sinclair did that deliberately and claims that the Microdrives are more powerful than those available for the Spectrum. They can access at least 100K and the average access time is 3.5 seconds.

As well as using an upgraded version of Basic,

called Super-Basic, the QL also has an operating system, called QDOS, which contains routines to control graphics and other processes in the machine, including operation of the twin Microdrives. There are several graphics modes and the screen display can use up to 32K of available memory at any time.

Windows can be defined in the screen display and various independent tasks can be performed within the windows. That shows that the machine is multi-tasking, which means that it can be made to run several programs at the same time.

Sinclair has matched the QL against other microcomputers on the market, including the BBC Micro. At the launch Sir Clive Sinclair said that to make the Acorn machine comparable with the QL would cost approximately £1,800.

Sinclair Research is expecting big demand for the new machine but stresses that it will not take the place of the Spectrum at the lower end of the market. Managing director Nigel Searle said the machine will be aimed at business and education users, as well as the serious student.

OCEAN SOFTWARE programmer Paul Owens, left, shakes hands with 14-year-old Andrew Blackley, the winner of the Mr Wimpy championship held simultaneously in London and Manchester.

One of a ten-strong team of northern schoolchildren who played against a London team, Andrew beat his rivals by 16,000 points, achieving a high score of 81,360. Not even Owens, author of the Mr Wimpy game, has managed so many.

The two teams each played for 15 minutes on banks of Spectrums loaned for the occasion by Sinclair Research. Blackley's prize was a colour monitor for the computer room at Lostock School, Stretford, where he is a pupil, and a micro for himself. Runner-up with a score of 64,590 points was Joseph Gittings, aged 13, who won a monitor for Islington Green School, London, and a Mr Wimpy watch.

Games shops in trouble

THE GAMES CENTRE, which has recently devoted an increasing part of its business to computers and computer games, has gone into liquidation. Unless a new investor can be found, the eight shops in the chain, including four in London's West End, are to be closed.

Managing director Graham Levin claims, however, that the company difficulties had nothing to do with computer and software sales.

"On the contrary, they formed the most profitable side of our business," he says. The shops were affected by cashflow problems which were aggravated in London by the pre-Christmas slump after the Harrods bombing.

Unveiling of the robots

THE WORLD'S first generation of personal robots was unveiled at London's Hippodrome by Prism Consumer Products Ltd. Surrounded by dancers and lit by a spectacular laser light display, the

walking, talking machines trundled to and fro to the amusement of the audience.

The robots, called Topo and Fred, are members of the Androbot family invented by Nolan Bushnell and are already marketed in the States. Prism Consumer Products, a sister company to ECC Publications, has been appointed sole U.K. distributor.

Topo, 3ft. tall and the bigger of the two, is controlled by a computer keyboard or joystick, information being relayed via an infra-red com-

munications link. In that way Topo can be programmed to speak, or even sing, and move round a room following a previously-memorised route.

Future applications might well include domestic chores such as vacuum cleaning and lawn-mowing and the robot could act as a security watchdog and fire detector.

The smaller robot, Fred, is capable of translating screen graphics accurately into precise line drawings.

Software written for Topo and Fred is already available for the Apple II but Prism Developments is developing packages which will allow BBC, Commodore 64 and Spectrum computer owners to use the robots.

The robots might well be, as Prism claims, the ultimate computer peripheral, and with Topo retailing at about £1,500 and Fred at £200, they are certainly among the most expensive. Sinclair users who feel those prices to be beyond their pockets might strike lucky and win a Topo robot by entering our giant competition on page 41.

Educational advances to be exhibited

THE FIRST Sinclair Education Exhibition will be held from March 28-30 at the Central Hall, Westminster. The centrepiece will be the Sinclair stand and some 50 other supporting companies will be exhibiting, including dealers, publishers and software and peripheral suppliers. *Sinclair User* will be among the exhibitors.

The aim is to provide a central venue for all those whose products and work relates to educational aspects of Sinclair computers, giving educationalists the opportunity to acquaint themselves of the latest advances made by Sinclair and its supporting manufacturers.

Entry is by invitation only and is restricted to teachers, lecturers and others in the education field.

Ground Zero homes-in

FORMER journalist Colin Smith is selling his house in Christchurch, Dorset, to raise capital for the launch of a computer adventure game on the controversial theme of surviving a nuclear attack.

Called **Ground Zero**, the 48K Spectrum game is set in a British suburb and involves collecting the items necessary for survival.

"I thought that participating in the game would bring home to people the horrors of nuclear war more powerfully than any film or book," he says. The game is also intended to highlight what he considers the inadequacies of the Government Protect and Survive civil defence scheme.

Smith plans to move his family into premises above a shop where he will be selling *Ground Zero*, as well as other adventure games which he has programmed.

Software over the air

FOLLOWING the lead of local radio stations such as Radio West in Bristol and Radio Victory at Portsmouth, the BBC has started a regular computer programme which includes transmissions of micro software.

Presented by Barry Norman, the Chip Shop consists of 25 minutes of news and general information broadcast on Saturdays at 5pm and a "takeaway service" of software transmitted four nights a week. The programs start at 12.23am following the shipping forecast.

The programs are broadcast in Basicode, a language which can be understood by a wide range of computers using a special translation tape. Listeners interested in receiving the programs have to send for the BBC Chip

Shop kit, a 90-page booklet and the translation cassette, costing £3.95.

The idea for Basicode was that of the Dutch broadcasting company, NOS. It has been using the language to transmit computer programs for the last 18 months and the idea has spread to Germany, the U.S. and Australia, as well as the U.K.

Initially, the BBC transmissions were available for most popular makes of micros, including the ZX-81, but the Spectrum is making a late entry. "The Spectrum is not widely sold in the Netherlands," explains researcher David Dawson, "which is why no translation tape was available for it at first." The BBC plans to have the Spectrum service operational early this month.

The BBC has already received thousands of letters about the programme and so far no-one has complained about the lateness of the data transmissions. "We broadcast them after hours so that ordinary listeners will not be disturbed by the noise," says David Dawson. A timing device can be bought to avoid having to stay up until the small hours.

A fact sheet about the programme is available from Fact Sheet, Chip Shop, BBC, London W12 8QT.

At Wolverhampton, Beacon Radio has started another computer series. The fortnightly programme will be looking at computer applications and is experimenting with broadcasting software. The programme is on alternate Wednesdays at 9pm.

"POOLSWINNER"

THE ULTIMATE POOLS PREDICTION PROGRAM

- PREDICTS** Not just SCOREDRAWS, but NOSCORES, ALWAYS and HOMES.
- IT WORKS** We **guarantee** the program performs significantly better than chance.
- ADAPTABLE** "Poolswinner" allows the precise prediction formula to be set by the user — you can develop and test your own unique method. Probabilities are given on **every** fixture — choose as many or as few selections as you wish.
- EASY TO USE** Fully menu driven, with detailed instruction Booklet.
- DATABASE** The program comes complete with the largest database available — over 20,000 matches. The database automatically updates as results are fed in.

SPECTRUM (48K) ZX-81 (16K) £15.00 (all inclusive)

We produce databases for those developing their own prediction program. 2 years results £7.50. 5 years results £12.50.

Also "COURSEWINNER" — Computer aided horse betting — £9.50

Prices include VAT, post and packing. Remittances payable to Bridgemaster.

TRACE

FOR ANY ZX SPECTRUM AND FOR THE 16K ZX81

A superb aid to programming the ZX81/SPECTRUM, allowing you to watch what your BASIC programs are doing every step of the way. Bugs in your program will be easier to find. Example programs will almost explain themselves. Before the ZX81/SPECTRUM executes each BASIC statement in your program it will display the line number, statement number (SPECTRUM), and the statement itself in the input area (it will not overwrite the main display area). The speed is controllable from single step upwards. You can produce a TRACE listing on the ZX printer, stop your program at any point to print variables or correct errors, and start/stop tracing from anywhere in your program.

"an effective TRACE . . . a useful debugging tool . . . easy to use". S.U. 9/83 reviewing SPECTRUM version.

It might even help you find the errors in the magazine listings!

ZX81 (16K) — £5.95
SPECTRUM — £6.95

THE FUN WITH EDUCATION SERIES

Colourful, fast moving graphics, sound and controllable difficulty combine to provide a fun way to learn without the need for keyboard dexterity.

FUN WITH NUMBERS

Addition, subtraction, multiplication and division in a space game format. Shoot down the spaceship carrying the correct answer, while building a ladder to rescue the Man in the Moon!!

For the 48K Spectrum
— £5.50

FUN WITH WORDS

Spelling and Word Recognition. Use the overhead crane to pick the correct letter from the coal trucks while filling the steam engines tender with coal and collecting the passengers.

For the 48K Spectrum
— £5.50

SOFTWARE

DOOMSDAY CASTLE

is an arcade style game
with the feel
of a real adventure

Doomsday Castle consists of a labyrinth of 76 complexly inter-connected Halls and Passages where you will meet a whole host of adversaries serving the infinitely evil Scarthax, the Garthrogs, the Orphacs, the phenomenally nasty Googly Bird and the Urks which manifest themselves in over fifty unbelievably weird and wonderful guises.

Scarthax has scoured the Universe to bring together the six ancient stones of life force. United in Doomsday Castle they are being used to wield an irresistible power over the cosmos, emanating waves of corruption through every galaxy.

To save the Universe, you must battle your way through the Castle to find and collect the six stones and use their force against Scarthax to destroy Doomsday Castle, hopefully escaping yourself before the final cataclysmic explosion. The task is not easy (saving the Universe never is!) and it will take you many games to unfold the structure of Doomsday Castle and discover the locations of the ancient stones. The addictive arcade style action will keep you coming back to play but the overall challenge should still keep you occupied for months.

You take on the role of our super hero ZIGGY shown here above in his exploratory capsule in combat with an Urk disguised as a pangalactic gargleblaster (!!) This is a true representation of the on-screen graphics.

More than fun and games!

FIRST STEPS with the Mr. Men

by Primer Educational Software

The ever-popular Mr. Men help prepare young children for reading with four simple and absorbing games designed to exercise essential skills as well as entertain.

An easy-to-use, colour-coded key guide is included with an illustrated introductory book, featuring the Mr. Men. For ages 4 to 8 years. Available now on cassette for the Spectrum 48K (and also for the BBC B and Electron). **£8.95**

QUICK THINKING!

by Widgeit Software

Two mind-stretching, space-age games to test mental arithmetic and nimble fingers. In **Sum Vaders** alien robots invade the earth. Only quick thinking and fast reactions can prevent them. Several levels of difficulty and a two-player game with a handicap option make Sum Vaders equally testing for all family members, from 8 years to adult.

Robot Tables challenges the young player to make a series of perfect robots.

Knowing your multiplication tables is the key to controlling the robot-making machine. With a learning mode and a testing mode, robot Tables is a fun way for early learners, and more advanced children, to master an important and often neglected skill.

Available now on cassette for the Spectrum 48K (and also for the BBC B, Electron and Commodore 64). **£6.95**

CAESAR THE CAT

by Andromeda Software

Meet Caesar, a cheeky young cat on duty in a well-stocked larder. He's kept busy chasing a gang of hungry mice eating the family's food.

A fast, colourful, all-action, arcade-style game with catchy music and a best-score record. Challenging for high-scoring arcade addicts as well as great fun to play for the novice. It's a hit on cassette for the Commodore 64 and it's coming soon on the Spectrum 48K. **£8.95**

Prices include VAT and post and packaging.

MIRRORSOFT programs are available from selected branches of W.H. Smith and Boots, and other leading software stockists.

Trade enquiries welcome: phone 01-822 3580.

WHEN IT COMES TO DISPLAYING THE SPECTRUM...

WE'VE AN IMPRESSIVE LEAD

Surprisingly enough, there's only one high performance BEAB approved colour monitor on the market with an input designed to accept the signal from the Sinclair Spectrum direct.

This same monitor also features a second input to receive T.T.L. signals for use with other micro computers including the BBC B.

This impressive lead over the competition in design specification is more than matched by the brilliance of the colour display, thanks to a standard resolution screen 585 pixels high by 452 wide, and a

bandwidth of 18 MHz.

Needless to say, this gives colour reproduction far in excess of that available from an ordinary television.

And the monitor in question? – **The 1431/MZ from the MICROVITEC range of CUB colour displays.**

Call at your local dealer or contact us now and we'll rush you full information.

Hartland Software's Famous FOOTBALL POOLS PROGRAM

- * This program lists out, in order of preference, the sixteen most likely score-draws; also the sixteen most likely homes, draws (including 0-0) and aways. For each forecast, it will also give you the probability that the forecast is correct.
- * It picks out the results on the bookmakers' FIXED ODDS coupons that have been given over-generous odds. It calculates your expected profit!
- * The program will be initialised to the English and Scottish league tables. You will be able to update these league tables week by week as results come in — or enter a complete new set of league tables. You will then be able to save the new league tables on another cassette; in other words the program will never become "out of date".
- * Australian pools in the summer? No problem! You will be able to alter the built-in team names, and save them on another cassette.
- * Advanced probability theory is used to make all forecasts — no guesswork or random numbers. A brief description of the theory is contained within the instruction leaflet. Only top quality cassettes are used — Sony or TDK.

"I HAVE SEEN THE OTHER PROGRAMS WHICH A FRIEND OF MINE HAS, BUT I LIKE YOUR PROGRAMS THE BEST. I HAVE USED IT ON THE POOLS SEVERAL TIMES, AND I HAVE BEEN VERY NEAR TO THE BIG DIVIDEND." Mr J. O., London N21.

This program will not cost you a fortune either! It is available for the ZX81 (16K) and the ZX Spectrum (48K) for just £6.95, including postage & packing, from:

HARTLAND SOFTWARE (Dept. S), 8 PENZANCE PLACE, LONDON W11 4PA

Put everything you need on the keyboard with a Custom Keypanel Kit.

Everything you need IS on the keyboard with CUSTOM KEYPANELS.

These precision die-cut plastic panels fit perfectly over your keyboard and provide an instant and individual reference to all of your software.

Each Kit comes in a clear plastic storage wallet and contains: 10 Matt-black Keypanels plus sheets containing over 140 self adhesive Command labels pre-printed with words, symbols and arrows, plus a sheet of blanks for your own designs.

SPECTRUM KEYPANELS are 96 x 224mm and the labels are printed in 'Spectrum' bright red. A MUST for flight-simulation and all multi-key games and applications.

The **FIRST** add-on for your Spectrum.

ORIC KEYPANELS are 105 x 275mm and the labels are 'ORIC' blue. Master those CTRL and ESC key combinations.

An **INSTANT** reference to all ORIC's keyboard functions.

Software industry not a rip-off

I HAVE to disagree with Mr Plowman of Matlock — *Sinclair User*, January, 1984 — in his assertion that the home micro software industry is a rip-off. There seem to be a few organisations to which profit is more important than building the loyalty of the customer. Most of that revolves around the cassette packaging, which is sometimes so blatantly misleading as to be inevitably disappointing when the game is ultimately played.

I do not object to there being no graphics on Velnor's Lair but should the customer not be told clearly on the packaging? If you bought a Michael Jackson record, only to find when you arrived home that it contained Michael Jackson reading the works of Proust, and if that fact was not mentioned clearly on the sleeve, might that not be unacceptable?

A cassette sleeve should, at the very least, show an accu-

rate display of the game in motion and not a fanciful illustration without the remotest relevance. How many people would have bought Espionage Island had they realised there was no sound, colour or graphics?

That is not to say that we are all in for the quick buck at all costs. As a software writer's agent, we deal with many honest and honourable software houses. We may spend up to six months on a single program, revising and refining with the single motive of presenting the best value for money.

We and they together go into minute detail to ensure bug-free satisfaction and nei-

ther I nor many of my colleagues would put forward a program unless it was of a quality with which I would be pleased if I had paid for it at W H Smith.

With a little self-regulating on descriptive wrappers which I am sure will come, I will be in a long-term and rewarding business where people at home with only a Spectrum and a tape recorder can earn a fair reward from their talent for amusing or confounding programs. Fallible we are but 'gigantic rip-off' merchants we are certainly not.

**John Courage,
Neil Gibson & Co,
Bury St Edmunds.**

Mini-squash lines missing

MINI SQUASH, in the January issue of *Sinclair User*, ended with line 110. Further lines should have read:

```
120 GOTO 50
200 PRINT AT 0,0; "YOU
HAVE LOST LIFE NUM-
BER ";Y
201 PRINT AT 10,9;
"YOUR"
202 PRINT AT
11,9;"SCORE= ";S
203 PRINT AT 12,9; "AF-
TER ";Y;"GAME";"S"
AND Y>1
204 PAUSE 100
205 IF Y=3 THEN GOTO
213
206 NEXT Y
213 PAUSE 150
214 CLS
215 PRINT AT 0,0;
"GAME OVER"
216 PRINT AT 1,0;
"ANOTHER GO, (Y/N)?"
218 IF INKEY$="Y"
THEN GOTO 3
219 IF INKEY$="N"
THEN STOP
220 GOTO 218
```

Program out of balance

I AM interested in making use of the program on pages 120-121 from the November issue of *Sinclair User* for keeping track of household accounts and bank balances.

My computer is a ZX-81 16K and a number of changes required seem to be obvious but I cannot understand line 370 on diagram 3.

Line 370 does not appear to be mathematically complete and I would be pleased if you could confirm that.

**A W Orchard,
Richmond, Surrey.**

● Diagram 3 of John Armfield's programming article was printed incorrectly. Line 370 should have read: 370 LET A\$ = "." + A\$ AND A\$ (1 TO 2) = "00") + (A\$ AND A\$ (1) = "." + (A\$ (2 TO) AND A\$ (1 TO 2) = "0.")

**Andrew Browne,
Ivinghoe, Beds.**

Basic bug

IN THE December issue of *Sinclair User*, you published my routine for Basic program ciphering. Analysing the routine again, I found a bug in line 9999, which should read: 9999 LET n=n+5: GOTO 9993.

**Marjan Klenovsek,
Celje,
Yugoslavia.**

The last word on Orbiter

I DECIDED to write and settle the Orbiter record once and for all. My high score is 7,876,200. It took me nine hours.

**Roger Merrifield,
Brierfield,
Lancs.**

Letters poorly organised

I HAVE bought almost every edition of your magazine since last November and although, on the whole, it is of very good quality, I have found your Letters page rather poorly organised. You have now published, to my knowledge, four useful tips, all informing us that by adding a third parameter to the draw statement, interesting geometrical patterns are produced. Accidentally publishing the same tip three times I might accept, but twice in one issue?

I was also amused by your reviewer's claim that the joystick facility on Interface

Two was non-standard. How can any add-on from a computer manufacturer be labelled non-standard?

It was also stated that only Psion games responded to the joystick. Quicksilver, Artic and DKtronics all sell compatible software.

Your reviews, especially those on hardware, are usually highly informative and helpful to anybody choosing equipment but before publishing articles you should make sure that the subject has been properly researched.

In defence of Chuckie Egg

I FEEL I must write in answer to the review of Chuckie Egg, for the 48K Spectrum, which appeared in the January issue.

The object of the game, to collect eggs and corn in a hen-house using platforms, ladders and lifts, while avoiding giant birds, was correct.

I disagree with the reviewer about many other things. The fact that the birds gave more concern than the ladders, as it is difficult to negotiate the ladders, is difficult to believe. A solution to using them easily and not just as escape routes, is simply to hold the 'up' key down while running past a ladder, and the man climbs up the ladder. The two-key system works for getting off, in and out of ladders as well.

Tracing the family tree

DILYS McINTYRE enquired for an advertisement of a program to produce a family tree. On page 121 of the January issue, or page 150 of the December, 1983 issue, such a program is offered by Keysoft.

**John Corbett,
Sinclair User Club.**

● Readers who would like to program family trees might be interested in the quarterly magazine, *Computer Genealogy*, Society of Genealogists, 37 Hallington Gardens, London SW7 4JX.

Second, the jump facility was described as difficult to operate successfully. It is almost as easy to use as the ladders. No great skill is needed and after playing the game, technique soon forms.

The playing against the clock has no great significance. Only on a few higher levels is it necessary to glance at the diminishing seconds. It was mentioned that there were three lives per level but you start with five lives at the beginning of the game and gain an extra life for each 10,000 scored.

Also at level nine the duck is released from its cage and every ninth level something new happens.

**Anthony Webster,
aged 15,**

Cheadle, Chester.

● In addition to these comments, it has been indicated by other readers that it is easier to play Chuckie Egg with a joystick.

Long-life Manic Miner

WE ARE WRITING as we believe readers will be interested in two programs which, when typed in, will either give you 32 lives or let you use a practice mode on Manic Miner.

For 32 lives, first of all type Merge "... Start tape. Stop the tape after merging the first part of the program. List. Type in line 25 poke 34269,32. Run. Start tape.

For practice mode and everlasting lives, type Merge "... Start tape. Stop tape after merging the first part of the program. List. Type in line 25 poke 35136,0. Run. Load the rest of the program. Press enter. Then type 6031769. A boot will appear by the lives at the bottom. Press all the keys shown at the same time to change stage.

Keep up the good work,
Sinclair User.

**S C Chadwick,
I Brocklebank,
Halewood,
Liverpool.**

Counting up the bytes

MAY I add to my letter in the February *Sinclair User*. The device of including a bytes count routine at the end of a program should be treated with a RUN instruction prior to SAVEing. That clears all bytes which may have been included with the running of the program and, on SAVEing, the same number will always result. To make a check on bytes used, do not use GOTO 9980 but RUN 9980.

**Charles Buzzard,
Chorley Wood, Herts.**

Machine code misprint

I HAVE written to report a misprint in your January, 1984 edition. 'Figure five' of the machine code sound effects should have read 33, 244,1 not 33, 2441 as it was printed because this gives the report 'B Integer out of range'. The highest number allowed in a POKE statement is 255.

**Richard Fotiadis,
aged 12,
London W6.**

Interface changed

IN THE REVIEW of the Stonechip programmable interface for the Spectrum, published in the December issue you mentioned that the interface disabled the keyboard and that a modification would be made to all current units to overcome it. Since then we have had several telephone calls asking if the modification has been made.

The modification was made in September, and all units delivered from that date will not disable the keyboard. Those units delivered with the fault numbered fewer than 100 and most of them were returned and modified.

**P J Mills,
Stonechip Electronics,
Aldershot.**

No childish tripe

HAVING JUST bought *Sinclair User*, January issue, I turned to Letters as usual and found a letter by Mike Goodwin of Leicester. I found it bewildering, to say the least.

If he wants to find games which require him to tax his intelligence, try Football Manager, Gangsters, Plunder, Flight Simulator, Heathrow, to name a few.

I am sure many other readers could add their favourites. You have my word that none of those mentioned is in any way "childish tripe".

P Gallagher,
Nottingham.

IN REPLY to Mike Godwin Letters, January issue, I, too, am 35-ish and want something to tax my intelligence. That is why I write my own programs. It is the ultimate intellectual challenge — conceive the idea, write the program, then the difficult and satisfying part, get it working. Why else own a com-

puter? If all you want to do is play games, buy a games machine.

D B Tombs,
Faringdon,
Oxfordshire.

Bug in Halls of the Things

I HAVE written about a bug in the supposedly bugless Spectrum game Halls of the Things, where it states that you have to get seven rings before you can get into the last section. I have found a

way of getting into the last section at any point in the game.

What you do is press '2', then 'space', which opens the last section automatically. When you have entered the section a little hint is to stop and press fireball as many times as you can and then walk to the other side of the 'maze', where you will find a key. When you get the key you can finish the game by going back to the stairway which finishes the game automatically.

Ian Sloan,
Troon, Ayrshire.

Absence of Ultimate

I AM a first-time buyer of your magazine. While I was flicking through it I noticed your Software Listings did not include any game from Ultimate. Why is this? Is it because it does not advertise with you? The games I have are excellent.

John Rowlands,
aged 12,
Boxmoor, Herts.

● *Ultimate Play the Game software is included in this month's Software Directory.*

Batting for the Spectrum

I HAVE recently become the proud owner of a 48K Spectrum and my main purpose, unlike so many others who play games, is to find how a home computer can be used in cricket statistics.

As the official scorer and statistician to Hampshire County Cricket Club, and

one of the leading authorities on limited-overs cricket world-wide, I would be very interested to hear from any of your readers who has similar interest in cricket statistics and who could help me to learn about computers.

I must congratulate you on an excellent magazine, which

caters for a need of the now thousands of Sinclair users, and I have already recommended it to three of my friends, two who obtained 48Ks at Christmas.

Victor Isaacs,
10 Danebury Way,
Nursling,
Southampton SO1 9YF.

@ **£5.00**

THE DEVIL RIDES IN

I uttered the last incantations as the clock struck thirteen. All fell silent except for a faint rustling in the corner. From out of the shadows they came: all Hell's fury against me but I was not defenseless until the Angel of Death, astride a winged horse, joined the battle. Avoiding his bolts of hell fire, I took careful aim. My chances were slim, but my luck held.

(Fast moving, machine code, all action, Arcade game)

Available for 48K Spectrum **£5.95**

FROM CARNELL SOFTWARE

"THE WRATH OF MAGRA" A THIRD CONTINENT SERIES ADVENTURE

The first born has been destroyed. The Black Crystal of Beroth has been banished. The alliance of Evil has been defeated by the armies of Lord Fendal. So ends the Third Age. Now we invite you to write your name in the history of the Fourth Age of the Third Continent.

You will meet friends and enemies, old and new, in the long awaited sequel to Volcanic Dungeon. Using high resolution graphics and combining the best qualities of "Black Crystal" and "Volcanic Dungeon", we will allow you to become part of this tale of revenge.

"The Wrath of Magra" comes as three, 48K programmes on cassette, boxed with instruction manual and book detailing the history of the Third Continent and the many spells you will be using throughout the game. For the 48K Spectrum @ £12.50.

NOTE: "The Wrath of Magra" is a complete adventure. You need not buy "Volcanic Dungeon" or "Black Crystal" to play it.

Available from Feb '84

CARNELL SOFTWARE LTD

Pat the Postman
Really original. All Pat has to do is collect parcels whilst avoiding obstacles – like cars, fires, trains, etc. Skill level and Hall of Fame.
48K Spectrum. £6.95

Defendar
Earth is under attack from mutant aliens in an accurate implementation of a top arcade game – and one of the most difficult to survive in!
48K Spectrum. £6.95

Cruise Attack
Save the city from annihilation in this wonderful version of an arcade favourite. Nine skill levels, bonus points for attack ships.
48K Spectrum. £6.95

Nanas
Catch the bananas, miss the coconuts. Easy? Try it and see. Simple in concept, hilariously entertaining – it'll drive you bananas.
16K Spectrum. £5.95

Timequest
A warp-space accident spreads your capsule across time. As you land in each new era, fresh perils face you. A very skillful graphic adventure
48K Spectrum. £6.95

One Hundred & Eighty
That famous shout tells you what it's all about! A good implementation of a difficult game – doubles, trebles, twenty-five and bull all possible.
48K Spectrum. £6.95

Land of Sagan
A quest to find the long lost Staff of Health. Is it in one of the castles? Or in the Tower? There are plenty of problems – and plenty of opponents – in this great graphic adventure.
48K Spectrum. £6.95

Creepy Crawler
An authentic version of one of the most addictive arcade games devised. All the usual features (Centipede, Spider, Bug, etc) with full use of Spectrum graphics and sound.
16K Spectrum. £5.95

Mad Martha II
Great sequel to the best-selling Mad Martha. Hilarious graphic adventure, with hero Henry in sunny Spain, beset by wacky waiters, mad bulls and the wrathful Martha.
48K Spectrum. £6.95

SAS Assault
Your mission – rescue the Russian ambassador from terrorist kidnappers, before the Kremlin declares war. Loads in two parts – your rating in the second depends on your skill in the first.
48K Spectrum. £6.95

Star Trek
Defend the star systems against the Klingon attack. Runs in real time – so you have to make the right decisions fast!

AT LAST—LOW COST GRAPH PAPER AVAILABLE

No sooner have you started to use computer defined graphics than you discover their limitations. You have to define your own graphics before you can create the type of illustrations that are found in top-quality manufactured software.

Defining your own graphics, on the other hand, is a little complicated unless you have some kind of aid, and there are plenty of solutions available.

But what do you do when you don't have endless supplies of money to buy these gadgets?

The answer to creating high-resolution graphics best lies in graph paper. This

method is cost-effective and accurate. The design has only to be drawn on to the graph paper and entered usually using the binary method. This requires a very simple program and away you go.

The result is surprisingly good and a further advantage of graph paper is that subsequent changes can be made very easily. It is essential to have a record of your illustration in 'hard copy' if, for example, you wish to colour the graphics or make them move.

Until now, even graph paper has been costly, but TRT design have just released an excellent solution. Their 'Data Design Pads' show

both 'screen' and 'pixel' graphs and are priced at only £4.95 per pad—this is for 50 leaves of well laid out graph

paper. Now—at last—the way is open to create lifelike graphics at a price everyone can afford.

TRT Design, 43b Nightingale Lne., Clapham London SW12 8SU

I want to create high-resolution graphics. Please send me
Data Design Pads at £4.95 for one—two for £8.35 or three for
£11.55. I enclose a cheque P/O for

Disc interface takes the waiting out of wanting

OWNERS of the Spectrum who want a fast method of data storage have, until recently, had to wait for the chance to buy the elusive Microdrive. Technology Research Ltd, however, has now taken the waiting out of wanting by announcing the latest version of its floppy disc interface.

It will accept up to two 5¼in. drives in either 40- or

80-track, single- or double-sided format and is complete with a utility disc.

The interface is in the inevitable black box which fits into the user port at the back of the computer and has a through port for other additions. A socket on one side takes the cable to the disc and in the back left-hand corner is a socket for the Spectrum power supply. Unusually the

box lies flat and out from the computer rather than standing up; that presumably is to aid stability but if, as is the case with this reviewer, your Spectrum is housed in a full-size keyboard, you could find that the interface ends up being about 1.5cm. off the desk. An empty matchbox placed under the back edge of the interface solves the problem.

Inside the box are two PCBs; the lower one takes the signals across the board to the extension at the back and also houses the power socket and associated chips. The other contains the majority of the electronics, the disc operating chip — a 1771 — a 4K EPROM and the socket to the disc. The socket is suitably buffered so that the disc lead can be removed without crashing the system, a useful feature for BBC computer owners as it is wired to the same standard.

On power-up, the interface loads the contents of the EPROM into the upper 4K of memory and re-sets RAM-TOP to below that. In the version for the 16K Spectrum the program, or more accurately the disc operating system, remains in the interface, but otherwise the two versions operate in much the same manner.

There is a complete range of commands which all have to be typed-in in full; you cannot use Sinclair keywords. The DOS gives a temporary C cursor automatically and will not recognise lower-case commands as it differentiates between the two.

SAVE will save either Basic or machine code but not variables. If the program name is preceded by a \$ sign a Basic program is saved; when loaded back it will RUN from line 1. For ma-

chine code the name must be followed by three hex numbers which denote the start, finish and autostart addresses of the code.

The only time the system was made to crash was when trying to save a Basic program with the \$ sign omitted; all other errors were trapped successfully by the system.

Two levels of protection exist for the user. First there is a password, which is held on the disc. After a new disc has been formatted, using the program on the utility disc, the directory must be initialised using the UNIT command. The disc will then take the name of the current password. That name cannot be changed without erasing the disc.

Second, every interface contains its own code number, and while initialising or later using the LOCK command it is possible, if required, to store it on the disc so that only the interfaces used to save a program can load it back.

The interface proved to be very easy to use and also reliable, apart from the instance mentioned. Almost any Basic program can be saved; only machine code programs which use the upper 4K of memory present a problem and they are fairly rare. Business software is being written to use the interface.

Priced at £85, the interface is rather expensive but it allows the use of disc drives which are not dedicated to one machine. Also if used with an 80-track double-sided drive it can give 390K per disc at less than £2 a time.

Further information from Technology Research Ltd, 356 Westmount Road, London SE9 1NW. Tel: 01-856 8408.

Intricate connection to Compusound board

COMPUSOUND has announced a new version of its Tele-Sound sound board. As with previous models it is a small printed circuit board which fits inside the Spectrum case and outputs sound through the TV. Now, however, the unit will also work on the new Issue 3 Spectrums.

Fitting the unit is fairly straightforward, provided that you have the courage to open your Spectrum, and should present no difficulties. Three wires have to be connected to the Spectrum PCB and detailed instructions are given with the unit.

It is an intricate procedure, the connection to the speaker

being particularly so. Once fitted, the unit can be stuck down and the case screwed back together. In some cases the unit may have to be tuned to get the best sound and vision on your TV and, depending on the make of your set, may degrade the picture slightly. If the picture is not particularly good to start, the degradation will probably not be noticed.

If you are looking for an inexpensive sound amplifier and are prepared to open your Spectrum, this unit, priced at £9.95 inc., is worth considering.

Compusound is at 32-33 Langley Close, Redditch, Worcs B98 0ET.

Tapes under control

ONE OF the major omissions of the Spectrum design was its inability to control external devices such as a tape cassette deck. The Tape Controller from Ness Micro Systems remedies the failing and also provides an in-built BEEP amplifier.

The controller is housed in a small black box which can be placed alongside the computer and has leads to the EAR and MIC sockets of the tape deck and Spectrum. Another lead connects to the Spectrum power socket, and two more leads connect to the

remote sockets on two tape decks.

If you do not want to use two separate decks for loading and saving, a connector is provided to join both leads to one deck. On the front of the controller are two switches. One controls whether the unit is to be used as a tape controller or as an amplifier. The other has three positions; up and down are used to load and save programs — without the need to remove leads as is normally the case; in the middle position the controller will control the cassette motor of the relevant deck by detecting a pre-set BEEP frequency. Also provided is a volume control and two LEDs which show how the unit is set up.

Inside the case are two tone-decoding circuits, one for LOAD and one for SAVE, which are pre-set to respond to different BEEP frequencies. Those pre-sets can be changed if more than one controller is being used. Each decoder controls a relay, toggling it on and off as required, so that only one can be on at any time.

Priced at £19.95, or £16.95 in kit form, both plus £1.50 p&p, the controller represents good value.

Ness Micro Systems, 100 Drakies Avenue, Inverness IV2 3SD.

Generating the sound of music

FOR THOSE with a musical bent who have a Sinclair machine, help is at hand. Not a musical bent straightener but the Trichord from Petron Electronics, a stereo programmable sound generator board, available in two versions, with and without an internal amplifier and speaker, for both the ZX-81 and Spectrum. The Spectrum version can also have a BEEP amplifier built-in.

The Trichord has three basic modes of operation. First, using an inbuilt PROM, it can reproduce any of 255 sound effects ranging from one described as a 'low bong' to a steam engine and whistle, plus many indescribable ones. Second, it can be used to play three-part harmony and, finally, the internal registers of the PSG chip can be accessed to produce your own sound effects. Programs on a tape supplied with the unit demonstrate those features.

Once the information about a sound has been fed to the PSG it will maintain that sound without continuous computer updating, making it ideal for use in games.

All versions of the Trichord are in the same-sized black plastic box which has a ZX-81 connector and through port. On a Spectrum that means only a Sinclair printer could be plugged into the back of it.

With prices ranging from £24.95 for the ZX-81 version to £29.95 for the Spectrum version with BEEP amplifier, the Trichord is probably the most versatile sound generator on the market at the price. The manual is available separately at £1.25.

Petron Electronics is at Courtlands Road, Newton Abbot, Devon TQ12 2JA. Tel: 0626-62836.

more hardware on page 36

No stopping the Add-On amplifier

USERS who struggle to hear the Spectrum BEEP may well consider the new Pinnacle sound amplifier marketed by Add-On Electronics. The battery-powered unit plugs into either the EAR or MIC socket and provides enough sound to annoy the whole family.

The unit is housed in an attractive 80mm. x 55mm. x 90mm. silver plastic cas-

ing which contains a large 8ohm speaker, four HP7 batteries and a small amplifier board which gives up to 800mW output. A LED on the front gives an indication of the battery strength.

The major disadvantage is the lack of any volume control. The only control you have is that the EAR socket gives more volume than the MIC socket. It appears to be a case of spoiling the ship for a ha'p'oth of tar. Apart from that the unit worked satisfactorily and one set of batteries lasted for more than 100 hours of continuous use. A side product is that two of the units could be used to amplify a personal stereo.

The Pinnacle is obtainable, for £9.95, from Add-On Electronics, Unit 7, Shire Hill Industrial Estate, Saffron Walden, Essex.

Interface has useful features

NEW from Kempston Electronics is the Model E Centronics interface for the Spectrum. It contains an EPROM which enables it, on power-up, to direct the commands LPRINT and LLIST direct to the printer without the need for additional software. Also built into the EPROM are routines which allow the use of COPY for the Epson and Seikosha ranges of printers.

Housed in the standard Kempston case, the interface plugs into the user port of the Spectrum and is complete with a cable to connect to the printer. The interface is

dead-ended in that it does not have a through port for other add-ons; that may be a problem if you want to use it at the same time as the Kempston joystick interface or any other dead-ended device. A problem which may arise with full-size keyboards is that the case is shaped with a lip to fit on top of the standard Spectrum. The lip may prevent the case fitting snugly.

Inside the case is a 2K EPROM which houses the printer software and a handful of chips which detect when the Spectrum is using the LPRINT, LLIST and

COPY commands. It does that with the COPY command by monitoring an address and when the Spectrum uses it to do a COPY the interface takes over and directs output to the printer.

Using the interface is very simple. If only text is to be printed, no setting-up is needed, apart from POKEing an address with the number of columns required if that is other than the default setting of 80. That address is one of the unused ones in the system variables area.

To use the COPY command the interface must be set up for your type of printer. By entering as a direct command COPY:REM? the interface displays a menu page which shows its current status. You can then set it up for the Epson range, Seikosha 100 or 250 printers, or add your own routines.

Once you have set it up in

that way any user-defined characters or graphics characters which appear in a listing will be printed as shown on the screen. An annoying feature is that those characters are wider than normal characters and make the listing appear untidy.

For computer artists there is an enlarged setting. When that is turned on COPY will produce a double-sized copy, about 180mm. x 145mm. on an Epson, suitable for hanging on the wall. Other settings are available to control the tokens, escape characters and automatic line feeds.

At £55 inc. the interface is by no means inexpensive — but it contains many useful features.

Details from Kempston Micro Electronics Ltd, Unit 30, Singer Way, Woburn Road Industrial Estate, Kempston, Bedford MK42 7AF. Tel: 0234-856633.

The REAL Challenge! For Spectrum

Quincy A superb dice game for 2 to 6 players. 3 throws per go to try and score points by obtaining certain combinations, i.e. 3 of a kind, a run, pairs etc. 13 go's to complete a game. The highest score is the winner! It's a game that is easy to learn but can be won by skilful and thoughtful play. Full colour graphics, on-screen instructions, bonus scores, etc.
Author - Tony Churcher.
Spectrum 48K - £4.95.

Moria A challenging adventure game set in the mines of Moria. You'll have to try and survive encounters with the monsters of middle-earth while trying to locate Durin's Ring. The Wizard and the Trader may help or hinder you on your journey to find and open the hidden doors to freedom - a game that will really test your character and staying power.
Author - Mike Howard.
Spectrum 16/48K - £4.95.

Jogger Guide your joggers across a 4-lane motorway and crocodile infested river to reach their safe haven through the gap in the fence. Each time a jogger is safely home the next one will have to encounter more lorries and cars on the motorway but fewer crocodiles and logs in the river. Full on-screen instructions. Miccode. sound effects and full action colour graphics.
Author - Mike Howard.
Spectrum 16/48K - £4.95.

AGF

MICRODRIVE

for Spectrum or ZX81

Recognised as the only true Hardware Programmed joystick interface this product offers all the features associated with such a design.

You can use *any* Atari-compatible joystick controller with *any* software for your Sinclair Spectrum or ZX81, not just those with a joystick option.

Movement of the joystick is recognised by the computer *exactly* the same as pressing the appropriate control keys, and can therefore give the most immediate response to that movement. The hardware programmed design works with *all* possible key-reading methods, both BASIC and Machine Code.

Eight directional movement, with or without the fire button being pressed, can be achieved by only programming the left, right, up, down and fire keys required by the game.

Programming is achieved by a two-digit code, which is looked up on the Programming Chart supplied, for each direction and firing button. These two numbers are then selected on a pair of leads which are clipped onto appropriately numbered strips on the interface.

Once configured this can be marked onto a Quick Reference Programming Card for storing with the game. As the programming is *not* power dependent the interface can be immediately used when next switched on.

The keyboard remains fully functional and can be used simultaneously with the joystick.

An integral rear expansion connector means there is no need to remove the interface to connect other peripherals.

NB. A recent design improvement now means that the AGF Programmable Interface works with the new Quickshot II rapid "Auto Fire" feature.

- ★ Programmable design gives TOTAL software support.
- ★ Accepts Atari, Competition Pro, Wico, Starfighter, Quick Shot, Le Stick etc.
- ★ Rear extension connector for all other add-ons.
- ★ Free demo program and instructions.

PACKAGE CONTENTS SUPPLIED

- Programmable Interface Module as illustrated, complete with clip-on programming leads.
- Self adhesive programming chart detailing how to define which key is simulated by UP, DOWN, LEFT, RIGHT, and FIRE.

- One pack of ten Quick Reference Programming Cards for at-a-glance setting to your games requirements.

- 12 months guarantee and full written instructions.

JOYSTICK INTERFACE II

for
Spectrum
or **ZX81**

ONLY
15.95
+£100pp

ABOUT OUR JOYSTICK INTERFACE

Following in the footsteps of our extremely popular original interface, which has sold over 1,000 worldwide since October last year, we have improved its performance.

The Interface Module II has been specially designed to plug on to the rear connector of your ZX Spectrum or ZX81 and allow you to connect any standard Atari type digital Joysticks. All of the computer's connections are duplicated on an extension connector so that you can still use any other devices intended for use with your computer.

The Interface Module II resides in the same memory space as the keyboard, which remains fully functional at all times, therefore it will not interfere with anything else connected.

When a suitable joystick is plugged into 'Player 1' socket its action will mimic pressing the cursor keys, up "7", left "5" and so on. The firing button will simulate key φ.

A second Joystick may be connected in the 'Player 2' position which simulates in a parallel fashion keys T-Y-U-I-P.

Using joystick control in your own programs is as easy as reading keys. Eight directions and Fire are all read by simple BASIC.

KEY FEATURES

- * Proven cursor key simulation for maximum software support
- * Accepts Atari, Competition Pro, Wico, Starfighter, Le Stick, etc Joysticks
- * Second Joystick facility
- * Rear extension connector for all other add-ons

AGF COMPATIBLE SOFTWARE - AVAILABLE NATIONWIDE

The following titles are available from us:

Galactic Jailbreak/	: Apocolypse	
Snake	: Software	£4.95
3D Tanx	: DK Tronics	£4.95
Splat!	: Incentive	
	: Software Ltd	£5.50
Phoenix	: Megadodo

HIGH FLYING EXCITEMENT FROM PROTEK.

HAVE YOU THE SKILL TO FLY AND LAND AN AIRLINER?

From take off to touch down you're in control. Flight control is totally in your hands. Keeping your aircraft in full flight will be as complex as controlling the real thing.

You'll be able to take off, manoeuvre, navigate, and land the aircraft using realistic aircraft controls. You'll chart your present position on a map or view the runway as you land without losing sight of vital instruments. In fact, you'll hardly be able to tell the difference thanks to 'Airliners' range of features.

Have you got what it takes to be a high flyer?

See the complete range of action packed computer games from Protek at your local computer store.

WIN A ROBOT

Part two of our mammoth competition

THE FIRST PRIZE in our fabulous robot competition is a child-sized robot called Topo. Using an interface which can be attached to your Spectrum you will be able to make the robot do what you want. It could be used in the home, at school, or in an office to perform menial tasks.

The second prize-winner will receive two Sinclair Research Microdrives, together with an Interface One, an Interface Two, five blank Microdrive cartridges and two games cartridges, Tranz Am and Psst.

The third prize is a Fidelity colour television set. The 25 runners-up will receive five games tapes from leading software companies — Artic Computing, Automata, Cases Computer Simulations, Crystal Computing and New Generation. All prize-winners will receive a year's free subscription to the exciting new ECC robot magazine which will be published bi-monthly from April, 1984.

How to enter

The competition is in two parts. Last month we asked you to produce a graphic representation of a robot, making imaginative use of the colour and graphics capabilities of your Spectrum.

This month you must animate the picture you have created so that the robot moves in some way. The amount of memory used in the program will be taken into account. After you have completed your animation complete the entry form on this page and, together with the coupon from last month's magazine, send it with your entry. As a tie-breaker suggest a suitable name for your robot and the reason why you chose that name.

All robot design entries must be on cassette to allow us to judge them quickly and the cassettes cannot be returned. You must enclose in your envelope the robot design, the two coupons and the entry form at the bottom of this page. Employees of ECC Publications are ineligible and the editor's decision is final.

Entry Form

Address

I have named my robot because

Send your entries marked Robot Competition, to Sinclair User, ECC Publications, 196-200 Balls Pond Road, London N1 4QA to arrive not later than April 2.

COMPUTERS AT WORK IN THE VEGETABLE GARDEN????

Here, at last, is a really practical use for the home computer. To ensure optimum utilisation of your plot and avoid that glut of vegetables during some months and nothing at all for others, here is the . . .

VEGA-TABLE

This versatile and easy to use program for the 48K SINCLAIR SPECTRUM computer is designed to help you decide what to have in your vegetable garden and when, where and how much to plant. You have only to divide the plot into manageable sections and then you move around it selecting and positioning crops as you wish. They "grow" before your eyes! You can see immediately if you are planting too close together or wasting space and you are guided into a straightforward 3 year rotation scheme.

You finish your planning with a clear picture (literally) of exactly where everything will be on your plot and a chart giving the date each crop is to be sown, when it should be ready for planting out and the likely harvesting season. You even get an estimate of the yield you might expect.

Stored within the program are details of over 40 varieties of commonly grown vegetables e.g. planting distances, sowing and harvesting dates etc. All carefully researched and verified.

Well worth £6.75 inc. VAT, p&p

University Software

LIBRARY OF ADVANCED MATH/STAT/ECON FOR ZX81 AND SPECTRUM

TAPE 1: MATRIX OPERATIONS (*), (+) **£9.95**
SIDE A: Inversion, multiplication, addition, subtraction, scalar multiplication and determinants of matrices and vectors within one single program. Any output can in turn be used as the input of the next operation without re-typing. Capacities: 16K ZX81: 25x25, 16K Spectrum: 15x15, 48K Spectrum: 48x48.
SIDE B: Determinants of square matrices.

TAPE 2: POLYNOMIALS (+) **£6.95**
SIDE A: Includes quadratic equations (as degree 2 polynomials) and Newton-Raphson and half-interval search methods for higher degree polynomials. Computes the real roots with 8 digits of precision. SIDE B: Plot of polynomials in any interval, values of real roots, extremum points.

TAPE 3: INTERGRATION (+) **£6.95**
SIDE A: Simultaneous integration of two functions by Simpson's and trapezoidal rules. Also computes the area enclosed between the two functions. SIDE B: Plot of two functions in any interval. Integrated area shaded.

TAPE 4: SUPER-REGRESSION (*) **£14.95**
SIDE A: A highly developed multivariate regression program with log/ln option on each variable, allowing for exponential and geometric regressions. Displays estimated coefficients, standard errors, t-statistics, R^2 , corrected R^2 , F-statistic, degrees of freedom, Durbin-Watson statistic, variance-covariance matrix, matrix of correlation coefficients, INTERPOLATION and PLOT of residuals. Capacity examples (var.xobs.): 16K ZX81: 2x400, 5x200, 10x100, 16K Spectrum: 2x75, 5x30, 48K Spectrum: 2x1650, 5x900, 10x500. SIDE B: Plot of bivariate regressions, slope, intercept, R^2 , standard deviation.

TAPE 5: PROFESSIONAL LINEAR PROGRAMMING (*) **£14.95**
SIDE A: A user friendly optimisation program capable of handling all sorts of linear programming problems (any combination of $<=>$ constraints and $X_i > 0$, $X_i < 0$, $-a < X_i < a$ sign constraints). Displays the canonical equivalent of the primal, values of slack variables, dual problem and its solution. Capacity examples (var.xcons.): 16K ZX81: 10x21, 15x18, 20x13, 16K Spectrum: 8x8, 48K Spectrum: 10x45, 25x35, 50x25. SIDE B: Solutions of simultaneous equations.

TAPE 6: STATISTICS (*), (+) **£14.95**
SIDE A: STATISTICAL TESTS AND DISTRIBUTIONS. Chi-square, Students t, F, Mann-Whitney U, Wilcoxon's Signed Rank tests and Chi-square, Students t, F, Binomial, Poisson and Normal distributions. Data on many samples can be entered at once, sorted and basic statistics displayed. Capacity examples (samp.xobs.): 16K ZX81: 1x230, 2x110, 5x45, 16K Spectrum: not available, 48K Spectrum: 2x1300, 10x250, 20x125.

SIDE B: DESCRIPTIVE STATISTICS. Analysis of ungrouped or grouped data. Ungrouped data sorted and grouped. Output includes mean, mean deviation, standard error, skewness, kurtosis, moments, Pearson's coefficient, etc. A comprehensive histogram with up to 30 class intervals, class frequencies, midpoint values. Capacities: ZX81: 450, 16K Spectrum: 200, 48K Spectrum: 2000.

EDUCATIONAL SERIES

INTRODUCTION TO ECONOMICS SET (48K Spectrum only): Basic concepts are introduced by extensive use of graphics, examples and exercises.

MICROECONOMICS I (+) **£9.95**
SIDE A: Demand and supply analysis, demand theory, cost-benefit analysis. SIDE B: Budget line analysis, indifference curves, decision making in a market economy.

MICROECONOMICS II (+) **£9.95**
SIDE A: Cobb-Douglas production function, linear programming and exercises on linear programming. SIDE B: Theory of the firm, elasticity of demand, CES production function.

MACROECONOMICS (+) **£9.95**
IS/LM curves, national income determination, aggregate demand and supply analysis, multipliers.

(*) Programs with INPUT, CHANGE, LPRINT and SAVE-DATA facilities. Spectrum versions also embody MERGE/READ DATA facilities. A common data-file can be used with these programs.

(+) Recommended for "A" Level, first year university and poly students.

- Tapes 1-6: £60. Introduction to economics set: £25.
- All inclusive prices for the UK. For overseas orders please add 50p per cassette for airmail post.
- Dealer enquiries welcome.
- Cheques payable to: **UNIVERSITY SOFTWARE, 29, St Peters Street, London N1 8JP. Tel: 01-359 0978.**

BETA BASIC

ENHANCED BASIC FOR THE
ZX SPECTRUM 16/48K
26 NEW KEYWORDS — 10 NEW
FUNCTIONS — MANY EXTRA FEATURES

Keywords include:

ALTER — allows extensive manipulation of the attributes file.
AUTO — for automatic entry of line numbers.
CLOCK — controls a digital clock with alarm and alarm-initiated GOSUB facility.
DELETE — any block of lines.
DO — LOOP structure, with WHILE, UNTIL and EXIT IF.
DPOKE — double POKE.
EDIT — a specified line number.
ELSE — used with IF... THEN.
GET — waits for keyboard entry; doesn't use ENTER.
KEYWORDS — shifts between new keywords and normal graphics mode.
ON — GOSUB or GO TO a line number from a list of line numbers.
ON ERROR — allows trapping of most reports: has available ERROR, LINE and STAT variables.
POP — removes data from BASIC's stack.
PROC — named procedures, with DEF PROC and END PROC.
RENUM — renumber part or whole program with specified start line and increment. Handles GO TO, GOSUB, ON, etc.
ROLL — pixel movement of part or whole screen in any direction, with wrap-round.
SCROLL — as ROLL, but without wrap-round.
SORT — sorts part or all of string or numeric arrays according to specified substring or column. SORT INVERSE sorts in reverse order. One hundred strings can be sorted in about one-fifth of a second.
TRACE — allows display of line and statement numbers as a program is running. Display of selected variables, single stepping, and reduced speed are also possible.
USING — used with PRINT, formats numbers.

Functions provide:

Conversion between decimal and hexadecimal — conversion between integers and two-character strings (allows "integer arrays") — formatting of numbers — INSTRING and STRING\$ equivalents — amount of free memory — double PEEK — current time.

Features include:

Single-entry keywords (in graphics mode) with syntax check on entry — seven new error messages — compatibility with Spectrum BASIC — program occupies just 5.6K — cursor can move in all directions in a line being edited — flashing current line pointer — BREAK gets you out of even machine code lock-ups — PLOT lets you plot string anywhere on the screen — PLOT and DRAW scale and offset values can be set using XRG, YRG, XOS and YOS — 16K and 48K versions on same tape — comprehensive manual.

Only £11.00 inclusive!

Please send me copies of Beta BASIC.

I enclose cheque/p.o. for £.....

Space games to keep you firing

RECENT RELEASES from Romik Software all seem to follow roughly the same well-tried shoot-them-before-they-shoot you formula.

Galaxy Jailbreak for the 16K ZX-81 features a prison somewhere in space. You have captured some evil alien generals whose soldiers are trying to free them by nibbling away the walls of the jail. You control a stellar base which fires five missiles at a time and can attempt to shoot the soldiers before they get the generals out; if they get out, the generals start dropping bombs on you, making your life much more difficult.

Another mysterious law of outer space also decrees that if you shoot a general, he turns into five soldiers. You score 50 points for hitting a general, 20 for hitting a soldier.

Although the concept is not brilliantly original, *Galaxy Jailbreak* is enlivened by some fast action, and easy-to-use control keys — half the bottom row moves you left, the other half moves you right — are an additional bonus. Make sure you read the

opening instruction screens carefully, as the game does not give you a second chance to see them without re-loading.

Galactic Trooper, also for the 16K ZX-81, is in a similar vein. Again, you must be careful to read the instructions, as the graphics are a little confusing and they will not be explained again once the game has started.

The idea is to amass as high a score as possible by destroying a galactic attacking force and prevent it landing on earth. If a landing craft touches down, you lose your firing base.

The screen display shows the enemy mothership, worth 500 points, ranging back and forth above the ranks of drones; drones give you 20 points if you shoot them before they drop, 40 points if you catch them in mid-air. A mystery score is attached to the saucers, otherwise known as landing craft. You receive an extra ship if you reach a score of 10,000 points.

Unless you are an experienced player, you may not find that easy. Although it is

easy to increase your score quickly at the start — just keep firing — stopping the saucers landing and putting an end to your activities is a good deal more difficult. Again, not a strikingly original game, but one which should appeal to addicts of the fire button.

Other games for the 16K ZX-81 from Romik Software include **Bubble Bugs**, which entails firing spiked missiles at enemy bubble bugs to burst them before they destroy you with their bombs. **Bank Robber**, for a change, does not take place in space — or does it? — but involves removing as many money bags as possible from the bank and getting them home, while avoiding the meteorites, bricks and pills some unexplained force is hurling at you.

The game also features open and closed doors to negotiate, and you can choose the number of meteorites and speed with which you would like to be confronted.

All the games are available from Romik Software, 272 Argyll Avenue, Slough, Berkshire.

Hazardous quest for Sinclive diamond

JUST BEFORE its long-awaited premiere, the Sinclive diamond was stolen from the jewel room of Microdrivia. It is the player's task to find and replace the diamond as soon as possible and then to bring back the fake diamond to the Secret Police headquarters.

The game follows a conventional adventure format, with descriptions rather than pictures of locations. Hazards abound. You are likely to be found and killed by the police, run over on a busy road, shot down by a man with a gun, or die of starvation, all before the first series of locations has been left. The threat of dying of starvation effectively puts a time limit on the game. The player has a maximum of 29 turns in which to deal with the problem before dying.

Playing the game raises some questions. Why is the key where it is? Why are the police trying to kill the player? Who is the strange man with the gun who shoots you whenever you attempt to buy a train ticket? Some players may find the questions simple to answer — or there may be no answers.

The level of difficulty is well-thought-out. There are sufficient accessible locations, clues and red herrings to keep the player involved in the game for a long time, before finding the diamond even becomes a possibility remote on the horizon.

Diamond Trail is produced by Gilsoft, 30 Hawthorn Road, Barry, South Glamorgan CF6 8LE.

Collecting mail is just a start

DODGE CITY is made up of two games, an arcade and an adventure which are supplied on different cassettes. The player's aim in the arcade game is to elude pursuers, dodge cacti and collect the mail. Six successful mail collections completes a skill level and 12 skill levels must be completed before the adventure game can be played.

At the end of alternate skill

levels the player arrives to find that a telegram containing a clue for the adventure has been delivered. They appear and disappear slightly too quickly to be noted at the time but the game is so difficult that frequent re-starts will mean that most players will have memorised the clues by the time they reach level 12.

Various groupings of Indi-

ans, Mexicans and Confederate soldiers appear chasing the player during the game. Moving to the correct part of the screen at the proper time means that they can be shaken off quickly, although finding the proper place and the correct time can take hours.

An infuriating feature is that the mail collector can be shot at any time, even when no bullets have been seen to fly, or the pursuer behind is dead, or even when there is no visible pursuer behind. Another problem for the player is that Confederate soldiers seem to have nine lives, possibly because there are two of them on each horse.

Once the twelfth level has been reached and the player arrives in **Dodge City** the adventure begins. The sheriff's deputy is dead and what better suspect could the sheriff have than the mail rider who just arrived in town?

Dodge City is produced by Phoenix Software Ltd, Spangles House, 116 Marsh Road, Pinner, Middlesex.

Enter the Chinese oracle

THE I CHING, or Book of Changes, is an ancient collection of oracles refined and expanded by Chinese sages over 5,000 years. Reflecting a cosmology founded on the simple opposition of light and darkness, of Yang and Yin, the oracle is usually consulted by dividing heaps of yarrow stalks or tossing coins, and those generate patterns of broken and unbroken lines known as hexagrams.

In the Salamander Software version of **I Ching**, for the 48K Spectrum, the coin-tossing is simulated on the computer, the hexagrams displayed, followed by the interpretation of the questioner's present and future situation.

As with all fortune-telling,

much depends on how you interpret the answers but the I Ching is frequently disturbing in its analysis. When asked: "In the event of a nuclear confrontation will mankind survive?" the oracle replied: "Change, sudden surprise or shock. Worrying at first, but on a second look there is no problem and even a chance to learn from the situation."

The program appears to be faithful to the original, though it is annoying that the hexagrams are given only Chinese names and are not numbered. There are also some inexcusable spelling errors.

Those familiar with the I Ching might be more aware

of the program's shortcomings but for others it is an enjoyable, intriguing introduction to an ancient philosophy.

Finally, it seemed appropriate to consult the oracle as to its own worth. Asked "Is this tape of benefit to Sinclair users?" the resulting hexagram was unchanging: "Understand the steps required between what you have and what you want. Work hard but allow time for rest and pleasure."

You can make of that what you will.

Composer's difficult instructions out of tune

COMPOSER is another of those programs which allow their users, with a little practice, to play, compose, edit and save BEEPing sounds which bear some resemblance to tunes on the 48K Spectrum.

Using the BEEP instruction on the Spectrum is not a difficult matter. The manual explains it clearly in four pages and expects the user to be able to program the computer to play Mahler's first symphony at the end of that time. The instructions for **Composer** are longer than that chapter and add nothing to the user's programming knowledge.

Composer is a fairly difficult program to master, for the unexciting screen layout contains many abbreviations which are confusing even to those experienced in musical theory. Further, the instructions on the cassette insert, which are supposed to form a kind of crib sheet, contain a misprint which makes the matter even more difficult.

Before buying the program it is worth reading chapter 19 of the manual. If that is comprehensible, **Composer** is unnecessary; if it is incomprehensible, there is every likelihood that the **Composer** instructions will be as well. Check, too, if you have no experience of composition that you have a supply of sheet music to hand before attempting to program a piece of music, or the results will not prove worthwhile.

Composer is produced by Contrast Software, Farnham Road, West Liss, Hampshire GU33 6JU.

Mutant garden is compulsive

GARDENING can be a lethal business in the post-holocaust world of **Millypede**, from Add-On Electronics. In this version of the standard arcade game, plant and animal life has mutated after an inter-galactic fusion bomb has devastated the Earth. To prevent mutant bugs and creepy-crawlies getting into your family anti-fusion shelter you must zap and zap again as the mushroom patch is invaded by inexorable splitting millypedes.

Sickly bouncing spiders trampoline across your field of fire and you have to stay well clear of their trajectories if you want to survive to do the weeding another day.

You move and fire your laser with the QWERTY keys and you can shift the base up into the lower part of the screen to avoid any ravening bugs which have reached the bottom line. The machine code graphics are colourful and the millypedes snake and ladder down the mushrooms at an alarming rate. Your score is reckoned by the number of mushrooms, millypede segments and spiders you eliminate and there is a high score initialling facility.

Millypede is a reasonably fast and compulsive variant of an arcade oldie and will have you returning for just one more try, but watch for that darned spider. The game, runs on any Spectrum.

MILLYPEDE
Memory: 16 or 48K
Price: £5.00

Magic and mayhem at start of trilogy

THE LORDS of Ket rule a strife-torn land where magic and mayhem are normal. Raiders from the east sweep in and devastate the countryside, spurred by the villainous priest-king Vran Verusbel, arch-mage of the cult of Mad Monks, and by the beautiful though utterly evil priestess Delphia.

You know little of that as you languish on Death Row awaiting execution for a crime you did not commit. Suddenly, on the eve of your demise you are summoned before the Lords who give you a stark choice — die tomorrow or travel east

through the perilous **Mountains of Ket**. Your mission is to destroy Vran and Delphia and thus end the troublesome raiding. Of course you accept but, in case you were thinking of running away, the Lords have placed a magic assassin bug call Edgar on your neck to ensure loyalty to the cause.

That is the setting for **Mountains of Ket** by Incentive Software, billed as the first in a trilogy of interlinking but independent adventures. **Mountains of Ket** is a text-only game which features combat, creature interaction and a monetary

system. Your prowess, energy and luck determine your likelihood of surviving in combat and it is wisest to steer clear of fights wherever possible. You do not begin as a very expert swordsman and you will get further by cunning and commonsense than by chopping away at every creature you bump into, and once you get into the mysterious mountain there are many unpleasant characters roaming the caverns.

As in *The Hobbit*, your score is calculated on a percentage basis and there is a save-game facility. The creature interaction is somewhat limited, however, and talking to the characters can be difficult. Edgar will not give you much help if you are being lazy but has useful suggestions at crucial points.

You would be wise to keep a map as you progress; the path is long and there are many perils as well as rewards in the form of treasure, false beards, magic wands and the like. **Mountains of Ket** is a stimulating adventure which will keep you busy for some time.

MOUNTAINS OF KET

Memory: 48K
Price: £5.50
Gilbert Factor: 8

Piman wanders from the straight and narrow

HOW ARE the mighty fallen! The self-righteous Piman has returned from Hollywood where he clearly picked up some terrible habits from chain-smoking Groucho and has now become a skid row problem drinker. The new Automata release, **Pi-Eyed**, for 48K Spectrum, is an arcade-style descent into the unsavoury depths of Pi-Land pubs.

Using the cursor keys or a Kempston joystick, you must steer the tipsy Pi-Man along the road, avoiding irate motorists, and get him into various noisy and messy hostleries like *The Merry Corpse* or *The Gay Dog*. You may also enter some of the other buildings on the Pi-Land main street, where you will receive encouraging or abusive messages.

Once inside a pub the Pi-Man must drink all the pints of beer on the bar before he can weave his unsteady way out to find another watering hole. You do not increase your score in this game —

you start with a high score which is reduced progressively the more you drink. Points are also deducted if you annoy motorists, tread on packets of Rhino crisps or even more unpleasant substances, or disturb other pub patrons.

When the Pi-Man finally reaches rock bottom zero, his beer intake for the game is displayed; if the hangover is not too bad you can then totter back and start all over again. It is always opening time in Pi-Land.

Pi-Eyed continues the Automata tradition of bizarre, inventive games design and combines the usual garish graphics with a loopy setting and maddening music. The loading logo of two awful bloodshot eyes is disturbing. The game is reasonably entertaining though the format is a repetitive after a time.

PI-EYED
Memory: 48K
Price: £6.00
Joystick: Kempston
Gilbert Factor: 6

Seiddab hunt confusing

3-D SEIDDAB ATTACK from Hewson Consultants puts you in command of a space-age tank, or "drone", in which you must patrol the city streets, shooting down any Seiddabs — whatever they are — within range.

The screen display offers a 3-D representation of the streets and the view through the drone's windscreen. You can move your sights up and down to frame the enemy and the left and right keys move your vehicle in relation to the outside scene.

If you clear the first screen, by shooting down at least 10 Seiddabs followed by the enemy task force leader, you are transported to the open countryside, where you must face the fresh hazard of enemy bombs.

In spite of a sophisticated concept and some very satisfying explosive effects whenever you make a direct hit, the screen display of 3-D Seiddab Attack is not as clear as it might be, with flickering graphics adding to the confusion.

Improving your skill at scoring in the game is reasonably addictive and it offers the well-tried pleasures of shooting things out of the sky to addicts of that pastime.

3-D Seiddab Attack is produced by Hewson Consultants, 60A St Mary's Street, Wallingford, Oxon OX10 0EL.

St Bernard's mission dogged by disaster

ADVENTURES of St Bernard for the 48K Spectrum was produced by a husband-and-wife team and the graphics by former fashion designer Linda Ferguson are very attractive.

The story features Brandy the St Bernard dog, who is trying to rescue his mistress from the clutches of the Abominable Snowman. In the first stage of his mission, Brandy is besieged by a pack of wolves. If he manages to

kill them all, by turning to face each one, he goes on to stage two which involves jumping over icy pools, in many cases inhabited by a walrus which makes a successful leap more difficult.

Stage three features tumbling snowballs and more wolves. Then there is the Snowman and finally more pools and a horde of skating penguins.

The game is an addictive one and should appeal to any-

one with plenty of persistence and a good sense of timing. It also makes a pleasant change from the more violent scenarios of most Spectrum games.

The Adventures of St Bernard is produced by Carnell Software.

THE ADVENTURES OF ST BERNARD
Memory: 48K
Price: £5.95
Joystick: Protek, AGF II

Ever-growing caterpillar

THE PLAYER'S aim in **Demon Chase** is to move round the screen, avoiding the tombstones and walls, catching the demons and hitting the diamond-shaped bonus-point scores. Inexplicably the player's on-screen persona is what appears to be an ever-growing caterpillar, which creates the further obstacle that players must avoid their own tails.

The first level bears a dis-

tinct resemblance to a variety of amateur games, most of which are based on the adventures of a worm or caterpillar. On subsequent levels the amount of obstacles is greater, as is the amount of devils to be captured.

Demon Chase LOADs with a title page containing as many symbols of evil as could possibly be crowded on to a television screen. The graphics in the game are, by comparison, unimpressive, consisting for the most part of individual user-defined graphics-type figures.

The game is unoriginal and does not inspire the player to continue to higher, more sophisticated levels. It would appeal most to players who like games which depend on fast reactions. Such players, however, might be able to find more exciting variations on this theme elsewhere on the software market.

Demon Chase is distributed by Mansfield Computers and Electronics, 33 Albert Street, Mansfield, Notts. NG18 1EA.

Speed makes up for unoriginality

IN MUNNERY'S Mergatroids, for the 48K Spectrum, you must pilot your ship, The Spirit of Watford, across the desolate valley of the Mergatroids, blasting the aliens which swarm up to meet you from the distant mountain range.

Graphically the game resembles the arcade Battle Zone, with both aliens and scenery outlined against the dark backdrop. The simplicity of the graphics is more than compensated for by the 3D effect and the speed of the game, and quick responses are needed as you swerve to

left and right while hammering away at the enemy.

Lacking originality, the program is nevertheless instantly addictive. It is accompanied with a B side bonus, a trivial game called **Night Driver** in which the graphics are minimal and the action monotonous. The two-game cassette—and to describe Night Driver as a game is to use the term loosely—is produced by Abacus Programs.

GET THE RIGHT ANGLE ON YOUR SPECTRUM

Trickstick turns your Spectrum into the most sophisticated games machine in the world. Your fingers rest on the Trickstick's six sensitive pads (four directions and two fire buttons) and the harder you press the faster you go or the harder you turn.

Trickstick works by picking up mains hum from your body and converting it by an ingenious circuit design directly into digital input. Proportionality gives vast possibilities for more interesting games.

- ★ Each Trickstick comes with its own interface included in the price.
- ★ Up to eight interfaces can be stacked into each other for 1-8 simultaneous players. (Own 1-8 player game is Attaktics at £10).
- ★ Works with most Kempston compatible software, and with our new programmable adaptor (£10 for Trickstick owners) it works with ANY software.
- ★ Easy to program, even for proportional games.
- ★ In the shops soon. Now available by mail / telephone order at £34.50.

TRICKSTICK-

**The revolution that
Runs Rings round
ordinary joysticks**

THE 80K SPECTRUM - £57.50

Upgrade your 16k Spectrum to a full 80k with the SP80 - a 64k expansion kit giving two 32k pages above address 32767. Not recommended for beginners, but ideal for the serious programmer. Pages are switched using software instructions only, and an LED indicates which page you are on. The other page is isolated from the system, but retains all its information until switched back.

The SP80 simply plugs into the sockets in the 16k Spectrum. Full fitting instructions are provided. It is easy to fit and no soldering is required.

See 48/80 FORTH for another angle.

48/80 FORTH - £14.95

The latest, best and most complete version of this popular language for the Spectrum FORTH runs many times faster than machine code - a tonic if you're fed up with all those GOTOS.

Each tape includes both a 48k version and an 80k version (for use on Spectrums upgraded with our SP80. SP48 owners are offered a part-exchange price of £18 if they upgrade to 80k).

The manual provides both the normal technical definitions of the language, and an outstanding brief introduction for the beginner. Each tape also includes a superb EDITOR program to give you full control of the 16 (48k) or 32 (80k) disk screens.

A FORTH Toolkit (giving floating point etc.) and an extension for the Microdrive will be available shortly. 48/80 FORTH uses standard FIG-FORTH definitions with extensions to exploit the special characteristics of the Spectrum, including BEEP (for real arcade quality sound), DRAW, PLOT and CIRCLE.

BEYOND HORIZONS - £4.50

This teaching program has already made computing less mysterious for thousands of people. It guides you through the Spectrum 48k memory, teaches you to PEEK and POKE systems variables, shows you how the display file and colour attributes work, how a BASIC program is stored byte by byte, and much much more. Outstanding value for those who get stuck on the second half of the Spectrum manual.

UPGRADE YOUR ISSUE 2 OR 3 SPECTRUM FOR JUST £23 AND GET A £4.50 COPY OF BEYOND HORIZONS ABSOLUTELY FREE

The SP48 simply plugs into the sockets provided by Sinclair in your Spectrum. Easy to fit, full instructions provided and no soldering. Fits both Issue 2 and Issue 3 machines and gives you a standard 48k Spectrum. And no other expansion kit allows you to upgrade later to the 80k Spectrum. Over 20,000 16k Spectrum owners have already upgraded with the SP48. Join them.

And you get a free copy of BEYOND HORIZONS, so there's yet another angle to look at.

The Currah Microspeech from **COMET**

BRINGS A NEW DIMENSION TO YOUR SPECTRUM COMPUTER!

Now all the excitement of arcade game sound can be yours, thanks to the incredible Currah Microspeech. This simple unit links your Sinclair ZX Spectrum computer to your TV loudspeaker and brings you top quality sound and adjustable volume — bringing your games to life and adding a new dimension of enjoyment. The Currah Microspeech can also give your computer the power of speech! You can input unlimited vocabulary, enabling the unit to say *anything* — and even the function keys can be voiced; press 'enter', for instance, and your system will speak the word . . . The remarkable Currah Microspeech is fully compatible with Sinclair ZX Microdrive and Interface 1, and major software back-up is already appearing, with speech-incorporating programmes being produced by leading UK software houses. Each unit comes complete with a free cassette featuring both a game and a helpful demonstration programme.

The Currah Microspeech — available now at Comet.

3D SPACE WARS

3D SEIDDAB ATTACK
Spectrum 16 or 48K
HEWSON CONSULTANTS

The Seiddab have broken through the Earth's defenses and are attacking the cities. You are patrolling the city streets in the latest Knat Tank with its surface to air missiles.

Trundling along you observe the tell tale blips of the Seiddab as they appear on your scanner. They break formation and scatter across the city. Suddenly you catch sight of an alien craft swooping over the buildings to your right. He fires a plasma torpedo at your tank. You attempt to dodge but the missile finds its mark, shaking your tank and leaving a hole in the armour.

You unleash a missile and guide it accurately to the target. The Seiddab explodes and crashes from sight. You hunch over the controls once more, because this is only the beginning...

£5.95

3D SEIDDAB ATTACK

This game incorporates moving 3D graphics of city buildings and alien craft. It gets progressively harder with two types of landscape. 3 lives, high score, player one and player two score.

We are on the lookout for high quality simulations for all the popular home computers. Top royalties paid. Send in your samples today for fast evaluation and prompt reply.

Selected Hewson Consultants software is available through John Menzies, larger branches of Boots, all leading micro computer retailers and software stockists.

If you have any difficulty obtaining these products locally, then mail order to HEWSON CONSULTANTS LTD., 60A, ST. MARY'S STREET, WALLINGFORD, OXON. OX10 0EL.

SUPERCHESS 3.0

ABSOLUTELY GUARANTEED ABLE TO BEAT ALL OTHER SPECTRUM CHESS PROGRAMS

Superchess 3.0 has been developed to bring you the strongest chess program yet for the Spectrum computer.

At the tournament level Superchess 3.0 has a look-ahead of five to seven ply (moves) in the middle game, and ten to twelve ply in the end game. This gives Superchess 3.0 a substantial advantage against other chess programs and promises the experienced player an interesting and challenging game of chess.

Unlike other chess programs, Superchess 3.0 is not just a brute-force calculator, but employs artificial intelligence techniques to allow deeper searching along the main lines of play.

FEATURES:

- 10 levels—all play within tournament time limits.
- First level made especially easy for beginners.
- Easy to use—help menus provided.
- Recommended move option.
- Change sides and level during game.
- Self play mode.
- Set up/change position.
- Technical information—how the program 'thinks'.
- Program's internal score for position displayed.
- Number of evaluated positions displayed.
- Library of opening moves.
- Select your own colour scheme for graphic board display.
- Solve mating problems—up to mate in four.

48K SPECTRUM—Price £8.95

BRIDGE PLAYER

PLAY AN ENTIRE GAME OF BRIDGE AGAINST YOUR SPECTRUM—WITHOUT GETTING IN THREE FRIENDS FOR THE PURPOSE

Dealing—the program shuffles, deals and sorts the cards to produce randomly dealt hands. An almost infinite number of hands are therefore possible, with all kinds of distributions.

Bidding—is in the familiar ACOL system, including Stayman and Blackwood conventions. You bid your hand while the Spectrum bids the other three hands.

Card Play—you play from your own and dummy's hands, which are displayed as they would be at the bridge table, with the program playing the other two hands.

Scoring—at the end of each hand the score is calculated, including honours, slam and rubber points. Both the old and new scores are displayed in the usual manner.

Replay—at the end of each hand; all four hands can be displayed and, if desired, the hand replayed.

48K SPECTRUM BRIDGE PLAYER—£8.95

An ideal complement to the Bridge Player Program:

Spectrum Programs

SPECTRUM EXTENDED BASIC

—IMPROVE YOUR PROGRAMMING —EASE DE-BUGGING
—HELPS YOU ADD STRUCTURE TO YOUR PROGRAMS

The ten additional BASIC commands provided by Spectrum Extended Basic are considered an essential aid for most programming applications, so much so that many of these commands are standard features on other Basics.

The program is compact, occupying less than 5K memory, is user friendly—requiring only a two key entry—and incorporates syntax checking.

The program commands are used and entered just like normal Basic keywords, the program operates by trapping your usual keyboard input and testing for any of the ten additional commands.

The extra commands available are:

- **AUTO** auto line number, start and interval definable.
- **CLOCK** ON/OFF 12 hour clock, displayed on screen.
- **DELETE** Basic line/block delete.
- **EXAMINE** reads tape headers and displays information.
- **FIND** find specified string in Basic program.
- **MEMORY** displays memory status.
- **RENUMBER** full line renumber with GOSUBs and GOTOS
- **SCROLL** ON/OFF continuous scrolling.
- **TRACE** ON/OFF slows program execution, displays line and statement currently executed.
- **VARIABLES** displays variable names and contents.

48K Spectrum Extended Basic—£9.95

SUPERCODE —for 16K and 48K Spectrum

100+ ROUTINES

This is a superior machine code tool kit with one hundred machine code routines that are relocatable for use in your own BASIC and/or machine code programs, the combined user friendly BASIC program, 48k Spectrum only, gives easy access to all routines: • Index of routines. • Call up details of each routine including all information required to tailor the routine to your needs. • Demonstration of how the routine works under software control, the demonstration is repeatable. • Save and verify individual routines. • Comprehensive user guide.

Interface games are fast but not furious

John Gilbert reviews the ROM cartridge software currently available

THE SINCLAIR Research Interface Two has had few kind words said about it and that it is not surprising. The add-on is supposed to give the Spectrum the ROM potential of the Atari games consoles and computers into which you can plug ROM cartridges which will load games into the machine directly on power-up. It should have been the ideal add-on for users who want a quick-load device and no messing with tape recorders or even Microdrives.

The main difficulties with the idea are that the software available consists of reproductions of arcade games which are already on the market and that many software companies have been deterred from producing software for the Interface because of the conditions attached to ordering.

At the moment companies have to order batches of 1,000 cartridges in a sector of the market which is not fully-established. It is a risky business even for a company as established as Melbourne House or Psion. The situation could develop so that Sinclair is the only company producing the ROM cartridges. It certainly has the monopoly now.

The first ROM packages, together with their colourfully-styled display boxes, to arrive on the market were titles which already existed on the cassette format in the Sinclair software library. They included **Planetoids**, **Backgammon** and **Space Raiders** which are all from Psion.

The packages, one of which appeared originally on the ZX-81, are not particularly innovative or awe-inspiring and they are certainly not the kind of titles which would be expected to be produced when launching a new peripheral for a prime-selling microcomputer. It is as if Sinclair could not wait to get Interface Two out of the way and so complete its obligations for peripherals for the Spectrum. One reason may well have been that the new QL machine was occupying its thoughts.

Backgammon featured as the only mind game in the first release, the

others being held back because the Psion games were the quickest to produce. It is a pity that **Backgammon** was first instead of the chess package, which was left until later — chess has a far greater appeal to the majority of home computer users. Fortunately there was a gap of only two months before **Chess** was released and it has proved to be one of the better software packages in the launch.

Space Raiders is a painfully slow version of **Space Invaders** and could just

'The packages are not innovative or awe-inspiring'

as well be bought on cassette more cheaply. There are three spaceships with which you can fire at the aliens which amble across the screen.

Once you have finished one screen of the game, and that is not difficult, you will progress to the next level which is just as difficult or easy as the first. That makes the game a push-over and there is little challenge to tax even the newcomer to the arcade game scene.

Like most of the games in the range the price of the program on cassette is only £5 but the ROM version costs almost £10. Considering that the software does not show off either the graphics, colour or sound of the Spectrum to best effect it does not seem advantageous to buy the ROM version.

Planetoids is another arcade game with a familiar theme. Your spaceship first appears stationed at the centre of the screen and asteroids start to close in on it. You must try to destroy them and avoid the ones you miss. Alien spaceships make your task even more impossible.

The standard of the game is reasonable for the market, even though it was first produced in late 1982. The graphics are better than the original Atari version of **Asteroids**. The ship and the planetoids have been given a solid, almost three dimensional quality.

The program has a wraparound screen

which allows your spaceship to go off one side and return on the other. That causes a strange effect when your ship fires across the screen, as the missiles will disappear off one edge and reappear somewhere else. The rogue missiles could even cause you to have some nasty accidents shooting at yourself.

Those packages comprised the ROMs available at the launch of Interface Two and there was a considerable wait until the other ROMs were launched in December.

The new packages include some old favourites from Melbourne House, already in the Sinclair software library, and some releases introduced by Ultimate Play the Game.

The Melbourne House offerings feature the clown of the software scene. The newest Horace adventure is not on ROM but it is pleasant to see **Hungry Horace** having a re-birth and **Horace and the Spiders** on ROM.

For those who know nothing of the Horace myth he is a little round, Pac-man-type creature who has the habit of annoying everyone he meets.

Each of the games has a cute plot and Hungry Horace sees the round man taking the part of a Pac-man. He is, however, no ordinary powerpill eater. He has to eat the flowers in the park and avoid the keepers who will throw him out if he is discovered. If you go through one maze into another there will be more surprises and if you are adept enough you may start to think that there is no limit to the number of mazes in the game.

Horace and the Spiders is slightly different. Horace has to dodge the

whose task is to deliver and assemble spaceship kits and to collect valuable treasures on the way. You will be faced with all kinds of odd creatures which you must avoid and destroy to complete your task.

The other games from Ultimate are **Pssst**, which involves a robot keeping away the bugs from a sunflower, and **Cookie**, which involves a chef bouncing ingredients for a cake, avoiding the nasties in the larder and keeping clear of the bins. Both games are arcade standard in quality and benefit from the ROM treatment.

The only mind game in the second release of ROM software is **Chess**. It is the original cassette version which has existed since the title was launched, with no changes. That is surprising since Mikro Gen, the original manufacturer of the game, has produced an upgraded version.

The game is standard so far as computer chess goes with options for playing or setting-up the board to play in particular situations. There are 10 levels and the highest, nine, takes several minutes to make a move. Each move for both you and your opponent is monitored in seconds, minutes and hours on a chess clock above the board on the screen.

The future of the ROM interface is still uncertain and many software houses are unsure what they will do in the way of supporting it. It seems unlikely that any large-scale production of programs on Sinclair standard ROMs is planned in the software industry and Sinclair could be in the unenviable position of having a monopoly of ROM software.

Sinclair Research hopes to produce some language and utility packages for Interface Two but the company still has no idea which language or utilities will be available, or when. It is likely that a ROM version of **Micro-Prolog** will be available soon but no firm date is being given even for that step forward.

The indications are that it will be the last interface for the Spectrum. The buffer at the back of the board will support only a ZX printer and Sinclair has given no intention of producing more peripherals for its home market machine. It would therefore seem logical to support the interfaces it already has as far as it can and to promote the use of those devices as much as possible. As far as Interface Two is concerned it has crept on to the market with more of a whisper than the bang which was expected.

'The company has no idea which utilities will be available.'

spiders to gain points before he can reach the main part of the game which takes place in a cobwebbed house. You must destroy the spiders and their webs if you are to win the game.

The Horace adventures are a pleasure to play and it is good to see them in a format where they can be loaded immediately you feel like a quick game.

The range of Ultimate games is also worth having on cartridge, although they could be bought more cheaply on cassette from that company.

In chronological order, **Jet Pac** was the first game Ultimate produced for the Spectrum. In it you play a spaceman

GRAFPAD

...for as many uses
as YOU
can imagine!

BBC MODEL 2 • SPECTRUM COMMODORE 64

With Grafpad you can now add a new dimension to your computer enjoyment, but most important, it helps you create your own application programmes by the simple use of the Grafpad!

The Grafpad comes complete with a cassette comprising two programmes.

THE FIRST PROGRAMME

displays the co-ordinates of your screen area. The co-ordinates are based on the screen with a grid size of 1023 x 1279 pixel, also in the Grafpad giving you a grid size of 320 x 256 pixels!

THE SECOND PROGRAMME

provides you with the utilities for circles, squares, triangles, free-hand, erasing line-drawing etc, and of course, full "Fill-in" facility in 16 different colours by the simple use of the pen!

Draw from a simple apple to a computer circuit - store in cassette or disk, perhaps transfer direct to a printer - in black and white or full glorious colour!

Purchase unique C.A.D. (Computer Aided Designs) programme and add further enjoyment and professionalism to your computer designs!

The Grafpad comes complete with Operational Manual, Programmes, The Grafpad and Pen and it simply plugs in your computer.

(Size: 25mm height x 55mm width x 260mm depth)
Weight: 1.2 kg (Gross)

(The above designs were drawn by a 12-year-old at our showrooms!)

HOW TO ORDER:

BY TELEPHONE:
If you are an American Express, Barclaycard, Diners Club or Access Card Holder simply telephone us giving your Card No., Name, Address and item(s) required and your orders will be dispatched within 48 hours!

BY POST:
Simply fill in the coupon, enclosing your cheque/P.O. made payable to: BRITISH MICRO, or use the special section for Credit Card Holders, and post to the address below. Please allow 14 days for delivery.

Post to: BRITISH MICRO, UNIT Q2, PENFOLD WORKS

SINCLAIR BUSINESS USER

March 1984

Sinclair aims at a new market. Mike Wright speculates

QL has real quality

UNTIL NOW, Sinclair computers have been aimed fairly and squarely at the home and educational markets. Although the Spectrum is a versatile machine its lack of proper keyboard and built-in printer interfaces, together with its small display — 32 rows × 22 columns — makes it less than perfect for business users. The introduction of the Sinclair QL goes a long way to meeting the needs of the professional and business community, while still keeping the price — £399 — well within the range of the home computer market.

The QL measures 5½in. × 1¼in. × 18½in., weighs just over 3lb. and can be connected to either a monitor or TV. A colour monitor will give a wider screen and a greater resolution than a TV screen. The QL features the Motorola 68008 32-bit processor with 128K of user RAM; 32K is reserved for the screen display, which in its highest resolution gives 512 × 256 pixels in four colours or 256 × 256 pixels and eight colours.

There is also a 65-key full-travel keyboard. The introduction of the keyboard

also means the abolition of the traditional use of key words. It is complete with two built-in Microdrives, which are improved versions of the Spectrum Microdrive and are not compatible with the Spectrum, although with re-formatting the cartridges will be.

Other features include the ability to run more than one program at any time — multi-tasking — and the capability to connect up to 64 QLs and/or Spectrums via its QDOS operating systems.

The QL is also equipped with a sophisticated suite of four business packages. They are a spreadsheet — Abacus; database — Archive; word processing — QL Quill; and a business graphics package — Easel. The programs have been

developed by Psion for Sinclair Research in the last 18 months and are described by Psion managing director David Potter as “more powerful and functional than existing products for desk-top computers costing up to £5,000”.

The QL is regarded by Sinclair as setting new industry standards for value, performance, quality and user-friendliness. It is also seen as the centre of an extremely powerful system, reported to be a workstation

developed with ICL, and there are already major enhancements in the pipeline. They include a ½MB or 512K expansion RAM, a Pascal compiler, a 68000 assembler, a hard disc interface, a modem, and a Centronics parallel printer interface with multi-channel sound generator. The computer, although aimed at the top end of the amateur and home computer markets, is also intended to attract orders from small and large businesses. From a businessman's point of view, the QL can be seen to be a very exciting development, particularly with its price tag and size of memory.

Before it can be put to use a monitor

continued on page 58

*The Sinclair QL
with 0.5 Megabyte RAM
expansion board (optional)*

Reaching into the future?

continued from page 57

or TV, and a printer will need to be added. That will add about another £300 for a colour monitor and £250 for a reasonably good-quality dot matrix printer to complete the system.

With the networking facility it means that although monitors or TVs are needed for every machine, one printer is all that is needed for all the computers linked in the network.

The QL multi-tasking feature allows several programs to be run at once. That was demonstrated at the launch by having the computer run three separate programs, each scrolling text in a different direction, in different areas of the screen at the same time. Initially the possibilities of it for useful applications may look few and far between but it is a big step forward in having one program printing without the user having to wait for it to finish before he can perform another task in another program.

Networking

With the coming of the QL a very exciting development in the field of education can be visualised, a computing laboratory in which the teacher, with a QL, and every member of the class with a Spectrum or QL is linked in a local area network. The teacher would be able to monitor and display the work of up to four pupils at once in separate windows on the QL, rather like the

language laboratories which were the rage in schools not so long ago.

Despite the claims that the QL is less than half the cost of any comparable business machine, there remain several points which must be worrying to potential business users. The most major of them is the decision to stay with the Microdrives, although in an updated and improved form, instead of using floppy discs as back-up storage. Since the introduction of Microdrives last year, some experts have been worried by the performance of the drives and by the use of a continuous loop of video tape. Further, there is no connection point for a cassette recorder.

For Spectrum users who had hoped to be able to upgrade their machines while still retaining their favourite software, you will be disappointed even if

drive or a floppy disc interface. The cost of a hard disc could be two to three times the cost of the computer.

Perhaps one other point to consider for users with large amounts of data is that once the RAM expansion has been fitted the QL has 640K of RAM, yet each Microdrive cartridge holds only a maximum of 100K.

Omission

In keeping down the cost of the QL Sinclair Research may have sinned, by omission, for business users. The industry-standard interface for printers is the parallel or Centronics interface yet the QL is equipped with two RS232C ports and two joystick ports but no Centronics port. Because the Centronics is the standard, most printers are fitted with it

Examples of the QL Easel business graphics

your program is on a Microdrive cartridge. The QL uses a new improved Super Basic as its language which is radically different from the Spectrum Basic. Although loading from a cassette is a slow, tedious business, a cassette copy of a program is usually fairly reliable and what is more it is cheaper to produce commercial programs on cassette.

The cost of a blank cassette can be as little as 15 pence for large numbers while the cost of a blank Microdrive cartridge is about £5. While on the subject of mass storage it may be interesting to note that Sinclair has plans to produce a hard disc interface while it has no plans either to produce a disc

and then offer the option of a RS232 interface at extra cost. Alternatively the user can wait for the Centronics interface to be produced and use that, at extra cost.

Despite those minor reservations, the QL promises to be a major revolution for businessmen who want real computing power at moderate cost.

While many others will spend a long time arguing and debating the merits of the hardware, interest for many lies in the suite of applications programs written by Psion for the QL. They have been designed for their usability by a mass market with no prior training or pre-knowledge using the concepts of Inform and Decide, Do and See and What You See is What You Get. Because of the nature of the design it is said that even the most inexperienced person can carry-out useful tasks immediately, while experienced users can achieve a remarkable level of sophistication.

The suite consists of a word processor, a spreadsheet, a database and a business graphics program. They are integrated in style, structure design and perhaps most important in the sharing of information. The last feature allows data to be transferred between programs

Inserting Microdrive cartridges

QL Abacus is the spreadsheet with 256 rows and 64 columns generating more than 16,000 cells and working to an accuracy of 16 significant figures. One of the major features of Abacus is the ability to refer to rows, columns and even cells by user-defined names, instead of having to remember the co-ordinates of cells.

For example, if row 1 is labelled sales and the columns are labelled with months and years, e.g., Jan 80, then any cell can be found by referring to, for example, sales Mar 84 instead of struggling to work out the co-ordination of the cell.

Databases by their nature are usually more complicated to use than most business programs, since to have them perform to their utmost a measure of programming is usually required. QL Archive is no different, although its language is similar to Sinclair Super Basic and it has a powerful card index program. To make the maximum use of memory, Archive allows fields and records of variable lengths.

QL User Bureau

QL Easel is an impressive graphics package. It is fully interactive so that when data is entered it is shown on the screen immediately in a visual form — for example, as a bar on a bar chart. The bar chart can be changed into a pie chart or line graph fairly easily. The colours, shading, design and presentation of the graphs can also be changed easily.

Before a computer and software is bought, thought must be given to the level of support it will be given with both the machine and software. In an attempt to meet that Sinclair is providing an optional service known as QLUB — QL User Bureau. The cost is £35 per year and for that the user will receive six newsletters, a free update of each of the four programs each year, and the first option on buying new peripherals. In addition, Psion will provide a business query reply service not available to non-members.

so that data from the database or spreadsheet can be transferred to QL Easel, where it can be represented graphically and from whence it can be moved anywhere into a document in QL Quill ready for printing.

Although the QL manual contains large sections on all four programs, information on the current status and options available are displayed in English at the top of the screen. If the user still is lost at any time, pressing the key F1 will call up a HELP screen of relevant information with the option of

further HELP pages. Return, via the ESC key, is to precisely the point in the program the user left.

QL Quill has all the features of a modern word processor, plus some unusual ones such as viewing wide documents to check for layout and the input of data tables and graphs from other parts of the suite.

It certainly seems to have impressed Sir Clive Sinclair, since at the launch he said "for £800 you can have a word processor better than anything you can buy currently."

Spectrum
48K Program

Is your child ready for school?

Going to school can be a worrying experience but it can be fun if your child has already started to read and count.

LEARNING BOX is a series of 8 computer programs based on traditional stories. Designed for 3 to 8 year olds, the computer activity is enormously simplified by an overlay for the keyboard. A beautifully illustrated storybook and a

recording of the story provide back-up for the computer activities.

With the very clear Parent's Guide we can help your child get on at school.

Available from selected branches of Boots, W.H. Smith, leading computer stores and bookshops.

£9.95
inclusive.

**Learning to read
and count can be fun!**

Arrow Publications 17-21 Conway Street London W1P 6JD · Created by Five Ways Software™

Learning Box

Competition

Over £450 prizes to be won

Here's your opportunity to enhance your Sinclair ZX Spectrum by winning these valuable peripherals, worth over £350.

1 The Sinclair ZX Spectrum Interface 1 and an Epson RS232 interface for connection with computer peripherals.

2 The Epson RX 80T printer, unsurpassed for reliability, takes everything from a label to an A4 letter size sheet. Prints at 100 characters per second and has a 3 million character memory.

There are also 10 runners-up prizes. Each will receive a LEARNING BOX computer software package, designed specifically for children up to 8, and for use on the Sinclair ZX Spectrum.

Answer the questions below, by ticking the appropriate box. Then complete the tie breaker sentence to the best of your ability.

All entries must be received by 31 July 1984. The judges will be Bob Osborne, Educational Director of Hutchinson Publishing, and Bart Ullstein, Marketing Controller, Learning Box.

The overall winner will receive the Sinclair peripherals, the 10 runners-up a LEARNING BOX of their choice.

Competition Rules

1. The competition is open to UK residents only.
2. Employees of those companies involved in the promotion, their agents and families are excluded from entry.
3. Each entry must be on an official entry form.
4. Entries should be sent to Learning Box Competition, BW House, 11 West Street, London WC2H 9NF.
5. The organisers take no responsibility for any loss or damage whatever arising out of the competition. Proof of posting of entries will not be accepted as proof of delivery.
6. There is no alternative to the prizes which must be taken as specified on the entry form.
7. Competitors may make as many entries as they wish providing each one is on a separate entry form.
8. Entries which do not comply with these rules will be disqualified.
9. No correspondence may be entered into and the judge's decision on all matters relating to the competition will be final.
10. Entries will not be returned. Copyright on all entries shall rest in and belong to Arrow Publishing absolutely.

How many Learning Box programs are there?

2 ☐ 4 ☐ 6 ☐ 8 ☐

How many items in each Learning Box?

1 ☐ 4 ☐ 8 ☐ 20 ☐

How many keys on a Sinclair ZX Spectrum?

27 ☐ 41 ☐ 68 ☐ 95 ☐

How many Learning Box programs are for kids up to 6?

4 ☐ 8 ☐ 10 ☐ 12 ☐

Now complete this sentence in no more than 10 words (IN BLOCK CAPITALS)

Nicole Segre talks to Adrian Sherwin about a top programmer's flights of fancy

Bee line to success

IN NOVEMBER Bug-Byte Software of Liverpool released a program for the 48K Spectrum which made a dramatic departure from the all-too-familiar space vessels, robots, monsters and dungeons of computer games. **The Birds and the Bees** introduced "for the first time on screen" Boris the Bee, whose mission is to flit from flower to flower collecting pollen to take back to its hive.

At the same time, it has to avoid a mounting series of dangers such as birds, Venus fly-traps, spiders' webs, a bear, and a swarm of wasps. Within a month, the game had sold almost 10,000 copies and seemed set to continue making steady progress in the popularity charts.

The talent behind the unusual and refreshing game is Adrian Sherwin, one of the leading hopefuls in the Bug-Byte stable of bright young programmers. He has been writing games since he was 13 and, at the ripe old age of 16, has already sold four games to commercial software houses. He is working on the fifth and were it not for the demands on

buy him the expensive new toy. "I didn't have too much trouble," he says. "I told my father he could use it in his jewellery business but he never has done. He's computer illiterate," he adds with a note of pity.

From the start, Sherwin was spending about two hours a day with the computer and writing simple games of the space invader type. With the help of Toni Baker's book, *Mastering Machine Code on your ZX-81*, he learned machine code and proceeded to read Rodney Zaks' *Programming the ZX-80* to help him master assembly language. He also bought an assembler program.

Thus armed, Sherwin wrote **Caterpillar**, which was based on the arcade classic Centipede, and sent it to Ocean Software, then called Spectrum Games. The company accepted the game, as it did his next one, called **Robotics** and based on Berzerk. Another famous arcade game, *Missile Command*, formed the basis for Sherwin's third tape for Ocean Software, **Armageddon**.

Meanwhile, he had been introduced to Matthew Smith, the author of one of the best-known Bug-Byte products, **Manic Miner**. Smith was in the year ahead of Sherwin at school and was willing to help him further his programming career. Thanks to Smith's good offices, Sherwin was lent a Tandy Model 3, with its disc drive and superior keyboard, on which to start writing the *Birds and the Bees* for the Spectrum.

"We had seen what he had done for Ocean," says Bug-Byte director Tony Baden, "and were keen for him to try something for us."

The idea for *The Birds and the Bees* emanated from Sherwin's younger sister Kay, now aged 14. "I asked her for some suggestions, he says, "and she produced several. That was the one which appealed most to me."

Sherwin started to write the program when school broke up for the summer and had finished it in two weeks, all except for the graphics. "When he first showed it to us, it consisted mainly of shapeless blobs," says Tony Milner of

'At the ripe old age of 16, he has already sold four games'

his time made by his continuing education, could well be writing many more.

Sherwin was introduced to computers at Mosslands School, the boys-only Liverpool comprehensive where he is now studying for A levels. "The school has about 10 BBC micros now," he says, "but three years ago our electronics teacher had to bring in his Tandy to introduce us to some of the rudiments of computing."

Sherwin was so absorbed by the subject that he sent immediately for a ZX-80, swapping that for a Spectrum as soon as the new machine appeared on the market. In those days he had no money, so he had to persuade his parents it was a good idea for them to

Bug-Byte. Fortunately, Smith had already offered to help with the graphics and together they set to work, with the aid of a graphics designer program which Smith had already written. "It made things much quicker and easier," says Sherwin, "and we had the game finished and bug-free by the end of the holidays."

One of striking features about *The Birds and the Bees* is the way in which Boris the Bee swoops and dives, rather than travelling in predictable straight lines. Sherwin achieved that by giving each key movement a velocity factor. "The idea was Isaac Newton's," he says. "I just used it to make the game more lifelike." It also makes the game more difficult to play but Sherwin has managed to get as far as the swarm of wasps — the highest level — which proves the feat is not impossible.

Sherwin's latest project is a sequel to *The Birds and the Bees*, to be called **Antics**. The details are not yet finalised but it is likely that *Antics* will introduce a new character, Boris' cousin Barnaby — or Barnabee — who will attempt to rescue Boris from the ant-hill in which he finds himself — for mysterious reasons which the author declines to elucidate.

The title sequence is all that has been completed so far and features a fugue in "Bee" minor which, in the words of Milner, "sounds very good and goes on forever."

Bug-Byte has secured first option on the first three games which he produces using the company Tandy and Sherwin already has the idea for the third one. "But I'm not telling anyone," he says firmly.

Although Sherwin would have liked to turn to full-time programming, his parents have persuaded him to say at school to take A levels next year. His four subjects are maths, further maths, physics and electronics, and will leave him little time for programming.

Nevertheless, Bug-Byte approves of his decision to gain some sound qualifications, perhaps returning to programming later. "The days of the freelance

programmer making an easy killing are numbered," says Baden. "We are gradually turning over production to a team of programmers working full-time but who knows how the market will develop?"

Unlike other bright young Liverpool games authors, such as Imagine Software's Eugene Evans, who once complained publicly that he could not get a credit card because of his age, even though he had earned £30,000 that year

'Good machine code programmers are few and far between'

— or even Smith with his fast-selling *Manic Miner* — Sherwin has not yet earned a fortune. Yet, he has still made more money than most 16-year-olds; so far he has bought an Atari 800 with a disc drive from his proceeds and put the rest to earn interest in a building society account. "I shall wait till I have learned to drive before I buy a car," he says.

Apart from his obvious flair for mathematics, Sherwin does not know what makes him a good programmer, although he agrees with Milner that good machine code programmers are few and far between. "When you are using machine code," he says, "you have to be able to break down each aspect of your program into many small components and then keep track of them all. That is why an assembler is such a help, as it saves having to deal with so many numbers."

Writing games takes most of the time Sherwin has left from his studies. Apart from snooker, he tries to avoid all forms of sports, and although he likes films — "any films," he says — his interest in books is limited mainly to horror stories by James Herbert.

He lives south of the river in Wallasey with his sister and parents, who so far, he says, have been happy to let him program to his heart's content. Wherever his studies may lead him, so far he shows no signs of wanting to stop.

BUSINESS USERS

SPECTRUM 48K ACCOUNTS PREPARATION

Produces Prime Entry Listings, Nominal Ledger, Trial Balance, Profit and Loss Account and Balance Sheet with supporting schedules. 73 nominal ledger accounts and automatic VAT calculations.

Sole Trader/Partnership (Up to 4) £25.00
Limited Company £25.00
(Combined Price £35.00)

SALES AND PURCHASE-LEDGERS

Produces day book, sales/purchases and VAT analyses, debtors/creditors listings and statements. 250 accounts and 1000 monthly transactions. Automatically calculates VAT. £25.00

ZX-81 16K ACCOUNTS PREPARATION

31 nominal ledger accounts
Sole Trader £17.50
Limited Company £17.50
(Combined Price £25.00)

SALES AND PURCHASE LEDGERS

Produces day book, sales/purchase and VAT analyses, debtors/creditors listings, statements.
50 accounts and 200 monthly transactions.
Sales £20.00
Purchases £20.00
(Combined Price £25.00)

All programs have been professionally developed and are being used by practising accountants and small businesses. Supplied on cassette with operating instructions.

The Key to Spectrum Machine Code Success.

Picturesque's MACHINE CODE SYSTEM is used and recommended by professional software writers, yet the excellent documentation and the friendly, easy-to-use programs have been highly recommended for beginners.

You will only buy one Machine Code System, so buy the best, the one the professionals use.

ASSEMBLER

Completely self-contained, with its own line editor, giving an easy-to-read 40 column tabulated listing. Auto line numbering, line renumbering and auto-tabulation make this the fastest and easiest Assembler to use. 5 character Label names. SAVE / LOAD / VERIFY both the listing and Machine Code. Accepts Decimal or Hex numbers and ALL Z80 mnemonics. Assembler Directives: — ORG, END, DEFB, DEFW, DEFS, DEFM, EQU, DEFL. FAST ASSEMBLY: — 1K of

machine code in 7 seconds. Full error detection.
32 page Owner's Manual.

£8.50
INCL. VAT & P&P.

MONITOR

The ideal tool to help the beginner get started, yet it contains all the commands for the experienced programmer to run and de-bug machine code programs. Inspect and alter memory contents in Hex or ASCII characters. Breakpoints and full Register display. Disassemble any part of memory, ROM or RAM. Dec-Hex-Dec number conversion, plus Block Move, Insert and Delete commands for general memory management.

32 page Owner's Manual. Can reside in memory with the Assembler (48K machines only) to give a complete system.

£7.50
INCL. VAT & P&P.

The most valuable software purchase you will ever make.

Available from the "SPECTRUM" chain of stores, branches of John Menzies and all good computer shops, or by mail order by sending cheque / PO to:

PICTURESQUE, 6 Corkscrew Hill, West Wickham, Kent, BR4 9BB. Send SAE for details.

ULTIMATE

THE NOT·SO·SOFTWARE

CAN YOU HANDLE THE **ULTIMATE**?
THE MOST AMAZING PROGRAMMES, THE SMOOTHEST
ACTION, THE HIGHEST RESOLUTION GRAPHICS?
ALL **ULTIMATE** GAMES ARE ARCADE STANDARD,

FEATURE PACKED, 100% MACHINE CODE.

AND PURE ADDICTION.

SO WHICH WILL BLOW FIRST - YOUR COMPUTER OR
YOUR MIND?

Cookie 16/48K ZX Spectrum

Tranz Am 16/48K ZX Spectrum

Atic Atac 48K ZX Spectrum

Pssst 16/48K Spectrum

Lunar Jetman 48K ZX Spectrum

Jet Pac 16/48K ZX Spectrum

SPOT THE DIFFERENCE!

Choosing which game to buy from the mountain available is a difficult job, especially when everyone claims to produce the best on the market. But how can you tell the best from the rest? To help you decide, read on. . .

THE DUNGEON MASTER

Let your Spectrum be your guide in a totally new dimension in adventures in the true spirit of traditional role playing games where YOU design the scenario.

"I have been a Dungeons and Dragons fan for several years...The package provides excellent entertainment for all fans of the cults and should prove a good introduction to the game".

...Sinclair User.

"Highly recommended for its versatility, originality and quality. Definately well worth obtaining".

...ZX Computing.

ZX Spectrum 48K

£7.50

Written by Graham Stafford.

What the
real critics say. . .

Very rarely have software titles produced such universal acclaim as 'Halls of the Things' and 'The Dungeon Master'. Now, with three brand new programs, Crystal continues to set the standard of software excellence. The difference is obvious - the choice is yours:

The Best or The Rest.

HALLS OF THE THINGS

A stunning multi-level maze 'arcade - adventure'.

"Excellent and dangerously addictive - could change the Spectrum games scene overnight".

...Sinclair User.

"Spectacular - One of the best games I've seen, finely balanced between simplicity and addictiveness - superb graphics and colour - I CAN'T RECOMMEND IT HIGHLY ENOUGH".

...Popular Computing Weekly.

ZX Spectrum 48K

£7.50

Written by Neil Mottershead, Simon Brattel and Martin Horsley.

THE ISLAND

The ultimate test of logic and deduction! Can you solve the hidden mysteries of the South Pacific Island on which you have been stranded - and escape alive! A brilliant classic style adventure game to fascinate and frustrate you for months!

ZX Spectrum 48K

£7.50

Written by Martin H. Smith.

INVASION OF THE BODY SNATCHAS!

At last! a version as fast and furious and as frustratingly addictive as the arcade original. Landers, Mutants, Bombers, Pods, Swarms and much much more combine to produce the ultimate space game!

ZX Spectrum 48K

£6.50

Written by Simon Brattel and Neil Mottershead.

ROMMEL'S REVENGE

A brilliant interpretation of the most visually stunning arcade game of all time. Superb high resolution 3D graphics with full perspective plus a host of new and exciting features make Rommel's Revenge the most spectacular game ever produced for your Spectrum!

ZX Spectrum 48K

£6.50

Written by Martin Horsley.

PROGRAM PRINTOUT

JAWS

YOU ARE swimming in the sea in search of treasure. Watch for the man-eating shark and the crabs which appear at random. As the game progresses the sea bed rises, giving you less room to manoeuvre, and it becomes more difficult to escape the shark and avoid the crabs.

Jaws was written for the 48K Spectrum by Mark Hubbuck of Newport, Shropshire.

TELEPHONE CALL CALCULATOR

J A WATSON of Wilmslow, Cheshire submitted **Telephone Call Calculator** for the 16K Spectrum. The cost of local and long-distance calls can be calculated if the duration in minutes and seconds is entered. An estimation is given instantly and will help you control telephone bills.

DEATH BUBBLES

THERE IS a maniac on top of a building dropping nerve gas-filled bubbles. You are the only person who can save the city. Use the cursor keys 5 and 8 to collect the bubbles on your stretcher. As the game progresses your stretcher becomes smaller.

Death Bubbles was written for the 16K ZX-81 by Jonathon Currey of London SE12.

MOON MISSION

DODGE the poisonous gas bubbles in the first stage of this fast-moving game, then attempt to land on a floating platform. If you manage to do so you then have to jump over the craters to ensure a successful mission. Use keys 5 and 8 in the first two stages and any key in the third stage.

Moon Mission was written for the 16K Spectrum by Ross Henderson of Perth, Scotland.

CLIMBER

C LIMBER was written for the 16K ZX-81 by Piers Pettman of Amersham, Bucks. You are the "X" and have to work your way to the top of the wall by placing yourself beneath the opening on each level. There are 50 skill levels from which to choose and there is also a cheat facility for those who cannot make a successful climb.

HAUNTED HOUSE

COLLECT the jars from under the chimney and take them back to your van. Lay snares to trap the pursuing ghosts and pick up the hammer which you can use to eliminate the skeleton.

Haunted House was written for the 16K Spectrum by Babar Abidi, aged 13, of London SW19.

Bubble Sort

MATTHEW KNIGHT of Sittingbourne, Kent wrote **Bubble Sort** for the 16K ZX-81.

It will sort letters or numbers into their correct alphabetical or numerical order. After the last number or letter has been entered the screen will go black while the computer sorts the correct order. Decimal numbers as well as whole numbers can be entered.

```

COMMODORE 64

48K SPECTRUM

PROGRESS REPORT.....

It was only a few short weeks ago that (from left to right) Ian Weatherburn, John Gibson, Eugene Evans and Mike Glover were given their original brief.....'Produce the two most exhilarating computer games ever'.

The tension is beginning to show; their once smiling faces are now drawn and haggard, their eyes are bloodshot, PSYCLAPSE & BANDERSNATCH are beginning to take their toll.

The atmosphere in 'Imagine House' is electric; will they succeed? Can they maintain their sanity? Will they crack under the mental burden?

Rumours about they're adventure games, they're arcade games, they're completely original concepts in computer entertainment.

CAN YOU CONTAIN YOUR PATIENCE?

FROM IMAGINE

Don't just take our word, see what the experts say....

JUMPING JACK

(Any Spectrum)

20 levels of crazy, zany fun!

"Imagine has come up with yet another game that has good graphics, an original plot, and is the sort of game you just can't stop playing."

PERSONAL COMPUTER NEWS,
Aug. '83

ZIP ZAP

(48K Spectrum)

Heart stopping tension - supersmooth animation.

"Imagines games are guaranteed to be different....the graphics are first class."

PERSONAL COMPUTER NEWS,
Sept. '83

ARCADIA

(Any Spectrum, Any Vic-20, & Commodore 64)

Discover Britain's best selling computer game for yourself.

"Now this really is something special....the bright young things at Imagine have confidently pledged themselves to the production of totally original arcade-style software for a variety of home machines."

PERSONAL COMPUTER
WORLD,
May '83

ZZOOM

(48K Spectrum)

Don't just play your Spectrum
.....fly it!

"Zoom is certainly the best game Imagine have produced and is perhaps the most convincing shoot-em-up program yet written for the Spectrum."

YOUR COMPUTER,
Aug. '83

ALCHEMIST

(48K Spectrum)

Can YOU discover the "Spell of Destruction?"

"Excellent graphics and use of colour. An imagine-ative game and obviously worth the money....In playing, the game is extremely good fun and very addictive. Definitely another winner from Imagine."

CRASH MICRO GAMES
ACTION,
Feb. '84

STONKERS

(48K Spectrum)

Poised on the very brink of battle, every decision is yours!

"Stonkers is set to be the best wargame I've seen yet....the graphics and overall presentation are excellent....very addictive - I found myself having a bash during any spare hour."

CRASH MICRO GAMES ACTION,
Feb. '84

AH DIDDUMS

(Any Spectrum)

Be prepared for some sleepless nights with this one!

"Ah Diddums is an original and fun game....Diddums gets to be great fun."

Slicing an alligator for easy display

John Kerrigan explains how to use machine code to store large graphics figures

THE SPECTRUM manual explains on page 93 how standard user-defined characters can be set up. Each standard character is eight bits — one byte — wide and eight scans high; it is stored as eight bytes, one after the other in memory. Each byte is a complete horizontal slice of the character.

Consider storing a bigger figure in memory. As an example, let the figure be an alligator swimming, shown in figure one. That figure was drawn on graph paper so that I could count the number of boxes contained inside the figure. At its widest points the figure is 57 boxes or bits wide. The greatest vertical distance is 14 boxes or scans high.

With such bigger figures there can be advantages in storing them in vertical slices. That is especially true if we want to show the alligator swimming smoothly on to the screen from the left or right but let us leave that problem until later. For the moment, let us consider a routine which will show the whole of the figure on the screen.

For that routine — S3 shown in box one — we must store the figure in high memory in horizontal slices. Each slice can be contained in eight bytes, or 64 bits, and with 14 such slices we should set aside 112 bytes. The figure is reduced to the numbers defining each byte in lines 80, 90, 100, 110, 120 and 130 of the Basic program shown in box two.

Box 1.

SPECIFICATIONS S3 — ZX Spectrum

GENERAL DESCRIPTION: Shows figure on the screen. The figure must first be loaded into high memory in horizontal slices. There are no checks that the figure will fit on to the screen.

ON ENTRY: V1 (a 2-byte variable at 71F7H and 71F8H) must point to the top left of the position of the figure in screen memory. V2 (a 2-byte variable at 71F9H and 71FAH) must point to the first byte of the figure store in high memory. V3 (a 1-byte variable at 71FBH) must hold the number of bytes per scan (width) in the figure. V4 (a 1-byte variable at 71FCH) must hold the number of scans (height) in the figure.

ON EXIT: The figure is displayed. V1, V2 and V4 have their contents destroyed.

USES: A, B, C, D, E, H, L, V1, V2, V3, V4.

```

The key to the way in which S3 works is the powerful Z-80 instruction "LDIR". That instruction transfers a byte of data from the address pointed to by the HL register pair to the address pointed to by the DE register pair. Then HL and DE are incremented — increased by one — and the BC register pair is decremented — decreased by one. If BC then equals zero, the instruction is terminated. If BC does not equal zero, the instruction is repeated.

That means the three register pairs — HL, DE and BC — must be loaded with sensible values before LDIR is executed. If BC equals zero before the LDIR

Figure 1.

instruction, the system will almost certainly crash. That is because LDIR will attempt to shift the whole 64K of memory — that is any Basic program, the system variables, Basic variables and your machine code program including the LDIR instruction. It will not harm the computer but you will probably have to switch off and start again from scratch.

Box three contains a Basic program for 48K Spectrums only in two parts, both of which use LDIR. Lines 100 and above will create two screen displays,

transfer them to high memory with LDIR and then store the duplicate screens on tape. Lines 10 to 60 enable you to load the duplicate screen from tape and then flash between them by holding down any key other than BREAK.

A much more imaginative screen could be created by changing lines 120 and 140. The PAUSE 0s in lines 30 and 40 could be adapted so that different screens are displayed as you require them in your programs. The program illustrates how fast LDIR can shift memory.

Returning to S3, in boxes one and two we use LDIR to transfer the alligator slice by slice. Since each slice consists of eight bytes, that is the number BC must contain before meeting LDIR. HL will contain the address in high memory where we are storing the figure and DE will contain the address in screen memory where we want the figure shown.

S3 is a routine which can be used to show any figure of any size which can fit on the Spectrum screen. The figure must be stored in high memory and the variables V1, V2, V3 and V4 must be loaded with relevant values before S3 is called.

Also in memory must be the routine S0. If you recorded the Basic program from last month's article, you already have a routine to poke S0 into memory. Load the previous program from tape and type the program in box two from line 70 onwards.

When you have S3 working with the alligator you will almost certainly want to use it to show your figures. Your

figures may not be the same size as the alligator. You will have to set V1, V2, V3 and V4 to different values before you enter S3.

The contents of V1, V2 and V3 are loaded into the Z-80 registers in the first three instructions of S3. Let us study box one. Ignore the first "ORG" statement. The first instructions are (A) LD DE,(V1) (B) LD HL,(V2) and (C) LD BC,(V3). We already know that brackets in assembly language mean "contents of" — in other words the instructions will not load straight numbers. Instead they will load the contents of the address as indicated by those

numbers. In box one, V1 is used as a label for the number 71F7H. So LD DE,(V1) will load the contents of the address 71F7H. Since DE is a pair of registers, it will load the contents of two addresses; that is, it will load the contents of 71F7H and 71F8H. That instruction has been assembled as "ED5BF771". "ED5B" is the opcode meaning Load DE with the contents of the following address(es). "F771" is the address with the order of the bytes reversed.

The Z-80 chip treats any two-byte number as having the bytes the "wrong way round". The least significant byte (LSB) must come first and then the most significant byte (MSB). So if you want your figure to appear at the top left of the screen (4000H), poke 00 into 71F7H (29175) and 40H (or 64) into 71F8H (or 29176).

The last instruction in address 7223H-7225H — line number 290 — is "JP S3". It has been assembled as "C30072". "C3" is the opcode meaning jump to the following address. "0072" is the address 7200H in the standard Z-80 LSB/MSB format. That instruction is an "absolute" jump. There are also "relative" jumps.

Relative jumps are slower than absolute jumps — they work only over short distances and they are more prone to error. On the other hand, they take only two bytes as opposed to three bytes of memory and should need no re-assembling if the routine is moved up or down in memory.

Machine code

continued from page 87

As the name implies, a jump relative is a jump relatively forward or backward from the present position. The code takes two bytes, so a jump forward nine bytes will involve adding 7 to the PC (program counter) register. It would be assembled as 18H 07H.

If the program counter points to 7000H and we wish to move to a routine with its first opcode at 7009H, we could either poke 7000H with C3H, 7001H with 09H and 7002H with 70H (JP 7009H); or poke 7000H with 18H and 7001H with 07H (JR \$+7).

It is also possible to move backwards with JRs. That involves using a convention as to which numbers are to be considered positive and which are to be considered negative. If the second byte of a relative jump has the top bit set (=1), it is a jump backwards. If that top bit =0, it is a jump forwards. That means that bit 7 is used as a flag to indicate the sign and only bits 0 to 6 are used for the number.

That limits the range of relative jumps. It means that it is not possible to JR forward more than BIN 111111 (or 127). That is expressed more usually as a limit of 129 bytes because the code moves the program counter forward two

```

bytes. Negative numbers are held in a rather mechanical way. It is similar to the cog wheels of a car speedometer. If one collected a car from a factory, where the mileage was set to nil, and drove the car in reverse for one mile, the display would show that you had driven 99,999 miles. So it is with relative jumps backwards.

The opcode 18H followed by FFH — or BIN 11111111 — will be read as an instruction to take one off the program counter. That will result in the program counter pointing to FFH and treating that as the next opcode.

The opcode 18H followed by FEH — or BIN 11111110 — is an infinite loop. It would instruct the Z-80 to take 2 off

the program counter and so read itself again and again and again.

Continuing backwards, we reach more useful examples. Let us assume the program counter points to 900AH and we wish to move to 9000H. Poke 900AH with 18H and 900BH with F4H and we will get there.

Next month's article includes an illustration of a particularly useful relative jump instruction. Also included are routines to make the alligator or any other figure "swim" one pixel left or one pixel right.

H.U.R.G. A revolutionary piece of software for your 48K Spectrum which allows you to develop high quality Machine Language arcade games with absolutely no programming experience. Enter the H.U.R.G. competition and win £3000.

MELBOURNE DRAW. Now with Melbourne Draw you can create dazzling, intricate colour graphics and pictures on your Spectrum screen without special programming skills. The most useful and powerful graphics utility program for the 48K Spectrum.

FORTH. Abersoft Forth is an implementation of the Forth Language for your 48K Spectrum. Forth is closer to Machine Code and more than 10 times faster than BASIC. "Abersoft Forth is the only Spectrum package which has been endorsed by the Forth Interest Group." — Sinclair User.

PENETRATOR is one of the most challenging arcade games for the 48K Spectrum. Amazingly fast arcade action includes training mode and unique customising feature. "Penetrator is my pick—the graphics are terribly impressive... a most enjoyable and addictive game." — Computer and Video Games.

MELBOURNE

TERROR-DAKTIL 4D. In a place forgotten by time the beating of wings heralds an incarnation too horrible to believe — Terror Daktil 4D. "The graphics are among the best I have seen." — Computer and Video Games.

CLASSIC ADVENTURE is the program that started it all! Now you can discover the excitement of Classic Adventure on your 48K Spectrum, and if you are masterful enough you too could become a Master Adventurer.

MUGSY gives a totally new direction for thrill seekers — comic animation in text, stunning graphics and a full arcade game! Mugsy is your one and only chance to become the greatest gang leader with definite ill repute.

WIN THE POOLS?

SPECTADRAW 2 — THE BEST SELLING POOLS PREDICTION PROGRAM FOR THE 48K ZX SPECTRUM

The program looks at the recent form of the teams playing in each week's English and Scottish football league matches and then refers to a large database to see what has happened in the past when teams with similar form met. By combining the lessons learnt from the past with the teams' current league position, the program generates a draw probability factor for each match. It can then identify the matches which are likely to yield draws and output suitable predictions. It will also output the least likely draws for the benefit of those who prefer the fixed odds lines on coupons.

Program, 8000 match database (both on high quality cassette) and instruction manual £12.95 inclusive.

NEW!!! SPECTASORT — THE PERM GENERATION PROGRAM

Spectasort takes the 14 most likely and 10 least likely draw predictions and produces ten 8 from 10 full over perms, enabling you to complete your pools coupon directly from the screen. The program will run on its own in 16K, using your own predictions, or has the unique feature of being able to merge with SPECTADRAW 2 to provide a complete Pools Prediction package!!

Spectasort program on high quality cassette £4.95 inclusive.

(Cheques / POs payable to B.S. McAlley)

SPECTADRAW

EDUCATION EXHIBITION

Organised and Promoted by Computer Marketplace
Supported by **sinclair** Research Ltd.

Central Hall, Westminster, London S.W. 1

Wednesday 28th March 10.00am to 6.00pm

Thursday 29th March 10.00am to 8.00pm

Friday 30th March 10.00am to 5.00pm

The Sinclair Education Exhibition is planned to give all teachers, lecturers and educationalists a unique opportunity to get up to date with the latest developments concerning Sinclair computers. Over 50 leading suppliers as well as Sinclair themselves will be demonstrating hardware, software, peripherals and supplies. All under one easily accessible roof. This is an ideal opportunity to listen to informative talks, try out systems, watch demonstrations and collect literature away from the interruptions of students.

Admission is by ticket only and is limited to educationalists over 18. Every educational establishment in the country is being mailed with tickets, but if you would like more just write to: Ticket Office, Computer Marketplace (Exhibitions) Ltd., 20, Orange Street, London WC2H 7ED, stating your requirements.

New action sports games feature a 3D view of the game. In football and tennis you play one side, the computer plays the other. The computer is fast and hard to beat. Different skill levels.

FOOTBALL

Each player can move, shoot etc. independently. Includes fouls if players collide, corners, throw-ins etc. Scale 90 minutes play. Any team of names can be used. Game can be suspended and player numbers shown at the press of a key. **Price £5.50.**

BIG MATCH SOCCER

Just like football game but for 2 players. Each player uses keys at his side of the keyboard to control his men. All men can be moved, shoot etc. independently. Practice with football then play your friends in the big match. **Price £5.50.**

SUPER SOCCER

A deluxe version of the football. Even faster action, harder to beat. Choose team colours etc. **Price £7.00.**

TENNIS

Each key plays a different stroke. Move your players anywhere on court. Computer plays a hard game. All tennis rules used, just like the real thing. Proper serving and scoring. Plays 3 sets. Animated figures. **Price £5.50.**

TANK BATTLE

3D view from the tanks' turret of woods, villages, attacking tanks etc. Shots can destroy buildings, trees and enemy tanks. 360 degree turret movement. **Price £4.50.**

CAR RACE

You drive one car, the computer the other. Control your car with steering and brakes. Choice of 2 circuits. Lap counters and time recorded. **Price £3.95.**

CHESS - THE TURK from OCPTM VOTED "THE BEST CHESS OFFERING" by WHAT MICRO?

The original Turk was an eighteenth century automaton, a life-size mechanical figure resplendent in Turkish costume and seated behind a wooden cabinet on which a chess board and pieces were placed. OCP now offer you the twentieth century equivalent of that Turk - a chess playing computer program.

CHESS-THE TURK represents the very best in 48K ZX SPECTRUM chess programs, standard options are:-

- 6 LEVELS OF DIFFICULTY
- TWO PLAYER MODE
- RECOMMENDED MOVE
- STORING TO TAPE
- PRINT MOVE AND/OR BOARD

CHESS-THE TURK offers a whole range of additional options that have made it the definitive ZX Spectrum chess program. These enable you to:-

- CHANGE LEVELS DURING PLAY
- REMOVE PIECES TO EVEN THINGS UP (AS IF YOU WOULD!)
- CHANGE SIDES DURING PLAY
- PLAY AGAINST THE CLOCK
- SET UP GAMES FOR NEWSPAPER PROBLEMS

A menu driven chess program with a total of **14** options and superb graphics this program has to be seen to be appreciated.

DARE YOU PLAY THE TURK?

DON'T HESITATE... GET ONE TODAY

Available from selected branches of
W H SMITH, BOOTS and MENZIES and other good software stockists.

Software... simply the best

If you experience any difficulty obtaining your copy of **CHESS-THE TURK** send a cheque or postal order for £8.95 to:

On probation

Colin Berg puts the Spectrum to work helping offenders in the Cheshire area

WHEN Colin Berg, senior probation officer for south-east Cheshire, wants to know how often the courts are following the recommendations made by his team, or how much time its members are spending on each aspect of their work, he looks it up on his Spectrum. He also uses Spectrums in his work as training officer for the whole Cheshire area and is looking into the ways they can help him educate not only his children but some of the offenders in his care.

Berg's campaign for the computerisation of probation work began when he first saw an advertisement for the newly-released ZX-81. Pleased with the idea of a computer for less than £100, he sent for one immediately. The day it arrived, his wife and children happened to be away and before he knew where he was, he had worked his way through nine chapters of the manual.

The programs he wrote for the ZX-81 formed the basis for those he uses today. When the Spectrum appeared, he promptly ordered the new machine, adapting his old programs to run on it.

The program of which Berg makes the most use is one which correlates all the facts about the offenders in the Congleton area for which he is responsible. Based on the Campbell Systems Masterfile, the program records the age, sex, previous convictions and offence of each client, before which court he or she is appearing, whether the probation officer recommended probation, and what sentence was imposed.

"The program allows us not only to make statistical analyses of what is going on in our area but also to monitor how effectively we are working as probation officers," Berg explains: "If the courts are not following our recommendations in most cases, that means our reports are not good enough. On the other hand, if, say, they are following those of any particular officer too often, that might mean that he is predicting how the court will react, instead of trying to influence its decision."

Berg's program also uncovered another unexpected fact. "We found that whereas most officers tend to recommend probation for about one in 15 men, the figure was more like six out of

seven for women," he says. "Further, whereas on average the courts grant probation when we ask for it for men about 70 percent of the time, they were granting it every time in the case of women."

Things really took off for Berg and his Spectrum in 1982 when he organised a management conference and decided to devote an afternoon to the use of computers. "I had several borrowed computers set up for people to experiment with and intended to begin by demonstrating Masterfile to show how it could replace index cards. But there was much hostility to overcome."

Asked to record their views on computers at the start of the session, the 20 or so probation officers attending filled a foolscap sheet of paper with phrases like "more trouble than they're worth, business toys, a threat to confidentiality", and more in the same vein.

By the end of the afternoon, however, they had all changed their minds. "When one of them asked me how many 16-year-olds in Congleton had had three previous convictions, I was able to supply the answer in a few seconds", says Berg.

He performed the same miracle a few minutes later when someone wanted to know the average number of previous convictions on his case-load. "Master-

'The aim is to force people to clarify their thoughts'

file is a very good program which, as it happens, can supply averages at the touch of one key. Everyone was duly staggered, especially as it would have taken two days to supply that fact without the computer."

Armed with the favourable reactions he had forced from his audience, Berg visited his chief probation officer and asked for £800 with which to buy four Spectrums. His evidence was so impressive that he was given £1,000, which paid for four Spectrums, four black-and-white TV sets, four tape recorders and two ZX printers. He now runs regular workshops to introduce the use

of computers in probation work.

Besides using the Spectrum to analyse and monitor results, Berg has been looking at ways in which it can improve the performance of individual officers. One program, adapted from a commercial decision-making tape, is designed to help officers make up their minds on whether to recommend probation in any particular case.

"The program asks them to enter all the facts which might be relevant, such as family background, recent release from jail, whether it is a serious or petty offence, previous convictions, and so on", Berg explains. "They then have to allot scores to each of those factors according to importance. The aim is to force people to clarify their thoughts and make an informed decision."

One officer who used the program recently commented that his final verdict must be correct, since the computer had produced it. "I had to point out that the decision was his, not that of the computer", says Berg.

Berg has also written two management development programs for use on training courses. One is based on the Kolb method of classifying learning patterns and the other on Dr Meredith Belbin's theories on teams and the roles of individuals within them. "Using the program, we have members of a team analyse their functions within it and then other people's. It can be a painfully revealing process but is often helpful in making the team function better", Berg explains.

Part of a probation officer's work is to supervise and provide support for probationers and Berg's main interest at the moment is using the Spectrum to work directly with the client. "Many of the people in our care are illiterate and innumerate and I think there is plenty of scope for computers in remedial education", he says. "They are especially useful for anyone who has difficulty

WILFRED THE HAIRY, OLAF THE HUNGRY!

It is the age of the Vikings!, the world is constantly under attack by the power-mad army of 'Wilfred the Hairy'. You have a castle to defend and continents to capture, but beware! plagues of RATS destroy your supplies and send you scurrying home. Rampant FLEAS infest Wilfred sending him to his castle to delouse.

You control Olaf's army but watch out! Wilfred analyses every move you make and so creates a STRATEGY for attack. A game of high resolution action graphics to stretch your powers of LOGIC to the limit — you can only win by lateral thinking!

John Gilbert investigates some of the latest computer and programming publications

Probing the puzzles in the bookcase

IF YOU have recovered from the excitement of a computer for a Christmas present and feel you have exploited it to the full, you may like to solve a crime or two using it.

Input an Investigation, by Lois and Floyd McCoy, provides a series of classic mysteries featuring those American computer whizz-kids, the Bytes Brothers, pictured below.

Those brain boxes work their way through five mysteries and always get the correct solution using their home computer called Nibble.

As with any good detective story all the clues for the solution have been incorporated in the plot. The computer programs used to solve the crimes are also included, along with a full explanation on their structure and creation.

The book is for children but adults will be equally enthralled. It provides excellent entertainment and value for money. The good news is that the authors are writing a series of these entertaining books and the second, *Program a Problem*, is on the way. *Input an Investigation* can be obtained from Fontana Armada originals for £1.25.

Continuing with the entertainment theme, Pan Books, in association with *Personal Computer News*, has produced a book of *Micro Puzzles*. Most of the questions set in the book can be solved using your computer.

Micro Puzzles is split into three sections, each of which has a different type of conundrum. The first section is made up of three prize problems. They are very complex and if you can solve all three you can enter a competition to win an ACT Apricot computer.

The next section contains some quickies which could be solved without the aid of a computer. Most of the puzzles require logical thought but some are included for a joke.

The final section is called Micro-puzzles and includes some very tough quizzes. You will need your micro-computer for most of them, although the main problem will be trying to find a program to produce the solutions.

Much thought has gone into the production of *Micro Puzzles* and the result

is a challenge to your ability to solve problems in programs. The book costs £2.95.

A mixture of congratulations and criticism goes to Penguin for its publication of *The Penguin Computing Book*, by Susan Curran and Ray Curnow.

Congratulations are due because the company has managed to publish a book which contains a step-by-step guide to computers and electronics. The criticism is that there is nothing new in the format, although the authors have tried to provide a simple and concise explanation of almost everything relating to digital electronics, analogue electronics and computers.

Reading the book it appears that the authors have tried to cram too much information into a small space. Any difficulty in following arguments will

not be because of any complexity in the text but because so much information is covered in a few pages.

The structure of the book suggests that it should be read from cover to cover, like *War and Peace*, but it serves better as a handbook to be dipped into when necessary. The index is just adequate for such a purpose. The glossary and bibliography are also useful. The book costs £5.95.

On a slightly simpler level, *Using Your Home Computer* by Garth Davies provides a series of software projects for the owner of any microcomputer. Only brief details of the example projects are given, there are no Basic programs to

type-in, and the computer owner is left to do the difficult research.

That may sound like hard work but the author is trying to make the reader think about writing software. Part of the book explains system design and provides examples of computer applications. It shows how to work through a project, from the initial ideas to the rough design and, finally, the coding.

The sample projects include an address book, diary and family tree. All of them involve producing databases with similar structures and the author talks in some detail about the techniques which can be used.

It is a delight to see such a book on the market. It costs £3.50 and can be obtained from Macmillan Press.

One for the beginner is *Machine Code for Beginners*, from Usbourne Books. The title may deter you and you may think it is just another machine code book but it is the easiest book on the subject on the market. Using it, a child at junior school could learn the basic techniques of both Z-80 and 6502 programming. The way the subject is tackled is nothing short of brilliant. That both major types of microchip are covered is an extra bonus.

The cartoon characters, such as robots and bugs, which are included teach machine code in a subtle manner. It is possible to read the book as a comic strip, taking little account of the main text and still derive a knowledge of assembly and machine language. It is reasonably priced at £1.99.

Still staying with children but moving into secondary education, Shiva has produced *Spectrum in Education*, by Eric Deeson. The book is part of its friendly micro series and endeavours to show how a computer can be programmed and for what it can be used.

The structure of the book shows that Deeson is a teacher. It has been carefully produced and structured in such a manner that the reader is unlikely to lose his way reading through the sections on general usage to drawing bar charts, discussing computer-aided design and producing high-resolution graphics. It costs £6.50.

Vortex are always seeking exciting new programs. Contact us or send sample.

GLOSSARY

Basic — Beginners' All-purpose Symbolic Instruction Code. A programming language resembling English which is used by beginners because most popular microcomputers have it as standard.

Bug — an error in a program.

EPROM — Erasable Programmable Read-Only Memory. Semi-permanent storage. Information is not erased if the power is turned off in the computer. Programs can be erased by subjecting the memory chips to ultra-violet light. The memory can then be re-programmed using an electrical device called an EPROM blower.

Interface — RS232 and Centronics. A device which enables other computers or add-ons, such as printers, to be connected to the computer. It converts non-standard signals from add-ons to the standard signals of the computer in use.

Kilobyte — (K). A measurement of memory size. Most machines use 16K as a minimum but 48K is generally agreed to be necessary for serious work.

Machine code — an electronic pulse code used by the computer to perform functions and communicate with memory and other devices.

Mnemonics — abbreviated instructions — for example LD for Load — used in machine language programming.

Motherboard — an external printed circuit board which is used like a multi-way plug planner. It enables other printed circuit boards, such as graphics boards and colour boards, to be slotted-in.

Port — a link to the outside world which can be used by programs and the computer.

PCB — printed circuit board. A board which has on it the electronic circuits of the computer.

RAM — Random Access Memory. Information and programs can be stored in this type of memory as electronic pulses which conform to a set of numbers — machine language — in which programs are represented in the computer. When the power is turned off the information will be lost.

ROM — Read Only Memory. Information stored in this type of memory is not lost when the power is switched off.

Software — programs which control the operation of the computer.

Syntax error — a bug caused by incorrect use of a programming language.

Our easy-to-follow guide for new owners

The basic route to a habit-forming hobby

BUYING a Sinclair machine can be the start of a life-time's obsession with home computing. It is easy, however, to become discouraged if everything does not go according to plan from the beginning.

For those with only a little knowledge of computers and their capabilities, the best way to approach the machines is to abandon any ideas for special uses. While the 48K Spectrum is big enough for simple uses in small businesses, the range of Sinclair computers does not contain machines for major uses. It is better to become accustomed to the many facilities and then decide how you wish to use them.

Begin by unpacking your machine, overcoming your surprise at its size and weight and, following the manual, set up the system. If you cannot get the K on the screen, check that everything is plugged into its correct socket and re-set the machine by pulling-out the power plug for one second and try tuning-in again. If still nothing appears, check the power supply unit by shaking it. If it rattles, return it. If it is satisfactory, check your system with that of a friend.

If you have a Spectrum you will have received an introductory booklet which explains what the computer can do and giving detailed instructions on how to set it up. Also included is a fault-finding guide.

Once the K appears you are ready to begin learning about your machine. It can prevent family arguments if you can afford a separate television set for your system. It also makes life easier if you find somewhere to leave your equipment

set up permanently. You will find that a few power sockets are needed and a four-way block connector on a short length of extension cable will help to tidy trailing leads.

When using a Spectrum, a television set has to be more finely-tuned than when using a ZX-81 because of the added dimension of colour. If the set is not tuned properly, the colours will look hazy instead of sharp and clear. If no colour can be seen when it is switched on, the power supply or the television set may be at fault.

Some users have experienced some difficulty with some television sets, which include Hitachi, Grundig and Toshiba. Sets which many people have found compatible include the Sony Trinitron, Fidelity and Ferguson. Recent changes in the ULA should make more sets compatible.

The manuals are written in great detail and are reasonably easy to follow. Some of the chapters may not seem immediately relevant but it is worthwhile reading them as you might miss something important.

Patience is needed at that stage to learn the ways in which the computer will accept information. It is tempting to try to enter programs before you are ready but that is likely to lead to errors. For example, words like AND, THEN and AT should not be typed-in letter by letter.

By the time you have reached chapter 11 in the ZX-81 manual and chapter 19 in the Spectrum manual you should have accumulated sufficient knowledge to be

continued on page 102

Starter pack

continued from page 101

able to type-in other people's programs, such as those in *Sinclair User* and *Sinclair Programs*, without too much difficulty.

It is important when using the ZX-81 that it is not jolted. Some of the connections can easily work loose and everything which has been entered will be lost.

The manuals are not to everyone's liking and if you find them difficult to follow a number of books on the market can help you. Find the one which suits you best.

As a way of relaxing you can buy some of the growing range of commercially-produced software. That can be loaded directly from cassette but make sure that your machine is big enough to take the tapes you buy.

For the ZX-81 there are a few tapes for the unexpanded 1K machine but the majority require the 16K RAM pack. Similarly on the Spectrum most companies are taking advantage of the possibilities provided by the larger 48K machine rather than providing cassettes for the 16K.

The tapes can vary in quality and it is advisable to read the reviews in *Sinclair User* and use your judgment to find the best.

An alternative method to learn about both the ZX-81 and the Spectrum is to plunge in at the deep end and see what the machines will do. Refer to the manuals when you have difficulties. You can ignore the functions and calculations initially and experiment with PRINT statements to obtain the feel of the machines.

You may already have heard about the problem involved in SAVEing and

LOADing your own cassettes. The manual gives detailed instructions but many of the early ZX-81s would not accept tapes from some recorders. That problem is said to have been overcome but there can still be difficulties.

Usually they occur when LOADing tapes recorded by other people. One simple method to overcome this is to wind the tape to the middle of the program and type LOAD "" followed by NEWLINE; then increase the volume of

the recorder slowly with the tape running until the television screen shows four or five thick black bands. If you then rewind the tape, the program should LOAD normally.

LOADing and SAVEing on the Spectrum is much easier and faster than the ZX-81. One difference is that when SAVEing on the Spectrum the LOAD lead must be disconnected either at the recorder or the Spectrum.

Finally, a health warning. Apart from any practical uses, computing with your Sinclair machine can be a very entertaining hobby and is almost certainly habit-forming. You may easily find yourself crouched over your machine, red-eyed, in the early hours of the morning thinking that in another five minutes you will solve the problem. Try to break that habit by getting into the fresh air and meeting other Sinclair users.

By obtaining a Sinclair computer you find that you have joined a not very exclusive club with many thousands of members, many of whom would be only too happy to advise you if you have difficulties.

Make sure of your regular copies of *Sinclair User* and *Sinclair Programs* and you can be guaranteed many happy hours.

Banana Game

THE BANANA GAME was written for the 1K ZX-81 by Stuart Moore of Milton Keynes, Bucks. Using the cursor keys you have to move your basket round the screen, collecting the bananas before they rot.

```

1 PRINT "HOW MANY BANANAS ?"
2 INPUT BAN
3 LET S=0
100 LET A$=""
200 LET X=PI-PI
300 LET Y=PI-PI
350 FOR L=1 TO BAN
40 LET BX=INT (RND*15)
50 LET BY=INT (RND*15)
60 FOR B=1 TO 3
70 FOR F=1 TO 10
80 CLS
90 PRINT AT X,Y;"O";AT BX,BY;A$(B)
100 LET X=X+(INKEY$="6" AND X<U
AL "15")-(INKEY$="7" AND X>PI-PI)
110 LET Y=Y+(INKEY$="8" AND Y<U
AL "15")-(INKEY$="5" AND Y>PI-PI)
120 IF X=BX AND Y=BY THEN LET S=S+(4-B)
125 IF X=BX AND Y=BY THEN GOTO 150
130 NEXT F
140 NEXT B
150 NEXT L
160 PRINT AT 0,0;"YOU SCORED ";S;" OUT OF ";BAN*INT PI

```

COSMIC MISSION

T. SIMMONS of Downham Market, Norfolk wrote **Cosmic Mission** for the 1K ZX-81.

Guide your craft through outer space using keys 5 and 8. If you bump into the enemy your force field will disappear and you will be spotted. The score will be given and you can then run the program again. The explanation of the program lines and an adaption for the Spectrum is given below.

100 Defines the Enemy

105 Sets the score to zero for start of game

110-125 These variables are used later in the game and are set to zero initially (see lines 215-250)

130 The amount you score is increased each go. Initially it is set to 1

135 The starting position of your craft across the screen

160-300 This series of lines controls the movements in the game. The program will loop around these lines until the conditions in line 270 have been met.

160 Chooses a random position across the screen for the enemy between 0 and 26

170 Prints the enemy at the bottom of the screen

180-190 Scrolls the whole screen up by one line

200 Each time the program passes this point in the loop your score is increased by the value of t

210 If you have scored 104 this increases the value of t

215-250 r is the position across the screen of the enemy. On the first all these variables are at zero, and as the program passes line 250 a takes the value of r. On the second time round, as the enemy scrolls up the screen, b has the first value of r and a now has the second, and so on until the fifth time when e has the first value of r. By this time the enemy has scrolled up to your position. See line 270

255 Blanks out your craft which has scrolled up two lines from its previous position

260 Redraws your craft

270 Checks to see if your position x is within three squares — four if t=2 — of the enemy, and if it is a jump is made to line 500

280-290 These move your craft left or right to the value of t depending on which key you are pressing

300 Jumps back to the start of the loop

500 Prints that you have been spotted at your current position

510 Prints your score

515 Invites you to try again

To make this program work on the Spectrum replace lines 180 and 190 with:

180 POKE 23692,3; PRINT

190 PRINT

If the game is then too fast, add:

295 FOR F=1 TO 50 NEXT F

SINCLAIR USER March 1984

```

100 LET A$="A"
105 LET N=0
110 LET A=0
115 LET B=0
120 LET C=0
125 LET D=0
130 LET T=1
135 LET X=12
150 LET R=INT (RND*27)
170 PRINT AT 21,R;A$
180 SCROLL
190 SCROLL
200 LET N=N+T
210 IF N=104 THEN LET T=2
215 LET E=D
220 LET D=C
230 LET C=B
240 LET B=A
250 LET A=R
255 PRINT AT 9,X-2;" "
260 PRINT AT 11,X;"[A]"
270 IF X>=E-2 AND X<=E+T THEN G
OTO 500
280 IF INKEY$="5" THEN LET X=X-
T
290 IF INKEY$="8" THEN LET X=X+
T
300 GOTO 150
500 PRINT AT 11,X-1;"SPOTTED"
510 PRINT AT 0,0;"SCORE=";N
515 PRINT "TRY AGAIN"

```

MARK RIDER and Clifford Walker of Enfield, Middlesex have written a simple program for the unexpanded ZX-81. The computer chooses a number between 0 and 30 which you must guess before being hit by the wall.

THE WALL FOR 1K ZX81

```

1 LET Z=INT (RND*VAL "30")
2 FOR G=VAL "0" TO VAL "15"
3 PRINT AT G,VAL "0";"
4 PRINT AT VAL "0",VAL "13";"
  GUESS THE NUMBER"
5 PRINT AT VAL "16",VAL "4";"
  0"
6 INPUT U
7 IF U=Z THEN GOTO 15
8 NEXT G
9 CLS
10 PRINT "YOU HAVE BEEN CRUSHE
  D"
11 PRINT "THE NUMBER WAS ";Z
12 PAUSE VAL "400"
13 CLS
14 RUN
15 PRINT "WELL DONE,THE ANSWER
  WAS ";Z
16 GOTO 12
  
```

BARREL JUMP

BARREL JUMP was written for the 1K ZX-81 by Jeff Tupholme of Arnold, Notts. Jump the barrel as it rolls towards you and try to reach the top of the screen. Use keys 5 and 8 to move left and right and 7 to jump. You can jump the barrel only when it is directly in front of you.

```

1 LET A=VAL "31"
2 LET D=VAL "12"
3 LET B=PI-PI
4 LET E=VAL "4"
5 LET F=PI/PI
6 LET G=VAL "31"
7 LET H=B
8 LET I=B
9 LET C=D
10 FOR J=F TO D+F STEP E
11 FOR K=B TO A
12 PRINT AT J,K;" "
13 NEXT K
14 NEXT J
15 PRINT AT D,A;" ";AT C,B;" "
16 LET A=A-(INKEY$="5" AND A>H)
  +(INKEY$="8" AND A<G)
17 IF INKEY$="7" AND B=A-F THE
  N LET A=A-F-F
18 IF D=H AND A=G THEN STOP
19 IF B=G-I THEN LET B=I
20 LET B=B+F
21 IF A=I THEN LET D=D-E
22 LET C=D
23 IF A=I THEN LET B=G-A
24 PRINT AT D,A;"Y";AT C,B;H
25 IF A=B THEN STOP
26 IF A=I THEN LET F=-F
27 IF A=I THEN LET I=31-I
28 GOTO 15
  
```

Trapping the errors will ensure first-time running

THE FIRST error code encountered by most Sinclair users is the flashing "S" on the ZX-81 or "?" on the Spectrum, which indicates a syntax error in a sentence. Experience and the manual soon show that it is caused usually by typing-in a keyword letter by letter, or by bad punctuation, for example omitting a semi-colon or an inverted comma.

The most frequently-occurring error code is "2" — variable not found. A variable is a letter which has been given a numeric value. When you enter "LET a=2" you are defining a variable. Error code 2 results when the computer reaches a variable in the program to which you have so far given no value.

Check the line which the computer specifies. If it is your program, give a value to the variable or remove it. If you are copying the program, look back in the listing to see which line you have missed.

Although the majority of error codes are explained adequately in the manuals, the report "B-Integer out of range" can be confusing. An integer is a whole number — 1 is an integer, 1.5 and 1½ are not. That code occurs most frequently when you try to print something beyond the limits of the screen.

PRINT AT 0,31; "a" is acceptable and will print a letter "a" at the top right of the screen. PRINT AT 0,32; "a" would not be possible. The integer 32 would be out of range, resulting in error code "B". That would also happen if the computer were instructed to PRINT AT 0,31;"ab". It would still be trying to print a character beyond the limits of the screen.

That error is more difficult to detect if variables have been used as co-ordinates and your character, or series of characters, is being printed in varying positions. If the instruction PRINT AT 0,x;"a" produces report code B, make sure that the value of x never increases beyond 31.

On the Spectrum "B-integer out of range" is also often found when you are POKEing-in user defined graphics. The biggest number which can be POKEd-in this case is 255 or BIN 11111111. In that case the error code

will occur in the line containing the POKE statement. In most cases, though, the error will have occurred in one of the DATA lines in the program.

A very frequent error code produced on the Spectrum is "E-Out Of Data". That will occur in a line containing a READ statement. The error code, though, will have occurred in one of the program DATA lines, which may be nowhere near the READ line. A READ command sends the computer to a DATA line to collect the next piece of DATA contained there. That is often done using a FOR, NEXT loop, especially when graphics are being set up.

FOR n=1 TO 8: READ n will send the computer to the DATA lines eight

words such as LN or EXP as keywords.

On the ZX-81 especially it is easy to forget that pressing "π" will produce the word PI.

Make sure that when the "is not equal" sign, "<>" appears in a listing you always enter it as one character and not as "is less than", "<" followed by "is greater than", ">".

Technical problems can also cause errors in programs. Any alteration to the power supply can cause a program to CRASH. In that case the screen display may change dramatically and using the keyboard will have no effect. The only solution is to unplug your computer and begin again, making sure that your power supply and RAM pack

'The error need not be on the line which produces the report; that is simply the line where the computer meets the problem'

times, for eight separate pieces of information. If there are only seven pieces of DATA there it will return to the READ line and produce the code OUT OF DATA. When there are several DATA lines they will all have to be checked, because the piece of DATA you have omitted was not necessarily the last.

In some cases the computer will follow the program correctly, without producing an error code, but from the programmer's point of view the program contains an error. In that case BREAK into the program at the moment it goes wrong. That will produce report code 9 and the line on which you have STOPped the program. That method makes it easy to locate the area of the program which contains the error.

Programs which you copy from magazines, books or from friends can be difficult to error-trap because they contain programming techniques which you have not yet learned, or simply because it is often difficult to follow another programmer's logic.

The flashing "S" or "?" indicating a syntax error may appear frequently. In that case check carefully what you have copied. You may not have recognised

are both connected firmly. That error is caused by the computer and not by the program.

Sometimes a program listing in a book or magazine will contain what seems to be a very obvious error. If it contains key words or symbols which are not on your computer, check that it is intended for your machine. Programs for the Spectrum, the ZX-81 and the ZX-80 are not usually directly interchangeable. If a program contains the command GOTO or GOSUB — a non-existent line number — the computer will simply go to the next numbered line after that one. That is a sign that a program has been developed and improved and is rarely an error.

When you have errors in a program, first check the report codes listed in Appendix B of the manual. It may then be necessary to read the appropriate section of the manual. Remember that the error is not necessarily on the line which produces the report code; that is simply the line where the computer meets the problem for the first time.

Always check carefully every line connected with the line containing the error code and the mistake should be easy to locate.

Upgrade your 16K ZX SPECTRUM Now!

The CHEETAH 32K RAMPACK simply plugs into the user port at the rear of your computer and increases the memory instantly to 48K.

- ★ Fully compatible with all accessories via rear edge connector
- ★ No need to open computer and invalidate guarantee
- ★ Why send your computer away and wait weeks for upgrade
- ★ Fully cased tested and guaranteed.

Why wait any longer?

Only £39.95 including VAT and P&P.

Now make your Spectrum and ZX-81 Talk

The Cheetah "SWEET TALKER" just plugs into the back of the computer using the existing power supply. Based on an allophone system you can easily program any word sentence or phrase. Fully cased, tested guaranteed and compatible with all accessories via rear edge connector. Complete with demonstration cassette and full instructions. No more lonely nights! Simply incredible at **£29.75** (Please quote when ordering whether Spectrum or ZX81 owner)

John Menzies

WH SMITH

John Gilbert completes his series by looking at how Forth is used in education and industry

Versatile language aids the human factor

IN THE LAST six months this series has concentrated on what the Forth language can do for the Spectrum and the ZX-81. In the last of the series I want to cover the part of programming techniques called the human interface. It is the part of a computer or a piece of software which takes the human into account during its operations. I want to take the human into account and show how Forth can be used in schools and industry.

Schools and colleges are the obvious places to start as it is at those institutions that computer studies and, for the first time, Forth is being taught. It is at school that most young people learn about computers and examination boards are now treating Forth as a second language to Basic and Fortran.

There are two levels at which it can be used at school. The first is with the teacher, who can add words to the language to demonstrate the principles of a computer in operation. Forth can be turned into an even more high-level language by adding better input and output interfaces, so that the student can use it with ease. They can be stripped from the language as a pupil progresses. Eventually the pupil will be

able to use Forth at assembly language level.

Forth will be of use to the pupil on that level in education as a second language. Many schools are taking it that computers such as the Spectrum and ZX-81 use Forth and it is finding a place alongside the traditional and old school languages such as Basic and Fortran. It will train the pupil in machine concepts and make it easier to understand machine code in the long run.

The emphasis on input, output and

"Forth will make even the ZX-81 into a powerful machine"

the stack which the Forth operating system will put on to computer studies can only be good so far as the student is concerned.

Another area which can benefit from the processing power of the language is mathematics, not so much in education but in industry and the sciences.

Unfortunately most of the packages on the market for the Spectrum and ZX-81 offer only integer representation,

such as 1324, and not floating point representation, such as 1.324. One company which provides floating point is CP Software, which produces 16K and 48K Spectrum versions of Forth.

Integer Forth is faster than floating point but is usable for most purposes. Floating point Forth lays the emphasis on mathematical procedures and is ideal for scientific work in, say, a laboratory. Such a package could even be used to check variables in an experiment.

The level of sophistication of the language in the laboratory environment can be controlled by defining new words to cope with the expertise, or lack of it, of the staff. One scientist may be able to use Forth unaided whereas another may need the help of an easier Forth structure. Whatever the needs, the Forth language will be able to cope in most situations.

Forth is also ideal for mathematicians as they will be able to cope with the Reversed Polish Notation which is the curse of any student learning the language. The problem is that the arithmetic operators, such as + or -, are put after the operands, such as 2 3 + which means 2 + 3. Mathematicians can handle

continued on page 108

continued from page 107

that easily and it is one of the factors which increases the speed at which Forth runs, as the computer also handles formulae like this easily.

Another area in which the speed of Forth can be a boon is the creation of graphics, on the screen and on a printer. To produce graphics, such as lines, curves and characters, the user will, in many cases, have to add commands to the language. Luckily, in most of the Sinclair packages, notably Abersoft Forth, graphics features have been incorporated into the dictionary.

Unfortunately the graphics on all the Spectrum packages are only elementary but they show the speed with which pictures can be drawn and manipulated on the screen. The inherent speed factor means that design programs can be written in the language for use by engineers, or even craftsmen who work in metals or pottery. On a more educational level, Forth could be equipped with turtle graphics commands, which means that students can interact with the computer to produce and change pictures on the screen.

As Forth can be compiled, graphics routines using the language can be produced quickly and attached to arcade games or even adventure games.

One area in which Forth can be used to great effect but which is not thought of in Sinclair circles is its ability as a software systems design language. Usually the design of languages and other utility packages for microcomputers and big mainframes is done using either assembly language or specialised systems design languages such as 'C' or machine code.

Again the compilation facilities of Forth make it an ideal language with which to produce other compiled or assembled languages. Utilities such as assemblers could also be created in Forth, which would make it a tool for the design of software which would eventually be used in another microcomputer.

At the moment Forth is being used to write computer language interpreters for mainframe computers but such a system could be used by software houses in the Sinclair market. It would also be possible to write software using Forth on a larger development system, such as those used by Psion, and then download the software to run on a Spectrum or ZX-81.

The technique is common practice in software houses, although few of them use Forth as it is slower than machine code.

The advantage of using Forth for software design is that it is simpler than assembly language and much easier to use than machine code. Large software projects, such as the design of new languages, can be done quickly using Forth and the resulting listings of such projects will be easier to read.

The other advantage is that people who do not know enough about machine code to do complex operations on the Spectrum can produce programs with the power of the language which look professional.

The area of industrial control applications using Forth is massive and I cannot deal with it in much depth. There are, however, several sectors of

industry which can, and do, benefit from Forth as a control language.

The most obvious application in industry is the control of robots in a factory. Forth can be adapted to fit any particular input or output needs required, so that the people who work with the machines can program them if a change of task or speed is required. Large-scale changes can also be incorporated into operating program design in a faster time than if machine code was being used and the machines, which cost thousands of pounds an hour to maintain, will not be idle for long.

The input/output facilities of Forth can also be a benefit in the factory environment which may often have to be under strict control. For instance, a computer programmed with Forth could monitor the temperature on the factory floor by taking readings from a thermometer and then adjust the thermostatic controls. In a similar way various parts of a production line can be controlled very accurately.

All of those uses may seem a long way from the Spectrum and the humble ZX-

81 but most of the uses could be programmed on to a Sinclair machine, especially if it contained David Husband's ROMs. Forth will make even the ZX-81 into a powerful machine.

Those are just some of the ways in which Forth will help the human user get along with computers. As an adaptable language it should be useful for most purposes and most users but all the Spectrum and ZX-81 packages have weak areas which could be overcome with a little more thought.

None of the packages on the market is helpful where input/output is concerned. Nobody has gone to the trouble of producing worthwhile examples to drive any peripherals in the hardware line where Forth comes into its own.

One other blasting criticism is that no companies have backed their Forth interpreters with software which can be run on the Spectrum or ZX-81. For instance, the least that could be done are some utilities or programming tools which would make life easier with Forth. Those packages could be supplied separately and create another language market for producers of Sinclair software.

To help promote the Forth language, in which great interest has been shown, *Sinclair User* and *Sinclair Programs* would like to print programs in Forth as well as Basic. They can be simple games or complex utilities, so long as they are well-documented.

Also, although this is the last article in this series, I will be producing one more article on the subject in a few months which will answer any general questions which you may still have about the language. If you have such questions, write to me at *Sinclair User*. I cannot answer individual queries but will try to deal with as much as possible in the article.

In the meantime, you may like to look at some recommended books on the subject. *The Complete Forth*, by Alan Winfield, is published by Sigma Technical Press. It will introduce you to most of the concepts of Forth but describes the Forth 79 standard which is slightly different from Fig-Forth. Others books which can be recommended are best obtained from a good library. They include *The Systems Guide to Fig-Forth* and *Starting Forth* by Leo Brodie.

Alternatively you could join the Forth Interest Group, an organisation which started in the U.S. but which has a branch in Britain. It can be reached at 15, St. Albans Mansion, Kensington Court Place, London W8 5QM.

 3D Tunnel for 16K/48K Spectrum £5.95
'A masterpiece of programming' C & V G

Hurtle into a void leaving a trail for your unseen pursuers in 'KNOT IN 3D'. Weave your way through up to five trails but be careful, you could get knotted! Or travel through the depths of a moving tunnel full of bats, rats, spiders and toads in '3D TUNNEL', with a special surprise in the 48K version.

Stamina is the vital ingredient of 'ESCAPE', as you'll be venturing into the maze pursued by walking and flying dinosaurs.

ZX81 owners must be prepared for the

Escape for 16K Spectrum £4.95
'One of the best and most original games we have seen for the Spectrum' Sinclair User
 3D Monster Maze for 16K ZX81 £4.95
'Brilliant, Brilliant, Brilliant...' Popular Computing Weekly
 3D Defender for 16K ZX81 £4.95
'Another 3D Winner' Sinclair User

shock of coming face to face with the T. Rex that leaps out from '3D MONSTER MAZE'. '3D DEFENDER' takes you out of this world and plunges you into space in a fast moving game to defend your home planet against alien spacecraft in a blitz of explosions, plasma blasts and photon beams.

All these exciting 3D games have been designed by Malcolm Evans, the 3D expert. They'll have you leaping out of your seat because you don't just play New Generation games, you live them.

THE MOST IMAGINATIVE GRAPHICS PROGRAMMING SOFTWARE FOR YOUR SPECTRUM.

There's now one piece of software that's a *must* for every 48K SPECTRUM owner.

It's called "PAINTBOX".

If you wish to exploit the full graphics capability of your machine, you can do so . . . simply and easily with "PAINTBOX".

"PAINTBOX" is produced by Print 'n' Plotter Products — the company that has pioneered (and led) the field of graphics aids for ZX Computers.

With our name and reputation you are assured of quality and immense graphics capability!

Take a look at the actual screen prints opposite. They are the sort of thing you could produce on your SPECTRUM.

With a little practice — and "PAINTBOX" — you could be planning, producing, and utilizing these sort of graphics in your programs — producing software that will come alive with originality!

Just look at some of the facilities available from "PAINTBOX":

UDG EDITOR:

Giving you the facility to define (and re-define) up to 84 graphics characters which can be held in memory, stored in your BASIC programs for instant recall from its own built-in machine code!

UDG DRAWING BOARD:

A fully integrated UDG Planner for up to 4 Banks of user-defined characters. Planning facilities include MIRROR IMAGE, ROTATE, INVERSE, and FILE.

SKETCHPAD:

An experimentation "window" that allows you to try-out your UDG ideas during development of the 84 graphic character set.

PRECISION PLOTTER:

An amazingly versatile high-resolution drawing board which includes PAPER choice, INK choice, PLOT, DRAW, DRAW RADially, CIRCLE, ARC, OVER, FILL, instant change of INK colours (including BRIGHT), ERASE, and STORE in permanent memory during development!

All cursor movements can be controlled by Joystick or Keyboard operations, with choices which include FAST or SLOW movement and "Crosswire" or single Pixel cursor!

SCREEN PLANNER!

Combining the best of both worlds! PRECISION PLOTTER and UDG Characters! For complete screen planning of graphics. A multi-purpose graphics facility to enable you to produce screen graphics that are the equal of those seen in best-selling software!

All graphic results can be sent to the Printer, saved as SCREEN\$ or SAVED as CODE with its built-in machine code routines for instant recall from BASIC.

"PAINTBOX" is such a comprehensive graphics toolkit that it is impossible to describe it all in one advertisement!

The program comes complete with a cassette demonstration of what you could produce with "PAINTBOX" including a 28 page booklet describing in easy-to-understand language how to use it for best results and many tips for storing and using your graphics in BASIC programs.

Of course, "PAINTBOX" is ideally suited for use with Print 'n' Plotter's other great graphics aids.

The dedicated programmer will want to use it in conjunction with our ZX SPECTRUM JOTTER PAD — THE ORIGINAL (AND BEST) GRAPHICS PLANNING PAD!

So why not place your order today?

Write now. Phone your Credit Card. Ask at your local computer shop.

At only £7.50 (plus p&p) it's a marvellous investment for all ZX SPECTRUM owners . . . of all ages!

SO SIMPLE
A CHILD
COULD
USE IT!

Good software counts in learning arithmetic

This month Theodora Wood looks at programs which aim to help children with their sums

MANY PROGRAMS which deal with arithmetical skills provide drill situations and can be seen as the extension of the workbooks and worksheets which children use at school. Their educational aims therefore are relatively modest but include the fact that the programs familiarise children with computers, but only as a drill machine.

Hot Dog Spotter — Longman, Spectrum 16/48K, £7.95 — is an example. Designed to appeal to young children and to give them practice at counting, its format borrows features from arcade games. Dice drop from the top of the screen and the child has to recognise the number (1-9) on the dice before it reaches the bottom. If correct, the ball is returned to its pot; if incorrect, the numbers are counted out and the ball is lost. After three balls are lost the game is finished.

The child has to ENTER his name and a high score is kept. The game adjusts to the player's skill; if the correct number is pressed when the ball is in the yellow zone, three points are awarded, if pink two points, and the green zone scores only one point. If most entries are in the lower half of the screen the game will consist of the lower numbers. The action is fast so there is very little time to count the numbers, especially since they are not presented in conventional dice formation.

Countabout — Longman, Spectrum 16/48K, £7.95 — operates on three levels of difficulty — addition, subtraction and a combination of both. A box appears in the middle of the screen with a number of objects in it — telephones, crocodiles, boats or any other of the nine objects. A sum appears at the left-hand side, for example $2 + ? = 4$, and the child has to press the required number.

If incorrect, there are two more attempts, until the correct answer is shown. If correct, the box is filled with the correct number of objects and the chimpanzee moves up the banana tree on the left of the screen until it finally reaches the bananas at the top and the

game is finished. Unlike Hot Dog Spotter, there is no time element, so the child can count the numbers carefully.

Both the programs illustrate the single program concept; there is no opportunity to change any of the parameters and, because a child's attention span is short, they cannot be used for very long periods. By contrast, **Party Time** — Clever Clogs, Spectrum 48K, £6.50 — is geared to overcome that problem. Aimed at the three-plus age group, a variety of six activities is provided, all LOADED at the same time. A menu is provided and the child can choose any of the activities, although there are times when the computer will choose.

Included in the activities are two arithmetical ones — Counting and How Many? — which show in the first instance objects to be counted on the screen and in the second simple additions. The correct answer is given after three incorrect attempts. No more than four of them needs to be done at any one turn and then there is a nursery rhyme before returning to the menu. The parameters can be set for both.

Jungle Jumble — Clever Clogs, Spectrum 48K, £6.50 — develops the idea further for older children. Ten questions have to be answered while a picture of an animal is built and a safari game can be played. Among the questions are some simple arithmetical problems, such as three boys share six sweets, how many each? One hundred questions are provided and the opportunity is given to edit the questions to suit the individual child. By providing variety and the opportunity to personalise its programs, Clever Clogs has produced a much more flexible package than the one-game format Longman used.

Model Maths — Jive Software, Spectrum 48K, £5.75 — provides two programs based on real-life situations. Dartscore is a simulated game of darts in which the computer throws the darts and the player keeps the score on three levels of difficulty. Beginners have to

add the total score of five darts, juniors start with 51 and count down, and experts begin with 101 and do the same.

Balance simulates a set of scales and the player has four choices, to match a given weight up to 20, to find a secret weight up to 20, and the same for numbers up to 99. The child must put weights on the scales to make them balance. Avoiding the absolute correct or incorrect result of many arithmetic programs, Balance enables a child to play with combinations of numbers to achieve the correct result. Only 1, 2, 5, 10, 20 and 50 are used, reflecting our currency.

Learning tables is an example of rote learning which has provided software houses with an opportunity to invent a variety of approaches to aid a child to reach the position to supply an answer with no conscious effort. Chanting the tables in a classroom situation rather like a mantra is the traditional way of arriving at that position and **Know Your Tables** — Collins, Spectrum 16/48K, £5.95 — borrows this methodology and develops it further by providing a visual aid in the form of a number grid.

There is a choice of building a multiplication table or learning a table. The child can choose which table to build from one to 10; the computer then builds a grid of numbers from one to 50 and when the higher tables are chosen that continues up to 100. Then the child has to answer the questions, for example $1 \times 3 = ?$ and continues until the table reaches 10×3 .

When that is complete the child has to learn the flashing line, $9 \times 3 = 27$, and then say it three times. Learn a Table builds the grid and then colours the appropriate numbers, so the child can see the pattern as it is built, then learn-

ing the flashing line and saying it three times. The program is accompanied by a workbook which provides numerous activities to support the learning provided by the tables on screen.

A less conventional way of learning tables can be seen in **Robot Tables** included in **Quick Thinking** — Mirrorsoft, Spectrum 48K, £6.95. There are two choices of speed — slow for learning and fast for testing — and there is a choice of which tables to include, ranging from 2 only to 9, 6, 8, 7, 12. A large robot machine is fed with numbered blocks; the tables number is displayed and the child has to accept the block by pressing 1 or reject the block by pressing SPACE. The answers work through a given table in sequence 4, 8, 12, 16 and if the player does not press anything or gives an incorrect answer, the block goes up in smoke or a bad robot is made.

If correct, a good robot is made amid much whirring and clicking; correctly-rejected blocks are re-cycled. Points are awarded for correct answers and lost for incorrect ones.

Also on **Quick Thinking** is **Sum**

EDUCATION

Vaders, a drill routine to practise addition and subtraction, suitable for all ages from five to adult. There is a choice of one or two players who can be given different skill levels to play, varying from using numbers up to nine to adult level. A numbered space ship drops a numbered robot; if the answers given are correct the robot disintegrates; an incorrect answer jams the ship and the correct answer is shown when the robot lands; when five robots have landed the game is finished. The program provides practice in the skills of mental arithmetic but could also be used as calculator practice.

The format is also used in **Maths Invaders** — Stell Software, Spectrum 16/48K, £6.95. The player can choose addition, subtraction, multiplication or division at any of six levels. A score is kept at the top of the screen while the sum appears at the bottom. If the correct answer is given the player can fire a gun at the invaders by pressing any key; that can also be moved by pressing O or P but is rather unresponsive. The graphics are also disappointing and not up to the standard of the Longman package.

Jungle Maths — Scisoft, Spectrum 48K ZX version, £6.95 — is another drill program in fancy packaging. The parent or teacher can set the parameters of the game before it begins. There is a choice of addition or subtraction at three levels from less than 10 to less than 1,000. Practice with decimals and negatives can be chosen and the time limit varied from 20 seconds to five minutes 20 seconds. Pressing X while the child is doing the problems will give the number of incorrect answers.

The aim is to pass through the jungle at the top of the screen; to move a space requires the correct answer. If an incorrect answer is given the player is overtaken by one of the hazards, falling into the pit or being eaten by piranhas.

The difficulty with that approach is that giving an incorrect answer produces a more spectacular result than the correct answer and children operating

continued on page 116

continued from page 115

the program alone will learn that quickly. It also seems strange that, although Scisoft seems to be aiming at both the home and school market, there is no opportunity to change the parameters without reLOADing the program, which could be very time-consuming in a classroom.

Paddington's Shopping Mix-up — Collins, Spectrum 16/48K, £6.95 — takes a completely different approach from all the other programs discussed in that it introduces sums of all kinds in a

'Their success will differ according to the preferences of both parent and child'

story-time format. There is a Paddington story book with the tape and the activities are based on it. Five programs are provided, each to be LOADED separately. Paddington features in all the programs, so if a child is a Paddington fan it will have a certain appeal.

Plenty of counting practice is provided in Grocer, counting apples and

carrots as they go on to the scale. Sums provides a choice of six skill levels in all four types but the skill level moves up with correct answers, which can be rather daunting. Which, Doubles and Labels all provide more arithmetical situations and in the case of Doubles it is in the form of a board game to be played by one or two players, with counting practice in the form of dice thrown.

All the programs are examples of the various ways in which the Spectrum graphics, sound and animation capabilities have been used to make sums more entertaining. The majority of the programs will be used by parents and children at home, as the ratio of children to computers in schools is only 200:1.

The implications are various. Will there emerge a group of children with greater skill in these areas due to the extra practice obtained on home computers? Will parents feel more able to teach children at home by using these materials? Another consideration is that of the importance of obtaining a high degree of skill in an area where it is no longer necessary; decimalisation of the currency, calculators, electronic tills, have all altered life and work involving

arithmetic skills radically. At a basic level, the programs are materials to be used with the computer as a learning machine and their success will differ according to the individual preferences of both parent and child — we cannot all love Paddington.

Programs by Longman, Microsoft and Collins are widely available in stores. **Clever Clogs**, Computertutor, PO Box 3, St Neots, Cambs PE19 3NW. **Stell Software**, 36 Limefield Avenue, Whalley, Lancs BB6 9RJ. **Scisoft**, 5 Minster Gardens, Newthorpe, Eastwood, Nottingham. **Jive Software**, 76a The Hill, Wheathampstead, Hertfordshire.

Win £25 worth of software

MICRO MASTER in conjunction with *Sinclair User* offers readers the chance to win £25 worth of Educational Software from Micro Master.

Simply provide the correct answers to the questions below and send your answers to Micro Master Competition, 94 Airedale Avenue, Chiswick, London W4 2NN. Replies containing the correct answers will be put into a pool and the first five readers whose entries are drawn will each receive the prize of £25

worth of educational software. Previous customers who quote their registration numbers on their entry forms will be entitled to a further £10 worth of software. Winners will be allowed to choose their own software from Micro Master.

The range of choice includes Micro Master's own series of cassettes which deal with language and arithmetic for the 7-13 year age group but winners may also choose cassettes which are retailed by Micro Master but produced

by other companies, e.g., Longman, Widgeit, Rose and Calpac. The range will cater for all levels up to O level.

Entries must be received by April 2, 1984 and all entrants will receive details of the software available from Micro Master. The correct answers and the names of the winners will be published in the Education section of *Sinclair User*. Employees of *Sinclair User* and Micro Master are ineligible and the judges' decision is final.

Entry Form

SPECTRUM ORWIN SOFTWARE ZX-81

FOR 16K SPECTRUM (will also run on 48K Spectrum)

GHOST GOBLER
Eat the ghosts before the ghosts eat you. Eat a star and you can chase the ghosts for a while.

ALIENKILL Control lasers, rockets and a force field to stop the aliens from landing. **MOUSETRAP** Trap the mouse in the corner but not anywhere else. **REVERSI** A game of skill with simple rules but sophisticated tactics. Play against the computer. **LASER DEFENCE** Control the laser sight to shoot down the alien ships. Machine code sound routines.

Ten programs for £6

TANK BATTLE For 2 players simultaneous or play against the computer. Each player has 2 rotate controls and move and fire controls. The tanks fire steerable missiles. **PHOEBUS** A puzzle.

BLACKSPOT Gobble the stars and avoid running into black spots created by crossing your own path.

CUBE Manipulate a cube any size from 2 x 2 x 2 to 7 x 7 x 7.

MINEFIELD Collect the crowns while avoiding the mines and the electrified fence.

plus an extra...

GRAPHIC DEMO Did you know your Spectrum could do all this?

EDUCATIONAL COMPENDIUM FOR 16K/48K SPECTRUM £6

All these programs on one cassette.

These programs were developed for use in a Junior School and have been in regular use there for some time. Older people also find them interesting and fun.

TORTOISE GRAPHICS: an educational graphics language.

16K version commands include: forward, left and right through a specified angle, wipe, pen up and down, paper and ink colour, macro, edit.

48K version has extra commands including: backward, quit, cancel, printer and tape commands, auto, home, variables, loops.

TORTOISE & TORTMAZE: 16K games using the forward, left and right commands. These are good for learning a feeling for distances and angles and are fun to play.

REVEAL: an addictive 16K word game. A piece of writing has had its letters rubbed out and you have to find out what they are. You buy letters or try to predict them. Included are 20 textfiles to be solved and a textmaker which will let you input your own text and store it on tape for someone else to solve.

EQUATION INVADERS: a 16K game to make simple equations more interesting.

CENTIPOID PLUS THREE for 48K SPECTRUM. £6

Plus these games in Basic for the 48K Spectrum on the same cassette.

PANIC

HOUND

3D TIC TAC TOE
A 3D game of skill played against the computer.

CASSETTE 1: eleven programs (including 7 in machine code): React, Invaders, Planet from Aliens, Maze of Death, Planet Lander, Bouncing Letters, Bug Sploit, I Ching, Coderbreak, Robots, Basic Hangman.
for 1K ZX-81
£3.80

CASSETTE 2: ten games in Basic: Reversi, Awaraz, Laser Bases, Wordmaster, Rectangles, Crash, Roulette, Portocoon, Penny Shoot, Gun Command.
for 16K ZX-81
£5

CASSETTE 3: eight programs (including 1 in machine code): Starship Trojan, Star Trek, Princess of Kraal, Battle, Cube, Kalabrisz, Secret Messages, Martian Cricket.
for 16K ZX-81
£5

CASSETTE 4 8 games for 16K ZX-81 £6

GUNFIGHT (machine code)

Bomb and shoot your way through the fortified caves.

INVADERS (machine code)

"quantity as well as quality"
Sinclair User, Oct '82
"If each game was on a separate tape and selling for £5 each I would still recommend them"
ZX Computing, Oct/Nov '82

GALAXY INVADERS (machine code)

Fleets of swooping and diving alien craft to fight off.

SNAKEBITE (machine code)
Eat the snake before it eats you. Variable speed (very fast at top speed).

LIFE (machine code)
A ZX-81 version of the well known game.

3D TIC-TAC-TOE (Basic)
Played on a 4 x 4 x 4 board, this is a game for the brain. It is very hard to beat the computer at it.

7 of the 8 games are in machine code, because this is much faster than Basic.
(Some of these games were previously available from J. Steadman).

CASSETTE 5 8 games for 16K ZX-81 £6

BREAKOUT (machine code)

PLANETOIDS (machine code)
Rotate, move, fire and hyperspace controls. Wide range of choice of speed and difficulty.

BLITZ (machine code)

DODGERS (machine code)
Dodge the computer's car while eating the dots.

DRAUGHTS (machine code)
Three skill levels.

MERCHANT (Basic)
Make your fortune on trading voyages in the Mediterranean and beyond.

What Micro?
Games supplement,
Nov '83

BYTE-MAN (machine code)
(previously available from Mindseye)

SPACE RESCUE (machine code)
(previously available from Mindseye)

7 of the 8 games are in machine code because it is much faster than Basic.

The best accessory for your micro

ONLY
£34.49
(P+P £2.50)

The Rotronics Portable Case

Here is the ideal portable work station for home, school or work. Specially made for most home microcomputers, it contains your ZX81 or Spectrum within a smart executive style case with removable lid for convenience in use.

The individually tailored foam insert securely protects your

micro, printer, cassette recorder, tapes and manuals during transit. A scalpel is provided to modify the insert for expansion units and an alternative insert can be supplied if you change your hardware in the future. The case is also available with uncut foam inserts. All components remain fully operational within the case via inter-

connections routed between the double layers of foam, so there are no unsightly leads.

This is the first case designed for easy use with each component positioned for convenient operation. The overall dimensions are 138mm x 700mm x 363mm.

Spectrum Joystick Interface

Revolutionary design allows standard (9 pin) joystick to be used with any Spectrum software. Easily programmed in seconds - no links or cassette software required £24.45 (p+p 50p). Spectravideo "Quickshot" Joystick £9.45 (p+p 50p).

ZX Panda

The best 16K RAM for the ZX81. Anti-wobble design with LED power indicator. 16K Expandable RAM Pack £18.50 (p+p 50p). 16K Plug-in Module for above £13.95 (p+p 50p). 32K Giant Panda including Module £31.45 (p+p 75p).

A SIMPLE GUIDE TO USING COMPUTERS

Do you secretly feel frightened of using a computer at home or at work?

Benn Computer Consultants have designed 3 programs for people who think they will never be able to cope with operating a computer.

The programs show:-

1. How to use a keyboard
2. How to find programs using Menus.
3. How to enter facts such as names and addresses into a computer.

These programs use a 48K Spectrum to teach the fundamental principles of operating ANY computer and need no previous experience of computing or maths. **They are designed for the majority of people who want to know how to use a computer but don't want to learn how it works.** (Programs approved by the Manpower Services Commission).

Please supply copies of A Simple Guide at £9.95 (includes tape, VAT, P&P). I enclose £..... cheque/Postal Order payable to: BENN COMPUTER CONSULTANTS LTD.

WIDGIT SOFTWARE, 48 DURHAM ROAD, LONDON N2 9DT

Manipulating the sprites to eliminate flickering

Our expert Andrew Hewson introduces a graphics routine which makes use of the Spectrum attributes file

IN THE TWO YEARS I have been writing this column I have observed the gradual changes in the requests I have received. In the early days almost all the letters concerned the ZX-81 and most of them were fairly straightforward. These days roughly two out of every three are from Spectrum owners and very often the topic on which information is requested would need several chapters of a book to do it justice.

Take, for example, this letter from Falgun Patel of Harrow, Middlesex. He writes: **I am having great difficulty with a car game program which I am writing. The car is printed at the bottom of the screen and as it scrolls off the screen it has to be re-printed, causing a flickering. Another problem is that because the car is two characters high and two characters wide the top of the car appears briefly where the bottom of the car should be. On the Commodore 64 the problem can be solved by using sprite graphics which are not affected when the screen scrolls. Is there a machine code routine which simulates sprite graphics on the Spectrum?**

I find the letter, typical of a number I have received in recent weeks, interesting for a number of reasons. First, it reflects the increasing sophistication of Sinclair users. Six months ago I often received letters requesting routines for scrolling the entire Spectrum screen and I dealt with the topic at that time. Falgun has observed that there are games for the Spectrum on the market which appear to use sprite graphics — i.e., they scroll different parts of the screen independently of one another — and therefore wishes to incorporate the feature in his own software.

Second, his letter implies that a machine code routine to generate and manipulate sprite graphics should be fairly straightforward to design and write. That is a common assumption made by many correspondents who believe that I must produce this kind of routine in the odd half-hour between *Coronation Street* and supper-time. Unfortunately that is

● Please address problems and queries to Andrew Hewson, Helpline, Graham Close, Blewbury, Oxfordshire.

not true. There was a lag of about 15 months between the launch of the Spectrum and the time when the first 'sprite-like' games appeared on the market. Modesty forbids me to claim that I am quicker than anyone else at this kind of job.

Third, the letter is a challenge to write some software which will be of interest to most readers and stimulate a few to develop and extend it. I am not one to decline such a challenge readily.

Having accepted the challenge, it did not take long to realise that a complete response was impossible in the space

dealing with a reasonable number of them simultaneously and it should be possible to overlay two or more sprites at the same position on the screen. When overlaid, sprites should either appear to pass behind or to pass through one another.

The background forms an important component of a sprite display because the software must re-build it every time a sprite passes over it. A plain background is the simplest to handle and so I have adopted this form. The fundamental rule to remember is to check before plotting each component part that the part of the display which will be covered by the sprite is part of the background. In that way you will ensure that sprites are plotted only on the background and never on one another.

Similarly, when unplotting a sprite to move it elsewhere always check that the item to be "painted over" is part of the sprite being considered. If you do not observe that procedure you will find that the display will become cluttered with portions of sprites left over from previous cycles.

To reduce flickering, each sprite must dwell on the screen for as long as possible, hence the basic steps in any sprite program are unplot sprite from old position; plot sprite at new position; repeat those two functions for each

'Software for generating and handling sprites must be capable of dealing with a reasonable number of them simultaneously'

available. Hence the software presented serves to demonstrate the principle of sprite graphics using only the Spectrum attributes file. That approach has the advantage that the routines can be adapted in a fairly straightforward manner to run on the ZX-81 and I explain how to do so at the end of this column.

A sprite can be defined as a portion of the display image which can be moved independently of all other features of the display. Software for generating and handling sprites must be capable of

sprite in turn; execute all other routines incorporating delays if necessary; and return to the first situation.

If step one is executed for all sprites and then step two is executed for all sprites, the images will appear to pass in front and behind one another. Alternatively if step one, then step two are executed for each sprite in turn, the images will appear to superimpose on one another. The latter procedure is probably more appealing to the eye but with a large number of sprites the flick-

ering can become pronounced. The routines in table one can be used to plot and unplot a single sprite and the Basic program in table two shows how the routines can be used to drive two or more sprites.

Because of the complexity of the routines I have departed from my usual procedure of giving a ready-assembled list of machine code. Hence the reader will almost certainly wish to use an assembler program when loading the routines into his machine. The routines and their functions are:

RESETBG — Paint the attributes file uniformly using the colour code

stored in address 23551 the last byte of the printer buffer.

OFFSET — The IX register holds an address. Locations IX and IX+1 hold the column number and row number respectively of the position of the upper right corner of the current sprite in the attributes file. Calculate the corresponding address in the file and store it in HL.

PLOTGROUP — The main routine which plots, if the B register contains 0, or unplots, if the B register contains 1, a sprite. This routine calls:

PLOTLINE — Plots or unplots a line of sprite characters by calling:

PLOTLOC — Plot or unplot a character location at the address held in HL from the data at the address held in DE, when plotting or 23551, when unplotting.

The data for each sprite is held as follows:

IX + 0 — column number in attributes file.

IX + 1 — row number in attributes file.

IX + 2 — width of sprite in characters.

IX + 3 — height of sprite in characters.

IX + 4 — This address is transferred to DE. DE + 0 to DE + (IX + 2) * (IX + 3) define the sprite.

continued on page 124

Label	Assembly code	Comment	Label	Assembly code	Comment
ORG 50000		Assemble code at address 50000.		LD A,B	If B contains 0 then sprite is to be plotted, otherwise (save value in B)
RESETBG	LD HL,22528	Address of attributes to HL.		CP 0	(save value in B)
	LD BC,768	Length of attributes to BC.		PUSH BC	(load B with contents of location)
BG	LD A,(23551)	Background code to A.		LD B,(HL)	it is to be unplotted.
	LD (HL),A	Paint background at (HL).		JR Z,PLOT	Unplot — load A with colour info.
	INC HL	Move to next location.		LD A,(DE)	Compare with contents of location.
	DEC BC	Decrement length counter.		CP B	If dissimilar then do nothing.
	LD A,B	Test to see if task is complete.		JR NZ,ENDP	Contents and colour info identical
	OR C			LD A,(23551)	hence paint location into background.
	CP 0				Jump to end.
	JR NZ,BG	Repeat if incomplete.			
	RET	Return on completion.			
OFFSET	LD HL,22528	Address of attributes to HL.		LD (HL),A	Plot — load a with background colour.
	LD B,0	Clear register B.		JR ENDP	Compare with contents of location.
	LD C,(IX+0)	Load column counter into C.	PLOT	LD A,(23551)	If dissimilar then do nothing.
	ADD HL,BC	Move to position of column.		CP B	Contents and background identical
	LD C,(IX+1)	Load row counter into C.		JR NZ,ENDP	hence paint in part of sprite.
	LD DE,32	32 is length of one attribute line.		LD A,(DE)	Recover plot/unplot flag.
NEXTLINE	LD A,C	Move to position of row using the calculation (jump if calculation complete)		POP BC	Recover width counter.
	CP 0			POP AF	Return
	JR Z,END			RET	
	ADD HL,DE				
	DEC C				
	JR NEXTLINE	Continue calculation.	ENDP		
END	PUSH IX	Transfer value in IX to DE via the stack.	ORG 51000	LD IX,23296	Assemble at 51000
	POP DE	Increment DE			Data on first sprite is at 23296.
	INC DE	four times so that it points to the colour information		CALL OFFSET	Define position in attributes file.
	INC DE	for the group.			
	RET	Return		LD B,0	Set plot/unplot flat to PLOT.
PLOTGROUP	LD A,0	Clear A register.		CALL PLOTGROUP	Plot first sprite.
	LD C,(IX + 3)	Load C with height of group.		RET	Return.
LINE	PUSH HL	Save current position.	ORG 51100	LD IX,23296	Assemble at 51100
	CALL PLOTLINE	Plot a line from the group.			Data on first sprite is at 23296.
	POP HL	Retrieve previous position.		CALL OFFSET	Define position in attributes file.
	DEC C	Decrement height counter			
	CP C	and return if group is complete.		LD B,1	Set plot/unplot flat to UNPLOT.
	RET Z	Save position in group colour info.		CALL PLOTGROUP	Unplot first sprite.
	PUSH DE			RET	Return.
	LD DE,32	Step down by one line in the attributes file.	ORG 51200	LD IX,23306	Assemble at 51200
	ADD HL,DE	Retrieve position.			Data on second sprite is at 23306
	POP DE	Jump to plot next line in group.		CALL OFFSET	Define position in attributes file.
	JR LINE				
PLOTLINE	LD A,(IX + 2)	Load A with width of group.		LD B,0	Set plot/unplot flat to PLOT.
LOC	CALL PLOTLOC	Call routine to plot next location.		CALL PLOTGROUP	Plot second sprite.
				RET	Return.
	INC HL	Increment location in attributes file.	ORG 51300	LD IX,23306	Assemble at 51300
	INC DE	Increment position in colour group info.			Data on second sprite is at 23306
	DEC A	Decrement width counter.		CALL OFFSET	Define position in attributes file.
	CP 0	Repeat if line is not complete.			
	JR NZ,LOC	Return on completion.		LD B,1	Set plot/unplot flag to UNPLOT.
	RET			CALL PLOTGROUP	Unplot second sprite.
PLOTLOC	PUSH AF	Save group width counter.		RET	Return.

Table 1. A Spectrum assembly language program which, when driven from the Basic program in table two, demonstrates the principles of "sprites" by manipulating two groups of characters in the attributes file.

continued from p123

I have listed the routines as if they were to be assembled at address 50000. I have then listed four routines to be assembled at 51100, 51200, 51300, 51400 which plot and unplot each of two sprites.

The principal alterations when transferring the routines to the 16K ZX-81 are:

Choose new locations to store the data and re-set IX accordingly; use the address held in D FILE instead of 22528 throughout; alter OFFSET and PLOTGROUP to take account of the single marker byte at the end of each 32-character display line on the ZX-81.

10	POKE 23298,2	: REM Width of first sprite.
20	POKE 23299,3	: REM Height of first sprite.
30	FOR I=23300 TO 23305	: REM Colour of sprite is to be

500	GO TO 200	: REM Repeat.

Table 2. A Spectrum Basic program to drive the "sprite" routines listed in table one.

Smart executive type case, purpose built, with locks, special hinges and lift-off lid.

Internal console allows neat installation of computer, power supply and printer in fitted recesses. Provision for housing tape recorders up to 28cm x 15cm.

Aluminium switch panel eliminates constant removal of plugs for both save/load and power off facilities and provides sockets for tape recorder leads, to allow operation in convenient position shown.

All internal wiring and leads supplied to allow easy plug-in installation.

Case lid fitted with shock absorbing foam to protect components when closed and with retaining straps for neat storage of mains and T.V. aerial leads.

£44⁹⁵
(plus p & p)

- Solves storage problems
- Computer angled for convenient use
- Avoids lengthy setting up
- Hides most of wiring
- Case and console moulded in black grained ABS plastic

THE BIRDS AND THE BEES
THE BIRDS AND THE BEES (C)1983

The Birds and The Bees is an original animated cartoon-style game, introducing, for the first time on screen, Boris the Bee. Boris must collect as much nectar as possible, whilst avoiding various nasties like birds, wasps, centipedes and Venus fly traps. Smooth, fast machine-code action throughout, with sound effects, joystick option (most types) and speech option with the Currah Microspeech Unit.

There must be more to a micro than zapping monsters

See how much more when you plug into Micronet 800—a multi-million pound database that lets you play games as well.

Micronet 800 helps your micro come of age

It is the sophisticated network that many popular makes of micro can plug into via the telephone, giving home micro users new horizons to use and explore.

Micronet 800 lets you communicate through your micro...

...By linking you into a network of thousands of micro users who always have something new to say to each other. Through *Letters to the Editor*, *Clubspot* (for computer user groups), *Swapshop* (our electronic bulletin board) and electronic *Mailbox*, Micronet keeps you in touch with other people who want to do more with computers than just play games.

Micronet delivers to your micro our electronic newspaper and PRESTEL

Newsflashes give you news and reviews on new equipment, software and computer applications. A *Microbase* dedicated to your type of micro contains technical hints and tips. You also have access to other facilities on [®]Prestel: Homebanking with *Homelink*, world and business news, teleshopping and much more.

Micronet 800 gives you software

Offering you some of the best software bargains around. Through your phone line and straight into your computer. Scores of educational and utility programs are included. And a wide range of terrific games software. Many of which are completely free and constantly changing every few weeks – just in case you want to take another zap at those monsters again.

Systems Innovation of the year

Please send me the full facts about Micronet 800. Not forgetting the games!

Roll up, roll up!

Circus has come to town

Quentin Heath investigates the secret of the Big Top

AS THE NUMBER of Spectrum adventures on the market increases, it is difficult to find one which is different in either concept or content. Adventures are usually graphics or text only and take place in underground locations, mysterious fantasy worlds, on battle fields, or in outer space.

That is not true of the Mysterious Adventure series from Digital Fantasia. One adventure from the company shows the differences from other adventures and the advances in both plot and quality the company has brought to the adventure market. The game is called **Circus** and it is for the 48K Spectrum.

Circus is slightly different in format from other adventures, as you can switch between high-resolution graphics and text with an extra push of the ENTER key. The plot is unusual, as it takes place in and around a shadowy circus ground.

Few hints are given as to what you should do in the circus or what you are seeking, but that is as it should be. The packaging gives some hints as to what to do when it indicates that you have become stranded near a circus when your car runs out of petrol.

The car is not the starting-point of the adventure and that could confuse you. It is a deliberate ruse to convince you that the car contains nothing of interest. First, you will find yourself in a field with only a few compass-point directional movements, such as south, east and west, from which to choose.

At the start it may seem as if you are limited in the moves you can make and to get anywhere into the game you need to discover an arcane secret of great difficulty. Nothing could be further from the truth. All you have to do is think of a different and more specific type of movement command, such as go, and then specify the direction in which you want to move. That makes the game very complex, as you will have to name the sites you want to visit in different sectors.

The main sectors in Circus are the field in which you start, the road and car which you can reach, using Go road followed by Go car, and the circus

exterior and interior where much of the action will take place. Each of those sectors is discussed in the hints and tips panel.

One of the quests you will have to undertake is to find the petrol with which to fill your car to make your getaway. It could be in the generator which you will find near the circus or it could be in the dark depths of the tent. The generator is not working, so there is no power to go exploring in the tent. You will have to find your own, with a little help from hints and tips.

The secret of the petrol lies in the tent but you might like to explore the traps and pitfalls before you start to be

that vantage point and it is at that point, when you want to return to the ground, that you may have difficulty.

You may wish you had a map of the steps you took to get up to your precarious position. If you have not made a map you will become confused between ladders and swings. What you must not do is take out your rope, if you have it, and throw it. You might expect to find a quick way to the ground but the only thing you will get is a lost rope.

One other place to avoid is the human canon, unless you are trying to escape from the clown who keeps appearing. That character does little damage but he is difficult to follow.

One last strange, but useful, tip which can be given is that you should try and dig with your spade at every opportunity. No more said but you never know what you might discover.

Unfortunately not all software companies have the definition of an adventure game, in the computer sense, completely correct. Penguin Books calls its **Korth Trilogy** an adventure consisting of three separate cassette-and-book packages.

The packages contain only a series of arcade games based on all-too-familiar concepts. Many of them seem to have been written first, with the story-line slotted around them afterwards.

The saddest aspect is that the concept of this series of packages, based on traditional adventure lines, is fascinating and more software companies should try it.

The only advice I can give if you still intend to buy Korth Trilogy is to keep the science fiction story-book with the package and throw away the cassette. The relationship between the two is thin and you would be much less embarrassed if you did not look at the software. Penguin is, on the whole, better as a publisher of literature and might be advised to stay in that field.

involved with the quest. Learning from experience is usually the name of the game but there are some problems you can avoid with commonsense.

You may make a reasonable guess that most of the circus act equipment you find is in the tent and in the circus ring. The ladder you find hanging in mid-air. It seems to go up to the roof of the tent and is a temptation — if you ever wanted to swing on the trapeze you will find your wish granted if you can find the proper words to swing up to the top beams and canvas of the roof. If you jump from the trapeze you will land on the canvas of the roof and find nothing.

If you have a knife you could become a vandal, as the computer will accept the command to cut the canvas. Not much else seems to be possible from

HINTS AND TIPS

Useful items hidden close to the hand.
Dig with a spade in a field.
Your car is not as useless as it seems.
Look in the boot before you scream.

Model B

LANGUAGE LEARNING AIDS FOR FRENCH, GERMAN & SPANISH

Already in use in numerous schools and colleges, these programs provide an immensely powerful aid to foreign language learning. The cassettes include extensive vocabulary lists arranged as a series of lessons, each covering a different subject. A tuition control program enables individual lessons to be loaded and used as required.

Words, phrases etc are presented first in one language, then the other complete with all necessary accents and special

characters. Masculine, feminine and neuter words appear in different colours to encourage gender learning. All lessons can be run in three different ways, i.e. learning only, self-test or speed and accuracy test.

The programs are suitable for pupils of all ages as simple commands enable new lessons in vocabulary or grammar to be entered by the user. These may then be edited as required and stored on cassette for later use. Invaluable for homework and exam revision!

Level A Cassettes: Contain the tuition control program and 16 comprehensive lessons for general vocabulary learning.

Level B Cassettes: Contain the tuition control program and 16 lessons including verb lists, adjectives, adverbs and phrases.

Available from dealers, large stores or mail order.

Also Available "THE SPANISH TUTOR"

GI RECORDS, COCKBURN STREET, EDINBURGH

THE GREATEST CONFLICTS

CONFRONTATION

Newest addition to Lothlorien's famous Warmaster Series, this build-on battle game offers a basic format for any modern, non-nuclear conflict. This master tape contains a modern European scenario together with the facility to create other scenarios of your choice using both air and land forces. This is a two-player game.

THE FASTEST ACTION

Mid-way between strategy war games and arcade action, RED BARON offers plenty of excitement but requires tactical thought also. Highly recommended as a first primer for the higher-level 'Warmaster' Series.

In the middle of winter a turtle is defending his strawberry patch against a variety of marauding bugs ... some go for strawberries, some go for you ... some don't go for anything unless they're accidentally attacked. But this is winter and you never know when it will snow!

BEETLEMANIA Lothlorien arcade action at its best. Trapped in a maze with four giant beetles you need four giant beetle eggs to break out. But the beetles go berserk when their eggs are stolen.

Available from

THE NIGHT SKY

(for any Sinclair Spectrum)

An observer's guide to the stars visible from the UK (48 to 58 North)

Discover the fascination of the limitless heavens.

Create brilliant hi-res stargrams with THE NIGHT SKY and your Spectrum

- Features over 700 different stars
- 50 constellations identifiable
- Sky colour indicates day, night or twilight
- Make your TV screen a mini planetarium
- 5 magnitudes distinguished
- Over 4 million different skyscapes
- Ideal for serious astronomers and novices alike

Trace the movements of the constellations minute by minute, night by night

Send £8.90 for cassette and Manual

EPHEMERIS

(for any Spectrum and ZX81 16k)

Simply enter any date, time, longitude, latitude... then select SUN, MOON or planet from the Menu. Printout includes all the information you need:-

- Local sidereal time
- Distance from earth etc. etc.
- Menu allows selection of another time, planet etc.
- Ascension and declination, altitude and azimuth
- COPY option for ZX Printer owners

Send £6.90 for cassette and instructions (ZX81 16k) or £7.90 (Spectrum 16k/48k)

STATISTICS I

(for any Spectrum and ZX81 16k)

- Data input routines allow for correction
- Three applications of the "t" test
- Analysis of variance (one way)
- Full range of descriptive statistics
- Correlation and regression
- COPY option for ZX Printer owners

Send £6.90 for cassette and Manual (any Spectrum, ZX81 16k)

STATISTICS II

(for Sinclair Spectrum 48k)

The second edition of a superb user - friendly program enabling you to create, edit and analyse your own numeric database

- Up to 48 variables, 2,400 items of data
- Edit/SAVE/RELOAD data (tape or microdrive)
- Histogram and Cumulative frequency graphs in high resolution graphics
- COPY/SAVE options for all results
- New features include larger number of variables, microdrive facilities and many minor improvements
- Add variables, cases - transform variables
- Full range of descriptive and rank order stats
- Correlation, regression, scattergram (in hi-res)
- Correlated "t" test
- First edition sold to many universities, colleges and research laboratories in UK and worldwide

Send £12.90 for cassette and Manual (48k Spectrum only)

Send s.a.e. for full list of our scientific, educational, graphics and games software.

Full money back guarantee. Trade enquiries welcome

proudly presents
their latest fab game for the Spectrum 48K.

DR FRANKY & THE MONSTER

By Martin Wheeler for the Spectrum 48K
(VGC 1011)

Arcade Action! Action Packed!
A stunningly graphical nine unique screens game. Alone in the dark, haunted dungeons of his castle, Dr Franky is desperately trying to turn his monstrous creation into a human being. His task seems simple, he has to collect the flasks of life-giving chemicals which he has placed in his dungeons away from prying eyes. However, he has forgotten the power of the super-natural!

Don't forget these winners from our current range:

SPECTRON

By Mark Kirkby for the Spectrum 48K (VGC 1009)
You are the latest in a long line of SPECTRON-fighting robots and your only aim in life is to survive.
"Spectron is as addictive and challenging as games come and is of true arcade quality" - **Personal Computer Games, February 1984.**

QUETZALCOATL

By Gareth Briggs for the Spectrum 48K (VGC 1007)
"Graphics are good and colourful and I enjoyed playing this game, without ever managing to reach the exit, I certainly intend going back to it for another try." - **Personal Computer Games, February 1984.**
"The program is rather like a graphical adventure set in a three-dimensional maze with an excellently drawn screen display. The object is very simple to state, but difficult to achieve... The action is fast and smooth, with completely accurate orientation as one moves through the maze. I found it original, challenging and fascinating." - **Games Computing, January 1984.**

RACING MANAGER

By Mark Alexander for the Spectrum 48K (VGC 1005)
"This is more of a total concept than a game... a simulation that is almost as exciting as the real thing... This is certainly a game that will appeal not only to racing nuts, but to the whole family. It is, in my opinion, one of the better games on the market today." - **Value for money 100% - Home Computing Weekly, 22 November 1983.**
"... potentially one of the best computer simulations I have seen... all the usual racing trappings are included... The presence of Jo Gamble enables some nifty betting coups to be worked out... I certainly found Racing Manager addictive and great fun to play." - **Personal Computer World, November 1983.**

THE "I WANT TO BE RICH AND FAMOUS DEPARTMENT"

We are always keen to receive any original entertaining programs with good graphics at our now famous "I WANT TO BE RICH AND FAMOUS DEPARTMENT" from any of you programming mega-stars out there. Don't delay - send today!

£5.95

R.P.P.

NB: We have now found the fault which caused a batch of early copies of Racing Manager to crash. We would be delighted to replace any cassettes affected in this way.

PLAY THE WIN

Here's a sure-fire way of making certain 1984 is packed full of fun for you and your friends. We've searched for brilliant new program sources throughout the U.K. and North America to find an exciting collection of new games—and business programs—many of which cannot be bought by mail order from any other source! These are our latest exclusive offerings.

PITMAN SEVEN ●

Your mission is to rescue two teams of seven desperate men, trapped underground on level five. You must bring each man to the surface, surviving the dangers you meet en route.

ZX Spectrum 48K.
Cassette price: £6.95

Ref. No: 2-52

FLIGHT SIMULATION ●

You are the pilot of a light aircraft. Pay careful attention to the many cockpit instruments to take off, bank, dive and climb. Touch a button, your display is a navigational chart: work out your flight path, choose a runway, prepare to land!

Full-colour high-resolution graphics. Written by Psion for a 48K RAM Spectrum.

Cassette price: £7.95.

Ref. No: 2-54

FREE BLANK C15 COMPUTER CASSETTE WITH EVERY TWO CASSETTES YOU ORDER!

Remember there's no limit to the number of free cassettes you receive if your order justifies them — so why not get together with friends or user group members and share the freebies?

GREAT VALUE! TREMENDOUS SELECTION! PLUS A FREE OFFER EVERY TIME!

Fill in the order form right away — we're guaranteeing fast delivery, quality and satisfaction [after all, we want you to come back for more!]

MAIL ORDER PROTECTION SCHEME

Advertisements in this magazine are required to conform to the British Code of Advertising Practice. In respect of mail order advertisements where money is sought in advance of the despatch of goods the Code requires the advertiser to despatch goods within 28 days, unless a longer period is stated. Where goods are returned to an advertiser, undamaged, within 7 days, the purchaser's money must be refunded, plus the cost of returning the goods. The reader should retain evidence of despatch.

If you order goods from mail order advertisements in this magazine and pay in advance of delivery you will be considered for compensation under the Scheme if the advertiser becomes insolvent or ceases to trade provided that:

(a) you have not received the goods, or a refund in respect of returning same, AND:

(b) you write to the Advertisement Manager of this magazine, stating the facts, not earlier than 28 days from the date of the order and NOT LATER THAN THREE MONTHS from the date on which the advertisement appeared.

THE SCHEME ONLY COVERS ADVANCE PAYMENT SENT IN DIRECT RESPONSE TO AN ADVERTISEMENT IN THIS MAGAZINE. IT DOES NOT COVER:-

(a) Classified advertising;

(b) payment made in response to catalogues, brochures, etc. received as a result of responding to such advertisements;

(c) advertisers offering services as opposed to goods,

(d) claims where payment is made with Access or Barclaycard and where the cost of the goods is over £30. In this case claims should be made to the Credit Card Company concerned.

Full details of the Scheme are available by sending a stamped and addressed envelope to Mail Order Protection Scheme, Newspaper Publishers Association Limited, 6 Bouverie Street, London EC4Y 8AY.

Reach an estimated readership of over 200,000 users per month for as little as £2.00*.

Or if you are starting your own small business advertise in the supermart for only £10.00.

Yes all you have to do is fill in the coupon below including your name, address and/or telephone number and send to: Supermart, Sinclair User, ECC Publications, 196-200 Balls Pond Road, London N1 4AQ.

Maximum 30 words.

Your advert will appear in the earliest possible edition.

Name

Address

Tel:

Have you included the fee of £2.00 or £10.00?

*for second hand sales only

Conditions
The Advertisement Manager reserves the right to alter, reject or suspend an advertisement without assigning any reason. Advertisements are accepted subject to approval of copy and to the right of the Advertisement Manager to alter, reject or cancel any order without explanation. The Proprietors are not liable for any loss from any cause whatever, nor do they accept liability for printers' errors. The Advertiser shall indemnify the Publishers in respect of any claim, cost and expenses arising out of any libellous or malicious matter or untrue statement in any advertisement published for the advertiser, or any infringement of copyright, patent or design therein. The placing of any order will be deemed to be an acceptance of these conditions.
